2. The colour of the volatile oils is as various as their other properties. A great number are limpid and colourless; as oil of turpentine, lavender, rosemary, savine, aniseed: some are yellow; as spike, bergamotte: some are brown; as thyme, savoury, wormwood: others blue; as camomile, motherwort: others green; as milfoil, pepper, hops, parsley, wormwood, cajeput, juniper, sage, valerian: others, though at first colourless, become yellow or brown by age; as cloves, cinnamon, sassafras.

3. The odours are so various as to defy all description. It is sufficient to say, that all the fragrance of the vegetable kingdom resides in volatile oils. Their taste is acrid, hot, and exceedingly unpleasant.

4. Their specific gravity varies very considerably, not only in different oils, but even in the same oil in different circumstances.

When the volatile oils are heated in the open air, they evaporate readily, and without alteration diffuse their peculiar odours all around; but there is a considerable difference between the different oils in this respect. When distilled in close vessels, they do not so readily assume the form of vapour. Hence they lose their odour, become darker in colour, and are partly decomposed. Oils do not seem very susceptible of assuming the gaseous form, unless some other substance, as water, be present.

II. FIXED OILS are distinguished by the following characters: — 1. Liquid, or easily become so when exposed to a gentle heat; 2. An unctuous feel; 3. Very combustible; 4. A mild taste; 5. Boiling point not under 600°; 6. Insoluble in water, and nearly so in alcohol; 7. Leave a greasy stain upon paper.

These oils, which are called fat or expressed oils, are numerous, and are obtained partly from animals and partly from vegetables, by simple expression. As instances may be mentioned whale oil or train oil obtained from the blubber of the whale and from cod: olive oil, obtained from the fruit of the olive; linseed oil and almond oil, obtained from linseed and almond kernels. Fixed oils may also be extracted from poppy seeds, hemp seeds, beech mast, and many other vegetable substances.

All these oils differ from each other in several particulars, but have also many particulars in common.

1. Fixed oil is usually a liquid with a certain degree of viscidity, adhering to the sides of the glass vessels in which it is contained, and forming streaks. It is never perfectly transparent; has always a certain degree of colour, most usually yellowish or greenish; its taste is sweet, or nearly insipid. When fresh it has little or no smell.

There exist also in the vegetable kingdom a considerable number of bodies which, at the ordinary temperature of the atmosphere, are solid, and have hitherto been considered as fixed oils. Palm oil may be mentioned as an example. The various substances used in India and Africa as substitutes for butter, and as unguents, may likewise be mentioned.

2. All the fixed oils hitherto examined are lighter than water: but they differ greatly from one another in specific gravity. The same difference is observable in different samples of the same oil.

Fixed oil, when in the state of vapour, takes fire on the approach of an ignited body, and burns with a yellowish white flame. It is upon this principle that candles and lamps burn. The tallow or oil is first converted into a state of vapour in the wick; it then takes fire, and supplies a sufficient quantity of heat to convert more oil into vapour; and this process goes on while any oil remains. The wick is necessary to present a sufficiently small quantity of oil at once for the heat to act upon. If the heat were great enough to keep the whole oil at a temperature of 600°, no wick would be necessary, as is obvious from oil catching fire spontaneously when it has been raised to that temperature. When oil is used in this manner, either in the open air or in contact with oxygen gas, the only new products obtained are *water* and *carbonic* acid.

The drying oils are used as the vehicle of paints and varnishes. Linseed, nut, poppy, and hemp-seed oils belong to this class. These oils in their natural state possess the property of drying oils, but imperfectly. To prepare them for the use of the painter and varnish maker, they are boiled for some time in an iron pot, and sometimes burnt till they become viscid. When they burn for some time, their unctuous quality is much more completely destroyed than by any method that has been practised. Hence it is followed frequently in preparing the drying oils for varnishes, and always for printers' ink, which requires to be as free as possible from all unctuosity.

Nut oil has been found preferable to all other oils for printers' ink; though the dark colour which it acquires during boiling renders it not so proper for red ink as for black. Linseed oil is considered as next after nut oil in this respect. Other oils cannot be employed, because they cannot be sufficiently freed from their unctuosity. Ink made with them would be apt to come off and smear the paper while in the hands of the bookbinder, or even to spread beyond the mark of the types and stain the paper yellow.

The principal oils, in a commercial point of view, with the exception of ground-nut oil (See NUTS, GROUND) are enumerated in the following statement.

Account of the Quantities of the different Varieties of Oil imported into and re-exported from the U. Kingdom in 1852.

OLIBANUM (Fr. *Encens;* Ger. *Weiranch;* It. *Olibano;* Arab. *Looban*), a gum-resin, the produce of a large tree (*Libanus thurifera*) growing in Arabia and India. It is imported in chests containing each about 1 cwt., from the Levant and India; the best comes from the former, and is the produce of Arabia. Good olibanum is in semi-transparent tears, of a pink colour, brittle, and adhesive when warm; when burnt, the odour is very agreeable; its taste is bitterish, and somewhat pungent and aromatic; it flames for a long time with a steady clear light, which is not easily extinguished, leaving behind a *black* (not, as has been said, a whitish) ash. Olibanum is the frankincense (*thus*) of the ancients; and was extensively used by them in sacrifices. —(*Plin. Hist. Nat.* lib. xii. c. 14.) It has also been used in the ceremonies of the Greek and Roman churches.—(*Ainslie's Mat. Indica; Thomson's Chemistry; Kippingii Antiq. Rom.* lib. i. c. 11.)

OLIVE, OLIVES (Ger. *Oliven;* Fr. *Olives;* It. *Ulive, Olive;* Sp. *Aceitunas;* Port. *Azeitonas;* Lat. *Olivæ*), a fruit yielding a large quantity of oil, the produce of the *Olea*, or olive tree. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The cultivated species grows spontaneously in Syria, and is easily reared in Spain, Italy, and the south of France. It has even been raised in the open air in England, but its fruit is said not to have ripened. The fruit is a smooth oval plum, about $\frac{3}{4}$ of an inch in length, and $\frac{1}{2}$ an inch in diameter; of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but replete with a bland oil; covering an oblong, pointed, rough nut. Olives intended for preservation are gathered before they are ripe. In pickling, the object is to remove their bitterness, and to preserve them green, by impregnating them with a brine of aromatised sea salt; for this purpose various methods are employed. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine polish of which it is susceptible.

OLIVE OIL (Ger. *Baumol;* Fr. *Huile d'olives;* It. *Olio d'uliva;* Sp. *Aceite de aceitunas;* Lat. *Oleum olivarum*). The olive tree is principally cultivated for the sake of its oil. This is an insipid, inodorous, pale greenish yellow coloured, viscid fluid, unctuous to the feel, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils; and is largely used, particularly in Greece, Italy, Spain, and France, as an article of food, and in medicine and the arts. It is also very extensively used in this country, particularly in the woollen manufacture.

The ripe fruit is gathered in November, and immediately bruised in a mill, the stones of which are set so wide as not to crush the kernel. The pulp is then subjected to the press in bags made of rushes; and by means of a gentle pressure, the best, or *virgin* oil, flows first; a second, and afterwards a third, quality of oil is obtained by moistening the residuum, breaking the kernels, &c., and increasing the pressure. When the fruit is not sufficiently ripe, the recent oil has a bitterish taste; and when too ripe, it is fatty. After the oil has been drawn, it deposits a white, fibrous, and albuminous matter; but when this deposition has taken place, if it be put into clean glass flasks, it undergoes no further alteration; the common oil cannot, however, be preserved in casks above $1\frac{1}{2}$ or 2 years. It is sometimes adulterated by the admixture of poppy oil. —(*Thomson's Dispensatory.*)

The best olive oil is said to be made in the vicinity of Aix, in France. That which is brought from Leghorn, in chests containing 30 bottles, or 4 English gallons, is also very superior; it is known in our markets by the name of Florence oil, and is used mostly for culinary purposes. Olive oil is the principal article of export from the kingdom of Naples.—(See NAPLES.) Apulia and Calabria are the provinces most celebrated for its production. The Apulian is the best, and is preferred by the woollen manufacturers, by whom it is extensively used. By far the largest portion of the olive oil brought to England is in general imported from Italy; principally from Gallipoli, on the east coast of the Gulph of Taranto, (which see), whence it is commonly known by the name of Gallipoli oil. But besides Italy, Spain, Turkey, the Ionian Islands, &c. send us large quantities.

The duty on olive oil was for a lengthened period most exorbitant. In 1834 it was fixed at 10*l.* 10*s.* a tun if imported in a Neapolitan, and 8*l.* 8*s.* if imported in a British or other vessel. But as olive oil is of essential importance in the arts, being extensively used in the manufacture of woollens, in the preparation of the best species of soaps and other departments of industry, this duty was much and justly objected to. In consequence it was reduced, in 1841, to 4*l.* 4*s.* a tun if imported directly and not in a Neapolitan ship, and in 1842, the duty was farther reduced to 2*l.* and 4*l.* a ton according to the vessels in which it was imported. "At present," therefore, we observed in 1843, "the amount of the duty cannot be justly objected to, but the differential principle on which it has been and is imposed, is most objectionable. It imitates, and (in so far as copying can do) justifies the worst part of the commercial policy of the Neapolitan government, and prompts them to keep up high discriminating duties on articles imported into Naples and Sicily in British ships. So wretched an attempt at retaliation is quite unworthy of an enlightened nation, and deserves to be universally scouted. It is, in fact, injurious only to ourselves."

We are glad to have to state that the justice of this reasoning has been admitted; and that the duty on olive oil has been repealed, and its importation freely permitted, whether in British, Neapolitan, or other ships. We subjoin

An Account of the Quantities of Olive Oil imported into the U. K. in 1857, specifying the Countries from which it was imported, with the Quantities brought from each, its Value, &c.

Countries.	Imports.	Value of Import.	Price per Tun.

The exports of olive oil amounted, during the same year, to only 944 tuns.

Oil Trade of Naples.—The oils of the kingdom of Naples are produced in Apulia, from Bari to its southern extremity, the Capo di Leuca; a district comprising the territories which export from Gallipoli and Taranto; and in Calabria from Rossano, on the Gulph of Taranto, across to Gioja. The whole coast from Gioja as far as Gaeta is covered with olive trees. They are also abundant in the Abruzzi and the Terra di Lavaro; but Apulia and Calabria furnish by far the greatest quantity of oil.

The principal magazines, or *caricatori*, for oil, are at Gallipoli and Gioja.

Gallipoli supplies England, Holland, the north of Europe, and, in short, all those countries that require the most perfectly purified oil. It is clarified to the highest degree, by merely keeping it in cisterns hollowed out of the rock on which the town is built. The voyages it has to perform being long, it is put into casks so well constructed, that it frequently arrives at Petersburgh in the heat of summer, without the least waste or leakage,—an advantage attributed to the seasoning of the staves, which, before they are put together, are well soaked in sea water.

We borrow the following details with respect to the preparation of oil at Gallipoli, from a very interesting paper, communicated by an English gentleman who had resided in the town, in the volume entitled *Vegetable Substances Materials of Manufactures*, published by the Society for the Diffusion of Useful Knowledge.

"The rock on which the town is built is easily excavated; and in caverns thus constructed oil clarifies sooner, and keeps without rancidity much longer, than in any other place. Hence numerous oil-houses are established at Gallipoli, and a very considerable portion of the rock is cut into cisterns. A Gallipolitan oil warehouse generally occupies the ground floor of a dwelling-house, and has a low arched roof. Some are more extensive, but on an average they are about 30 feet square. In the stone floor you see 4, 6, or more holes, which are circular, about 2 feet in diameter, and like the mouths of wells. Each of these holes gives access to a separate cistern beneath your feet; and when the oil is poured into them care is taken not to mix different qualities, or oils at different stages, in the same reservoir. One cistern is set apart for *oglio mosto*, or oil that is not clarified, another for pure oil of the season, another for old oil, &c. I have seen oil that had thus been preserved for 7 years in a perfect state, or, as the Gallipoli merchants have it, *chiaro, giallo, e lampante*,—words which, during some months, I have heard at least 100 times a day. I also many times verified the fact: the *mosto*, or oil in its turbid state, which arrived almost as black and thick as pitch, soon became bright and yellow in these excellent reservoirs, without any help from man.

"All the oil, whatever may be its quality, is brought to the magazine in sheep or goat skins, which are generally carried on mules—there being but few *strade rotabile*, or roads fit for wheeled carriages, in these parts. In a good year, and at the proper season, I have counted, in the course of an afternoon's ride, as many as 100 mules returning from Gallipoli, where they had been to deposit their unctuous burdens, to different towns and villages in the Terra d'Otranto, or the more distant province of Bari. The quantity of oil required may be conceived, when I state, that at one time (in the year 1816) I saw 9 English, 3 American, 2 French, and 6 Genoese vessels, (not to mention some small craft from the Adriatic,) all waiting in the port of Gallipoli for entire or partial cargoes of it. When the oil is to be shipped, it is drawn off the cistern into *uteri*, or skins, and so carried on men's shoulders down to a small house on the sea shore. In that house there is a large open basin, capable of containing a given quantity, and of measuring the oil; and into that the porters empty their skins as they arrive. A tube communicates from the basin to a large cock at the outside of the house. When the basin is full, well-made casks, of various sizes for the convenience of stowage, are placed under the cock, which is then turned, and the casks are filled. As the casks are closed up by the cooper, the porters roll them down to the brink of the sea, where the sailors secure several of them together with a rope, and taking the end of the cord into the boat, they row off to the vessel, towing the oil casks through the water after them.

"I first became acquainted with the Gallipolitans shortly after the fall of Napoleon, whose system, whatever good parts of it may have done in the rest of Italy, was certainly most ruinous to the provinces of Lecce and Bari. Unable to export, or find any market for their produce, the proprietors in many parts of those provinces let the olives lie and rot upon the ground. For some years, indeed, the price of oil scarcely paid the cost of its preparation, to say nothing of transport and other necessary expenses. During the continental system, the best *chiaro, giallo, e lampante* oil was sold at Gallipoli for 8 Neapolitan ducats the salma; in 1816 and 1817, it found a ready market at from 60 to 70 ducats per salma!

"Those who, during the evil time, had penetration enough to foresee better days, and that a system opposed to the general commercial prosperity of Europe could not last; and who had, at the same time, money enough for such objects; by annually making their oil as usual, and buying up the oil of others at the low current prices of the day, realised enormous profits when peace threw open the port of Gallipoli, and ships of all nations flocked thither as before.

"The olives of which the Gallipoli oil is made, are never gathered, but allowed to drop in their maturity from the tree on the ground, where they are picked up chiefly by women and children, and carried to the mill.

"The machinery employed in expressing the oil is of the rudest kind, and, no doubt, numerous improvements might be introduced, not only into this branch, but into that of cultivating the olive tree. The peasantry, however, and, in the kingdom of Naples, those who stand higher in the scale of fortune and rank, are too often but boors in intellect, are obstinate in their attachment to old practices, and are apt, when any of these are reprehended, to stop discussion by saying—*Faccio come faceva la buon' anima di mio padre, e cio basta.* (I do as my father of blessed memory did before me, and that's enough.)

"The poor people of the country make culinary uses of the same oil that is exported, and which in England is only used in manufactures, or burnt in lamps; but in the houses of the gentry I have often tasted oil prepared with more care, which was truly delicious, being equal to that of Sorrento, Vico, and Massa, or even to the best oils of Tuscany or Provence."—(Pp. 200—204.)

The oil received into the cisterns in Gallipoli, either belongs to the proprietor who buys it of the planter,

or is received in *deposit* on account of some other party who gets a receipt (*biglietto di magazzino*) specifying the quantity of the oil received on his account, its quality, &c. Depositors pay at the rate of 20 grani a-year for every salma of oil to the party holding it in deposit, and who is bound to account for it.

The *caricatori* of Bari and Monopoli furnish oils for the consumption of Upper Italy and Germany, through the medium of Venice and Trieste. They also draw supplies from Brindisi and Otranto.

The *caricatori* of Taranto, of Eastern Calabria or Retromarina, and of Western Calabria, the principal of which is Gioja, furnish supplies for Marseilles, &c. But the *caricatori* now mentioned, having no conveniences for clarification, produce only the thick oils used for soap-making.

The oils of Sicily, like those of Tunis, are too thin to be used singly in the making of soap; and being used only for mixing, are less valuable than most others.

At present (1858) a full crop of oil in the province of Terra d'Otranto is supposed to yield about 300,000 salme, or 41,666 tuns. To facilitate transactions, orders or *cedules* are circulated, representing quantities of oil deposited in the provincial *caricatori*. These orders are negotiable, like bills of exchange, and are indorsed by the intermediate holder, who receives their value in cash, without, however, becoming liable for their due satisfaction. The only responsible parties are the drawer and drawee. The latter is obliged to deliver the oil at sight of the order, or to hold it, at the bearer's disposal, till the 10th of November for the *caricatori* of Apulia, and till the 31st of December for those of Calabria. If the contract be for time, that is, from one year to another, the oil is usually placed at the purchaser's command on the 1st of March. Purchases for time are effected by means of a contract, wherein the vendor undertakes to deliver the oil by the end of January, on receiving payment of the money; but the oil, as observed above, is not really at the purchaser's disposal before the beginning of March. Hence, in time bargains, the payment of the money precedes the delivery of the oil more than a month: scarce an instance is on record of an engagement of this sort having been broken, and the order is as readily negotiable as any other security.

In purchases of oil at command, payment likewise precedes the delivery of the article; but in this case the advance is confined to the 5 days necessary to transmit the order to the *caricatore* where the oil is kept for delivery.

The oil remains in the *caricatore* under the care and responsibility of the vendor, to be delivered on demand to the bearer of the order, free of all costs and charges whatever for the first year; but for every successive year from 25 to 30 grains per salma are charged for keeping, and for renewal of warranty.—(We are indebted for these details to a very valuable Report by Mr. Steel, vice-consul at Gallipoli, and to a *brochure* of M. Millenet, entitled *Coup d'Œil sur le Royaume de Naples*. Naples, 1832.)

OMNIUM, a term used at the Stock Exchange, to express the aggregate value of the different stocks in which a loan is now usually funded.

Thus, in the loan of 36,000,000*l.* contracted for in June, 1815, the omnium consisted of 130*l.* 3 per cent. reduced annuities, 44*l.* 3 per cent. consols, and 10*l.* 4 per cent. annuities, for each 100*l.* subscribed.

The loan was contracted for on the 14th of June, when the prices of the above stocks were—3 per cent. reduced, 54; 3 per cent. consols, 55; 4 per cents., 70: hence the parcels of stock given for 100*l.* advanced, were worth—

	£.	s.	d.
130*l.* reduced at 54	70	4	0
44*l.* consols, at 55	24	4	0
10*l.* 4 per cents., at 70	7	0	0
Together	101	8	0

which would be the value of the omnium, or 1*l.* 8*s.* per cent. premium, independently of any discount for prompt payment.

ONION (Ger. *Zwiebel*; Fr. *Oignon*; It. *Cipolla*; Sp. *Cebolla*; Rus. *Luk*), a well known bulbous plant (*Allium Cepa* Linn.) cultivated all over Europe for culinary purposes. The Strasburg, Spanish, and Portuguese varieties are the most esteemed.

ONYX (Ger. *Onyx*; Fr. *Onix, Onice*; Sp. *Onique*; Lat. *Onyx*). "Any stone exhibiting layers of 2 or more colours strongly contrasted is called an *onyx*; as banded jasper, chalcedony, &c., but more particularly the latter, when it is marked with white, and stratified with opaque and translucent lines. But the Oriental onyx is considered a substance consisting of 2 or more layers or bands of distinct and different colours. A sard, or sardoine, having a layer of white upon it, would be called an onyx; and according to the number of layers it would be distinguished as an onyx with 3 or more bands. Some of the antique engravings are upon onyxes of 4 bands."—(*Mawe's Treatise on Diamonds, &c.*)

OPAL (Ger. *Opal*; Fr. *Opale*; It. *Opalo*; Sp. *Opalo, Piedra iris*; Port. *Opala*; Lat. *Opalus*), a stone, of which there are several varieties, found in different parts of Europe, particularly in Hungary, and in the East Indies, &c. When first dug out of the earth it is soft, but it hardens and diminishes in bulk by exposure to the air. The opal is always amorphous; fracture conchoidal; commonly somewhat transparent. Hardness varies considerably. Specific gravity from 1·958 to 2·54. The lowness of its specific gravity in some cases is to be ascribed to accidental cavities which the stone contains. These are sometimes filled with drops of water. Some specimens of opal have the property of emitting various coloured rays, with a particular effulgency, when placed between the eye and the light. The opals which possess this property are distinguished by lapidaries by the epithet *Oriental*; and often, by mineralogists, by the epithet *nobilis*. This property rendered the stone much esteemed by the ancients.—(*Thomson's Chemistry*; see also *Plin. Hist. Nat.* lib. xxxvii. c. 6., where there are some very curious details as to this stone.)

Mr. Mawe gives the following statement with respect to the precious opal, or opal *nobilis*:—"The colour of the opal is white or pearl grey, and when held between the eye and the light is pale red, or wine yellow, with a milky translucency. By reflected light it exhibits, as its position is varied, elegant and most beatiful iridescent colours, particularly emerald green, golden yellow, flame and fire red, violet, purple, and celestial blue, so beautifully blended, and so fascinating, as to captivate the admirer. When the colour is arranged in small spangles, it takes the name of the harlequin opal. Sometimes it exhibits

only 1 of the above colours, and of these the most esteemed are the vivid emerald green and the orange yellow. When the stone possesses the latter of these colours, it is called the golden opal.

"The precious opal is not quite so hard as rock crystal: it is frequently full of flaws, which greatly contributes to its beauty, as the vivid iridescent colours which it displays are occasioned by the reflection and refraction of light, which is decomposed at these fissures. It is never cut in facets, but always hemispherical. It is generally small, rarely so large as an almond or hazel nut, though I have seen some specimens the size of a small walnut, for which several hundred pounds were demanded. At present, a pretty opal may be bought at from 1 to 3 or 5 guineas, sufficiently large for a pin or ring stone. It requires great care and judgment in the cutting, as it is fragile and easily spoiled.

"The opal, in all ages, has been highly esteemed: the history of the Roman senator, who preferred death rather than give up his opal ring to the Emperor Nero, is familiar to every one. Among the Eastern nations, the opal ranks higher than in Europe.

"A spurious substance is sometimes sold for black and green opal, and often set in jewellery; it occurs of the size of a small almond, but more commonly not larger than a lentil or pea. This *precious gem* is nothing more than the cartilage of the hinge of a large shell. Glass, and even scoria, having an iridescent appearance, have also often been sold for opal."—(*Treatise on Diamonds, &c.* 2d ed. pp. 123—125.)

OPIUM (Ger. *Mohnsaft;* Fr. *Opium;* It. *Oppio;* Sp. and Port. *Opio;* Lat. *Opium;* Arab. *Ufyoon;* Hind. *Ufeem;* Turk. *Madjoon*), the concrete juice of the white poppy (*Papaver somniferum*), which is most probably a native of Asia, though now found growing wild in the southern parts of Europe, and even in England. Opium is chiefly prepared in India, Turkey, and Persia; but the white poppy is extensively cultivated in France, and other parts of Europe, on account of its capsules, and of the useful bland oil obtained from its seeds. It has also been cultivated, and opium made, in England: but there is very little probability of its ever being raised here to any considerable extent.

The poppy is an annual plant, with a stalk rising to the height of 3 or 4 feet; its leaves resemble those of the lettuce, and its flower has the appearance of a tulip. When at its full growth, an incision is made in the top of the plant, from which there issues a white milky juice, which soon hardens, and is scraped off the plants, and wrought into cakes. In India, these are covered with the petals of the plant to prevent their sticking together, and in this situation are dried, and packed in chests lined with hides and covered with gunny, each containing 40 cakes, and weighing 2 maunds or 149½ lbs.; they are exported in this state to the places where the opium is consumed. Turkey opium is in flat pieces, covered with leaves, and the reddish capsules of some species of *rumex;* which is considered an indication of its goodness, as the inferior kinds have none of these capsules adhering to them.

According to Dr. A. T. Thomson, Turkey opium has a peculiar, strong, heavy, narcotic odour, and a bitter taste, accompanied by a sensation of acrid heat, or biting on the tongue and lips, if it be well chewed. Its colour when good is a reddish brown, or fawn colour; its texture compact and uniform. Its specific gravity is 1·336. When soft, it is tenacious; but when long exposed to the air, it becomes hard, breaks with a uniform shining fracture, is pulverulent, and affords a yellowish brown powder.

East Indian opium has a strong empyreumatic smell; but not much of the peculiar narcotic, heavy odour of the Turkey opium; the taste is more bitter, and equally nauseous, but it has less acrimony. It agrees with the Turkey opium in other sensible qualities, except that its colour is blacker, and its texture less plastic, although it is as tenacious. Good Turkey opium has been found to yield nearly 3 times the quantity of *morphia*, or of the peculiar principle of the drug, that is yielded by East Indian opium.

Opium is regarded as bad, when it is very soft, greasy, light, friable, of an intensely black colour, or mixed with many impurities. A weak or empyreumatic odour, a slightly bitter or acrid, or a sweetish taste, or the power of marking a brown or black continuous streak when drawn across paper, are all symptoms of inferior opium.—(*Dispensatory.*)

The raising of opium is a very hazardous business; the poppy being a delicate plant, peculiarly liable to injury from insects, wind, hail, or unseasonable rain. The produce seldom agrees with the true average, but commonly runs in extremes; while one cultivator is disappointed, another reaps immense gain: one season does not pay the labour of the culture; another, peculiarly fortunate, enriches all the cultivators. This circumstance is well suited to allure man, ever confident of good fortune.—(*Colebrooke's Husbandry of Bengal,* p. 119.)

In England, opium is little used, except as a medicine. In 1856 and 1857, 42,443 and 56,174 lbs. were respectively entered for consumption. By far the largest part of our supply is brought from Turkey. Opium from the latter was worth, in the London market, in 1857, from 15*s.* to 16*s.* per lb.

Cultivation of Opium in India—Monopoly, &c.—Opium is produced in Bengal, principally in the provinces of Bahar* and Benares, in parts of Bombay, and in Malwa, in Central India. In Bengal the production of opium is a monopoly, no person being allowed to grow the poppy except on account of government. The latter make advances to the cultivators, who deliver the entire produce into their hands at a fixed price of

* The opium of Bahar is known in commerce by the name of Patna opium.

about 3*s.* 6*d.* per lb. It is afterwards sold by the Company for about 11*s.* per lb., so that the profit of the latter amounts to about 7*s.* 6*d.* per lb.

Opium may be grown and manufactured in Bombay; but it is subjected to the same high duty that is imposed on opium imported into the Presidency. The object of this high duty is to "discourage its production." Government purchase what little is produced in Bombay, supplying through licensed dealers all that is required for home consumption.

The poppy is extensively cultivated in Malwa, in Central India, and yields a large revenue. Down to 1831, it was produced under a monopoly. But in that year the business was thrown open to the public, and the revenue collected by imposing a duty on the opium when passing through the Company's territories to Bombay. The capture of Scinde, by closing the route for the smuggling of opium through Kurachee to the Portuguese settlements of Demaun, &c., enabled a large addition to be made to the transit duty on Malwa opium, which was raised in 1847 to 400 rup. per chest, affording a revenue to government of about 6*s.* 8*d.* per lb.—(We have borrowed these authentic details from the Official Papers relative to India, pp. 73—75, published in 1853.)

No one doubts that opium is an excellent subject for taxation; and the higher the rate to which the duty on it can be raised without encouraging smuggling, so much the better. But a great deal has been said for and against the system under which the opium revenue is raised in Bengal and other parts of India; and, perhaps, it might be the better policy to open the culture of the plant to the unfettered competition of the public, imposing a high duty on the drug when grown or when exported. Without, however, entering on the discussion of this difficult question, we may shortly observe that the monopoly does not appear to have the consequences stated by Mr. Colebrooke; who tells us (*Husb. Bengal*, p. 118.), that except in a few situations that are peculiarly favourable, its culture is unprofitable; and that the peasants engage in it with reluctance, being tempted thereto only by the advances made by the government agents. But if such were the case formerly it would seem that circumstances have changed in the interval; for it appears from the official accounts that the exports of Bengal opium, which amounted to 18,827 chests of 160 lbs. each in 1840–41, had increased to 53,321 chests in 1854–55. The number of chests of Malwa opium (140 lbs. each) exported from Bombay during the same period has advanced from about 15,000 to 25,000 a year.

Consumption and Trade of Opium in China.—Opium is pretty extensively used, both as a masticatory and in smoking, in Turkey and India; but its great consumption is in China and the surrounding countries, where the habit of smoking it has become almost universal. The Chinese boil or seethe the crude opium; and by this process the impurities, resinous and gummy matter, are separated, and the remaining extract only is reserved for use. Thus prepared, the drug loses its ordinary strong and offensive aromatic odour, and has even a fragrant and agreeable perfume. A small ball of it, inserted in a large wooden pipe with some combustible matter, is lighted, and the amateur proceeds to inhale four or five whiffs, when he lies down and resigns himself to his dreams, which are said to have no inconsiderable resemblance to the sensations produced by inhaling the oxide of azote. Those who do not carry the indulgence to excess, do not, it is said, experience any bad effects from it.

It is a curious fact that both the poppy and its produce appear to have been unknown, till a comparatively recent period, to the Hindoos. And it has been conjectured, apparently on good grounds, that the plant, the method of extracting its juice, and its use, were introduced into India and China by Mohammedan traders, probably in the 9th or 10th century. And if such be really the case, the disciples of the Arabian prophet will not only be entitled to the credit, whatever it may be, of having introduced the art of distillation and the use of ardent spirits into the western world, but also of having introduced its favourite luxury into the East. At all events, it is certain that opium had been introduced into China in the early part of the 16th century; a century and a half before the English had anything whatever to do with its cultivation.—(See the tract entitled, *China and its Trade*, p. 14., by John Crawfurd, Esq., the most eminent authority to whom reference can be made in a matter of this sort.)

Nine tenths of the supplies of opium for the consumption of China have always been derived from India, a comparatively small quantity only being derived from Turkey. The trade has till recently been contraband, the introduction of the drug having been prohibited by the Chinese government. Until about 1810 the trade did not attract much attention, or become of any very great importance, but it has since been very greatly extended, and has been since 1828 of first-rate consequence. It was at first carried on at Whampoa, about 15 miles below Canton; next at Macao, whence it was driven by the exactions of the Portuguese; and thereafter in the bay of Lintin. Here the opium was kept on board ships, commonly called receiving ships, of which there

are often 10 or 12 lying together at anchor. But latterly the trade has been carried on all along the south-east coast of China, by means of the fast sailing vessels called "clippers," built expressly for the purpose, and strongly armed. The sales have been mostly effected by English and American agents, who give orders for the delivery of the opium; which, on producing the order, is handed over to the Chinese smuggler, who comes alongside at night to receive it. Frequently, however, the smuggler purchases the opium on his own account, paying for it on the spot in silver; it being a rule of the trade, never departed from, to receive the money before the drug is delivered.

During the first 10 years of the present century, the exports of opium from India to China averaged about 2,500 chests, of 149⅓ lbs. each. But after the introduction of Malwa opium into the markets of Bombay and Calcutta, the exports began rapidly to increase. We subjoin

An Account of the Quantities of the various Descriptions of Opium exported from India to all Parts in each Year from 1830-31 to 1854-55, with the Profits realised on the same.

Years.	Chests of Patna and Benares.	Chests of Malwa.	Total No. of Chests.	Total Profits.	Years.	Chests of Patna and Benares.	Chests of Malwa.	Total No. of Chests.	Total Profits.

It is necessary, however, to observe that the whole of the opium shipped from India does not go to China. That, indeed, is the destination of by far the largest portion of the exports. But it is supposed that within the last 8 or 10 years, from 8,000 to 12,000 chests of Indian opium have annually been consumed in Netherlands India, Siam, Cochin-China, and other ultra Gangetic countries ex China. In illustration of what is now stated, we subjoin

An Account of the Total Exports of Opium from India to China in each of the 4 Years ending with 1857-58.

Years.	Chests.	Value.	Years.	Chests.	Value.

Confiscation of Opium in 1839.—We have already seen (see art. CANTON) that opium has till very lately been prohibited in China, and that consequently its importation has always been looked upon as a smuggling speculation. There would seem, however, to be good grounds for thinking that the prohibition of the importation of opium was all along intended to be more apparent than real. At all events, it is certain that the trade grew gradually up, from a small beginning, to be one of great extent and value; and it is nugatory to suppose that this should have been the case, had it encountered any considerable opposition from the Chinese authorities. But the truth is, that these functionaries, instead of opposing the trade, or even merely conniving at it, were parties to its being openly carried on; and received certain regulated and large fees on all the opium that was imported. It has even been alleged that a part of these fees found its way into the Imperial treasury at Pekin, though that is more doubtful. The appetite for the drug increased with the increasing means of gratifying it; and there appeared to be no assignable limits to the quantity that might be disposed of in the empire.

The rapid extension of the trade seems at length to have drawn the attention of the court of Pekin to the subject. We doubt, however, notwithstanding what has been alleged to the contrary, whether a sense of the injurious consequences of the use of the drug had much to do in the matter. The alarm of the Chinese government was not so much about the health or morals of its subjects, as about their bullion! They are still haunted by the same visionary fears of being drained of a due supply of gold and silver, that formerly haunted the people of this country. The imports of opium having increased so rapidly as to be no longer balanced by the exports of tea and silk, sycee silver began also to be exported! The paternal government of Pekin might have tolerated what are called the demoralising effects of opium with stoical indifference, but the exportation of silver was not a thing to be endured. It is, however, only fair to state, that the Chinese statesmen were not all of the school of Mun and Gee; and that some of them appear to have taken an enlightened view of the question, and to

have emancipated themselves from the prejudices that influenced the majority of their colleagues. The statesmen in question contended, that whether the use of the drug were injurious or not, the taste for it was too deeply seated and too widely diffused to admit of its effectual prohibition; and they, therefore, proposed that its importation should be legalised, subjecting it, at the same time, to a heavy duty. There cannot be a doubt that this was the proper mode of dealing with the subject. In the end, however, the government of Pekin, influenced by unfounded theories, as to the mischievous effect of the export of the precious metals, came to a different conclusion, and resolved to put a stop to the traffic.

After this resolution had been come to, the Chinese appear to have acted with more than their usual vigour; and having proceeded to extremities, they confiscated and destroyed about 20,000 chests of opium. The reader does not require to be told that this violent conduct on the part of the Chinese led to a war with this country. This contest was terminated in 1842, when the Chinese agreed, among other things, to pay $21,000,000 towards the expenses of the war, and as an indemnity to the owners of the confiscated opium, to whom 1,250,000*l.* was ultimately awarded.

A good deal of discussion took place at the time in regard to the propriety of our conduct in compelling the Chinese to indemnify the opium holders. It was contended that as the introduction of opium into China was prohibited, the Chinese in destroying it had done nothing but what they were entitled to do, and what we should have done had we been in their place. That the only parties to blame were those who violated the law, and smuggled the opium into the empire: and that we acted unjustly, and abused our power in obtaining an indemnity for those in whose punishment we should have assisted.

But though specious, these objections are not really entitled to much weight. And though the interest in the subject be now gone by, it may be worth while to show that we had good grounds for what we did.

That the Chinese have the same right to exclude opium from their empire, that we have to prohibit the importation of beef, or ammunition, or to lay a duty on corn, does not admit of any question. But in endeavouring to suppress a trade that had been carried on under the sanction of the authorities at Canton, all of whom had largely participated in its profits, justice required that notice should have been given to the parties concerned of the intentions of government. It is necessary to bear in mind that the Chinese were in the habit of frequently issuing proclamations against the importation of opium; but as no attempt was ever made to give any real effect to these proclamations, the parties engaged in the trade were naturally led to conclude that such would always be the case. Hence the necessity for a distinct intimation being made, that the laws against the importation of opium were, in future, to be *bonâ fide* and truly carried into effect, and for fixing some period after which all parties found engaged in the trade would be subject to certain penalties. No valid objection could have been made to such a course of proceeding. The Chinese are clearly entitled to prohibit the importation of opium; but neither the Chinese nor any other nation are entitled, after having, by long connivance at and participation in a trade, induced foreigners to import a large amount of valuable property into their territories, to pounce upon and seize such property on pretence of its being contraband! The Chinese are a remarkably clever people; and it is impossible that they should not see that, in this instance, their government was guilty of gross injustice; and that it consequently rendered itself liable for the value of the property it so unwarrantably seized upon and destroyed.

Suppose the British parliament had, in 1796, passed an act prohibiting the importation of tea; and suppose, farther, that the collector of customs and other authorities in Liverpool had paid no attention whatever to this act, but that, from 1796 down to the present day, they had openly countenanced the trade; that it had rapidly increased; and that every year scores of Chinese ships laden with tea had arrived in the Mersey, safely unloaded their cargoes, and sailed either with silver or other British produce on board; what, under these circumstances, would the Chinese have said, had the British government suddenly turned round and declared, "You are engaged in an illegal trade;" and, without further intimation, have proceeded to seize and destroy all the tea belonging to them in England? Would not the Chinese, the Russians, French, and, in short, the whole world, have declared such an act to be flagrantly unjust? And would not every honest man in England have said that the Chinese had been swindled; and that the government of China did not deserve to be treated with ordinary respect, if it did not endeavour to procure redress for its subjects.

Now, this was precisely the case of England against the Chinese. The morality or immorality of the opium trade was wholly beside the question. Though the use of opium were ten times more injurious than has ever been represented, that would not alter the fact that the trade in it had been openly countenanced by the Chinese authorities for a period of more than forty years; and such being the case, foreigners were certainly entitled to infer that that countenance would not suddenly be withdrawn: and that, at all events, their property would be respected. This, in fact, is not a question about which there is any real room for doubt or difference of opinion. The conduct of the Chinese was most unwarrantable; and the government of this country had not only a well-founded claim for redress, but was called upon to enforce it by a just regard for the national honour and the interests of the British subjects, whose rights had been so outrageously violated at Canton.

But we may further observe, in reference to this matter, that though it be laid down by all writers on public law, that it depends wholly on the will of a nation to carry on commerce with another, or not to carry it on, and to regulate the manner in which it shall be carried on, (*Vattel*, book i. § 8.), we incline to think that this rule must be interpreted as applying only to such commercial states as recognise the general principles of public or international law. If a *state* possessed of a rich and extensive territory and abounding with products suited for the use and accommodation of the people of other countries, insulates itself by its institutions, and adopts a system of policy that is plainly inconsistent with the interests of every other nation, it appears to us that such nation may be justly compelled to adopt a course of policy more consistent with the general well-being of mankind. No doubt, the right of interference, in cases of this sort, is one that should be exercised with extreme caution, and requires strong grounds for its vindication. But that this right does exist, seems sufficiently clear. We admit that a slight degree of inconvenience, experienced from one nation refusing to enter into commercial transactions with another, or from its insisting that these transactions should be carried on in a troublesome and vexatious manner, would not warrant any interference with its internal affairs; but this, like all other questions of the same kind, is one of degree. Should the inconvenience resulting from such anti-social vexatious conduct become very oppressive on others, the parties so oppressed would have as good a right to interfere to enforce a change of conduct, as if the state that has adopted this anti-social offensive policy had openly attacked their territory or their citizens. A state has a *perfect* right to enact such rules and regulations for its internal government and the conduct of its trade as it pleases, provided they do not exercise any very injurious influence over others. But should such be the case — should the domestic or commercial policy of any particular state involve principles or regulations that trench on the rights or seriously injure the interest of other parties, none can doubt that these others

have a right to complain; and, if the injury be of a grave character, and redress be not obtained on complaint being made, — no reasonable doubt can be entertained that the aggrieved party is justified in resorting to force.

These principles appear to apply with peculiar force in the case of China. Tea, a peculiar product of that country, has become a necessary of life in England; and no one can doubt that a most serious injury would be inflicted on the people of Britain, were any considerable impediment thrown in the way of its importation; and as the arbitrary policy of the Chinese government, which is not influenced by the maxims, and is regardless of the forms, that prevail among civilised states, has on various occasions interrupted this trade, and constantly exposed it to great dangers, it certainly appears that this was a case for forcible intervention — *dignus vindice nodus*, — and that we were entitled to demand that the trade should be placed on a solid footing, that the import and export duties should be rendered intelligible and moderate, and that an end should be put to the extortion and interference of the Chinese authorities. And these desirable results appear to be secured by the treaty of 1858.

The prohibition against the importation of opium into China was not suppressed as it should have been by the treaty of 1842. But since that period the trade has been openly carried on at most places along the coast, and has met with little or no interruption. Since 1841–42, the imports into China have a good deal more than doubled. And, as already seen, the trade has attained to a magnitude that a few years ago the most sanguine would hardly have anticipated.

Repeal of the Prohibition. — Under the circumstances stated above, combined with the increasing cultivation of the drug in China, the continuance of the prohibition was out of the question. Its repeal was assented to by the Chinese in 1858; and among the trade regulations subjoined to the treaty of that year, is one legalising the importation of opium at a duty of 30 taels the picul. It may, however, be doubted whether this duty be not too high to stop the smuggling of the drug; but if so its reduction will be an easy matter.

Alleged injurious Influence of Opium. — The objections that have been made to the trade in opium, because of its supposed injurious influence over those by whom it is used, do not seem to be entitled to much weight. There are no good grounds for thinking that it is at all worse than brandy, gin, wine, or other stimulants. All of them are mischievous, as are most things, when taken in excess, but not otherwise. We do not anathematise the growers of barley, or distillers, or the importers of wines or spirits, and why should we adopt a different course in dealing with the cultivators and sellers of opium? Sir Benjamin Brodie, P.R.S., than whom there can be no higher authority, contends that the use of opium is not so injurious as indulgence in spirits. "The effect of opium," says he, "when taken into the stomach, is not to stimulate, but to soothe the nervous system. It may be otherwise in some instances, but these are exceptions to the general rule. The opium-taker is in a passive state, satisfied with his own dreamy condition, while under the influence of the drug. He is useless, but not mischievous. It is quite otherwise with alcoholic liquors. When Bishop and his partners murdered the Italian boy that they might sell his body, it appeared in evidence that they prepared themselves by a plentiful libation of gin. The same course is pursued by housebreakers and others who engage in desperate criminal undertakings. It is worthy of notice, also, that opium is much less destructive to the understanding than gin or brandy. Many opium-takers live to a great age, while dram drinking induces diseases of the liver, with their attendant bodily suffering, ill-temper, wretchedness, and premature death."—(*Physiological Inquiries.*)

It would be useless or worse to attempt to add anything to this conclusive statement. It disposes satisfactorily of the moral part of this question.

Opium as a Source of Revenue. — It is not easy to imagine a more unexceptionable source of revenue than the tax laid by the government of India on opium when exported. It is no part of their duty to look beyond the interests of their own subjects; but it is evident that in raising the duty on opium to the point at which it will yield the greatest amount of revenue, they are consulting, at one and the same time, the best interests of their own people and those of the Chinese. A large amount of revenue is produced for the service of the former by a tax laid on an article consumed by the latter. But as the abuse of opium, which, like the abuse of spirits, would be highly prejudicial, is checked and in part prevented by the duty, it is plain that the well-being, as well of the buyers as the sellers of the drug is promoted by its imposition. The tax is in truth one of the very best that has ever been imposed; and its productiveness is not one of the least of its good qualities. Of the entire nett revenue of India, amounting in 1855–56 to 22,147,347*l.*, no less than 3,714,358*l.* was derived from opium, that is, from a tax paid by the Chinese.

OPOBALSAM. See Balsam.

OPOPONAX (Ger. *Opoponax*; Fr. *Opopanax*; It. *Opoponasso*; Sp. *Opoponaca*; Arab. *Jawesheer*), a gum-resin obtained from the *Pastinaca Opoponax*, a species of parsnip.

It is a native of the south of Europe, and Asia Minor. The stem rises to the height of 4 or 5 feet, with a thick branched yellow-coloured root. The roots being wounded, a milky juice flows from them, which, being dried in the sun, is the opoponax of the shops. It is in lumps of a reddish yellow colour

and white within. Smell peculiar. Taste bitter and acrid. Specific gravity 1·622. It is imported from Turkey. Being used only to a small extent in medicine, the consumption is inconsiderable.—(*Thomson's Chemistry; Ainslie's Mat. Indica.*)

OPORTO, or PORTO, a large city and sea-port of Portugal, on the north bank of the Douro, about 2 miles from its mouth, lat. 41° 10′ 30″ N. lon. 80° 37′ 18″ W. It is a beautifully situated, well-built city; and is supposed to contain, including the suburbs of Villanova and Gaya, on the opposite bank of the river, about 80,000 inhabs.

Harbour.—The harbour of Oporto is a bar harbour, and can only be entered, at least by vessels of considerable burden, at high water; and it is seldom at any time practicable for vessels drawing more than 16 feet. On the north side of the entrance is the castle of St. Joao de Foz, whence a ledge of rocks, some of which are at all times above water, extends in a south-west direction. The outermost of these rocks, named Figueira, which is always visible, is left on the left or larboard side on entering. Cabedelo Point, forming the southern extremity of the entrance, is low and sandy. The bar being liable, from the action of the tides, and of sudden swellings or *freshes* in the river, to perpetual alterations, it is exceedingly dangerous for any vessel to attempt crossing it without a pilot. Pilots are always on the alert, and ready to offer their services when a vessel comes in sight, unless the weather be so bad that they cannot go off. On some few occasions of this sort, vessels have been detained for 3 weeks off the port, without having an opportunity of entering. The chapel of St. Catherine in a line with that of St. Michal leads over the bar. The ordinary rise of spring tides is from 10 to 12 feet, and of neaps from 6 to 8 feet. A light-house with a revolving light having the lantern 220 feet above the level of the sea, is erected on rising ground about 600 yards N.N.W. of St. Joao de Foz.

The swellings of the river, or *freshes*, as they are called, most commonly occur in spring, and are caused by heavy rains, and by the melting of the snow on the mountains. The rise of water at such times is frequently as much as 40 feet; and the rapidity and force of the current are so very great, that no dependence can be placed on anchors in the stream. Fortunately a *fresh* never occurs without previous warning; and it is then the practice to moor with a cable made fast to trees, or stone pillars erected on the shore for that purpose.—(For further information as to the harbour of Oporto, see *Purday's Sailing Directions for the Bay of Biscay.*)

Trade.—Oporto is the emporium of a large portion of the kingdom of Portugal and enjoys a pretty considerable foreign commerce. The well-known red wine, denominated Port, from its being exclusively shipped at this city, forms by far the largest article of export. The exports vary in different years, from about 30,000 to above 55,000 pipes. England is much the largest consumer of port. The high discriminating duties on French wine, originally introduced port into the British markets, and gave it a preference to which, though an excellent wine, it had no just title: this preference first generated, and its long continuance has since so confirmed, the taste for port among the great bulk of the population, that it bids fair to maintain its ascendancy as an after-dinner wine, notwithstanding the equalisation of the duties. At an average of the 7 years ending with 1858, there were shipped from Oporto for England 27,294 pipes a year. Next to England, Brazil, Russia, and the north of Europe are the principal consumers of port; but it appears, from the subjoined account, that the total exports to them do not amount to a half of those sent to England. The other exports are oil, oranges and other fruits, wool, refined sugar, cream of tartar, shumac, leather, cork, &c. The imports are corn, rice, beef, salt fish, and other articles of provision; sugar, coffee, &c. from Brazil; cotton and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals, from the Baltic, &c.

Besides the British manufactured goods imported into Portugal for the use of the natives, a considerable quantity is destined for the consumption of Spain; being smuggled into that country through Braganza and other towns on the frontier.

Money, Weights, and Measures same as those of Lisbon; which see.

We subjoin

An Account of the Export of Port Wine from Oporto from 1852 to 1858, inclusive.

Years.	To United Kingdom.	To Continent of Europe.	To Countries out of Europe.	Totals.
1852	19,219	1,555	10,725	31,499
1853	46,855	2,887	6,089	55,811
1854	33,831	2,049	3,372	39,252
1855	26,755	2,696	4,935	34,386
1856	29,216	3,242	9,163	41,621
1857	23,614	1,919	3,203	28,736
1858	11,592	954	4,144	16,690
Total pipes	191,062	15,302	41,631	247,995
Annual average	27,294	2,186	5,947	35,428

The vintages in the Upper Douro fluctuate very greatly, but previously to the breaking out of the *oïdium* or vine disease, in 1853, they might at an average be taken at from 70,000 to 80,000 pipes, of which, about 33,000 were exported. The production and exportation of wine would, however, have been much greater but for the policy adopted by the Oporto Wine Company, to which government conceded a monopoly of the trade. They divided all wine produced on the Douro into 3 qualities, viz., 1st, 2d, 3d, and refuse. But the merchants engaged in the wine trade affirmed that the distinction between the 1st and 2nd qualities was quite imaginary; and that they were, in fact, "precisely the same."—(*Report of Commons Com. on Wine Duties*, 1852, part i. p. 65.) Delusive though it were, the classification was not, however, without an object. No wine, other than the 1st quality, was allowed to be shipped for any port in Europe, and it was charged on being exported with a duty of 3*l.* 10*s.* a pipe; whereas, what is called the 2nd quality, though it were really as good as the 1st, was only charged on being shipped for America, or any country out of Europe, with a nominal duty of 6*d.* a pipe. This extraordinary regulation, besides being injurious to the Portuguese, was offensive and unjust to others, and especially to us who are the great consumers of port. It had not, however, all the success which its contrivers anticipated; for it led to an indirect importation of port wine from the U. States, which would, no doubt, have continued till the duties on the wines shipped from Oporto had been equalised or abolished.

The British government did not fail strongly to remonstrate against this system, which, indeed, was in direct contradiction to the engagements in our treaties with Portugal. And in the end the Portuguese authorities appear to have become satisfied that by raising the cost of their wines, limiting their consumption, and making others be substituted in their stead, the system was a great deal more injurious to themselves than to any one else.

In consequence a decree was issued on the 13th of October, 1852, which has effected some very important reforms. Instead, for example, of being divided into 1st, 2nd and 3d qualities, wine is henceforth to be divided into wine fit and unfit for exportation. The latter is to be retained in the country either for home consumption or conversion into brandy, while the former, or the wine fit for exportation, may be sent to all parts of the world, on paying a reasonable duty of about 14*s.* a pipe. The Douro Wine Company has, also, been abolished, and other changes effected.

These are great improvements. Still, however, the trade is far from being free. Power is given to a "Regulating Commission" to say how much wine should be exported, so as to prevent a glut of the foreign markets! It would be but an equivocal compliment to the intelligence of the reader were we to dwell on the folly of such a regulation. Neither can there be any legitimate excuse for prohibiting the export of inferior wine. It would either be bought, under a free system, by the foreigner, or it would not. If it would not be bought, the prohibition is superfluous, and if it would be bought, then it is mischievous, and hinders the Portuguese from sending an important product to the best market. On the whole, however, a great change for the better has been effected, and it will most likely pave the way for others.

Sometimes wine is purchased from the farmer in the wine country. In this case, the casks are sent about 60 miles up the river, in boats, to be filled. Owing to the miserable state of the roads, the expense of carriage is very considerable; the cartage from and to the river side frequently costing from 1*l.* to 2*l.* per pipe. The freight from the upper country down the river to Oporto is about equal to that from the latter to England. There is also an internal duty on all wine brought down the river. Inasmuch, however, as these charges are perpetually varying, it is not possible to lay before the reader any *pro formâ* account of the cost of wine bought in the Upper Douro.

The *oïdium* or disease, which has attacked the vines here and elsewhere, first appeared in Portugal in 1853, and has continued more or less every year since. It has greatly diminished the production, as is evident from the following statement of the returns made to the government of the amount of each vintage from 1852 to 1858 inclusive, within the factory district. And this return is larger than the actual quantity; for, the wine within the factory limits being the most valuable, the farmers make their returns as large as possible.

Abstract of the Returns made to Government of the Quantities and Qualities of each Vintage from 1852 to 1858 inclusive.

Years.	Wines exportable.	Wines not exportable.	Total.	Years.	Wines exportable.	Wines not exportable.	Total.
	Pipes.	*Pipes.*	*Pipes.*		*Pipes.*	*Pipes.*	*Pipes.*
1852	35,833	56,217	92,050	1856	11,498	3,126	14,624
1853	49,742	20,982	70,724	1857	15,392	2,079	17,471
1854	35,190	12,058	47,248	1858	25,082	16,134	41,216
1855	13,945	10,829	24,774				

It is difficult to say whether the wine disease be or be not really diminishing. There can, indeed, be no doubt that the application of sulphur has given it a decided check. But this is an expensive remedy; and unless it be judiciously applied, it is apt to spoil the wine. (We have been indebted for most part of these details to the highest mercantile authority connected with Oporto.)

ORANGES (Ger. *Pomeranzen;* Du. *Orangen;* Fr. *Oranges;* It. *Melarance;* Sp. *Naranjas;* Rus. *Pomeranezü*; Hind. *Narunge;* Malay, *Simao-manis*), the fruit of the orange tree. The common or sweet orange (*Citrus sinensis* or *Citrus nobilis*), and the Seville, or bitter orange (*Citrus aurantium*), are natives of China: and the Portuguese are entitled to the honour of having transferred the plant to other countries. Particular species of *Citrus* seem to be indigenous to various Eastern countries; but the birth-place of the proper orange may be distinctly traced to China. It is now to be found in our green-houses. Oranges are imported in chests and boxes, packed separately in paper. The best come from the Azores and Spain; very good ones are also brought from Portugal, Italy, Malta, and other places.

The orange trade carried on by this country is of considerable value and importance. Oranges are not much more expensive than most of our superior domestic fruits, while they are, perhaps, the most refreshing and wholesome of those of warmer climates. The entries for home consumption amounted, at an average of the years 1850 and 1851, to 359,142 boxes a-year. The duty produced, at an average of the above years, 73,246*l.* a-year. The number of persons employed in the importation and sale of oranges must be very considerable. The duty was reduced in 1853, from about 2*s.* 8*d.* to 8*d.* the bushel. But the policy of charging any duty on oranges seems questionable. They are very apt to spoil; and as no abatement is made from the duty on account of damage, its influence on their price is more considerable than might at first be supposed. In 1857 no fewer than 917,797 bush. of oranges and lemons were entered for consumption.

ORCHILLA WEED, ORCHELLA, OR ARCHIL (Ger. *Orseille;* Fr. *Orseille;* It. *Oricello, Orcella;* Sp. *Orchilla*), a whitish lichen (*Lichen orcella*) found in the Isle of Portland; but that which is used is imported from the Canary and Cape de Verd Islands, Madeira, Barbary, and the Levant. From it is obtained the archil, or orchal, of commerce, which yields a rich purple tincture, fugitive, indeed, but extremely beautiful. The preparation of orchilla was long a secret, known only to the Florentines and Hollanders; but it is now extensively manufactured in this country. Orchil is generally sold in the form of cake, but sometimes in that of moist pulp; it is extensively used by dyers; and in times of scarcity the weed or lichen has sold as high as 1,000*l.* per ton!—(*Thomson's Dispensatory.*) At present (July 1843) Madeira orchilla fetches, in

the London market, 75*l.* a ton; but orchilla from the Canary Islands fetches a higher, and that from Barbary a much lower price. The entries for consumption amounted, at an average of the 3 years ending with 1842, to 6,050 cwt. 3 qrs. 10 lbs. The duty, which had been 3*s.* a cwt., was reduced in 1842 to 1*s.* a cwt., and was wholly repealed in 1846. In 1857 the imports amounted to 25,012 cwt. and the exports to 5,690 do.

ORGOL. See ARGOL.

ORPIMENT (Ger. *Operment*; Fr. *Orpiment*; It. *Orpimento*; Sp. *Oropimente*; Lat. *Auripigmentum*), the name usually given to sulphuret of arsenic.

When artificially prepared, it is in the form of a fine yellow-coloured powder; but it is found native in many parts of the world, particularly in Bohemia, Turkey, China, and Ava. It is exported from the last two in considerable quantities; and is known in the East by the name of hartal. Native orpiment is composed of thin plates of a lively gold colour, intermixed with pieces of a vermilion red, of a shattery foliaceous texture, flexible, soft to the touch like talc, and sparkling when broken. Specific gravity 3·45. The inferior kinds are of a dead yellow, inclining to green, and want the bright appearance of the best specimens. Its principal use is as a colouring drug among painters, bookbinders, &c.—(*Thomson's Chemistry*; *Milburn's Orient. Com.*)

OSTRICH FEATHERS, (Lat. *Plumæ Struthionis*; Fr. *Plumes d'Autruche*), the feathers of the ostrich, but more especially the long feathers of the wings and tail. These feathers have been highly prized from the remotest antiquity; and have been employed, either singly, or intermixed with others, (those of the swan, heron, peacock, &c.), to heighten the magnificence of processions, the splendour of warriors, and the beauty of the fair.

The ostrich, as every one knows, is chiefly found in the sandy deserts of Arabia and Africa. Dr. Livingston in his travels into the interior of the latter, recently published, says that, "notwithstanding the difficulty of their capture, the quantity of feathers collected annually shows that the numbers slain must be considerable, as each bird has only a few in the wings and tail. The male bird is of a jet-black glossy colour, with the single exception of the white feathers, which are objects of trade. Nothing can be finer than the adaptation of these glossy feathers for the climate of the Kalahari, where these birds abound; for they afford a perfect shade to the body, with free ventilation beneath them. The hen-ostrich is of a dark brownish-grey colour, and so are the half-grown cocks." (p. 155.)

The emu, or cassowary, a variety of the ostrich, is a native of Malacca, the Islands of the Asiatic Archipelago, and Australia. There is, also, a variety of the ostrich in S. America. But the feathers of these varieties have hardly as yet become articles of commerce; and are very inferior to those of the Arabian and African ostriches.

One of the earliest as well as the most celebrated notices of ostrich feathers in modern times refers to those which adorned the helmet of the king of Bohemia, who fell at Cressy in 1346. These, with the motto, *Ich dien* (I serve), having been assumed by the Black Prince, whose gallantry greatly contributed to the success of the English, have since formed the insignia of the Princes of Wales, and have been borne by them on state occasions. Henry VIII. is represented with an ostrich plume in his velvet cap, in a portrait by Holbein; and a portrait of his contemporary Francis I. is similarly decorated. In more recent times, these feathers, or substitutes for them, have been, and continue to be, used in the bonnets of the Scottish Highland regiments. At present they are extensively used in the decoration of ladies' bonnets and head-dresses; in children's hats, in artificial flower-making; funeral plumes; military plumes, and in various kinds of fancy trimmings and ornaments.

"Leghorn, after the decline of its commerce with the Levant, remained the great entrepôt of ostrich feathers, and did business in that article to the amount of about 1,200,000 francs annually. But since the establishment of steam navigation, London has gradually become the principal centre of that branch of trade, and Leghorn now only does business to about half the preceding amount: a part of the diminution is, however, owing to the decline which has taken place in prices. Seven-eighths of the ostrich feathers which Leghorn receives come from Egypt, and the rest from Tripoli and Aleppo."—(*Annales du Commerce Extérieur.*) The Cape of Good Hope supplies the most valuable feathers, chiefly on account of their *white* colour. *Black* feathers come principally from Mogadore and Aleppo. A good black feather comes from the Cape, but in small quantities. White and grey feathers may be dyed to suit the prevailing taste; but black feathers are always dyed to a darker shade before they are made into plumes by the manufacturer. It is estimated that, at present prices, the value of the annual consumption of the rough undressed article may amount to from 30,000*l.* to 35,000*l.*; of which a half may come from the Cape, 1-4th part from Mogadore, and the remaining 1-4th from Egypt and Aleppo, by way of France.

In the estimation of the value of ostrich feathers, dealers as a rule consider the *whitest* and most perfect to be the best. The best *whites* vary from 15*l.* to 30*l.* per pound avoirdupois, and the whites of all qualities mixed together, from 10*l.* to 17*l.* per lb. *Blacks* vary from 15*s.* to 5*l.* per lb., according to their length and quality, the longest being the most valuable. The ostrich feather is esteemed of the greatest value of all other feathers, if we except the Marabouts or feathers from the White Paddy bird, which are worth from 25*s.* to 5*l.* per ounce.

In this trade, which is carried on chiefly in London and the neighbourhood, there are about 60 persons engaged in business on their own account, who employ as workers and assistants between 350 and 400 others, chiefly women and young girls. The value of the produce may probably amount to 150,000*l.* a-year, or thereby.

The French have for many years past obtained supplies of Cape feathers and Marabouts from London, and they often purchase Mogadore feathers in the same market. They export to most of the cities in Europe both the manufactured and undressed article.

The fashion of wearing feathers in bonnets and hats, by women and children, perhaps never prevailed to so great an extent as at present (1859), and interferes very seriously with the ribbon trade. The dressing and preparation of these feathers give employment to vast numbers of women and girls, both in France and England. The feathers of many of our native birds, as well as of domestic poultry, are employed for that purpose. And here, as in the case of the ostrich, the white feathers are greatly superior in value, from their being capable of being dyed of different colours. Such is the existing demand

for the plumage of the white dunghill cock, that persons in the fancy feather trade in Paris keep large numbers of these birds, for the revolting but profitable object of yearly plucking them.

The imports in 1857 were entered at the custom-house for value, as under.

		lbs.	£					
Dressed ostrich feathers from France		85	value	858				
Ditto ditto other parts		2	—	24				
				882	duty 5s. per lb.

Free.

But the quantities imported this year and the prices were greatly above their ordinary level. [We are indebted for this curious and valuable article to our friend Robert Slater, Esq., of the house of Morrison, Dillon and Co., Fore Street.]

OWNERS OF SHIPS. Property in ships is acquired, like other personal property, by fabricating them, or by inheritance, purchase, &c.

No ship is entitled to any of the privileges of a British ship until she be duly registered as such, and all the provisions connected therewith, embodied in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104., be complied with.—(See REGISTRY.)

A British ship may belong either to one individual, or to several individuals. It is ordered by the act just cited, that the property of every vessel of which there are more owners than one, shall be divided into 64th shares; that no person shall be entitled to be registered as an owner who does not, at least, hold one 64th share; but that any number of persons not exceeding five may be registered as joint owners of a share. It is further provided by the same statute, that not more than *thirty-two* persons shall be owners of any one ship at any one time. Companies or associations may hold property in ships on a special declaration in regard to the ownership of such body being made by their secretary or other authorised functionary in the terms prescribed by the statute.

Neither the property of an entire ship, nor any share or shares in such ship, can be transferred from one individual to another, except by bill of sale or other instrument in writing; and before the sale is valid, such bill or instrument must be produced to the registrar of the port at which the ship is registered, who is to enter the names, residences, &c. of the seller and buyer, the number of shares sold, &c. in the book of registry of such vessel, and to indorse the particulars on the bill of sale.—(See §§ 57 & 58 of statute, art. REGISTRY.)

But, though compliance with the directions in the statute accomplishes a complete transference of the property, when the transaction is not in its nature illegal, it gives no sort of security to a transference that is otherwise bad. The purchaser should in all cases endeavour to get *possession* of the ship, or of his share in her, as soon as his title to her or it is acquired, by the registration of the particulars of the bill of sale; for though all the formalities of sale have been completed, yet, if the sellers continue as apparent owners in possession of the ship, their creditors may in the event of their becoming bankrupt, acquire a right to it, to the exclusion of the purchasers. In the case of a sale or agreement for a part only, it is enough if, the sale being completed, the seller ceases to act as a part owner.—(*Lord Tenterden on the Law of Shipping*, part i. c. 1.)

Property in ships is sometimes acquired by capture. During war, his Majesty's ships, and private ships having letters of marque, are entitled to make prizes. But before the captors acquire a legal title to such prizes, they must be condemned in the admiralty or other court constituted for that purpose. When this is done, the captors are considered to be in the same situation, with respect to them, as if they had built or purchased them.

No person having the mortgage of a ship, or a share of a ship, made over to him as a security for a debt, shall be deemed an owner, or part owner, of such ship. And when such mortgage has been duly registered according to the provisions of the act, the right and interest of the mortgagee are not to be affected by the bankruptcy of the mortgagor, though he be the reputed owner, or part owner, of such ship.—(See §§ 70—72 of statute, art. REGISTRY.)

In the article MASTERS OF SHIPS is given an account of the liabilities incurred by the owners of ships for the acts of the masters. But it has been attempted to encourage navigation by limiting the responsibility of the owners, without, however, depriving the freighter of a ship of an adequate security for the faithful performance of the contract. To effect this desirable object, it has been enacted, that the owner or owners shall not be liable to make good any loss or damage happening *without their fault or privity*, to any goods put on board any ship or vessel belonging to such owner or owners, further than the value of such ship or vessel, with all its appurtenances, and the freight due, or growing due, during the voyage that may be in prosecution, or

contracted for, at the time when the loss or damage has taken place.—(17 & 18 Vict. c. 104. § 504.)

This limitation was first introduced into our law by the 7 Geo. 2. c. 15. But it had previously been adopted in the law of Holland, and in the justly celebrated French Ordinance of 1681. In the Ordinance of Rotterdam, issued in 1721, it is expressly declared, that "the owners shall not be answerable for any act of the master, done without their order, any further than their part of the ship amounts to." Independently, however, of this general agreement, the expediency of the limitation appears, for the reasons already stated, sufficiently obvious.

It was also enacted in 1786 (26 Geo. 3. c. 60.), that neither the master nor owners of any ship or vessel shall be liable to answer for or make good any gold or silver, diamonds, watches, jewels, or precious stones, lost or embezzled during the course of the voyage, unless the shipper thereof insert in his bill of lading, or declare in writing to the master or owners, the true nature, quality, and value of such articles. This restriction is embodied in the Mercantile Shipping Act (§ 503.); with the further condition that the owners shall not be liable for any damage done to goods on board by fire. We subjoin the clauses in the statute having reference to the liability of the owners.

Owner not liable in respect of certain Articles.—No owner of any sea-going ship or share therein shall be liable to make good any loss or damage that may happen without his actual fault or privity of or to any of the following things, viz.:

(1.) Of or to any goods, merchandise, or other things whatsoever taken in or put on board any such ship, by reason of any fire happening on board such ship.

(2.) Of or to any gold, silver, diamonds, watches, jewels, or precious stones taken in or put on board any such ship, by reason of any robbery, embezzlement, making away with or secreting thereof, unless the owner or shipper thereof has, at the time of shipping the same, inserted in his bills of lading or otherwise declared in writing to the master or owner of such ship the true nature and value of such articles,

to any extent whatever.—§ 503.

Measure of Owner's Liability.—No owner of any sea-going ship or share therein shall, in cases where all or any of the following events occur without his actual fault or privity, viz.:

(1.) Where any loss of life or personal injury is caused to any person being carried in such ship;

(2.) Where any damage or loss is caused to any goods, merchandise, or other things whatsoever on board any such ship;

(3.) Where any loss of life or personal injury is by reason of the improper navigation of such sea-going ship as aforesaid caused to any person carried in any other ship or boat;

(4.) Where any loss or damage is by reason of any such improper navigation of such sea-going ship as aforesaid caused to any other ship or boat or to any goods, merchandise, or other things whatsoever, on board any other ship or boat;

be answerable in damages to an extent beyond the value of his ship and the freight due or to grow due in respect of such ship during the voyage which at the time of the happening of any such events as aforesaid is in prosecution or contracted for, subject to the following proviso, (viz.) that in no case where any such liability as aforesaid is incurred in respect of loss of life or personal injury to any passenger, shall the value of any such ship and the freight thereof be taken to be less than 15*l.* per registered ton.—§ 504.

Value of Carriage of Goods and Passage Money to be considered as Freight.—For the purposes of this act, the freight shall be deemed to include the value of the carriage of any goods or merchandise belonging to the owners of the ship, passage money, and also the hire due or to grow due under or by virtue of any contract, except only such hire, in the case of a ship hired for time, as may not begin to be earned until the expiration of six months after such loss or damage.—§ 505.

Provision for separate Losses.—The owner of every sea-going ship or share therein shall be liable in respect of every such loss of life, personal injury, loss of or damage to goods as aforesaid arising on distinct occasions to the same extent as if no other loss, injury, or damage had arisen.—§ 506.

When several freighters sustain losses exceeding in the whole the value of the ship and freight, they are to receive compensation thereout in proportion to their respective losses; and any one freighter, on behalf of himself and the other freighters, or any part owner, on behalf of himself and the other part owners, may file a bill in a court of equity for the discovery of the total amount of the losses, and of the value of the ship, and for an equal distribution and payment. If the bill be filed by or on behalf of the part owners, the plaintiff must make affidavit that he does not collude with the defendants, and must offer to pay the value of the ship and freight, as the court shall direct.

It is usual in most countries, where the part owners of a ship disagree as to her employment, to give those possessed of the greater number of shares power to bind the whole. But in this country, while the majority of the owners in value have authority to employ the ship as they please, the interests of the minority are secured from being prejudiced by having their property engaged in an adventure of which they disapprove. For this purpose the Court of Admiralty has been in the practice of taking a stipulation from those who desire to send the ship on a voyage, in a sum equal to the value of the shares of those who object to it, either to bring back and restore to them the ship, or to pay them the value of their shares. When this is done, the dissentient part owners bear no portion of the expense of the outfit, and are not entitled to a share in the profits of the voyage; the ship sails wholly at the charge and risk, and for the profit, of the others.—(*Abbott*, part. i. c. 3.)

For the statutory enactments as to the sale and transfer of ships, see REGISTRY.

OYSTER (*Ostrea edulis*). OYSTERS (Lat. *Ostreæ*; Fr. *Huîtres*), a well-known and highly valued shell-fish found in great abundance and in the greatest perfection in many places along our shores. In antiquity, as in modern times, the oysters of Britain were held in the highest estimation. Juvenal, in illustration of the fastidious taste of the Roman epicures, says:

"Circæis nata forent, an
Lucrinum ad saxum, Rutupinove * edita fundo
Ostrea, callebat primo deprendere morsu." — *Sat.* IV. 140.

Oysters differ in size and quality according to the different nature of the grounds or beds on which they are found. They are particularly abundant in the creeks and rivers of Essex and Kent, and in various parts along the S. coast and the coast of Wales. Ireland is, also, well supplied with oysters; those of Carlingford being the greatest favourites. The beds in the Frith of Forth, adjacent to Edinburgh, are very valuable. And those of the Channel Islands, especially Jersey, furnish large supplies.

Oysters are not always carried direct from the places where they are found to market, but are frequently conveyed to artificial beds, where they are fattened, and where their flavour is said to be improved. This sort of industry has been long practised by the traders who supply the London market. The small, ovate, deep-shelled oysters, called *natives*, which are here most esteemed, are all brought from artificial beds at

* Richborough in Kent.

Whitstable, Rochester, Milton, Colchester, Burnham, &c.; those from Burnham being reckoned the best. Inasmuch as the oyster does not breed freely, and often not at all on these beds, they would require, even though they were not dredged, constant re stocking.

The consumption of oysters in London is immense; for, notwithstanding their high price, they are largely consumed by the middle and lower classes. It has been variously estimated, but may, perhaps, annually amount to from 25,000 to 30,000 bushels of natives, and to 100.000 bushels of other varieties. The consumption of oysters in Edinburgh and Leith has been e timated at 7,350 a day. The export of oysters from Jersey amounted, at an average of the 4 years ending with 1822, to 208,023 bushels a year: of these a large portion comes to London.

Oysters are very abundant on many parts of the shores of the U. States; and their consumption in New York and other great cities is very large, though some of the statements that have been put forth with respect to it appear to be extremely exaggerated. Baltimore is the grand seat of the American oyster trade. Supplies of oysters are sent from the feeding grounds and beds belonging to that city to most parts of the Union.—(For farther information with respect to this curious and interesting subject, see the excellent article on the oyster in the work of Forbes and Hanley on *British Mollusca*, ii. pp. 305—329; *Eyton on the Oyster, passim; Pennant's British Zoology, &c.*)

The disposition of the English and French, as of all other fishermen, to encroach, in pursuing their business, on the grounds belonging to the others, gave rise to many disputes and collisions. To terminate these a Convention was agreed to in 1839, by which commissioners were appointed to ascertain and fix the limits of the fishing grounds belonging to each nation. These, which were laid down in a chart affixed to the award of the commissioners, were fixed, speaking generally, at 3 miles distance from low water mark along the shores of both countries; and the fishing boats of either were prohibited from coming within these limits of the coasts of the other, except from stress of weather, the influence of the tides, or other specified cause. The regulations laid down by the commissioners were carried into effect by the act 6 & 7 Vict. c. 79. to which they are appended; and it farther provided that the oyster fisheries should open on the 1st of September and close on the 30th April. It has since been enacted by the 18 & 19 Vict. c. 101. that all oysters and dredges found on board fishing vessels between the 1st May and the 31st August may be seized, and that oysters landed between the above dates may also be seized. The execution of the act is committed to the officers of the coast-guard and customs.

The stealing of oysters, or oyster brood, from any oyster bed, laying, or fishery, is larceny; and the offender, being convicted thereof, shall be punished accordingly; and if any person shall unlawfully and wilfully use any dredge, net, &c. for the purpose of taking oysters, or oyster brood, within the limits of any oyster bed or fishery, every such person shall be deemed guilty of a misdemeanour, and, upon being convicted thereof, shall be punished by fine or imprisonment, or both, as the court may award; such fine not to exceed 20*l*., and such imprisonment not to exceed 3 calendar months. It is provided, that nothing in the act shall be construed as preventing any one from catching *floating fish* within the limits of any oyster fishery, with any net, instrument, or engine adapted to the catching of such fish.—(7 & 8 *Geo.* 4. c. 29. § 36.)

P.

PACKAGE, SCAVAGE, BAILLAGE, AND PORTAGE, were duties charged in the port of London on the goods imported and exported by aliens, or by denizens being the sons of aliens.

During the dark ages, it was usual to lay higher duties upon goods imported or exported by aliens, whether in British or foreign ships, than were laid on similar goods when imported or exported by natives. But according as sounder and more enlarged principles prevailed, this illiberal distinction was gradually modified, and was at length wholly abolished, in so far at least as it was of a public character, by the 24 Geo. 3. c. 16. This act, after reciting that "the several duties and restrictions imposed by various acts of parliament upon merchandise are, by the alterations of the trade now carried on between this kingdom and foreign states, in some cases become an unnecessary burden upon commerce, without producing any real advantage to the public revenue, and that it is expedient they should no longer continue," enacts, that the duty commonly called "the petty customs," imposed by the 12 Car. 2., and all other additional duties imposed by any act upon the goods of aliens above those payable by natural-born subjects, should be no longer payable. The act then goes on to provide, that nothing contained in it shall "alter the duties due and payable upon goods imported into or exported from this kingdom in any *foreign* ship, nor the duties of *package* and *scavage*, or any duties granted by charter to the city of London;" and then follow provisions to prevent the city being defrauded of such duties by false entries of aliens' goods in the name of a British subject.—(*Chitty's Commercial Law*, vol. i. p. 160.)

The duties thus preserved to the city were not very heavy; but the principle on which they were imposed was exceedingly objectionable, and their collection was attended with a great deal of trouble and inconvenience. Not being levied in other places, they operated to the prejudice of the trade of the metropolis. For these reasons, we observed, in the first edition of this work, that "if the funds of the corporation will not admit of their following the liberal example of the legislature by voluntarily abandoning this vexatious impost, it would be good policy to give them a compensation for relinquishing it." And we are glad to have to state that this suggestion has since been carried into effect. The act 3 & 4 Will. 4. c. 66. authorised the Lords of the Treasury to purchase up the duties in question from the city. This was done, at an expense of about 140,000*l*., and the duties were abolished. There is a Table of the Duties in the first edition of this work.

PACKETS. See NEW YORK, PASSENGERS, and POST-OFFICE.

PALERMO (anciently PANORMUS), a large city and sea-port, the capital of the noble island of Sicily, on the north coast of which it is situated, the light-house being in lat. 38° 8′ 15″ N., lon. 13° 21′ 56″ E. Population, in 1856, 200,000.

The bay of Palermo is about 5 miles in depth, the city being situated on its south-west shore. A fine mole, fully ¼ of a mile in length, having a lighthouse and battery at its extremity, projects in a southerly direction from the arsenal into 9 or 10 fathoms water, forming a convenient port, capable of containing

a great number of vessels. This immense work cost about 1,000,000*l.* sterling in its construction; but the lighthouse, though a splendid structure, is said to be very ill lighted. There is an inner port which is reserved for the use of the arsenal. Ships that do not mean to go within the mole may anchor about ½ a mile from it, in from 16 to 23 fathoms, the mole light bearing N.W. ¾ W. A heavy sea sometimes rolls into the bay, but no danger need be apprehended by ships properly found in anchors and chain cables. In going into the bay, it is necessary to keep clear of the nets of the tunny fishery, for these are so strong and well moored, as to be capable of arresting a ship under sail.—(*Smyth's Sicily*, p. 70. and *Appen.* p. 4.)

Money.—Since 1818, the coins of Sicily have been the same as those of Naples, their names only differing.—(See NAPLES.) The ducat, =3*s.* 5·2*d.* sterling, is subdivided into 100 *bajocchi* and 10 *piccioli*; but accounts are still generally kept in *oncie*, *tari*, and *grani*: 20 grani=1 taro; 30 tari=1 oncia. The oncia = 3 ducats; and 1 carlino of Naples = 1 taro of Sicily. The Spanish dollar is current at 12 tari 8 grani.

Weights.—These are the *cantaro grosso*, subdivided into 100 *rottoli grossi* of 33 oncie, or into 110 rottoli sottili of 30 oncie; and the *cantaro sottile*, subdivided into 100 rottoli sottili of 30 oncie, or 250 lbs. of 12 oncie. The rottolo of 33 ounces = 1·93 lbs. avoirdupois = 2·34 lbs. Troy = 8·73 hectogrammes = 1·77 lbs. of Amsterdam = 1·8 lbs. of Hamburg. The rottolo of 30 ounces = 1·75 lbs. avoirdupois = 2·13 lbs. Troy = 7·94 hectogrammes = 1·6 lbs. of Amsterdam = 1·64 lbs. of Hamburg.

100 Sicilian pounds of 12 ounces = 70 lbs. avoirdupois = 85·11 lbs. Troy = 31·76 kilog. = 64·23 lbs. of Amsterdam = 65·58 lbs. of Hamburg.

Measures.—The *salma grossa* = 9·48 Winch. bush.: the *salma generale* = 7·62 Winch. bush.

The principal liquid measure is the tonna, divided into 4 barili, each equivalent to 9⅝ wine gallons. 1 barile = 2 quartare; 1 quartara = 20 quartucci. The caffiso of oil = 4⅜ Eng. gallons.

The yard or *canna* = 8 *palmi*; 2½ palms = 1 yard Eng.—(*Nelkenbrecher*; *Smyth*, p. 62. App.)

Tares.—Coffee, indigo, pepper, and dye woods, 2 per cent. and weight of package. Cinnamon, 6 rottoli per *seron*, with 1 wrapper, or 8 rottoli, with 2 wrappers; cocoa, 2 per cent., weight of package, and 3 per cent. for dust; cod-fish, 3 per cent.; herrings, 12 per cent.; tin, 13 rottoli per barrel; wax, weight of package, and 3 to 4 per cent. extra allowance; Havanna sugars, 16 per cent.; Brazil do., in short cases, 18 per cent., and in long cases, 20 per cent.; crushed sugar, weight of cask, and 5 per cent., or 13 per cent. in all, at the option of the buyer; East India, do. in bags, 8 rot. to 10 rot. per bag. 1 rottoli taken as weight of bag, for coffee and cocoa in bags.

Charges on Goods.—The regular charges on the sale of goods consigned to Palermo, are—commission 3 per cent.; brokerage, ½ per cent.; warehouse rent, ¼ per cent.; and porterage and boat hire; with 2 per cent. *del credere*,—imports being almost always sold on credit. The charges may occasionally vary ¼ to 1 per cent., and imports are frequently sold duty paid; the prices, however, so obtained, fully compensate for the trifling increase of charges.

The charges on goods exported are—3 per cent. commission; brokerage, so much per *cantaro*, *salma*, &c., generally amounting to about ½ per cent., except on fruit, on which it is equivalent to from 2 to 3 per cent.

Imports and Exports.—The great articles of export from Sicily are—olive oil, grain, particularly wheat and barley; silk, brimstone, wine and brandy, barilla, lemons and oranges, lemon juice, manna, shumac, linseed, fruit, salted fish and salt; with argol, liquorice, pumice stone, rags, skins, honey, cotton wool, saffron, &c. Wheat is largely exported. It is of a mixed quality, hard, and is generally sold from the public magazines, or *caricatori* (see *post*), by measure, without weight. But the best hard wheat, grown in the neighbourhood of Palermo, is sold by the salma of 272 rottoli=476 lbs. Eng.; the difference between weight and measure being made good by the seller or buyer, as the case may be. Wine is principally shipped from Marsala; lemons, oranges, and lemon juice, from Messina; salt, from Trapani; and barilla, from the southern coast. But all the articles to be found on the coast may, for the most part, be had at Palermo; unless, however, the quantity required be small, it is usually best to ship them from the outports, the expense of their conveyance to Palermo being very heavy. The crops of barilla and shumac come to market in August; but brimstone, salt, oil, wine, rags, &c. may generally be had all the year round. The first shipments of lemons and oranges may be made in the beginning of November. Purchases of produce are always paid for in cash, generally ½ on making the purchase, and the other ½ on delivery, when in Palermo, and on receiving order for delivery on the coast.

The imports consist of cotton, stuffs, and linens and woollens; sugar, coffee, cocoa, dye stuffs, iron, earthenware, spices, coal, tin, hides, Newfoundland cod, timber for building, &c. The best of the old accounts of the trade of Sicily that we have met with is contained in *Swinburne's Travels in the Two Sicilies*, 4to ed. vol. ii. pp. 401—413. We have also, derived much valuable information from the elaborate and valuable reports of Mr. Consul Goodwin, one of the most intelligent of that class of functionaries.

Account of the Quantities and Values of the Principal Articles exported from Sicily in 1856 and 1857, specifying the Values of those exported to the U. Kingdom.

The value of the imports into Sicily from the U. Kingdom amounted in 1856 to 451,000*l.*, and in 1857 to 399,000*l.* The principal articles are cotton stuffs and yarn, linens and woollens, iron, coal, hardware, and earthenware, colonial produce, &c.

Remarks on the Trade, &c. of Sicily. — This noble island contains about 10,500 square miles, being the largest in the Mediterranean, and one of the most fertile and best situated in the world. Its population is about 2,100,000. In ancient times, Sicily was celebrated for the number, magnitude, and opulence of its cities. Notwithstanding, however, that its population was then probably treble its present amount, it obtained, from its furnishing vast supplies of corn and other articles of provision for the use of Rome, the appropriate epithet of *horreum Romanorum*, and is said by Livy to have been *Populoque Romano, pace ac bello, fidissimum annonæ subsidium.* — (Lib. xxvii. cap. 5.) But (*quantum mutatus!*) there are now few countries in which agriculture and the arts are in so degraded a state! It does not, however, appear very difficult to account for this melancholy change. After the overthrow of the Roman power, Sicily was occupied successively by the Greeks, Saracens, Normans, and French, till at length it became a dependency, first of the crown of Spain, and more recently of that of Naples. It is to this dependence, and to the introduction of the feudal system by the Normans, that its backward state is principally to be ascribed. The multiplied abuses which grew up in Spain under the reign of Ferdinand and his successors of the Austrian line, flourished with equal luxuriance in Sicily, and have proved no less destructive of the industry and civilisation of its inhabitants than those of Spain. Misgovernment, the abuses of the feudal system, insecurity, and unequal and arbitrary taxes, have here, as every where else, paralysed industry, and impoverished the people.

But the grand curse of Sicilian, as of Sardinian industry, will probably be found in the oppressive restrictions that have been laid on the importation of corn. Down to a late period, no corn could be exported without leave being obtained from the *Real Patrimonia*, a body that pretended to take an account of the crops, and which determined whether there were to be any exportation; and in the event of its being allowed it issued, or rather sold, licences to a few favoured individuals*, authorising them to export certain specified quantities! Even had Sicily been ten times more productive than she really is, it is quite impossible that agriculture could have flourished under such discouragements. Luckily, however, these oppressive restraints have been abolished, and there are no longer any obstacles to the free exportation of corn. Oppressive taxes, the want of leases of a reasonable length, and of practicable roads, are at present, perhaps, the greatest obstacles to agriculture.

The property of the island was valued in 1811, when the English garrison and fleet occasioned a great demand, and high prices for produce of all kinds; and this valuation has been continued to this day, as the basis on which the land and house tax (*fondiaria*) is levied. A rate of 7½ per cent. on the valuation was first charged, which was subsequently raised to 12½ per cent., at which it is now fixed. Owing, however, as is stated, to the fall in the price of agricultural produce since 1811, this tax has been alleged to be more than equivalent to a duty of 25 per cent. on the produce of the soil taken at its present value, and to be a very great obstacle to improvement. We believe, however, that its influence in this respect, though considerable, has been much over-rated; and that the backward state of Sicily is principally owing to other and different causes.

Though there be in Sicily a very considerable number of small proprietors, by far the greater part of the land belongs to the crown, the church, and the nobility, some of whom have very extensive and valuable estates. Down to a recent period, these were held under a system of strict entail, and their occupiers, as well as those of the estates of the crown and the church, usually held under triennial leases, and were in a state of feudal bondage, and subject to numerous exactions on the part of their lords. Under such circumstances, even though there had been neither restrictions on exportation nor a land tax, the depressed condition of the peasantry, and the low state of agriculture, need not be wondered at.

But we are glad to have to state that the dawn of a better day seems to have arisen, and that several important changes have lately been introduced. We have already noticed the removal of the restrictions on exportation; and in 1812 and 1838 laws were passed for the abolition of the feudal system, and the complete emancipation of the peasantry. And, notwithstanding the poverty and ignorance of the latter will hinder them from speedily profiting to the extent that might be anticipated from the passing of these laws, this cannot fail, in the end, to be productive of the best effects. It was also enacted in 1819, that in future, on the death of any individual possessed of an estate in land, and having more than one son, the half only of the estate should descend to the eldest son, and that the other half should be divided in equal shares among the other children. This law, which appears to have been framed on the model of that which regulates the succession to property in France, will probably have nearly similar effects. In both countries, the abuses of entails might have been obviated without running into

* The late Queen is said to have been a great dealer in corn on her own account!

the opposite extreme, and establishing a system that can hardly fail in the end to occasion the too great division of landed property.

Exclusive of wheat and barley, hemp, flax, and cotton are raised with but little labour. The culture of the last is said to be extending of late years, especially in the neighbourhood of Mazzara. It is mostly short-stapled, and but little is exported, and that only to Naples and Trieste. It is probable, however, that by attention to its culture, and the introduction of improved varieties, its quality might be improved, and it might become an article of some importance. The sugar-cane was formerly a staple product of the S. shore of Sicily. But owing to the introduction of cheaper sugar from the W. Indies and Brazil, the culture of the cane is now restricted to some small plantations near Avola, and will probably at no distant period be wholly abandoned.

The district round Marsala is the principal seat of the wine culture; and, thanks to the exertions of some English capitalists established in that city, the production of wine is become an important branch of industry, and it forms a principal article of export.—(See WINE.) But, except in the English establishments, little care is in general bestowed on the vintage. Along the N. coast, the mountain slopes and valleys are almost wholly covered with olive groves; though elsewhere they are rare, and do not furnish sufficient oil for the inhabitants. But for the imperfections in the mode of its preparation, the oil of Sicily would be excellent. The olives, however, are permitted to hang on the tree till they come off with shaking, or beating with light canes; and they are then kept in vats till they get quite black, so that the oil becomes pungent and rancid, and, though fit for the lamp, is totally unfit for the table. It is only near the capital and in a few other places, that a more improved process is followed. Lemons and oranges, which grow luxuriantly, are of excellent quality, well adapted for long voyages, and, when intended for exportation, are collected with more care than any other agricultural product. They are largely exported, and are altogether highly important. Almonds, pistachios, dates, madder, the barilla plant, hazel-nuts, the *Ricinus palma*, or castor oil plant, saffron, tobacco, &c., might all be raised in any quantity; but their culture is for the most part neglected, or ill-conducted. The mulberry is grown in the vicinity of Messina, and in the N. E. part of the island; but the produce of silk does not exceed 400,000 lbs. a year. The manna ash is grown near the capital, and, manna not being monopolised by the government in Sicily, as in Naples, it might be a much more extensive and profitable article of trade than it really is, if there were any public enterprise. Liquorice is found growing wild in several parts of the island, and considerable quantities of juice are exported. The culture of shumac is a good deal attended to, and it forms a principal article of export.

Formerly there were only certain ports from which corn could be exported; a limitation which gave rise to the establishment at these ports of public magazines or *caricatori*, where the corn may be deposited till an opportunity occurs of shipping it off. Provided it be of good quality (*mercantibile* or *recetible*), and provided it be brought in immediately after harvest, or, at farthest, in August, it is warehoused free of expense; what it gains in bulk after that period (about 5 per cent.) being sufficient to defray all expenses. The receipt of the *caricator*, or keeper of the magazine, is negotiable like a bill of exchange, and is the object of speculative purchases on the exchange at Palermo, Messina, &c., according to the expected rise or fall in the price of corn. The depositor of a quantity sells it in such portions as he pleases, the whole being faithfully accounted for. The public magazines, in some parts of the island, are either excavations into calcareous rocks, or holes in the ground shaped like a bottle, walled up, and made waterproof, containing each about 200 salme of corn, or about 1,600 English bushels. The neck of the bottle is hermetically closed with a stone fastened with gypsum. Corn may be thus preserved for an indefinite length of time; at least it has been found in perfectly good order after the lapse of a century.—(*Simond*, p. 540.; *Swinburne*, vol. ii. p. 405. For an account of the oil *caracatori* of Naples, see OLIVE OIL.)

The fisheries are chiefly conducted by corporations of fishermen, or monied individuals. That at Palermo employs, during the season, from 900 to 1,000 boats, and 3,500 fishermen; and the produce is valued at from 20,000*l.* to 25,000*l.* a year. Tunnies, the fish principally caught on the Sicilian coasts, and which were in great request in antiquity, as well as in modern times, are of large dimensions, being generally from 4 to 8 feet in length, with a nearly equal girth. Their flesh is highly nutritious. The shoals of tunny enter the Mediterranean early in the year. The *tonnare*, or fishing establishments, on the Sicilian coasts, are more extensive and valuable than those of any other part of the Mediterranean. The nets belonging to the one in the Bay of Palermo are so very strong as to be able to arrest the progress of a ship when under sail. The fishery of the sword-fish is confined chiefly to the Straits of Messina, and the anchovy and pilchard fisheries to Siculania. Lentini has some trade in *botarga*, made of the roe of the mullet. The coral fishery, near Bona, in Africa, is principally frequented by fishermen from Trapani, at which city the coral is polished, and brought for exportation to Catania, Naples, Leghorn, &c.

The minerals of Sicily are important and valuable. Sulphur ranks first; it is found in great quantities imbedded in blue marl, or in gypsum and limestone, over most of the central and S. parts of the island. The sulphur mines have been wrought for upwards of 300 years; but it is only since 1820 that any extraordinary quantity has been prepared for exportation. Subsequently to 1833, the trade with this country increased so much that the export of sulphur to the U. Kingdom rose from 19,122 tons in the above year, to 38,654 tons in 1838. In this year, however, the Neapolitan government granted to a French company the monopoly of the trade in sulphur, the production of which was to be limited to

600,000 quintals, to be supplied to the company by the proprietors of the mines at certain fixed prices, on condition of the latter paying to the government a bonus of 400,000 Neapolitan ducats a year! It is needless to dwell on the impolicy and absurdity of such a project. Instead of attempting to limit the export of sulphur, government should have given it every possible facility; and taking the export under a free system, at only 1,000,000 quintals, it would have yielded, at the low duty of 2s. a cwt. on export, a larger sum than was to be paid by the company for their monopoly. Luckily, however, a firm remonstrance by England occasioned the suppression of the monopoly, and the sulphur trade is again restored to its former state. Some sulphur mines are wrought by English speculators, with machinery brought from England, and workmen from Wales, Cornwall, and Scotland; but in most of the other mines the processes are very rude, and, in melting, a great part of the sulphur is allowed to escape in gas, to the destruction of the surrounding vegetation. Sicily furnishes saltpetre of excellent quality in sufficient quantity for her own consumption, but from want of enterprise none is produced for exportation. Rock salt, bitumen, gypsum, and marble of different kinds are found in various places; and good salt is made at Trapani, and other coast towns. There are also ores of copper, lead, mercury, and iron, but very few of these are wrought. There are no iron foundries in the island, and iron and tin goods are principally imported from England, lead from Spain, and steel from Germany.

Were the bounty of nature towards Sicily not counteracted by vicious laws and institutions, she would undoubtedly be one of the richest and finest of European countries. All that she requires is security of property and freedom of industry. Let but these be given to her, and a few years will develop her gigantic resources, and elevate Girgenti, Termini, and Sciacca, to a very high rank among corn-shipping ports.

PALM OIL (Ger. *Palmol*; Fr. *Huile de Palme, Huile de Senegal*; It. *Olio di Palma*; Sp. *Aceite de Palma*), is obtained from the fruit of several species of palms, but especially from that of the *Elais Guineensis*, growing on the W. coasts of Africa, S. of Fernando Po, for some distance inland, and in Brazil.

The oil palm reaches a height of from 15 to 40 feet. Its fruit consists of a nut or kernel, surrounded by an arillus or pulp, and when full grown is about the size of a chesnut, the pulp being about ½ of the whole bulk. The fruit grows in clusters, much after the manner of clusters of grapes, only a great deal larger, some clusters weighing as much as a cwt. When fully ripe, the fruit, which has a very thin skin, is of a beautiful bright orange colour; in taste, the pulp has a slight approach to sweetness, and is both wholesome and agreeable to eat.

The oil season on the W. coast of Africa is from February to September. When ripe, the fruit is collected in troughs or reservoirs of the most primitive description,—occasionally even in holes dug in the ground, paved at the bottom with stones,—where it is exposed to the heat of the sun, which in a short while partially separates the pulp from the kernels or nuts, the separation being completed by beating or bruising the fruit with pieces of wood or stones. The kernels and stems having been removed by hand, the pulp is put into earthen pots and boiled; the oil being in this way separated from a fibrous substance which pervades the pulp, and from other impurities. The whole of this process is so rudely performed, that there is necessarily great waste. When the oil has cooled down it concretes to about the consistence of butter, and is then ready for the cask. It retains nearly the same consistence upon importation into this country; it has no particular taste, but has a pleasant aromatic smell, and is of a yellowish to a deep orange colour. The finest oil is generally of the deepest shade. By keeping it loses its bright colour, fades into a dirty white, and becomes rancid, in which state it is rejected.

The natives on the coast use it for the same purposes that we use butter. In this country, and on the continent of Europe, it is made into soap, candles, &c.; and it is employed, in conjunction with other materials, to lubricate the axles of railway carriages. By far the greatest consumption of palm oil, however, is in soap making, for which purpose, as well as for candles, it requires to undergo the somewhat expensive process of bleaching. It is sometimes imitated with hog's lard, coloured with turmeric, and scented with Florentine iris root.

Hitherto our supplies of palm oil have been derived almost entirely, if not exclusively, from the Bights of Biafra and Benin, on the W. coast of Africa, of which it is the staple article of export. It is occasionally brought in small quantities from the Cape de Verd Islands, the West Indies, and Brazil; but it is nevertheless the produce of the coast of Africa indirectly imported.

The trade in palm oil, which took its rise some 50 years ago, is now of great magnitude and value. In 1806 the oil imported into England was estimated at only 150 tons, received from the Bight of Biafra; whereas, in 1857, the whole importations amounted, according to the official returns, to 42,740 tons, worth, at the market price of 40*l.* a ton, over 1,700,000*l.*, and affording employment to a large amount of shipping. The imports in 1858 were somewhat less than in 1857, which is to be attributed to local causes on the African coast, especially at the river Bonny, where the trade was for a time partially suspended. The re-exports of palm oil in 1857 were 10,690 tons, and in 1858, 8,726 tons.

Of late years an oil has to some small extent been extracted from the kernel or nut of the oil palm; but it is essentially different in character from that known as palm oil, and, probably from the unskilful manner in which the natives extract it, is of considerably less value. The present market value (June, 1859) of palm oil is from 45*l.* to 46*l.* per ton. It is hardly necessary to observe that the trade in palm oil promises to do more than anything to introduce a taste for commercial pursuits, and consequently for civilisation, among the natives of Africa.

PAMPHLET, a small book, usually printed in the octavo form, and stitched, popularly understood to comprise from 1 to 10 sheets or thereby.

It is enacted by 10 Ann. c. 19. § 113. that no person shall sell, or expose to sale, any pamphlet, without the name and place of abode of some known person, by and for whom it was printed or published, written or printed thereon, under a penalty of 20*l.* and costs.

It is enacted by the 55 Geo. 3. c. 185. that every book containing 1 whole sheet, and not exceeding 8 sheets, in 8vo. or any lesser size; or not exceeding 12 sheets in 4to. or 20 sheets in folio, shall be deemed a pamphlet. The same act imposed a duty of 3*s.* upon each sheet of *one* copy of all pamphlets published. This duty, which was at once vexatious and unproductive, hardly ever yielding more than 1,000*l.* or 1,100*l.* a year, was repealed in 1833.

We have given (*antè*, p. 176.) an account of the number and selling price of the pamphlets published in 1850, 1851, and 1852. Some pamphlets have a very large sale; but, speaking generally, their publication is quite as hazardous as that of books. The establishment of Quarterly Reviews has lessened the occasions and the demand for pamphlets.

PAPER, (Ger. and Du. *Papier*; Fr. *Papier*; It. *Carta*; Sp. *Papel*; Rus. *Bumaga*; Lat. *Charta*; Arab. *Kartas*; Pers. *Kaghas*). This highly useful substance is, as every one knows, thin, flexible, of different colours, but most commonly white, being used for writing and printing upon, and for various other purposes. It is manufactured of ve-

getable matter reduced to a sort of pulp. The term paper is derived from the Greek παπῦρος (*papyrus*, see *post*), the name of the plant on the inner bark of which (*Liber*, βιβλος, whence our word *book*) the ancients used to write. Paper is made up into *sheets*, *quires*, and *reams*; each quire consisting of 24 sheets, and each ream of 20 quires.

Historical Sketch of Paper. Difference between ancient and modern Paper. — Some of those learned and ingenious persons who have investigated the arts of the ancient world, have expressed their surprise that the Greeks and Romans, though they possessed an immense number of books, and approached very near to printing in the stamping of words and letters, and similar devices, should not have discovered the art; the first rude attempts at typography being sufficiently obvious, though much time and contrivance have been required to bring the process to its present state of perfection. But they should rather, perhaps, have wondered that the more civilised nations of antiquity did not invent paper, an invention which, it may easily be shown, necessarily preceded that of printing. But this was an exceedingly difficult task; the more so, that the vast importance of paper could not be appreciated, or even imagined, till after it had been generally introduced. At first, the memory of important events appears to have been handed down by inscriptions cut on rocks, pillars of stone or marble, and the walls of edifices; and this primitive usage is still retained in the monuments in our churches and cemeteries. In a later, though still very remote age, men were accustomed to write upon portable surfaces of various kinds. Everybody knows that the Decalogue was written upon tables of stone; and Joshua wrote a copy of the law upon the like materials. — (*Josh.* c. viii. v. 32.) The Greeks and Romans engraved laws, treaties, contracts, and other important documents, on plates of brass; and it is stated, that a fire which broke out in the capitol, in the reign of Vespasian, consumed above 3,000 such bronze muniments. — (*Nouveau Traité de Diplomatique*, i. 451.) But exclusive of plates of this sort, which were necessarily inconvenient, costly, and quite unfit for ordinary use, thin and flexible plates of lead and other metals, (*Job*, c. xix. v. 23, 24.) thin pieces of wood, skins, parchment, linen, and a variety of similar substances were used in writing. Cheaper materials, such as the leaves and bark of trees, palms, &c., were also used from a very remote period for the same purpose; but leaves (χαρτης, *chartæ*) being, when dry, apt to split in the direction of the fibres, it was found to be necessary, in preparing them for writing, to glue them together, so that the fibres might cross each other in opposite directions. The texture of the leaf, or sheet, if we may so call it, is thus greatly strengthened; and when it has been smoothed, polished, and fitted for use, it is less inconvenient and better looking than might be supposed. Such, in fact, is the principle on which the paper of the ancients was formed. This, however, which was called *Charta Egyptiaca*, from the place of its manufacture, did not consist of leaves, but of the inner bark of the famous reed or rush, the *Cyperus Papyrus*, found along the banks of the Nile, or rather in the pools and ditches which communicate with the river. The ancients applied this useful plant to an immense variety of purposes; but here we shall only notice that from which it has acquired an immortality of renown. The inner bark having been divided by a needle or other sharp instrument into very thin and broad layers or filaments, portions of these were placed side by side longitudinally, and glued together at the ends; another portion being glued crosswise on the backs of the latter, to give the page the requisite strength. Pliny and other writers have described the process (*Hist. Nat.* lib. xiii. c. 11, 12, 13.), which has been farther elucidated by Hardouin and other commentators. But the fullest and ablest discussion of this curious subject is contained in the very learned and elaborate work, the *Nouveau Traité de Diplomatique* (i. pp. 448—524.), where the most interesting particulars respecting the history and manufacture of papyrus, as well as of the greater number of the other writing materials used in antiquity, have been collected and set in the clearest point of view. — (See also the *Dictionnaire Diplomatique* of De Vaines, art. *Papier*, ii. pp. 165—174.) Bruce has given a summary of the authorities in the seventh volume of the octavo edition of his Travels; and, not satisfied with this, he attempted to make paper from the papyrus, in which not being very successful, he imputes his failure to errors in the statements of Pliny; not reflecting that, had he endeavoured, trusting to written directions, without experience and traditional art, to make modern paper, or even a pair of shoes, he would, most probably, have been equally infelicitous. Egypt enjoyed for a lengthened period a natural monopoly of this valuable article; and even attempted, in anticipation of a later policy, by prohibiting the growth of the papyrus, except in certain localities, and limiting its supply, to sell its produce at an artificially enhanced price! — (*Ameilhon. Commerce des Egyptiens*, p. 288.) But this policy ceased on the conquest of Egypt by the Romans, who, having imported the plant into Rome, succeeded in preparing from it a very superior article. Pliny enumerates the various kinds of paper, from the coarsest, which was used, like our brown paper,

for packing, to the most expensive and finest. The latter, which was made of the innermost filaments, was of a snowy whiteness; and when properly dressed and polished, was easily written upon. The consumption was very considerable; and being, after the foundation of Alexandria, principally made in that city, it formed an important article in her commerce, and furnished employment for many workmen and much capital. Flavius Vopiscus relates, that in the 3d century, the tyrant Firmus used to say there was so much paper there, and so large a quantity of the glue or size used in its preparation, that he could maintain an army with it: — "*Tantum habuisse de chartis, ut publicè sæpe diceret, exercitum se alere posse papyrô et glutinô.*" We may doubt whether the value of the paper at present belonging to any single city would do the like. *Charta Egyptiaca* is very ancient, having, notwithstanding the assertion of Varro and Pliny to the contrary, (*Hist. Nat.* lib. xiii. cap. 11.,) been in common use long before the age of Alexander. This is evident from the statement of Herodotus, who, though he lived about a century before that conqueror, tells us, that in former times, when papyrus was scarce, the Ionians wrote on the skins of goats and sheep; and that that practice continued to be customary among several barbarous nations. — (Lib. v. cap. 58.)

Though white, smooth, durable, and not ill-adapted for writing, ancient paper was not suited for the printer: by reason of the closeness of the grain, it would not have received the ink from types more kindly than shavings of wood, and such like materials; and its texture was so very brittle, that it would have shivered to pieces under the press. It was, in truth, an inartificial mass ("*viscera nivea virentium herbarum*"), no great invention or ingenuity being discovered in its preparation. Modern paper, on the other hand, is wholly artificial; and the contrivances for its manufacture are marvellous alike for the sagacity evinced in their design and their practical efficiency. Like the paper of antiquity, it is formed of the filaments of various sorts of vegetable substances, derived principally from the tearing to pieces or pounding cotton and linen rags, and similar materials, mixed with water. This process is called beating them into pulp; and when examined with a microscope, the floating filaments are found to be well fitted for adhering together, being jagged and rough, and mixed in every possible way. A portion of this mixture or pulp being, when properly prepared, poured upon moulds or sieves of fine woven wire, the water is drained off, and the suspended fibres, falling to the bottom, form a layer or sheet, which, being consolidated by pressure and dried, becomes paper; its strength and goodness depending, of course, in a great measure, on the quality of the rag or other material of which it is made. Paper used to be manufactured by dipping sieves or frames into the pulp; the portion of filaments so lifted up forming the sheet of paper. But the application of rotary motion to the manufacture has effected a total change in the mode in which it was carried on: instead of dipping the sieves or frames into the cistern of pulp, a circular web, or round towel of woven wire, revolves horizontally under the vessel, (technically called the vat,) receives the deposit, conveys it away, and, by an adjustment of extraordinary delicacy, transfers it uninjured, though as fragile as a wet cobweb, to a similar revolving towel of felt: thus an endless web of paper is spun, as long, at least, as the machine continues to move, and pulp is supplied.

The pervious and spongy texture of paper make it readily imbibe and retain the ink impressed on it by types in printing, and by the pen in writing; its toughness hinders it from being easily torn; and, in a well-bound book, under favourable circumstances, its duration is indefinite, and, for all practical purposes, eternal! It is true that legal documents are sometimes written or printed on parchment, which is less liable to be torn, or injured by rubbing; the luxury of typography occasionally, also, exhibits a few impressions of a splendid work upon vellum; and, it is farther true, that these substances were used for writing upon by the ancients: but they are necessarily expensive, and the cost of either far exceeds the means of the great majority of book buyers; so that it would be altogether unprofitable to cast types, to construct presses, and to incur the various and heavy charges of an establishment for printing, unless we possessed a cheaper material on which to print.

Almost all the more ancient and valuable existing Greek and Latin manuscripts are written either on parchment or vellum, but generally on the latter. It is singular, however, that while such is the case, all or almost all the very old charters and diplomas are written on papyrus. Indeed the learned authors of the *Nouveau Traité de Diplomatique* affirm that no parchment charter has been discovered anterior to the 6th century. — (i. 479.)

It appears to be sufficiently established that paper, fabricated like that now in use, of cotton and other vegetable materials, and of silk, has been manufactured in China from a very remote epoch — (*Nouveau Traité de Diplomatique*, i. 519.): the Arab historians state that similar paper was manufactured in Mecca in the beginning of the 8th century — (*Andres, Origine e Progressi d' Ogni Letteratura*, i. 202., ed. Rom. 1808,

and *Gibbon*, ix. 379.); and most probably the mode of its production was then, also, known to the Greeks. It appears to have been soon after introduced into Europe; but it is doubtful whether this were done by the Arabians or Greeks. The mode of fabricating paper from cotton and other vegetable materials being once discovered, its fabrication from linen rags was a comparatively easy, and in Europe, where cotton was then extremely scarce, an all but necessary step. It is singular, however, that we have no positive information either as to the country where, or the epoch when, paper from rags began to be manufactured in Europe. *Mais on ne peut reculer son invention plus tard, qu'au Treizieme siecle, ni son usage ordinaire au-delà du Quatorzième.* — (*Nouveau Traité, &c.*, i. 524.) In fact, Egyptian paper, or paper made of papyrus, in the manner described above, continued to be partially employed down to the middle of the 11th century, though parchment was then the principal material used in writing.

It is curious to observe how very shortly the introduction of paper preceded the invention of printing, to which, indeed, as already seen, it was an indispensable preliminary. Muratori attributes the ignorance of the barbarous ages principally to the scarcity and high price of paper, and the superior intelligence of modern times to its abundance and cheapness. — (*Andres*, i. 200.) And whatever opinion may be entertained as to the first part of this statement, there can be no question that the latter is perfectly well founded.

Not only are we in the dark as to the history of modern paper, but we are unable to make any very satisfactory conjectural estimate of the mode in which it was invented. It is, however, all but certain that the invention must have been suggested by accident, or by observing the effects produced by the accidental drying of triturated vegetable matter, or in some such way; and that the hint thus afforded was gradually improved upon. It is not possible to imagine that the invention should have been wholly the result of design; for, we cannot conceive how any one without any previous knowledge should have proposed to himself to produce paper by pounding rags, or other vegetable matter, mixing the mass in water, and then pressing and drying the deposit. But, without indulging in unprofitable conjectures, it is at all events certain, that however and by whomsoever discovered, no invention has been of greater importance. *Chartæ usu maxime humanitas vitæ constet et memoria.* — (*Plin. Hist. Nat.* lib. xiii. cap. 11.) The processes by which the most worthless and vilest materials are converted into such admirable substances as paper and glass, are probably the greatest triumphs of human talent and ingenuity. They have more than realised the dreams of the alchemists; and have been incomparably more advantageous than if we had become acquainted with a means of transmuting the inferior metals into gold.

Manufacture of Paper in England. — The application of paper to the purposes of writing and printing, and the fact of its being indispensable to the prosecution of the latter, render its manufacture of the highest utility and importance. But, even in a commercial point of view, its value is very considerable. France, Holland, and Genoa had, for a lengthened period, a decided superiority in this department. The finest and best paper being made of linen rags, its quality may be supposed to depend, in a considerable degree, on the sort of linen usually worn in the country where it is manufactured; and this circumstance is said to account for the greater whiteness of the Dutch and Belgian papers, as compared with those of the French and Italians, and still more the Germans. The rags used in the manufacture of writing paper in Great Britain are collected at home; but those used in the manufacture of the best printing paper are imported, principally, from Italy, Hamburg, and the Austrian States, by way of Trieste. — (See Rags.) We believe, however, that it was owing rather to the want of skill, than, as has sometimes been supposed, to the inferior quality of the linen of this country, that the manufacture of paper was not carried on with much success in England till a comparatively recent period. During the 17th century, most part of our supply was imported from the Continent, especially from France. The manufacture is said to have been considerably improved by the French refugees who fled to this country in 1685. But it is distinctly stated in the *The British Merchant* (vol. ii. p. 266.), that hardly any sort of paper, except brown, was made here previously to the Revolution. In 1690, however, the manufacture of white paper was attempted; and within a few years, most branches were much improved. In 1721, it is supposed that there were about 300,000 reams of paper annually produced in Great Britain, which was equal to about two thirds of the whole consumption. In 1783, the value of the paper annually manufactured was estimated at 780,000*l.* At present, besides making a sufficient quantity of most sorts of paper for our own use, and for exportation, we annually export about 100,000*l.* worth of books. The importation of foreign paper for British consumption has now nearly ceased. A small quantity of French paper was used in this country for copperplate printing till within these few years; but, in this respect, we now surpass the French, and there is no artist of either country, who does not consider English paper, manufactured according to the latest improvements, best

adapted for prints. The French have, however, always excelled in the manufacture of very thin letter paper; and a small portion of this article, and some paper hangings, are now the only articles of import.

In 1813, Dr. Colquhoun estimated the value of paper annually produced in Great Britain at 2,000,000*l.*; but Mr. Stevenson, an incomparably better authority upon such subjects, estimated it at only half this sum. From information obtained from those engaged in the trade, we incline to think that the total annual value of the paper manufactured in the United Kingdom, exclusive of the duty, may at present amount to about 1,600,000*l.* or 1,700,000*l.* There are about 700 paper-mills in England, and from 70 to 80 in Scotland. The number in Ireland is but inconsiderable. Of these mills, we believe very few have lately been unemployed. About 28,000 individuals are supposed to be directly engaged in the trade: and, besides the workmen employed in the mills, the paper manufacture creates a considerable demand for the labour of millwrights, machinists, smiths, carpenters, iron and brass founders, wire-workers, woollen manufacturers, and others, in the machinery and apparatus of the mills. Some parts of these are very powerful, and subject to severe strain; and other parts are complicated and delicate, and require continual renovation. Owing to this, the manufacture is of much greater importance, as a source of employment, than might at first be supposed, or than it would seem to have been formerly considered by government, who loaded it, down to a very recent period, with an excise duty amounting to more than *three times as much as the total wages of the workpeople employed!*

It was formerly customary to collect the rags used in the manufacture into large heaps, in order that, by their heating and fermentation, they might be the more easily reduced to filaments. But this injured the rags; and it is now the practice to tear them to pieces, without any such preparation, by powerful machines, constructed for the purpose.

During the present century this manufacture has been signally promoted by the combined influence of science, ingenuity, and mechanical skill. These have been successfully exerted in the preparation of the pulp; the conversion of the pulp into paper; and the provision of materials: and in none has their influence been more remarkable than in the last. This is evident from the fact, that while the manufacture has been more than doubled since 1820, the demand for continental rags and other foreign materials has actually been reduced within that time, in consequence of the immense home supply we derive from substances previously regarded as worthless, and treated as refuse. The sweepings of cotton and flax mills, owing to the grease and dirt with which they are mixed up, were, until within these few years, of no value whatever, except as manure. But means having been discovered of rendering them clean and white, they are now made into very good paper; and the neighbourhood of Manchester has, in consequence, become a principal seat of the manufacture. The chemical and mechanical processes by which these materials are purified, whitened, and made available for the production of paper, without their strength being impaired, are not only exceedingly interesting in themselves, but are of great national importance; and, by reducing the cost of paper, have done ten times more to lower the price of books, and diffuse literature, than all the efforts of all the societies that ever existed.

The first idea of a machine for converting pulp into paper, originated in France, the inventor being an ingenious workman of the name of Louis Robert. A model of this machine was brought to England by M. Leger Didot; and though at first it was far from giving an assurance of success, it sufficed to induce English capitalists and engineers, particularly Mr. Donkin, to follow up the scheme; and in the course of a few years they brought it to a high degree of perfection. Mr. Dickinson, of Hertfordshire, one of the most intelligent mechanists and extensive paper manufacturers in England, has invented a machine of a different construction for the same purpose, and has also introduced various subsidiary improvements into the manufacture. One of these consists in the application of air pumps to the process, by the action of which, he produces a partial vacuum under a portion of the wire on which the pulp is in the act of settling, and thus very much accelerates its consolidation; in fact, prepares it almost instantaneously for the first mechanical pressure. The result is all but miraculous. By the agency of a great deal of complicated machinery, so admirably contrived as to produce the intended effect with unerrring precision and in the very best manner, a process, which in the old system of paper-making occupied about *three* weeks, is performed in as many minutes! A continuous stream of fluid pulp is, within this brief space of time, and the short distance of 80 feet, not only made into paper, but actually dried, polished, and every separate sheet cut round the edges, and rendered completely ready for use! The paper manufactured by this wonderful combination of intelligence and power is, at once, moderate in price, and, for most purposes, superior in quality to what was formerly made by hand. The sample before the reader, though not the finest that is made, will warrant what is now stated.

Mr. Dickinson some time since made an important improvement in the paper manufacture, on the principle of veneering in cabinet work. He makes two webs of paper, each by a separate process; and by laying them together while in an early stage, they are rendered inseparable by the pressure to which they are subjected This paper is used in copperplate printing; and by adopting a peculiar method of preparing the pulp, and selecting a finer rag for the web which forms the face of the paper, it is much better calculated for taking a fine impression. Its introduction has put a total stop to the importation of that species of French paper, which was formerly used in considerable quantities by copperplate printers. Probably, however, the most ingenious of the modern inventions in the manufacture is that by which Mr. Dickinson has contrived, without increasing the thickness of paper, to embody parallel coloured threads in its fabric. This novel description of paper is now used in the printing of exchequer bills and postage envelopes, for which it is admirably fitted, inasmuch as it cannot be counterfeited, except by employing similar machinery, which it would cost a great deal to construct, and be all but impossible to conceal.

Duty on Paper.—Previously to 1836, all writing, coloured, or wrapping papers, cardboards, and pasteboards, were denominated 1st class paper, and paid 3*d.* per lb. duty (28*s.* a cwt.); unless *manufactured wholly of tarred ropes, without the tar being previously extracted,* in which case the paper was denominated 2d class, and paid 1½*d.* per lb. (14*s.* a cwt.). Millboards and scaleboards, made of the same materials as 2d class paper, paid 2¼*d.* per lb. (21*s.* a cwt.) duty.

This duty varied on the different descriptions of 1st class paper from about 25 or 30 per cent. on the finest, to about 200 per cent. on the coarsest! A duty so oppressive led to the commission of very great frauds, which all the vigilance of the officers, and the endless multiplication of checks and penalties, were unable to prevent; the real effect of such devices being to injure the honest manufacturers, and to give those of a different character greater facilities for carrying on their fraudulent schemes. But, laying out of view for a moment the oppressiveness of the duty, could any thing be more absurd, than to interdict the manufacturer of third class wrapping paper (for it is to him that the regulation applied) from using any other material than *tarred ropes?* After the peace, and the very general introduction of iron cables, tarred ropes advanced considerably in price; but as the use of *any other material whatever* would have occasioned an increase of 14*s.* a cwt. of duty, advantage could not be taken of this circumstance; so that the excise regulation, without putting one sixpence into the pockets of government, obliged the public to pay an increased price for an inferior article! Neither was this its only effect: a good deal of the refuse thrown out in sorting rags, which might have been used in the manufacture of coarse wrapping paper, was sold by the manufacturers for about 3*s.* a cwt.; while a good deal that might have been used in the same way could not be sold at all, but was absolutely lost. It is plain, therefore, that this regulation had a two-fold operation: first, in adding to the cost of wrapping paper, by compelling it to be made from a comparatively expensive article; and, secondly, in adding to the expense of fine paper, by preventing the refuse of the rags used in its manufacture from being beneficially employed.

It may, perhaps, be doubted, considering the purposes to which paper is applied whether it should be subject to any duty whatever. Printers, stationers, bookbinders, type-founders, artists, copperplate and lithographic printers, card-makers, paper-stainers and paper-hangers, &c., are all affected by a duty on it. And if it be not kept within reasonable bounds it increases the price, and hinders the publication, of books. "This places a great obstacle in the way of the progress of knowledge, of useful and necessary arts, and of sober, industrious habits. Books carry the productions of the human mind over the whole world, and may be truly called the raw materials of every kind of science and art, and of all social improvement."—(*Sir H. Parnell on Financial Reform,* 3d ed. p. 30.)

But though the exigencies of the public service have not permitted the total repeal of the duties on paper, we are glad to have to state that they have been most materially lowered. In 1836, the duty on first-class papers was reduced to the same level as that on papers of the second class, or from 3*d.* per lb. to 1½*d.* per lb.; the manufacturers of the coarser descriptions of paper being at the same time relieved from the restraints under which they had previously laboured, and allowed to use any material in the manufacture which they may judge best. The duty of 1¾*d.* per square yard laid on paper when printed or stained, over and above the ordinary duty on paper, was then also repealed, and the various acts relating to paper were combined into a single statute. At present, therefore, the same rate of duty is laid on all descriptions of paper, so that there is no longer any room for cheating the revenue by the substitution of superior for inferior paper, and, consequently, no necessity for exercising that vexatious surveillance over the manufacture which formerly prevailed.

The influence of this wise and judicious measure in reducing the price of paper used in printing and writing has since been decidedly manifested. The abolition of the discriminating duty on stained or printed paper has, also, been of material importance. The reduction of price it has occasioned has enabled a much larger class of persons to get their apartments papered; and it has been in this way productive, not only of an additional demand for paper and labour, but of an increase of comfort and cleanliness.

This measure has, also, in great part obviated the injustice done to authors and publishers, by compelling them to pay a duty on the paper used in printing books previously to their publication; and, consequently, before it can be known whether the books will sell. When they do not sell, the tax has obviously to be paid out of the capital of the authors or publishers, and the loss arising from an unsuccessful publishing speculation is increased by its amount.—(See *antè*, p. 174.) It is true that every duty on paper, how limited soever, operates in this way, and is, therefore, objectionable on principle; but the practical hardship inflicted on authors by the existing paper duty is not very material.

As respects revenue, too, the measure has been completely successful. In 1835, the nett produce of the old duties on paper, in the U. Kingdom, amounted to 796,305*l.* In 1840 the reduced duties produced 581,429*l.*; and in 1858 they produced 1,119,433*l.*, being 323,128*l.* more than their produce when the rate of charge was double! This statement, however, gives but an imperfect view of the progress of the manufacture; for, owing to the premium (for so it may be called) which the present postage regulations give on the use of thin and light paper, the increase in its production is, no doubt, a good deal greater than we might infer from the mere increase of weight. The following accounts show the former and present state of the manufacture.

An Account exhibiting the Quantities of the different Sorts of Paper charged with Duties, the Rates of Duty, and the Produce of the Duties, in 1835.

Year.	First Class Paper.	Second Class Paper.	Millboard, Glazed Paper, Sheathing Paper, Button Board, &c.		Pasteboard.		Total Weight of Paper, Millboard, and Paste board.	Gross Produce of the Duties.	Nett Produce of the Duties.	Drawbacks on Paper exported.

Note.—COSTS OF COLLECTION.—It is necessary to state that the "costs of collection" do not cause any difference between the gross and the nett-receipt, as the same are paid out of the votes of parliament for the expenses of the Inland Revenue Department.

FAILURE OF PAYMENT.—This item does not cause any difference between the gross and nett receipts, but between the amount of duty charged and the gross receipt, inasmuch as it consists of duty unreceived at the time due; and which at the close of the year ended 31st March, 1857, amounted to 235*l.* 6*s.*; ditto, 1858, 24*l.* 16*s.* 7*d.*—(*Parl. Paper*, No. 307, Sess. 1858.)

N.B.—There are at present (1859) about 400 paper-mills in the U. Kingdom, whereof about 312 are in England, 58 in Scotland, and the remainder in Ireland.

PARCEL, a term indifferently applied to small packages of wares, and to large lots of goods. In this latter sense, 20 hogsheads of sugar or more, if bought at one price, or in a single lot, are denominated "a parcel of sugar."

PARCELS, BILL OF, an account of the items composing a parcel.

PARCHMENT AND VELLUM. The former consists of the skins of sheep and goats, and the latter of those of calves, prepared in such a manner as to render them suitable for being written upon, for covering books, and other purposes. The consumpsion of these articles is very considerable. In this and most other countries, it is customary to use them instead of paper in the drawing up of a great variety of deeds and other legal instruments. They are also extensively used, especially in Italy, in the binding of books. The finest copies of the magnificent classics which issued from the Dutch presses, in the 17th century and the early part of the 18th, were all bound in vellum.

Parchment is coarser than vellum, and not so well adapted for writing upon. The qualities of both articles differ very widely; so much so that the best parchment is preferable to inferior or even middling vellum. The goodness of each depends partly on the quality of the skins of which they are made, and partly, and indeed in a very high degree, on the care and skill with which they are manufactured.

Historical Notice. — The history of these articles is involved in some obscurity. Varro and Pliny (*Hist. Nat.* lib. xiii. cap. 11.), who have been generally followed, state that they were originally manufactured at Pergamus, in Asia Minor, the capital city of Eumenes II., one of Alexander's successors *, during the reign of that prince; and that parchment owes to this circumstance its classical name of *charta Pergamena*. But there seems to be little if any foundation for this statement. We have seen, in the preceding article on paper, that Herodotus, who flourished rather more than a century before Alexander the Great, states distinctly, that previously to his æra, when paper (*charta Egyptiaca*) was scarce, the Ionians were accustomed to write on the skins of sheep and goats, and that that practice was then followed (viz. in his time) by several barbarous nations. — (Lib. v. cap. 58.) And it is all but certain, seeing that the practice of writing on skins had been in use for at least 2½ centuries, and probably much more, previously to the æra of Eumenes, that their preparation would, in the course of that lengthened period, be so much improved as to render them little different from parchment. It is probable, indeed, that their manufacture may have been improved in Pergamus; but we incline to think that parchment owes its name rather to the extensive demand for it in that city, in consequence of Eumenes having amassed a large and valuable library, than to any thing else. He was, in fact, compelled to use parchment and vellum in the copying of books, as his contemporary Ptolemy Philadelphus had prohibited the exportation of paper. — (*Plin. ubi suprà.*)

The scarcity of parchment during the middle ages, and in antecedent times, led to the practice of obliterating the writing on old parchments, by rubbing them with pumice stone, immersing them in boiling water, and such like devices; and there can be no manner of doubt that the prevalence of this practice has been most injurious to literature, and that it has most probably occasioned the total destruction of some of the noblest *chefs-d'œuvre* of antiquity. In the middle ages these were erased that room might be made for some worthless treatise on scholastic theology or logic! Sometimes, however, it happens that the ancient writing is not so much obliterated, but that it may still be read; and to that circumstance the recent discovery of a portion of Cicero's treatise *De Republica* is to be ascribed. It had been effaced to make room for a commentary of St. Augustine on the Psalms. — (See the preface of May, the ingenious discoverer of this lost treatise.)

Parchments that have been erased in this way are called *Palimpsests* (from παλιν, *again*, and ψαω, *to efface or clean*), or repeatedly cleaned parchments; because they have been repeatedly cleaned, renewed, or prepared for writing upon. If the learned world is ever to be gratified by the recovery of the lost comedies of Menander, or the lost books of Polybius, Livy, and Tacitus, it will most probably be by finding them under some homily or such like trash. — (*Nouveau Traité de Diplomatique*, i. 482, &c.; *Dom de Vaines*, ii. 177, &c.)

PARTIAL LOSS. See INSURANCE (MARINE).

PARTNERSHIP, the association of two or more individuals for carrying on some business or undertaking in common; each deriving a certain share of the profits, and bearing a corresponding share of the loss arising therefrom.

The term partnership is usually applied to those smaller associations in which the partners personally conduct their joint affairs: the term company being applied to those great associations conducted by directors and servants appointed by the body of the

* He was a successor of, but must not be confounded with, Eumenes, the secretary and general of the Conqueror.

partners to act for them; the latter having no direct concern in the management of the affairs of the company. — (See COMPANIES.)

The advantages of partnership are obvious. Many businesses could not be successfully carried on without a larger command of capital than usually belongs to an individual; and most of them require the combination of various species of talent. An individual may have capital sufficient to undertake a particular business; but he may not be thoroughly versed in any of its details, or he may be familiar with certain parts of it and not with others; so that it might be for his advantage to assume one or more individuals as his partners, supposing them to be without capital, provided they possessed the skill and other qualifications required in prosecuting the business. Associations of this sort enable capital and talent to derive all the assistance that each is capable of lending to the other. And as the gains of each partner usually consist of a certain *proportion* of the total profits made by the company, each has the most powerful motive to exert himself for the benefit of the concern. It is not, indeed, to be denied, that associations of this sort are occasionally productive of mischievous consequences. The public interest requires that the whole partners in a firm should be bound by the acts of any one of their number; so that the folly or fraud of a single partner may entail very serious consequences upon those associated with him. Generally, however, this is not an evil of frequent occurrence; and there can be no question that, both in a private and public point of view, partnerships are highly beneficial.

To enter into any thing like a full discussion of the law of partnership would very far exceed our limits. We shall, therefore, merely state a few of those leading principles with respect to it, as to which it is of importance that mercantile men, and the public generally, should be well acquainted.

Formation of Partnerships. — The mere consent of the partners, fixed and certified by acts or contracts, is quite sufficient to constitute a private copartnership; so that if two or more merchants, or other persons, join together in trade, or in any sort of business, with a mutual, though it may be unequal, participation in the profit and loss of the concern, they are in every respect to be considered as partners. No particular form of words or proceeding is necessary to constitute a partnership. It may be entered into either by an express written agreement, or by a merely verbal one. The former ought in almost all cases to be preferred. The contract of copartnery should state the parties to it, the business to be carried on, the space of time the partnership is to continue, the capital each is to bring into the business, the proportion in which the profit and loss are to be divided, the manner in which the business is to be conducted, the mode agreed upon for settling accounts at the dissolution of the partnership, together with the special covenants adapted to the circumstances of each particular case.

To constitute a partnership, there must be a participation in uncertain profits and losses: and the true criterion to determine, when money is advanced to a trader, whether the individual making the advance is to be looked upon as a partner or not, is to ascertain whether the *premium or profit be certain and defined, or casual, indefinite, and depending upon the accidents of trade.* In the former case he is a lender merely; in the latter he is a partner. The mere participation in the profits of any business or adventure, without a participation in the losses, constitutes a partnership, so far as to render the individual so participating liable to third parties for the engagements of the concern, though as between the parties themselves it may be no partnership. Thus, if a clerk or other servant stipulate for a share of the profits of any business as *a reward for his labour*, he becomes responsible to third parties as a partner, and no private arrangement can cancel his liability.

If an individual, by his own act or inadvertence, allow himself *to appear to the world as a partner*, he is precluded from disputing the fact, even though he have no interest in the profits. A partner who withdraws from a firm is liable on account of the remaining partners continuing his name in the firm, though without his consent, unless he take the necessary precautions — (see *post*) — to show that he has ceased to belong to it.

If there be no express stipulation as to the management of partnership property, the majority decide as to the disposition and management of the joint affairs of the firm; or, if there be but two parties in a firm, one may manage the concern as he thinks fit, provided it be within the rules of good faith, and warranted by the circumstances of the case. The general duty of a partner is to keep in view, at all times, and in all transactions, the interest and welfare of the partnership, by acting honestly and uprightly, and as a prudent man would conduct his own affairs.

Liability of Partners as to third Parties. — It may be laid down as a general rule, that partners, whether actual, ostensible, or dormant, are bound by the act of their partner, made in the course of and with reference to the partnership business, and in the regular course of dealing by the firm; and though the general rule of law be, that no one is liable upon any contract, except such as are privy to it, yet this is not contravened by the liability of partners, as they are supposed virtually present at and sanctioning the pro-

ceedings they singly enter into in the course of trade, or as being severally vested with a power enabling them to act at once as principals and as the authorised agents of their copartners. It is for the advantage of partners that they are thus held liable; for the credit of their firm is in consequence greatly enhanced, and facility is given to all their dealings, even when they reside in different parts of the country, or of the world. A due regard to the interest of strangers is at the same time observed; for where an individual deals with one of several partners, he relies upon the credit of the entire firm, and therefore ought to have his remedy against all the individuals who compose it.

Unless, however, the act of one partner relate to and be connected with the partnership trade, and in the *course of dealing by the firm*, such acting partner only will be bound; for it is only by acting in the course of their particular trade or line of business that an implied authority is delegated by partners to each other; and it is only in such transactions that third parties have a right to rely upon the partnership funds. To bind a partnership, credit must be given to the firm itself, and not to one merely of its partners. One of them may even, in furtherance of the objects of the firm, enter into a contract with some third party; but if such contract be made *exclusively and solely upon the credit of the individual partner*, it will only bind him, and not the firm. The presumption of the law, however, always is, that a contract with one of the partners in reference to the business of the firm has been entered into upon the credit of the whole; and this presumption is not to be rebutted, except by very clear evidence. One partner cannot, as such, except in bankruptcy, bind another by *deed*.

The authority of a partner is revocable; and it is now fully established that a *disclaimer* of the authority of the partners in any particular transaction will preclude him from binding his copartners. Even during the subsistence of the partnership, one partner may to a certain degree limit his responsibility; and if there be any particular speculation or bargain proposed, which he disapproves of, he may, by giving distinct notice to those with whom his partners are about to contract that he will not be concerned in it, relieve himself from all consequences. Such notice would rebut his *primâ facie* liability. The partnership would be suspended *quoad* this transaction. Thus, if a partner draw, accept, or indorse a bill or note, he will, in all ordinary cases, thereby render the firm liable. But, to use the words of Lord Ellenborough, "it is not essential to a partnership that every partner should have such power; they may stipulate among themselves that it shall not be done; and if a third party, *having notice of this*, will take such security from one of the partners, he shall not sue the others upon it, in breach of such stipulation, nor in defiance of notice previously given to him by one of them, that he will not be liable for any bill or note signed by the others."—(*Galway* v. *Matthew*, 10 East, 264.); and so in other cases.

However small the share a partner may have in a concern, he is liable for the *whole* of the debts contracted by the firm; and must seek his remedy in a rateable contribution against his partners. Should one party enter into a smuggling or other illegal transaction on the partnership account, the other partners are liable to the duties and the penalty; and the Crown may proceed against the real delinquent alone, or against all the partners. A bookseller, or newspaper proprietor, is answerable for the acts of his agent or copartner, not only civilly, but also *criminally*.

Dissolution of Partnerships. — A partnership may be dissolved by the effluxion or expiration of the time during which it was originally agreed that it should continue. When a copartnership is formed for a single dealing or transaction, the moment that is completed, it is at an end. Partnerships may also be dissolved by death, agreement, bankruptcy, outlawry, &c. A court of equity will interfere to dissolve a partnership, in cases where a partner so misconducts himself as to be injurious to the firm, or to defeat the object for which the partnership was formed; or when a partner becomes insane, or is in such a state of mind as to render him permanently incapable of transacting the peculiar business of the firm; or where a partnership is formed for an impracticable purpose. Indeed, in all cases, where even a partnership may be dissolved without the interference of a court of equity, it may be most prudent, if the dissolution be opposed by one of the partners, to file a bill, praying a dissolution and account, and an injunction against using the partnership name.

When a partnership is dissolved by agreement, or one of the partners withdraws from it, public notice of the dissolution must be given in the *London Gazette*; and *a specific intimation of the circumstance must be sent to* ALL *individuals accustomed to deal with the firm*. Where such intimation has not been sent, the individual withdrawing from the firm may be made liable to third parties after he has ceased to have any thing to do with it. A dormant partner, whose name has never been announced, may withdraw from a firm without making the dissolution of partnership publicly known.

When the joint debts of the firm are paid, and the property duly distributed among the partners, the dissolution may be said, in a general sense, to be accomplished. If any one of the firm be guilty of a breach of duty in misapplying the effects before the

concern is finally wound up, the proper course is to apply to the Court of Chancery to appoint a manager.

Within a reasonable time after the death of one partner, the survivors must account to the representatives of the deceased; and if not willing to do so, a court of equity will compel them. In taking partnership accounts at the death of a partner, they must commence with the last stated account; or, if there be none such, with the commencement of the partnership; and they must end with the state of the stock at the time of the partner's death, and the proceeds thereof until it be got in.

No notice is necessary to third parties of the death of a partner; the partnership is dissolved, and all liabilities for subsequent acts cease. The surviving parties are to be sued alone for the partnership liabilities and obligations, for which they are liable to the full extent. But they are not liable for the separate debts of the deceased partner, unless, after payment of all the joint debts, they have a surplus of the partnership effects in their hands.

Upon a dissolution by death, if the joint effects be insufficient to pay the partnership debts, the separate estate of the deceased partner, if he have any, is liable for the deficiency.

The statements now made will, probably, be sufficient to give our readers a tolerably distinct notion of the formation of partnerships; and of the more important rights, duties, liabilities, &c. arising out of such institutions. Those who wish to go deeper into the subject, may consult the treatises of *Watson* and *Montague* on the *Law of Partnership; Chitty's Commercial Law*, vol. iii. pp. 225—269.; *Woolrych on Commercial Law*, pp. 298—317., *&c.*

PARTNERSHIPS WITH LIMITED LIABILITY, *or "en Commandite."*—For an account of these partnerships, see COMPANIES, and SUPPLEMENT.

PASSENGERS, in commercial navigation, are individuals conveyed for hire from one place to another on board ship. Passage ships are those peculiarly appropriated to the conveyance of passengers.

Passage ships are generally placed under certain regulations; and the extent to which emigration is now carried renders it of the utmost importance that these regulations should be carefully compiled and properly carried out.

Average Annual emigration from the United Kingdom						From 1815 to 1858 -	-	-	-	-	109,026
						For the 10 years ending 1858	-	-	-	-	261,865

By far the largest proportion of these emigrants, especially of late years, has consisted of natives of Ireland. The scarcity, or rather famine, of 1846-47, gave an extraordinary stimulus to Irish emigration; and it has since been continued, partly by the depressed condition of the peasantry, partly by the wish of the bulk of the landlords to diminish the number of petty holdings on their estates, and partly also by the entreaties and more effectually still by the large sums of money which have been sent to Ireland by parties who have emigrated, to encourage and assist the emigration of others. But there is no reason to fear that this emigration, however promoted, will be carried to excess. The rise of wages consequent on the diminution of the population will effectually hinder this result. It has latterly, indeed, declined considerably; and there can be no manner of doubt that emigration from Ireland might be carried to a much greater extent than it has yet been carried, without its being otherwise than advantageous to that island and to the U. Kingdom generally.

It is seen from the above account that in 1852 no fewer than 368,764, and in 1855,

323,429 voluntary emigrants left the U. Kingdom; and such being the vast extent to which emigration is now carried, the propriety, or rather necessity, of enacting some general regulations, with respect to the conveyance of emigrants to their destination, must be obvious to every one at all acquainted with the subject. The greater number of emigrants are in humble life: few among them know any thing of ships, or of the precautions necessary to insure a safe and comfortable voyage; they are also, for the most part, poor, and exceedingly anxious to economise, so that they seldom hesitate to embark in any ship, however unfit for the conveyance of passengers, or inadequately furnished with provisions, if it be *cheap*. Unprincipled masters and owners have not been slow to take advantage of this; and in order to prevent the frauds that would otherwise be practised on the unwary, it has been found indispensable to lay down some general regulations as to the number of passengers to be taken on board ships as compared with their tonnage, the quantity of water and provisions as compared with the passengers, &c. But this is no very easy task. If the limitations be too strict, that is, if comparatively few passengers may be carried, or if the stock of provisions to be put on board be either unnecessarily large or expensive, the cost of emigration is proportionally enhanced; and an artificial and serious impediment is thrown in the way of what should be made as easy as possible, consistent with security. But, on the other hand, if too many passengers be allowed, their health is liable to suffer; and should the supply of provisions be inadequate, or the quality bad, the most serious consequences may ensue. The act 6 G. 4. c. 116. obliged too great a quantity of expensive provisions to be put on board, and was in consequence objected to by emigrants as well as shippers. The act 9 G. 4. c. 21. avoided this error; but it was defective, inasmuch as it made no provision with respect to the sufficiency of the ship, the having a surgeon, or other properly qualified medical person on board ships carrying a certain number of passengers, and in other particulars. These deficiencies were in part supplied by the act 5 & 6 W. 4. c. 53., and subsequent statutes, including the 15 & 16 Vict. c. 44. But the provisions in these acts having been found to be in several respects inadequate, they have been repealed, and the following regulations, embodied in the 18 & 19 Vict. c. 119., have been substituted in their stead. We doubt, however, whether these will be much longer lived than those by which they have been preceded. They seem to be singularly deficient in the precision and clearness so very necessary in such matters, and to be encumbered with a host of details altogether foreign to the real business of the statute.

ACT OF 1855, THE 18 & 19 VICT. CAP. 119., FOR REGULATING THE CARRIAGE OF PASSENGERS BY SEA.

Commencement of this Act, and repeal of former Act, &c. — On the 1st October next, when this Act shall commence and come in force, "The Passengers Act, 1852," shall be repealed; except so far as the said Act repeals any former act or enactment; and except as to existing passage brokers' licences, which shall continue in force as mentioned in § 68. of this Act, and except as to any ship which shall have cleared out from any colonial port under the said Act, and before this Act shall have come into operation in such colony; and except so far as may be necessary for supporting or continuing any proceeding taken or to be taken upon any bond given under the said Act, or upon any other civil process; and except as to the recovery and application of any penalty for any offence committed against the said Act; and except also as to an order in council made by H. Majesty on the 16th October, 1852 in pursuance of the powers given by § 55. of the said Act, which said order in council shall remain in force until altered or revoked by any order in council to be made under the provisions of this Act.—§ 1.

Section 2. directs that in reciting this Act in other acts of parliament, or in any instrument, document, or proceeding, it shall be sufficient to use the expression "The Passengers Act, 1855."

Section 3. lays down the definition of terms used in this Act.

To what Vessels and Voyages this Act extends. — This Act shall extend to every "passenger ship" proceeding on any voyage from the U. K. to any place out of Europe, and not being within the Mediterranean Sea, and on every colonial voyage as after described, and in the particulars mentioned or referred to in §§ 100, 101, and 102, to every ship bringing passengers into the U. K. from any place out of Europe, and not being within the Mediterranean Sea; but shall not extend to any of H. M.'s ships of war, nor to any ships in the service of the lords of the admiralty of the U. K., nor to any ship of war or transport in the service of the E. I. Company, nor to any steam vessel regularly employed in the conveyance of mails under an existing contract with the government of the state or colony to which such steam vessel may belong, provided the master thereof shall, on demand, produce to the emigration officer at the port of clearance or port of departure a certificate of exemption, in the form given in schedule (A.) hereto annexed, under the hand of the postmaster general of the U. K., or of some person deputed by him for the purpose, or in the case of a colony, under the hand of the governor thereof, or in the case of a foreign state, under the hand of the postmaster general or other competent government officer, whose signature shall be authenticated by the signature of a British consular officer in such foreign state.—§ 4.

Penalty on fraudulently using Certificates or using fraudulent Certificates. — Such certificate of exemption shall be issuable at the discretion of the officer authorised to grant the same as herein mentioned, and shall remain in force for the period specified therein, unless sooner revoked, or unless the vessel for which it shall have been issued shall sooner cease to be employed in carrying the public mails; and if any person shall make or attempt to make any fraudulent use of any such certificate, or shall forge, counterfeit, alter, or erase the whole or any part thereof, or shall use or attempt to use any spurious or fraudulent certificate, the person so offending, and every person aiding and abetting in such offence, shall be liable to a penalty not exceeding 500*l*., and the vessel for which the exemption is claimed shall not be cleared out until all the requirements of this Act have been complied with.—§ 5.

Clause 6. enacts that the commissioners of emigration shall carry this Act into execution.

Clause 7. enacts that the emigration commissioners may sue and be sued in the name of their secretary, &c.

Clause 8. enacts that the emigration officers and assistants are to act under the commissioners of emigration, and that existing appointments are to continue until revoked.

Clause 9. enacts that the duties of emigration officer may be performed by his assistant or by the chief officer of customs.

Facilities to be given for the Inspection of all Ships fitting for Passengers.—The master of every ship, whether a "passenger ship" or otherwise, fitting or intended for the carriage of passengers, or which shall carry passengers upon any voyage to which this Act extends, shall afford to the emigration officer at any port or place in H. M.'s dominions, and, in the case of British ships, to H. M.'s consular officer at any foreign port or place at which such ship shall be or arrive, every facility for inspecting such ship, and for communicating with the passengers, and for ascertaining that the provisions of this Act, so far as the same may be applicable to such ships, have been duly complied with; the master of any ship who shall omit or fail to comply with any of the requirements of this section shall be liable to a penalty not exceeding 50*l.*—§ 10.

No Passenger Ship to clear without Certificate from Emigration Officer, &c.—No ship fitted or intended for the carriage of passengers as a "passenger ship" shall clear out or proceed to sea until the master thereof shall have obtained from the emigration officer at the port of clearance a certificate of clearance under his hand that all the requirements of this Act, so far as the same can be complied with, before the departure of such ship, have been duly complied with, and that such ship is, in his opinion, seaworthy, in safe trim, and in all respects fit for her intended voyage, and that her passengers and crew are in a fit state to proceed, nor until the master shall have joined in executing such bond to the crown as required by § 63. of this Act: Provided, that if such emigration officer shall refuse to grant such certificate, and the owner or charterer of such ship shall appeal in writing to the emigration commissioners, such commissioners shall appoint any 2 other emigration officers, or any 2 competent persons, at the expense of the appellant, to examine into the matter, and if the persons so appointed shall grant a certificate under their joint hands to the purport herein-before required, such certificate shall be held to be of the same effect as if granted by the emigration officer of the port of clearance.—§ 11.

Forfeiture of Ship if Master proceeds to Sea without Certificate of Clearance, &c.—If any "passenger ship" shall clear out or proceed to sea without the master having first obtained such certificate of clearance, or without his having joined in executing such bond, as by this Act is required, or if such ship after having sailed shall put into any port or place in the U. K. in a damaged state, and shall put to sea again without the master having first obtained such certificate of clearance as required by § 50. of this Act, such ship shall be forfeited to the use of H. M., and may be seized by any officer of customs, if found, within 2 years from the commission of the offence, in any port or place in H. M.'s dominions; and such ship shall thereupon be dealt with in the same manner as if she had been seized as forfeited under any of the laws relating to the customs for an offence incurring forfeiture under those laws.—§ 12.

Where Passengers may be carried.—No ship shall carry passengers or cabin passengers on more than 2 decks; provided, that cabin passengers in a proportion not exceeding 1 cabin passenger for every 100 tons of the ship's tonnage, or sick persons placed in a hospital, as after provided, may be carried in a poop or deck house, notwithstanding that passengers are carried on 2 other decks, and if passengers are carried under the poop or in any round house or deck house, such poop, round house, or deck house shall be properly built and secured to the satisfaction of the emigration officer at the port of clearance: for any breach of this enactment the master of the ship shall for each offence be liable to a penalty not exceeding 500*l.* nor less than 20*l.* sterling.—§ 13.

Rule for determining the Number of Passengers to be carried.—For determining the number of passengers to be carried in any "passenger ship" the following rules shall be observed:

1. No ship propelled by sails only shall carry a greater number of persons (including every individual on board) than in the proportion of 1 statute adult to every 2 tons of her registered tonnage:
2. No ship shall carry under the poop, or in the round house or deck house, or on the "upper passenger deck," a greater number of passengers than in the proportion of 1 statute adult to every 15 clear superficial feet of deck allotted to their use:
3. No ship shall carry on her lower passenger deck a greater number of passengers than in the proportion of 1 statute adult to every 18 clear superficial feet of deck allotted to their use: Provided nevertheless, that if the height between such lower passenger deck and the deck immediately above it shall be less than 7 feet, or if the apertures (exclusive of side scuttles) through which light and air shall be admitted to the lower passenger deck shall be less in size than in the proportion of 3 sq. feet to every 100 superficial feet of the lower passenger deck, no greater number of passengers shall be carried on such deck than in the proportion of 1 statute adult to every 25 clear superficial feet thereof:
4. No ship, whatever be her tonnage or superficial space of "passenger decks," shall carry a greater number of passengers on the whole than in the proportion of 1 statute adult to every 5 superficial feet, clear for exercise, on the upper deck or poop, or (if secured and fitted on the top with a railing or guard to the satisfaction of the emigration officer at the port of clearance) on any round house or deck house:
5. In the measurement of the passenger decks, poop, round house, or deck house, the space for the hospital and that occupied by such portion of the personal luggage of the passengers as the emigration officer may permit to be carried there shall be included:

If there be on board of any ship at or after the time of clearance a greater number of persons or passengers (except by births at sea) than in the proportions before mentioned, the master of such ship shall be liable to a penalty not exceeding 20*l.* nor less than 5*l.* for each passenger or person constituting such excess.—§ 14.

Nothing to extend to repeal 16 & 17 Vict. c. 84.—Provided nevertheless, that nothing in this Act shall repeal the Act 16 & 17 Vict. c. 84., intituled, "An Act to amend the Passengers Act, 1852, so far as relates to the Passages of Natives of Asia or Africa, and also Passages between the Island of Ceylon and certain Parts of the East Indies."—§ 15.

Passengers' Lists to be delivered in Duplicate by the Master before Clearance.—The master of every ship, whether a "passenger ship" or otherwise, carrying passengers on any voyage to which this Act extends, shall, before demanding a clearance for such ship, sign 2 lists, made out according to the form contained in schedule (B.) hereto annexed, correctly setting forth in the manner therein directed the name and other particulars of the ship, and of every passenger on board thereof; and the said lists, when countersigned by the emigration officer, where there is one at the port, shall be delivered by the master to the officer of the customs from whom a clearance of the said ship shall be demanded, and such officer shall thereupon also countersign and return to the said master 1 of such lists, called "The Master's List;" and the said master shall note in writing on such last-mentioned list, and on any additional lists to be made out as next provided, the date and supposed cause of death of any passenger who may die, and the date of birth and sex of any child who may be born on the voyage, and shall exhibit such list, with any additions which may from time to time be made thereto, to the chief officer of customs at any port or place in H. M.'s possessions, or to H. M.'s consular officer at any foreign port at which the said passengers or any of them shall be landed, and shall deposit the same with such chief officer of customs or such consular officer, as the case may be, at the final port or place of discharge, and such officer of customs or consular officer shall thereupon forthwith transmit the particulars respecting any passenger who may die, or of any child who may be born on the voyage to the registrar general of births, deaths, and marriages in England, who shall file the same, and enter a copy thereof in the "marine register book," which entry shall be dealt with and be of the same value as any other entry made in such book under the provisions of the 6 & 7 W. 4. c. 86.: in case of noncompliance with any of the requirements of this section on the part of the master, or if such lists shall be wilfully false, the master shall for each offence be liable to a penalty of not more than 100*l.* nor less than 5*l.*—§ 16.

Lists of Passengers embarked after Clearance to be delivered by Master.—If at any time after such lists

have been signed and delivered any additional passenger shall be taken on board, in such case the master shall add to "the master's list" the names and other particulars of every such additional passenger, and shall also sign a separate list, made out according to the aforesaid form, containing the names and other particulars of every such additional passenger, and such last-mentioned list, when countersigned by the emigration officer, where there is 1 at the port, shall, with "the master's list" to which such addition have been made, be delivered to the chief officer of customs, and thereupon such officer shall countersign "the master's list," and shall return the same to the said master, and shall retain the separate list, and so on in like manner whenever any additional passenger or passengers may be taken on board; or if no officer of customs be stationed at the port or place where such additional passenger or passengers may be taken on board, the said lists shall be delivered to the officer of customs at the next port or place at which such vessel shall touch or arrive and where any such officer shall be stationed, to be dealt with as before mentioned: provided, that when any additional passengers are taken on board the master shall obtain a fresh certificate from the emigration officer of the port that all the requirements of this Act have been duly complied with before the ship proceed to sea: in case of noncompliance with any of the requirements of this section, the master of such ship shall for each offence be liable to a penalty of not more than 50*l*. nor less than 5*l*.—§ 17.

Penalty on Persons found on board Ships without Consent of Owners, &c.—If any person be found on board any passenger ship with intent to obtain a passage therein without the consent of the owner, charterer, or master thereof, such person, and every person aiding and abetting him in such fraudulent intent, shall respectively be liable to a penalty not exceeding 5*l*., and in default of payment to imprisonment, with or without hard labour, for not exceeding 3 calendar months; and such person so found on board may be taken before any justice of the peace, without warrant, and such justice may summarily hear the case, and on proof of the offence convict such offender as aforesaid.—§ 18.

All Passenger Ships to be surveyed before clearing out.—No "passenger ship" shall clear out or proceed to sea unless she has been surveyed, under the direction of the emigration officer at the port of clearance, but at the expense of the owner or charterer thereof, by 2 or more competent surveyors to be appointed by the said emigration commissioners for each port at which there may be an emigration officer, and for other ports by the commissioners of customs, nor unless it shall be reported by such surveyors that such "passenger ship" is in their opinion seaworthy, and fit for her intended voyage. The survey shall be made before any part of the cargo is taken on board, except so much as may be necessary for ballasting the ship, and such portion of cargo if laden on board shall be shifted, if required by the emigration officer or surveyors, so as to expose to view successively every part of the frame of the ship. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 100*l*. nor less than 5*l*. Provided always that in case any "passenger ship" be reported by such surveyors not to be seaworthy, or not fit for her said intended voyage, the owner or charterer, if he think fit, may require, by writing under his hand, the emigration officer, or in his absence the chief officer of customs, to appoint 3 other competent surveyors, of whom 2 at least shall be shipwrights, to survey the said ship, at the expense of the said owner or charterer; and the said officer shall thereupon appoint such surveyors, who shall survey the said ship, and if they shall, by an unanimous report under their hands (but not otherwise), declare the said ship to be seaworthy, and fit for her intended voyage, the said ship shall then, for the purposes of this Act, be deemed seaworthy for such voyage.—§ 19.

As to the Construction of Beams and Decks.—In every "passenger ship" the beams supporting the "passenger decks" shall form part of the permanent structure of the ship: they shall be of adequate strength, in the judgment of the emigration officer at the port of clearance, and shall be firmly secured to the ship to his satisfaction. The "passenger decks" shall be at least 1½ in. in thickness, and shall be laid and firmly fastened upon the beams continuously from side to side of the compartment in which the passengers are berthed. The height between that part of any deck on which passengers are carried and the deck immediately above it shall not be less than 6 ft. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty of not more than 50*l*. nor less than 5*l*.—§ 20.

Arrangement and Size of Berths.—There shall not be more than 2 tiers of berths on any 1 deck in any "passenger ship," and the interval between the floor of the berths and the deck immediately beneath them shall not be less than 6 in., nor the interval between each tier of berths and between the uppermost tier and the deck above it less than 2½ ft.: the berths shall be securely constructed, and of dimensions not less than 6 ft. in length and 18 in. in width for each statute adult, and shall be sufficient in number for the proper accommodation of all the passengers contained in the lists of passengers herein-before required to be delivered by the master of the ship. No part of any berth shall be placed within 9 in. of any water-closet erected in the between-decks. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 21.

Single Men to be berthed in a separate Compartment.—In every "passenger ship" all the male passengers of the age of 14 years and upwards who do not occupy berths with their wives shall, to the satisfaction of the emigration officer at the port of clearance, be berthed in the fore part of the ship, in a compartment divided off from the space appropriated to the other passengers by a substantial and well-secured bulk-head, without opening into, or communication with, any adjoining passenger berth, or in separate rooms if the ship be fitted with enclosed berths: Not more than 1 passenger, unless husband and wife, or females or children under 12 years of age, shall be placed in or occupy the same berth. In case of n ncompliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty of not more than 50*l*. nor less than 5*l*.—§ 22.

Berths not to be removed till Passengers are landed.—No berths in a "passenger ship" occupied by passengers during the voyage shall be taken down until 48 hours after the arrival of such ship at the port of final discharge, unless all the passengers shall have voluntarily quitted the ship before the expiration of that time. In case of noncompliance with any of the requirements of this section, the master of such ship shall be liable for each offence to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 23.

Space to be allotted as an Hospital.—In every "passenger ship" there shall be a sufficient space properly divided off to the satisfaction of the emigration officer at the port of clearance, to be used exclusively as an hospital or hospitals for the passengers: this space shall be under the poop, or in the round house, or in any deck house which shall be properly built and secured to the satisfaction of such emigration officer, or on the upper passenger deck, and not elsewhere, and shall in no case be less than 18 clear superficial feet for every 50 passengers which the ship shall carry. Such hospitals shall be fitted with bed-places, and supplied with proper beds, bedding, and utensils, to the satisfaction of the emigration officer at the port of clearance, and throughout the voyage kept so fitted and supplied. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of the ship shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 24.

Regulation as to Construction of Privies.—No "passenger ship" shall clear out or proceed to sea unless fitted, to the satisfaction of the emigration officer at the port of clearance, with at least 2 privies, and with 2 additional privies on deck for *every 100* passengers on board, and in ships carrying as many as 50 female passengers, with at least 2 water-closets under the poop, or elsewhere on the upper deck, to the satisfaction of such emigration officer, for the exclusive use of the women and young children; all of which privies and water-closets shall be firmly constructed and maintained in a serviceable and cleanly condition throughout the voyage, and shall not be taken down until the expiration of 48 hours after the

arrival of the ship at the port of final discharge, unless all the passengers sooner quit the ship; provided that such privies shall be placed in equal numbers on each side of the ship, and need not in any case exceed 12 in number. In case of noncompliance with any of the requirements of this section, the master shall be liable to a penalty for each offence of not more than 50*l.* nor less than 5*l.*—§ 25.

As to Light and Ventilation. — No "passenger ship" shall clear out or proceed to sea without such provisions for affording light and air to the passenger decks as the circumstances of the case may, in the judgment of the emigration officer at the port of clearance, require; nor if there are as many as 100 passengers on board, without having an adequate and proper ventilating apparatus, to be approved by such emigration officer and fitted to his satisfaction; the passengers shall, moreover, have the free and unimpeded use of the whole of each hatchway situated over the space appropriated to their use, and over each such hatchway there shall be erected such a boobyhatch or other substantial covering as shall, in the opinion of such emigration officer, afford the greatest amount of light and air, and of protection from wet, as the case will admit. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of the ship, or any of them, shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 20*l.*—§ 26.

Regulations as to the carrying of Boats.—Every "passenger ship" shall carry throughout the voyage a number of boats according to the following scale; viz.: —

2 boats for every ship of less than 200 tons:
3 boats for every ship of 200 and less than 400 tons:
4 boats for every ship of 400 and less than 600 tons:
5 boats for every ship of 600 and less than 1000 tons:
6 boats for every ship of 1000 and less than 1500 tons:
7 boats for every ship of 1500 tons and upwards: Provided that no "passenger ship" shall be required to carry a greater number of boats than are sufficient in the judgment of the emigration officer at the port of clearance to carry all the persons on board of such ship:

One of such boats shall in all cases be a long boat, and one shall be a properly fitted life boat, which shall be carried in such a manner as to be, in the opinion of the emigration officer, most available for immediate service: each of such boats shall be of a suitable size and description, to be approved by the emigration officer at the port of clearance, and shall be seaworthy, and properly supplied with all requisites, and kept clear at all times for immediate use at sea: there shall likewise be on board each "passenger ship" if proceeding to any place to the southward of the equator at least 2 chronometers, and if to any place to the northward of the equator at least 1 chronometer, and on board of all "passenger ships" at least 3 steering and 1 azimuth compass, 4 properly fitted life buoys, kept ready at all times for immediate use, and some adequate means, to be approved by the emigration officer at the port of clearance, of making signals by night and in fogs; also a fire engine, in proper working order, and of such description and power and either with or without such other apparatus for extinguishing fire as such officer may approve; and not less than 3 bower anchors of such weight, and with cables of such length, size, and material, as in the judgment of such emigration officer shall be sufficient for the size of the ship. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty of not more than 50*l.* nor less than 5*l.*—§ 27.

Regulations as to carrying an efficient Crew. — Every "passenger ship" shall be manned with an efficient crew for her intended voyage, to the satisfaction of the emigration officer from whom a clearance of such ship may be demanded, and the strength of the crew shall not be diminished, nor any of the men changed when once passed by such emigration officer, without his consent in writing, or that of the shipping master of the port of clearance, as required by the laws then in force regulating the shipping of seamen on board merchant vessels. Where the consent of the shipping master is obtained, it shall, within 24 hours thereafter, be lodged with such emigration officer. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l.*: provided, that if the emigration officer shall consider the crew inefficient, and the owner or charterer of the ship shall thereupon appeal in writing to the said emigration commissioners, such commissioners shall, at the expense of the appellant, appoint 2 other emigration officers or 2 competent persons to examine into the matter, and the unanimous opinion of the persons so appointed, expressed under their hands, shall be conclusive on the point.—§ 28.

Certain Articles prohibited as Cargo and Ballast.—No "passenger ship" shall clear out or proceed to sea if there shall be on board as cargo, horses, cattle, gunpowder, vitriol, lucifer matches, guano, or green hides, nor if there shall be on board any other article or number of articles, whether as cargo or ballast, which by reason of the nature or quantity or mode of stowage thereof shall, either singly or collectively, be deemed by the emigration officer at the port of clearance likely to endanger the health or lives of the passengers or the safety of the ship: no part of the cargo, or of the passengers luggage, or of the provisions, water, or stores, whether for the use of the passengers or of the crew, shall be carried on the upper deck or on the "passenger decks," unless in the opinion of such emigration officer it shall be so placed as not to impede light or ventilation, nor interfere with the comfort of the passengers; nor unless the same be stowed and secured to the satisfaction of such emigration officer, and the space occupied thereby or rendered, in the opinion of such officer, unavailable for the accommodation of the passengers, shall (unless occupied by passengers' luggage) be deducted in calculating the space by which, under the provisions of this Act, the number of passengers is regulated. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master, or any of them, shall for each offence be liable to a penalty not exceeding 300*l.* nor less than 5*l.*—§ 29.

Computation of Voyages. — For the purposes of this Act, the length of the voyage for a "passenger ship" proceeding from the U. K. to the under-mentioned places respectively shall be determined by the following scale; viz.—(See Table, next page.)

For the like purposes, the said emigration commissioners, acting by and under the authority of one of H. M.'s principal secretaries of state, from time to time, by any notice in writing issued under the hands of any 2 of such commissioners, and published in the "London Gazette," may nevertheless declare what shall be deemed to be the length of voyage from the U. K. to any of the before-mentioned places, or to any other port or place whatsoever, and may fix such different lengths of voyage as they may think reasonable for such different descriptions of vessels as aforesaid.—§ 30.

Before Clearance, Provisions and Water to be surveyed.—Before any "passenger ship" be cleared out the emigration officer at the port of clearance shall survey or cause to be surveyed by some competent person the provisions and water required by this Act to be on board for the consumption of the passengers, and shall satisfy himself that the same are of a good and wholesome quality, and in a sweet and good condition, and are in quantities sufficient to secure throughout the voyage the issues herein prescribed: in addition to the allowance of pure water for the use of each passenger there shall be shipped for cooking purposes an additional supply of pure water after the rate of at least 10 gallons for every day of the prescribed length of voyage for every 100 statute adults on board; and also for the use of the crew and all other persons on board an ample supply of wholesome provisions and pure water, which shall not be inferior in quality to the supply of the same articles provided for the consumption of the passengers: all such water, provisions, and stores shall be provided and properly stowed away in accordance with the requirements of the 29th section of this Act, by and at the expense of the owner, charterer, or master of the ship; and if a clearance be obtained for any "passenger ship" which is not then stored with the requisite quantities of such water, provisions, and stores as are required by this Act, the

	If the ship be propelled by sails alone, or by steam power not sufficient without the aid of sails, to propel the ship after the rate of 5 miles an hour.	If the ship be propelled either wholly or in aid of sails by steam engines of not less power than sufficient, without the aid of sails, to propel the ship after the rate of 5 miles an hour.
	Days.	Days.

owner, charterer, or master of such ship, or any of them, shall for each offence be liable to a penalty not exceeding 300*l.*—§ 31.

Power to Emigration Officer to reject and mark bad Provisions, &c.—If such emigration officer shall consider that any of the provisions or stores or water are not of a good and wholesome quality, or are not in a sweet and good condition, it shall be lawful for him to reject and mark the same, or the packages or vessels in which they are contained, and to direct the same to be landed or emptied; and if such rejected provisions or stores or water be not thereupon forthwith landed or emptied, or if, after being landed, the same or any part thereof shall be reshipped in such ship, the owner, charterer, or master thereof, or any of them, or if reshipped in any other "passenger ship," the person causing the same to be reshipped, shall for each offence be liable to a penalty not exceeding 100*l.*—§ 32.

Water Tanks or Casks to be approved by Emigration Officer.—In every "passenger ship" the water to be laden on board, as herein required, shall be carried in tanks or in casks to be approved by the emigration officer at the port of clearance. When casks are used, they shall be sweet and tight, of sufficient strength, and if of wood properly charred inside, and shall not be capable severally of containing more than 300 gallons each: the staves of the water casks shall not be made of fir, pine, or soft wood. In case of noncompliance with any of the requirements of this section, the owner, charterer, or master of such ship, or any of them, shall for each offence be liable to a penalty of not more than 50*l.*—§ 33.

Provision for touching at intermediate Ports to fill up Water.—If any "passenger ship" be intended to call at any intermediate port or place during the voyage, for the purpose of taking in water, and if an engagement to that effect be inserted in the bond mentioned in the 63rd section of this Act, then it shall be sufficient to place on board at the port of clearance such supply of water as may be requisite, according to the rate herein-after mentioned, for the voyage of the said ship to such intermediate port or place, subject to the following conditions; viz.—

1. That the emigration officer signify his approval in writing of the arrangement, to be carried amongst the papers of the ship, and exhibited to the chief officer of customs, or to H. M.'s consular officer, as the case may be, at such intermediate port or place, and to be delivered to the chief officer of customs, or to H. M.'s consular officer, as the case may be, on the arrival of the said ship at the final port or place of discharge:

2. That if the length of either portion of the voyage, whether to such intermediate port or place, or from such intermediate port or place to the final port or place of discharge, be not prescribed in or under the provisions of this Act, the emigration officer at the port of clearance shall in every such case declare the same in writing to be carried amongst the papers of the ship:

3. That the ship shall have on board at the time a clearance is demanded, tanks or water casks, of the description hereinbefore mentioned, sufficient for stowing the quantity of water required for the longest of such portions of the voyage as aforesaid.—§ 34.

Dietary Scales of Provisions.—The master of every "passenger ship" shall, during the voyage, including the time of detention at any place before the termination thereof, issue to each passenger, or, where the passengers are divided into messes, to the head man for the time being of each mess on behalf and for the use of all the members thereof, an allowance of pure water and sweet and wholesome provisions, of good quality, according to the following dietary scale; viz., if the length of the voyage, computed as before mentioned, shall not exceed 84 days for ships propelled by sails only, or 50 days for ships propelled by steam, or steam in aid of sails, then according to the dietary scale marked "A.;" but if the length of the voyage, computed as aforesaid, shall exceed 84 days for ships propelled by sails only, or 50 days for ships propelled by steam, or steam in aid of sails, then according to the dietary scale marked "B."

WATER.

Three Quarts of Water daily to each Statute Adult, exclusive of the quantity before specified as necessary for cooking the articles herein required to be issued in a cooked state.

PROVISIONS.

Weekly per Statute Adult:—

	Scale A. For Voyages not exceeding 84 days for Sailing Vessels, or 50 days for Steamers.	Scale B. For Voyages exceeding 84 days for Sailing Vessels, or 50 days for Steamers.		Scale A. For Voyages not exceeding 84 days for Sailing Vessels, or 50 days for Steamers.	Scale B. For Voyages exceeding 84 days for Sailing Vessels, or 50 days for Steamers.
	lbs. oz.	lbs. oz.		lbs. oz.	lbs. oz.
Bread or Biscuit, not inferior in quality to Navy Biscuit	3 8	3 8	Salt	0 2	0 2
Wheaten Flour	1 0	2 0	Mustard	0 ½	0 ½

Pork	1 0	1 0	Raisins	0 8	0 8
Tea	0 2	0 2	Butter	0 4	0 4
Sugar	1 0	1 0			

SUBSTITUTIONS.

Substitutions at the following rates may, at the option of the master of any "passenger ship," be made in the above dietary scales, that is to say:—

1 lb. of preserved meat, for 1 lb. of salt pork or beef.
1 lb. of flour or of bread or biscuit, or ½ lb. of beef or of pork, for 1½ lb. of oatmeal, or 1 lb. of rice, or 1 lb. of peas.
1 lb. of rice, for 1½ lb. of oatmeal, or vice versa.
½ lb. of preserved potatoes, for 1 lb. of potatoes.
10 oz. of currants, for 8 oz. of raisins.
3½ oz. of cocoa, or of coffee, toasted and ground, for 2 oz. of tea.
⅞ lb. of treacle, for ½ lb. of sugar.
1 gill of mixed pickles, for 1 gill of vinegar.

Provided, that the substituted articles be set forth in the contract tickets of the passengers. In case of noncompliance with any of the requirements of this section, the master of the ship shall be liable for each offence to a penalty not exceeding 50*l*.—§ 35.

Size of Messes.—The messes into which the passengers in any "passenger ship" may be divided shall not consist of more than 10 statute adults in each mess, and members of the same family, whereof 1 at least is a male adult, shall be allowed to form a separate mess. The provisions according to the above scale shall be issued, such of them as require to be cooked, in a properly cooked state, daily before 2 o'clock in the afternoon, to the head person for the time being of each mess on behalf and for the use of the members thereof. The first of such issues shall be made before 2 o'clock in the afternoon of the day of embarkation to or for such passengers as shall be then on board. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l*.—§ 36.

Power to Emigration Commissioners to authorise an alternative Dietary Scale.—The emigration commissioners for the time being, acting under the authority of 1 of the principal secretaries of state, may from time to time, by any notice for that purpose, issued under the hands of any 2 of such commissioners, and published in the "London Gazette," authorise the issue of provisions in any "passenger ship" according to such other dietary scale (besides that before prescribed) as shall in their opinion contain in the whole an equivalent amount of wholesome nutriment; and after the publication of such notice it shall be lawful for the master of any "passenger ship" to issue provisions to his passengers either according to the scale by this Act prescribed, or according to the scale authorised by the said commissioners, whichever may have been set forth in the contract tickets of the passengers: provided always, that the said commissioners acting under such authority and by such notice as aforesaid, may revoke or alter any such dietary scale authorised by them, as occasion may require.—§ 37.

As to Passengers' Stewards.—Every "passenger ship" carrying as many as 100 passengers shall have on board a seafaring person, who shall be rated in the ship's articles as passengers' steward, and who shall be approved by the emigration officer at the port of clearance, and who shall be employed in messing and serving out the provisions to the passengers, and in assisting to maintain cleanliness, order, and good discipline among the passengers, and who shall not assist in any way in navigating or working the ship. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 38.

As to Passenger Cooks and cooking Apparatus.—Every "passenger ship" carrying as many as 100 passengers shall also have on board a seafaring man, or if carrying more than 300 "statute adults," 2 seafaring men, to be rated and approved as in the case of passengers' stewards, who shall be employed in cooking the food of the passengers: a convenient place for cooking shall also be set apart on deck; and a sufficient cooking apparatus, properly covered in and arranged, shall be provided, to the satisfaction of the said emigration officer, together with a proper supply of fuel adequate, in his opinion, for the intended voyage. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 39.

In what Cases Interpreters to be carried.—In every foreign "passenger ship" in which as many as half the passengers are British subjects, unless the master and officers or not less than 3 of them shall understand and speak intelligibly the English language, there shall be carried, where the number of passengers does not exceed 250, 1 person, and where it exceeds 250, 2 persons, who understand and speak intelligibly the language spoken by the master and crew and also the English language, and such persons shall act as interpreters, and be employed exclusively in attendance on the passengers, and not in the working of the ship; and no such ship shall clear out or proceed to sea without having such interpreter or interpreters on board; and the master of any such foreign ship clearing out or proceeding to sea without having such interpreter or interpreters on board as aforesaid shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 40.

In what Cases a Medical Man must be carried.—Every "passenger ship" shall in the following cases carry a duly qualified medical practitioner, who shall be rated on the ship's articles:—

1st, when the duration of the intended voyage, as before computed, exceeds 80 days in the case of ships propelled by sails, and 45 days in the case of ships propelled by steam, and the number of passengers on board exceeds 50:
2nd, whenever the number of persons on board (including cabin passengers, officers, and crew,) exceeds 300:

In case of noncompliance with any of the requirements of this section, the master shall for each offence be liable to a penalty not exceeding 100*l*. nor less than 20*l*.—§ 41.

Qualification of Medical Man.—No medical practitioner shall be considered to be duly qualified for the purposes of this Act unless authorised by law to practise in some part of H. M.'s dominions, or, in the case of a foreign ship, in the country to which such ship may belong, as a physician, surgeon, or apothecary, nor unless his name shall have been notified to the emigration officer at the port of clearance, and shall not be objected to by him, nor unless he shall be provided with proper surgical instruments to the satisfaction of such officer: provided nevertheless, that where the majority of the passengers in any "passenger ship," or as many as 300, are foreigners, any medical practitioner who may be approved by such emigration officer may be carried therein. In case any person shall proceed or attempt to proceed as medical practitioner in any "passenger ship" without being duly qualified as aforesaid, or contrary to any of the requirements of this section, such person and all persons aiding or abetting therein shall for each offence be liable to a penalty not exceeding 100*l*. nor less than 10*l*.—§ 42.

Medicines and Medical Comforts.—The owner or charterer of every "passenger ship" shall provide for the use of the passengers a supply of medicines, medical comforts, instruments, and other things proper and necessary for diseases and accidents incident to sea voyages, and for the medical treatment of the passengers during the voyage, including an adequate supply of disinfecting fluid or agent, together with printed or written directions for the use of the same respectively; and such medicines, medical comforts, instruments, and other things shall, in the judgment of the emigration officer at the port of clearance, be good in quality, and sufficient in quantity, for the probable exigencies of the intended voyage, and shall be properly packed and placed under the charge of the medical practitioner, when there is one on board, to be used at his discretion. In case of noncompliance with any of the requirements of this section, the master of the ship shall for each offence be liable to a penalty not exceeding 50*l*. nor less than 5*l*.—§ 43.

Medical Inspection of Passengers and Medicines, &c.—No "passenger ship," except as after provided, shall clear out or proceed to sea until some medical practitioner, to be appointed by the emigration officer at the port of clearance, shall have inspected such medicines, medical comforts, and other articles as are required to be supplied by the last section, and also all the passengers and crew about to proceed in the ship, and shall have certified to the said emigration officer that the said ship contains a sufficient supply of medicines, medical comforts, disinfecting fluid or agent, instruments, and other things requisite for

the medical treatment of the passengers during the intended voyage, nor until such medical practitioner shall have certified and the said emigration officer shall be satisfied that none of the passengers or crew appear, by reason of any bodily or mental disease, unfit to proceed, or likely to endanger the health or safety of the other persons about to proceed in such vessel. Such medical inspection of the passengers shall take place either on board the vessel, or, at the discretion of the said emigration officer, at such convenient place on shore before embarkation as he may appoint; and the master, owner, or charterer of the ship shall pay to such emigration officer a sum at the rate of 1*l.* for every 100 persons so examined: provided also, that in case the emigration officer on any particular occasion shall be unable to obtain the attendance of a medical practitioner, it shall be lawful for the master of any such ship to clear out and proceed to sea, on receiving from the said emigration officer written permission for the purpose. In case any "passenger ship" shall clear out or proceed to sea without having complied with all the requirements of this section, the master of such ship shall for each offence be liable to a penalty not exceeding 100*l.* nor less than 5*l.*—§ 44.

Relanding of Passengers on account of Sickness or for purifying Ships.—If the emigration officer at any port shall be satisfied that any person on board or about to proceed in any "passenger ship" is by reason of sickness unfit to proceed, or is for that or for any other reason likely to endanger the health or safety of the other persons on board, the said emigration officer shall prohibit the embarkation of such person, or if embarked shall require him to be relanded; and if such emigration officer shall be satisfied that it is necessary, for the purification of the ship or otherwise, that all or any of the passengers or persons on board should be relanded, the said emigration officer may require the master of the ship to reland all such passengers or persons and the master shall thereupon reland such passengers or persons, with so much of their effects and with such members of their families as cannot in the judgment of such emigration officer be properly separated from them; and in case of noncompliance with any of the requirements of this section, the master, owner, or charterer of the ship shall for each offence be liable to a penalty not exceeding 200*l.* nor less than 10*l.*; and any passenger or person embarking after such prohibition, or refusing or neglecting to leave the ship when so directed to be relanded, shall be liable to be summarily removed, and to a penalty not exceeding 2*l.* for each day which he shall remain on board after the giving of such prohibition or direction.—§ 45.

Return of Passage Money to Passengers relanded on account of Sickness, &c.—Any passenger so relanded on account of the sickness of himself or of any member of his family who may not be re-embarked and finally sail in such ship, or any emigration officer on his behalf, shall be entitled to recover, by summary process, the whole of the monies which may have been paid by or on account of such passenger for his passage, and that of the members of his family so relanded, from the party to whom the same may have been paid, or from the owner, charterer, or master of such ship, or any of them, at the option of such passenger or emigration officer.—§ 46.

Subsistence Money to be paid to Passengers relanded.—The master of any "passenger ship," from which the whole or any part of the passengers shall be relanded on account of any of the reasons mentioned in § 45, shall pay to each passenger so relanded (or if he shall be lodged and maintained in any hulk or establishment under the superintendence of the said emigration commissioners, then to the emigration officer at the port), subsistence money at the rate of 1*s.* 6*d.* a day for each statute adult until he shall be re-embarked or decline or neglect to proceed, or until his passage money, if recoverable under § 45 of this Act, be returned to him.—§ 47.

Return of Passage Money, &c.—If any person by whom or on whose behalf any contract shall have been made for a passage in any ship proceeding on any voyage to which this Act extends, shall be at the place of embarkation before 6 o'clock in the afternoon of the day of embarkation appointed in such contract, and shall, if required, pay the stipulated passage money, or the unpaid balance thereof, and if from any cause whatever, other than his own refusal, neglect, or default, or the prohibition of an emigration officer, as before mentioned, or the requirements of any order in council, such passenger shall not be received on board before that hour, or if from any such cause as aforesaid any passenger who shall have been received on board shall not either obtain a passage in such ship to the port at which he may have contracted to land, or, together with all the immediate members of his family who may be included in such contract, obtain a passage to the same port in some other equally eligible ship, to sail within ten days from the expiration of the said day of embarkation, and in the meantime be paid subsistence money from the time and at the rate after mentioned, such passenger, or any emigration officer on his behalf, shall be entitled to recover either from the party to whom or on whose account the same may have been paid, (or (in case such contract shall have been made with the owner, charterer, or master of such ship, or with any person acting on behalf or by the authority of any of them respectively), from such owner, charterer, or master of such ship, or any of them, at the option of such passenger or emigration officer, all monies which shall have been paid by or on account of such passengers for such passage, and also such further sum, not exceeding 10*l.*, in respect of each such passage, as shall in the opinion of the justices of the peace who shall adjudicate on the complaint, be a reasonable compensation for the loss or inconvenience occasioned to such passenger by the loss of such passage.—§ 48.

Subsistence in case of Detention.—If any ship, whether a "passenger ship" or otherwise, shall not actually put to sea, and proceed on her intended voyage before 3 o'clock in the afternoon of the day next after the said day of embarkation, the owner, charterer, or master of such ship, or his or their agent, or any of them, at the option of such passenger or emigration officer, shall pay to every passenger entitled to a passage (or if such passenger shall be lodged and maintained in any establishment under the superintendence of the said emigration commissioners, then to the emigration officer at the port of embarkation), subsistence money after the rate of 1*s.* 6*d.* for each statute adult in respect of each day of delay for the first 10 days, and afterwards 3*s.* a day for each statute adult, until the final departure of such ship on such voyage, and the same may be recovered in manner after mentioned; provided that if the passengers be maintained on board in the same manner as if the voyage had commenced, no such subsistence money shall be payable for the first 2 days next after the said day of embarkation, nor if they shall be maintained shall such subsistence money be payable if the ship be unavoidably detained by wind or weather, or by any cause not attributable in the opinion of the emigration officer to the act or default of the owner, charterer, or master.—§ 49.

Ships putting back to replenish Provisions, &c.—If any "passenger ship" shall, after clearance, be detained in port for more than 7 days, or shall put into or touch at any port or place in the U. K., she shall not put to sea again until there shall have been laden on board, at the expense of the owner, charterer, or master of such ship, such further supply of pure water, wholesome provisions of the requisite kinds and qualities, and medical comforts and stores, as may be necessary to make up the full quantities of those articles before required to be laden on board for the intended voyage, nor until any damage she may have sustained shall have been effectually repaired, nor until the master of the said ship shall have obtained from the emigration officer or his assistant, or, where there is no such officer, or in his absence, from the officer of customs at such port or place, a certificate to the same effect as the certificate before required to enable the ship to be cleared out; and in case of any default herein the said master shall be liable, on conviction, as herein-after mentioned, to a penalty not exceeding 100*l.* nor less than 50*l.* And if the master of any "passenger ship" so putting into or touching at any port or place as aforesaid shall not within 12 hours thereafter report, in writing, his arrival, and the cause of his putting back, and the condition of his ship, and of her stores and provisions, to the emigration officer, or, as the case may be, to the officer of customs at the port, and shall not produce to such officer the official or "master's list" of passengers, such master shall for each offence be liable to a penalty not exceeding 20*l.* nor less than 2*l.*—§ 50.

In case of Wreck or Damage Passengers to be provided with a Passage by some other Vessel, &c.—If any "passenger ship" shall put into any port or place in the U. K. in a damaged state, and the master, charterer, or owner shall not give a written undertaking that the said ship shall be made sound and seaworthy, and shall within 6 weeks from the day of her so putting into such port or place again proceed with her passengers on her intended voyage, and if the said ship shall not accordingly be made seaworthy and proceed on her intended voyage within that period, or if any such ship shall after the commencement of her voyage be wrecked, sunk, or otherwise destroyed, or shall from any cause whatsoever not land her passengers at the place where they may have respectively contracted to land, the owner, charterer, or master thereof shall provide the passengers with a passage in some other eligible ship to sail within 6 weeks to the port or place at which they respectively may have originally contracted to land, and shall in the meantime, if the passengers be not lodged and maintained on board in the same manner as if the ship were at sea, pay to such passengers (or if such passengers shall be lodged or maintained in any hulk or establishment under the superintendence of the said emigration commissioners, then to the emigration officer at such port or place), subsistence money after the rate of 1*s.* 6*d.* for each statute adult in respect of each day of delay until such passengers are duly forwarded to their destination; and if default shall be made in any of the requirements of this section such passengers respectively, or any emigration officer on their behalf, shall be entitled to recover, by summary process, as after mentioned, all monies which shall have been paid by or on account of such passengers or any of them for such passage, from the party to whom or on whose account the same may have been paid, or from the owner, charterer, or master of such ship, or any of them, at the option of such passenger or emigration officer: Provided that the said emigration officer may, if he shall think it necessary, direct that the passengers shall be removed from such "passenger ship" at the expense of the master thereof; and if after such direction any passenger shall refuse to leave such ship, he shall be liable to a penalty not exceeding 2*l.* or to imprisonment not exceeding 1 calendar month.—§ 51.

Secretary of State, &c., may pay Expenses of taking off Passengers at Sea.—If the passengers or cabin passengers of any "passenger ship" shall be taken off from any such "passenger ship" or shall be picked up at sea from any boat, raft, or otherwise, it shall be lawful, if the port or place to which they shall be conveyed shall be in the U. K., for one of the principal secretaries of state, or if in any colonial possession, for the governor of such colony, or for any person authorised by him for the purpose, or if in any foreign country, for H. M.'s consular officer, at such port or place therein, to defray all or any part of the expenses thereby incurred.—§ 52.

Governors or Consuls may send on Passengers if the Master of the Ship fail to do so.—If any passenger or cabin passenger of any "passenger ship" shall, without any neglect or default of his own, find himself within any colonial or foreign port or place other than that at which he may have contracted to land, it shall be lawful for the governor of such colony, or for any person authorised by him for the purpose, or for H. M.'s consular officer at such foreign port or place, as the case may be, to forward such passenger to his intended destination, unless the master of such ship shall, within 48 hours of the arrival of such passenger, give to the governor or consular officer, as the case may be, a written undertaking to forward or carry on within 6 weeks thereafter such passenger or cabin passenger to his original destination, and unless such master shall accordingly forward or carry him on within that period.—§ 53.

Expenses incurred under the two preceding Sections to be a Crown Debt.—All expenses incurred under the last two preceding sections or either of them, by or by the authority of such secretary of state, governor, consular officer, as aforesaid, including the cost of maintaining the passengers until forwarded to their destination, and of all necessary bedding, provisions, and stores, shall become a debt to H. M. and her successors from the owner, charterer, and master of such ship, and shall be recoverable from them, or from any one or more of them, at the suit and for the use of H. M., in like manner as in the case of other crown debts; and a certificate purporting to be under the hand of any such secretary of state, governor, or consular officer (as the case may be), stating the total amount of such expenses, shall in any suit or other proceeding for the recovery of such debt be received in evidence without proof of the handwriting or of the official character of such secretary of state, governor, or consular officer, and shall be deemed sufficient evidence of the amount of such expenses, and that the same were duly incurred: Provided nevertheless, that in no case shall any larger sum be recovered on account of such expenses than a sum equal to twice the total amount of passage money received by the owner, charterer, or master of such passenger ship, or any of them, from or on account of the whole number of passengers and cabin passengers who may have embarked in such ship; which total amount of passage money shall be proved by the defendant, if he will have the advantage of this limitation of the debt; but if any such passengers are forwarded or conveyed to their intended destination under the provisions of the last preceding section, they shall not be entitled to the return of their passage money, or to any compensation for loss of passage under the provisions of this Act.—§ 54.

Insurance of Passage Money not to be void on account of the nature of the Risk.—No policy of assurance effected in respect of any passages, or of any passage or compensation monies, by any person by this Act made liable, in the events aforesaid, to provide such passages or to pay such monies, or in respect of any other risk under this Act, shall be deemed to be invalid by reason of the nature of the risk or interest sought to be covered by such policy of assurance.—§ 55.

Penalty on wrongfully landing Passengers.—If any passenger in any ship, whether a "passenger ship" or otherwise, shall be landed at any port or place other than the port or place at which he may have contracted to land, unless with his previous consent, or unless such landing shall be rendered necessary by perils of the sea, or other unavoidable accident, the master shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 10*l.*—§ 56.

Passengers to be maintained for 48 *Hours after Arrival.*—Every passenger in a "passenger ship" shall be entitled for at least 48 hours next after his arrival at the end of his voyage, to sleep in the ship, and to be provided for and maintained on board thereof, in the same manner as during the voyage, unless within that period the ship shall quit such port or place in the further prosecution of her voyage. In case of noncompliance with any of the requirements of this section, the master shall for each offence be liable to a penalty not exceeding 5*l.*—§ 57.

Passengers Right of Action preserved.—Nothing herein contained shall take away or abridge any right of action which may accrue to any passenger in any ship, or to any other person, in respect of the breach or nonperformance of any contract made or entered into between or on behalf of any such passenger or other person, and the master, charterer, or owner of any such ship, or his or their agent, or any passage broker.—§ 58.

H. M. may, by Orders in Council, prescribe Rules for Purposes herein described.—It shall be lawful for H. M., by any order in council, to prescribe such rules and regulations as to H. M. may seem fit, for the following purposes; viz.—

1. For preserving order, promoting health, and securing cleanliness and ventilation on board of "passenger ships" proceeding from the U. K. to any port or place in H. M.'s possessions abroad.
2. For permitting the use on board of "passenger ships" of an apparatus for distilling water, and for defining in such case the quantity of fresh water to be carried in tanks or casks for the passengers.
3. For prohibiting emigration from any port or ports at any time when choleraic or any epidemic disease may be generally prevalent in the U. K. or any part thereof, or for reducing the number of passengers allowed to be carried in "passenger ships" generally, or from any particular ports under the provisions of this Act.
4. For requiring duly qualified medical practitioners to be carried in "passenger ships" in cases where they would not be required to be carried under the provisions of this Act.

Any such order in council may from time to time in like manner be altered, amended, and revoked, as occasion may require. Any copy of such order in council contained in the "London Gazette," or purporting to be printed by the Queen's printer, shall throughout H. M.'s dominions be received in all legal proceedings as good and sufficient evidence of the making and contents of any such order in council.—§ 59.

Surgeon or Master to exact Obedience to Rules and Regulations.—In every such "passenger ship" the medical practitioner on board, aided by the master thereof, or, in the absence of such medical practitioner, the master of such ship, is hereby empowered to exact obedience to all rules and regulations which may be prescribed by any such order in council to be observed on board passenger ships as aforesaid; and any person on board who shall neglect or refuse to obey any such rule or regulation, or who shall obstruct the medical practitioner or master of such ship in the execution of any duty imposed upon him by any such rule or regulation, or who shall offend against any of the provisions of this Act, or who shall be guilty of riotous or insubordinate conduct, shall be liable for each offence to a penalty not exceeding 2*l.*, and in addition thereto, to be confined in the common gaol for any period not exceeding 1 month, at the discretion of the justices who shall adjudicate on the complaint.—§ 60.

Emigration Commissioners to prepare an Abstract of Act and Orders in Council.—The said emigration commissioners shall from time to time prepare such abstracts as they may think proper of the whole or any part of this Act, and of any such order in council as aforesaid; and four copies of such abstracts, together with a copy of this Act, shall, on demand, be supplied by the principal officer of customs at the port of clearance to the master of every "passenger ship" proceeding from the U. K. to any port or place in H. M.'s possessions abroad; and such master shall, on request made to him, produce a copy of this Act to any passenger on board, for his perusal, and, further, shall post, previous to the embarkation of the passengers, and shall keep posted so long as any passenger shall be entitled to remain in the ship in at least two conspicuous places between the decks on which passengers may be carried, copies of such abstracts; and such master shall be liable to a penalty not exceeding 2*l.* for every day during any part of which by his act or default such abstracts shall fail to be so posted; and any person displacing or defacing such abstracts so posted shall be liable to a penalty not exceeding 2*l.*—§ 61.

Sale of Spirits prohibited on board Passenger Ships.—If in any "passenger ship" any person shall during the voyage, directly or indirectly, sell or cause to be sold any spirits or strong waters to any passenger, he shall be liable for every such offence to a penalty not exceeding 20*l.* nor less than 5*l.*—§ 62.

Bond to be given by Masters of British and Foreign Passenger Ships.—Before any "passenger ship" shall clear out or proceed to sea, the master, together with the owner or charterer of the ship, or, in the event of the absence of such owner or charterer, or if the master be the owner or charterer, one other good and sufficient person, to be approved by the chief officer of customs at the port of clearance, shall enter into a joint and several bond, in the sum of 2,000*l.* to H. M., her heirs and successors, according to the form contained in schedule annexed to the Act. Such bond shall not be liable to stamp duty, and shall be executed in duplicate.—§ 63.

Clause 64. enacts that a counterpart of the bond referred to shall be certified, and sent to the colony to which ship bound, and be received in evidence without further proof of execution.

In the Absence of Agreement to the contrary the Owner to be responsible in respect of Default.—In the absence of any agreement to the contrary, the owner shall be the party ultimately responsible, as between himself and the other persons hereby made liable in respect of any default in complying with the requirements of this Act; and if any such last-mentioned person shall pay any monies hereby made payable to or on behalf of any such passengers as aforesaid, the person so paying the same shall be entitled, in the absence of any such agreement as aforesaid, to sue for and recover from the owner the amount so paid, together with costs of suit.—§ 65.

No Person to act as a Passage Broker without a Licence.—No person whatever shall directly or indirectly act as a passage broker in respect of passages from the U. K. to any place out of Europe, and not being within the Mediterranean Sea, or shall sell or let, or agree to sell or let, or be in anywise concerned in the sale or letting of passages in any ship, whether a "passenger ship" or otherwise, proceeding from the U. K. to any such place as aforesaid, unless such person, with 2 good and sufficient sureties to be approved by the emigration officer at the port nearest to the place of business of such person, shall have previously entered into a joint and several bond, in the sum of 1000*l.* to H. M., her heirs and successors, which bond shall be renewed on each occasion of obtaining such licence as after mentioned, and shall be in duplicate, without stamps, and one part thereof shall be deposited at the office in London of the said emigration commissioners, and the other part thereof with the emigration officer at the port nearest to the place of business of such person; nor unless such person shall have obtained a licence, as after mentioned, to let or sell passages, nor unless such licence shall then be in force; and if any person shall offend in any particular against this enactment, every person so offending shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 20*l.* to be sued for and recovered as after mentioned: Provided that such bond shall not be required of any person who shall be one of the sworn brokers of the city of London: Provided also, that there shall be excepted from the operation of this section the said emigration commissioners, and any persons contracting with them, or acting under their authority, and also any person acting as the agent of any passage broker in pursuance of an appointment signed by such passage broker, and countersigned by such emigration officer as aforesaid: Provided further, that the acts and defaults of any person acting under the authority or as agent of any passage broker shall, for the purposes of this Act, be deemed to be also the acts and defaults of such passage-broker: Provided also that nothing before contained shall be held or construed to prevent the said emigration officer from accepting the bond of a guarantee society, such bond and such guarantee society as shall have been approved by the commissioners of H. M.'s treasury, in lieu of the bond of 2 good and sufficient securities as aforesaid.—§ 66.

Clause 67. directs how passage brokers are to obtain licences.

Clause 68. enacts that existing licences shall continue in force until 1st Feb. 1856.

Clause 69. enacts that passage brokers shall employ no agents except those expressly appointed by them.

Penalty on Persons fraudulently inducing others to engage Passages.—If any person shall by false representation as to the size of a ship, or otherwise, or by any false pretence or fraud whatsoever, induce any person to engage a passage in any ship, the person so offending shall for each offence be liable to a penalty not exceeding 20*l.* nor less than 5*l.*—§ 70.

Contract Tickets for Cabin and other Passengers.—Every person whatever, except the said emigration commissioners and persons acting for them and under their direct authority, who shall receive money from any person for or in respect of a passage in any ship, or of a cabin passage in any "passenger ship" proceeding from the U. K. to any place out of Europe, and not being within the Mediterranean Sea, shall give to the person paying such money a contract ticket, signed by the owner, charterer, or master of the ship or "passenger ship" (as the case may be) in which the passage is to be provided, or by some person in their or his name, and on their or his behalf: such contract ticket shall be made out in plain and legible characters on a printed form, which in the case of cabin passengers shall be according to the form contained in schedule annexed to the Act, and in the case of all other passengers in the form contained in schedule L. hereto annexed, or according to such other form as in either case may from time to time be prescribed by the said emigration commissioners in any notice issued under their hands, or the hands of any two of them, and published in the "London Gazette:" and any directions contained on the face of such form of contract ticket shall be obeyed in the same manner as is herein set forth. In case of noncompliance with any of the requirements of this section, or of any of the directions on such

form of contract ticket not inconsistent with this Act, the person so offending shall for each offence be liable to a penalty not exceeding 50*l.* nor less than 5*l.*: Provided always, that such contract tickets shall not be liable to any stamp duty.—§ 71.

Clauses 72. to 94. inclusive relate to matters of detail and to legal procedure.

Colonial Voyages defined.—And whereas it is expedient to provide in certain cases for the carriage of passengers by sea from H. M.'s possessions abroad: Be it therefore enacted as follows: For the purposes of this Act the term "colonial voyage" shall signify any voyage from any place within any of such possessions (except the territories under the government of the E. I. Company and the island of Hong Kong) to any place whatever where the distance between such places shall exceed 400 miles, or the duration of the voyage, to be prescribed as hereinafter mentioned, shall exceed 3 days.—§ 95.

This Act shall apply to all Colonial Voyages, except as relates to Matters herein named.—This Act shall apply, so far as the same is applicable, to all ships carrying passengers on any such "colonial voyage," except as to such parts of the Act as relate to the following matters; viz.

1. To passage brokers and their licences:
2. To passengers contract tickets:
3. To emigrant runners:
4. To the giving bond to H. Majesty:
5. To the keeping on board a copy of this Act:
6. To orders in council regulating emigration from the United Kingdom, or prescribing rules for promoting health, cleanliness, order, and ventilation:

Provided that if the prescribed duration of any "colonial voyage" be less than three weeks; then, in addition to the matters lastly hereinbefore excepted, the provisions of this Act shall not extend or apply so far as they relate to the following subjects; viz.

The construction or thickness of the decks:
The berths and berthing:
The height between decks:
Privies:
Hospitals:
Light and ventilation:
Manning:
Passengers stewards:
Passengers cooks and cooking apparatus:
The surgeon, and medicine chest:
The maintenance of passengers for 48 hours after arrival.

Provided also, that in the case of such "colonial voyages" whereof the prescribed duration is less than 3 weeks, the requirements of this Act respecting the issue of provisions shall not, except as to the issue of water, be applicable to any passenger who may have contracted to furnish his own provisions.—§ 96.

Clause 97. empowers the governors of colonies, by proclamation, to declare length of voyage, and prescribe scale of diet, medicines, and medical comforts.

Clause 99. authorises the governor-general of India in council, by any Act to be passed for that purpose to adopt this Act for India, and to make rules respecting food, passengers, surgeons, &c.

List of Passengers brought into the U. K., &c.—The master of every ship bringing passengers into the U. K. from any place out of Europe, and not within the Mediterranean Sea, shall, within 24 hours after arrival, deliver to the emigration officer or his assistant, or in their absence to the chief officer of customs at the port of arrival, a correct list, signed by such master, and specifying the names, ages, and callings of all the passengers embarked, and also the port or ports at which they respectively may have embarked, and showing which, if any of them, may have died, with the supposed cause of death, or been born on the voyage; and if any master shall fail so to deliver such list, or if the same shall be wilfully false, he shall, on conviction, as before mentioned, be liable to a penalty not exceeding 50*l.* Such emigration or customs officer shall, upon receipt of such list, transmit the particulars respecting any passenger named therein who may have died, with the supposed cause of death, or been born on the voyage, to the registrar-general of births, deaths, and marriages, who shall file the same, and enter a copy thereof under his hand in the "Marine Register Book," which entry shall be dealt with and be of the same value as evidence as any other entry made in such book under the provisions of the 6 & 7 W. 4. c. 86.—§ 100.

Penalty on Masters for having on Board a greater Number of Persons than prescribed by this Act.—If any ship bringing passengers into the U. K. from any place out of Europe shall have on board a greater number of passengers or persons than in the proportions respectively prescribed in §14 of this Act for ships carrying passengers from the U. K., the master of such ship shall be liable, on such conviction as before mentioned, to a penalty not exceeding 10*l.* nor less than 5*l.* for each such person or statute adult constituting any such excess.—§ 101.

Provisions and Water to be issued to Passengers brought into the U. K., &c.—The master of every passenger ship bringing passengers into the U. K. from any place out of Europe shall make to each statute adult during the voyage, including the time of detention, if any, at any port or place before the termination thereof, issues of pure water and of good and wholesome provisions in a sweet condition, in quantities not less in amount than is prescribed in §35 of this Act for passengers proceeding from the U. K.; and in case of non-compliance with any of the requirements of this section the master of such ship shall on such conviction as hereinbefore mentioned, be liable for each offence to a penalty not exceeding 50*l.*—§ 102.

SCHEDULE B. FORM OF PASSENGERS' LIST.

Ship's Name.	Master's Name.	Tons per Register.	Aggregate Number of Superficial Feet in the several Compartments set apart for Passengers other than Cabin Passengers.	Total Number of Statute Adults, exclusive of Master, Crew, and Cabin Passengers, which the Ship can legally carry.	Where bound.

I hereby certify, that the provisions actually laden on board this ship are sufficient, according to the requirements of the Passenger Act, for statute adults for a voyage of days.

Date _____ 185 . (Signature) _____ Master.

NAMES AND DESCRIPTIONS OF PASSENGERS.

Ports of Embarkation.	Names of Passengers.	Age of each Adult of 12 Years and upwards.				Children between 1 and 12 Years.		Infants.		Profession, Occupation, or Calling of Passenger.	State whether English, Scotch, or Irish.	Port at which Passengers have contracted to land.
		Married.		Single.

We hereby certify, that the above is a correct list of the names and descriptions of all the passengers who embarked at the port of _____

(Signed) _____ Master.
_____ Emigration Officer.
(Countersigned) _____ Officer of Customs at _____.

Date _____ 185 .

N.B.—Lines should be ruled in the same Form for any additions to the list after the ship first clears out; and similar certificates be subjoined to such additions, according to the requirements of the Act.

Ship _____,
Counterpart of Passengers' contract ticket.

This part of the contract ticket is to be separated from the other, and to be delivered by the passenger to the emigration officer at the port of embarkation, (or if no such officer, to the officer of customs,) or to any one appointed by him to receive it, under a penalty not exceeding £10.

CONTRACT TICKET.

I engage that the persons mentioned below shall be provided with a steerage passage to _____ and be landed at the port of _____ in _____ in the ship _____ of _____ tons with not less than ten cubic feet for luggage for each statute adult, and shall be victualled during the whole voyage according to the dietary scale prescribed by law. The ship to receive her passengers at _____ on the _____ day of _____ 185—. Passage money, including government dues, if any, and all charges of landing, £ _____.

Names.	Ages.

_____ Souls, equal to * _____ statute adults.

To be signed in full by the party issuing the ticket.

* Insert number of souls and of statute adults respectively.

These directions, and the "Notices to Passengers" below, form part of, and must appear on, each contract ticket.

SCHEDULE L. FORM OF PASSENGER'S CONTRACT TICKET.

1. A contract ticket in this form must be given to every passenger engaging a passage from the United Kingdom to any place out of Europe, and not being within the Mediterranean Sea.
2. The victualling scale for the voyage must be printed in the body of the ticket.
3. All the blanks must be correctly filled in, and the ticket must be legibly signed with the christian names and surname and address in full of the party issuing the same.
4. The day of the month on which the passengers are to embark must be inserted in words and not in figures.
5. When once issued, this ticket must not be withdrawn from the passenger, nor any alteration, addition, or erasure made in it.

Ship _____ of _____ tons register, to take in passengers at _____ for _____ on the _____ day of _____ 185—.

Names.	Age.	Equal to Statute Adults.

I engage that the person named in the margin hereof shall be provided with a steerage passage to, and shall be landed at, the port of _____ in _____ in the ship _____ with not less than ten cubic feet for luggage for each statute adult, and shall be victualled during the voyage and the time of detention at any place before its termination, according to the subjoined scale, for the sum of £_____, including government dues before embarkation, and head money, if any, at the place of landing, and every other charge, except freight for excess of luggage beyond the quantity above specified, and I hereby acknowledge to have received the sum of £_____ in {full / part} payment.

The following quantities, at least, of water and provisions, (to be issued daily, will be supplied by the master of the ship, as required by law; viz., to each statute adult 2 quarts of water daily, exclusive of what is necessary for cooking the articles required by the Passengers Act to be issued in a cooked state; and a weekly allowance of provisions according to the following scale:—

[Here insert the victualling scale intended to be used on the voyage. This must be either the scale prescribed in the 35th section of the Passengers Act, 1855, or that scale modified by the introduction of articles authorised by the Act to be substituted for oatmeal, rice and potatoes.]

[N.B.—If mess utensils and bedding are to be provided by the ship, the stipulation must be inserted here.]

NOTICES TO PASSENGERS.

1. If passengers, through no default of their own, are not received on board on the day named in their contract tickets, or fail to obtain a passage in the ship, they should apply to the government emigration officer at the port, who will assist them in obtaining redress under the Passenger Act.
2. Passengers should carefully keep this part of their contract ticket till after the end of the voyage.

N.B.—This contract ticket is exempt from stamp duty.

The United States, in imitation of the policy followed in the U. Kingdom, have passed several Acts in regard to the conveyance of passengers in ships belonging to the different ports of the Union. The last of these Acts is as follows:—

AN ACT TO REGULATE THE CARRIAGE OF PASSENGERS IN STEAM SHIPS AND OTHER VESSELS, APPROVED 3. MARCH, 1855.

BE it enacted by the Senate and House of Representatives of the U. States of America in Congress assembled, that no master of any vessel owned in whole or in part by a citizen of the U. States, or by a citizen of any foreign country, shall take on board such vessel, at any foreign port or place other than foreign contiguous territory of the U. States, a greater number of passengers than in proportion of 1 to every 2 tons of such vessel, not including children under the age of 1 year in the computation, and com-

puting 2 children over 1 and under 8 years of age as 1 passenger. That the spaces appropriated for the use of such passengers, and which shall not be occupied by stores or other goods not the personal baggage of such passengers, shall be in the following proportions, viz.: — on the main and poop decks or platforms and in the deck-houses, if there be any, 1 passenger for each 16 clear superficial feet of deck, if the height or distance between the decks or platform shall not be less than 6 feet; and on the lower deck (not being an orlop deck), if any one passenger for 18 such clear superficial feet, if the height or distance between the decks or platforms shall not be less than 6 feet, but so as that no passenger shall be carried on any deck or platform, nor upon any deck where the height or distance between decks is less than 6 feet, with intent to bring such passenger to the U. States, and shall leave such port or place and bring the same, or any number thereof, within the jurisdiction of the U. States; or if any such master of any vessel shall take on board his vessel, or at any port or place within the jurisdiction of the U. States, any greater number of passengers than in the proportion aforesaid, to the space aforesaid, or to the tonnage aforesaid, with intent to carry the same to any foreign port or place other than foreign contiguous territory as aforesaid, every such master shall be deemed guilty of a misdemeanor, and upon conviction thereof, before any circuit or district court of the U. States, shall, for each passenger taken on board beyond the limit aforesaid, or the space aforesaid, be fined in the sum of 50 dollars, and may also be imprisoned, at the discretion of the judge before whom the penalty shall be recovered, not exceeding six months; but should it be necessary for the safety or convenience of the vessel that any portion of her cargo, or any other articles or article, should be placed on or stored in any of the decks, cabins, or other places appropriated to the use of passengers, the same may be placed in lockers or inclosures prepared for the purpose, on an exterior surface impervious to the wave, capable of being cleansed in like manner as the decks or platforms of the vessel. In no case, however, shall the places thus provided be deemed to be a part of the space allowable for the use of passengers, but the same shall be deducted therefrom, and in all cases where prepared or used, the upper surface of said lockers or inclosed spaces shall be deemed and taken to be the deck or platform from which measurement shall be made for all the purposes of this Act. It is also provided that one hospital in the space appropriated to passengers, and separate therefrom by an appropriate partition, and furnished as its purposes require, may be prepared, and when used, may be included in the space allowable for passengers, but the same shall not occupy more than 100 superficial feet of deck or platform — provided, that on board 2 deck ships, where the height between the decks is 7½ feet or more, 14 clear superficial feet of deck shall be the proportion required for each passenger. — § 1.

And no such vessel shall have more than two tiers of berths, and the interval between the lowest part thereof and the deck or platform beneath shall not be less than 9 inches, and the berths shall be well constructed, parallel with the sides of the vessel, and separated from each other by partitions, as berths ordinarily are separated, and shall be at least 6 feet in length and at least 2 feet in width, and each berth shall be occupied by no more than 1 passenger; but double berths of twice the above width may be constructed, each berth to be occupied by no more, and by no other, than two women, or by one woman and 2 children under the age of 8 years, or by husband and wife, or by a man and 2 of his own children under the age of 8 years, or by 2 men, members of the same family; and if there shall be any violation of this section in any of its provisions, then the master of the vessel and owners thereof shall severally forfeit and pay the sum of 5 dollars for each passenger on board of said vessel on such voyage, to be recovered by the U. States in any port where such vessel may arrive or depart. — § 2.

And all vessels, whether of the U. States or any foreign country, having sufficient capacity of space according to law, for fifty or more passengers (other than cabin passengers), shall, when employed in transporting such passengers between the U. States and Europe, have, on the upper deck, for the use of such passengers, a house over the passage-way leading to the apartments allotted to such passengers below deck, firmly secured to the deck or combings of the hatch with 2 doors, the sills of which shall be at least 1 foot above the deck, so constructed that a door or window in such house may at all times be left open for ventilation; and all vessels so employed, and having the capacity to carry 150 such passengers or more, shall have 2 such houses; and the stairs or ladder leading down to the aforesaid apartment shall be furnished with a hand-rail of wood or strong rope; but booby hatches may be substituted for such houses. — § 3.

And every such vessel so employed, and having the legal capacity for more than 100 such passengers, shall have at least 2 ventilators to purify the apartment or apartments occupied by such passengers; 1 of which shall be inserted in the after part of the apartment or apartments, and the other shall be placed in the forward portion of the apartment or apartments, and one of them shall have an exhausting cap to carry off the foul air, and the other a receiving cap to carry down the fresh air; which said ventilators shall have a capacity proportioned to the size of the apartment or apartments to be purified; namely, if the apartment or apartments will lawfully authorise the reception of 200 such passengers, the capacity of such ventilators shall each be equal to a cube of 12 inches diameter in the clear, and in proportion for larger or smaller apartments; and all said ventilators shall rise at best 4 feet 6 inches above the upper deck of any such vessel, and be of the most approved form and construction; but if it shall appear, from the report to be made and approved, as herein-after provided, that such vessel is equally well ventilated by any other means, such other means of ventilation shall be deemed and held to be a compliance with the provisions of this section. — § 4.

And every vessel carrying more than 50 such passengers shall have for their use on deck, housed and conveniently arranged, at least one camboose or cooking range, the dimensions of which shall be equal to 4 feet long and 1 foot 6 inches wide for every 200 passengers; and provision shall be made in the manner aforesaid, in this ratio, for a greater or less number of passengers; but nothing herein contained shall take away the right to make such arrangements for cooking between decks, if that shall be deemed desirable. — § 5.

And all vessels employed as aforesaid shall have on board, for the use of such passengers, at the time of leaving the last port whence such vessel shall sail, well secured under deck, for each passenger, at least 20 pounds of good navy bread, 15 pounds of rice, 15 pounds of oatmeal, 10 pounds of wheat flour, 15 pounds of peas and beans, 20 pounds of potatoes, 1 pint of vinegar, 60 gallons of fresh water, 10 pounds of salted pork, and 10 pounds of salt beef, free of bone, all to be of good quality; but at places where either rice, oatmeal, wheat flour, or peas and beans, cannot be procured, of good quality, and on reasonable terms, the quantity of either or any of the other last-named articles may be increased and substituted therefor; and in case potatoes cannot be procured on reasonable terms, 1 pound of either of said articles may be substituted in lieu of 5 pounds of potatoes; and the captains of such vessels shall deliver to each passenger at least one-tenth part of the aforesaid provisions weekly, commencing on the day of sailing, and at least 3 quarts of water daily; and if the passengers on board of any such vessel in which the provisions and water herein required shall not have been provided as aforesaid, shall at any time be put on short allowance during any voyage, the master or owner of any such vessel shall pay to each and every passenger who shall have been put on short allowance, the sum of 3 dollars for each and every day they may have been put on short allowance, to be recovered in the circuit or district court of the U. States; and it shall be the duty of the captain or master of every such ship or vessel to cause the food and provisions of all the passengers to be well and properly cooked daily, and to be served out and distributed to them at regular and stated hours, by messes, or in such other manner as shall be deemed best and most condusive to the health and comfort of such passengers, of which hours and manner of distribution due and sufficient notice shall be given. If the captain or master of any such ship or vessel shall wilfully fail to furnish and distribute such provisions, cooked as aforesaid, he shall be deemed

guilty of a misdemeanor, and upon conviction thereof before any circuit or district court of the U. States, shall be fined not more than 1000 dollars, and shall be imprisoned for a term not exceeding 1 year, provided that the enforcement of this penalty shall not affect the civil responsibility of the captain or master and owners to such passengers as may have suffered from said default.—§ 6.

And the captain of any such vessel so employed, is hereby authorised to maintain good discipline and such habits of cleanliness among such passengers as will tend to the preservation and promotion of health; and to that end he shall cause such regulations as he may adopt for this purpose to be posted up before sailing on board such vessel, in a place accessible to such passengers, and shall keep the same so posted up during the voyage; and it is hereby made the duty of said captain to cause the apartments occupied by such passengers to be kept at all times in a clean, healthy state, and the owners of every such vessel so employed are required to construct the decks, and all parts of said apartment, so that it can be thoroughly cleansed; and they shall also provide a safe, convenient privy or water-closet for the exclusive use of every 100 such passengers. And when the weather is such that said passengers cannot be mustered on deck with their bedding, it shall be the duty of the captain of every such vessel to cause the deck occupied by such passengers to be cleansed with chloride of lime, or some other equally efficient disinfecting agent, and also at such other times as said captain may deem necessary.—§ 7.

And the master and owner or owners of any such vessel so employed, which shall not be provided with the house or houses over the passageways, as prescribed in the third section of this chapter, or with ventilators, as prescribed in the fourth section of this chapter, or with the cambooses or cooking ranges, with the houses over them, as prescribed in the fifth section of this chapter, shall severally forfeit and pay to the U. States the sum of 200 dollars for each and every violation of, or neglect to conform to, the provisions of each said sections; and 50 dollars for each and every neglect or violation of any of the provisions of the seventh section of this chapter, to be recovered by suit in any circuit or district court of the U. States, within the jurisdiction of which the said vessel may arrive, or from which she may be about to depart, or at any place within the jurisdiction of such courts, wherever the owner or owners, or captain of such vessel may be found.—§ 8.

And the collector of the customs at any port of the U. States at which any vessel so employed shall arrive, or from which any such vessel shall be about to depart, shall appoint and direct one or more of the inspectors of the customs for each port to examine such vessel, and report in writing, to such collector, whether the requirements of law have been complied with in respect to such vessel; and if such report shall state such compliance, and shall be approved by such collector, it shall be deemed and held as *primâ facie* evidence thereof.—§ 9.

And the provisions, requisitions, penalties, and liens of this Act, relating to the space in vessels appropriated to the use of passengers are hereby extended and made applicable to all spaces appropriated to the use of steerage passengers in vessels propelled, in whole or in part, by steam, and navigating from, to, and between the ports, and in manner as in this Act named, and to such vessels and to the masters thereof; and so much of the Act entitled, "An Act to amend an Act entitled, 'An Act to provide for the better security of the lives of passengers on board of vessels propelled in whole or in part, by steam, and for other purposes,'" approved Aug. 30, 1852, as conflicts with this Act, is hereby repealed; and the space appropriated to the use of steerage passengers in the vessels so as above propelled and navigated, is hereby subjected to the supervision and inspection of the collector of the customs at any port of the U. States at which any such vessel shall arrive, or from which she shall be about to depart; and the same shall be examined and reported in the same manner and by the same officers, by the next preceding section directed to examine and report.—§ 10.

And the vessels bound from any port in the U. States to any port or place in the Pacific Ocean, or on its tributaries, or from any such port or place to any port in the U. States on the Atlantic or its tributaries, shall be subject to the foregoing provisions regulating the carriage of passengers in merchant vessels, except so much as relates to provisions and water; but the owners and masters of all such vessels shall in all such cases furnish to each passenger the daily supply of water therein mentioned; and they shall furnish a sufficient supply of good and wholesome food, properly cooked; and in case they shall fail so to do, or shall provide unwholesome or unsuitable provisions, they shall be subject to the penalty provided in the sixth section of this chapter, in case the passengers are put on short allowance of water or provisions.—§ 11.

And the captain or master of any ship or vessel arriving in the U. States, or any of the territories thereof, from any foreign place whatever, at the same time that he delivers a manifest of the cargo, and if there be no cargo, then at the time of making report or entry of the ship or vessel, pursuant to law, shall also deliver and report to the collector of the district in which such ship or vessel shall arrive, a list or manifest of all the passengers taken on board of the said ship or vessel at any foreign port or place, in which list or manifest it shall be the duty of the said master to designate, particularly, the age, sex, and occupation of the said passengers, respectively, the part of the vessel occupied by each during the voyage, the country to which they severally belong, and that of which it is their intention to become inhabitant; and shall further set forth whether any, and what number, have died on the voyage; which list or manifest shall be sworn to by the said master, in the same manner as directed by law in relation to the manifest of the cargo, and the refusal or neglect of the master aforesaid to comply with the provisions of this section, or any part thereof, shall incur the same penalties, disabilities, and forfeitures as are provided for a refusal or neglect to report and deliver a manifest of the cargo aforesaid.—§ 12.

And each and every collector of the customs, to whom such manifest or list of passengers as aforesaid shall be delivered, shall quarterly return copies thereof to the Secretary of State of the U. States, by whom statements of the same shall be laid before Congress at each and every session.—§ 13.

And in case there shall have occurred on board any ship or vessel arriving at any port or place within the U. States or its territories any death or deaths among the passengers (other than cabin passengers), the master or captain, or owner or consignee of such ship or vessel shall, within twenty-four hours after the time within which the report and list of manifest of passengers mentioned in § 12 of this Act is required to be delivered to the collector of the customs, pay to the said collector the sum of 10 dollars for each and every passenger above the age of 8 years who shall have died on the voyage by natural disease; and the said collector shall pay the money thus received at such times and in such manner as the Secretary of the Treasury by general rules shall direct, to any board or commission appointed by, and acting under the authority of, the State within which the port where such ship or vessel arrived is situated, for the care and protection of sick, indigent, or destitute emigrants, to be applied to the objects of their appointment; and if there be more than one board or commission who shall claim such payment, the Secretary of the Treasury for the time being shall determine which is entitled to receive the same, and his decision in the premises shall be final and without appeal—provided, that the payment shall in no case be awarded or made to any board or commission or association formed for the protection or advancement of any particular class of emigrants, or emigrants of any particular nation or creed; and if the master, captain, owner, or consignee of any ship or vessel, refuse or neglect to pay the collector the sum and sums of money required, and within the time prescribed by this section, he or they shall severally forfeit and pay the sum of 50 dollars in addition to such sum of 10 dollars for each and every passenger upon whose death the same has become payable, to be recovered by the U. States in any circuit or district court of the U. States where such vessel may arrive, or such master, captain, owner, or consignee may reside; and when recovered, the said money shall be disposed of in the same

manner as is directed with respect to the sum and sums required to be paid to the collector of customs.—§ 14.

And the amount of the several penalties imposed by the foregoing provisions, regulating the cariarge of passengers in merchant vessels, shall be liens on the vessel or vessels violating those provisions, and each vessel or vessels shall be libelled therefor in any circuit or district court of the U. States where such vessel or vessels shall arrive.—§ 15.

And all and every vessel or vessels which shall or may be employed by the American Colonisation Society, or the colonisation society of any State, to transport, and which shall actually transport, from any port or ports of the U. States to any colony or colonies on the west coast of Africa, coloured emigrants to reside there, shall be, and the same are hereby, subjected to the operation of the foregoing provisions regulating the carriage of passengers in merchant vessels.—§ 16.

And the collector of the customs shall examine such emigrant ship or vessel on its arrival at his port, and ascertain and report to the Secretary of the Treasury, at the time of sailing, the length of the voyage, the ventilation, the number of passengers, their space on board, their food, the native country of the emigrants, the number of deaths, the age and sex of those who died during the voyage, together with his opinion of the cause of the mortality, if any, on board, and if none, what precautionary measures, arrangements, or habits, are supposed to have had any, and what agency in causing the exemption.—§ 17.

And this Act shall take effect, with respect to vessels sailing from ports in the U. States, on the eastern side of the continent, within 30 days from the time of its approval; and, with respect to vessels sailing from ports in the U. States, on the western side of the continent, and from ports in Europe, within 60 days from the time of its approval; and, with respect to vessels sailing from ports in other parts of the world, within 6 months from the time of its approval: And it is hereby made the duty of the Secretary of State to give notice in the ports of Europe and elsewhere, of this Act, in such manner as he shall deem proper.—§ 18.

And from and after the time that this Act shall take effect with respect to any vessels, in respect to such vessels, the Act of 2nd March, 1819, entitled "An Act regulating passenger ships and vessels," the Act of 22nd February, 1847, entitled "An Act to regulate the carriage of passengers in merchant vessels," the Act of 2nd March, 1847, entitled "An Act to amend an Act entitled 'An Act to regulate the carriage of passengers in merchant vessels,' and to determine the time when said Act shall take effect," the Act of 31st January, 1848, entitled "An Act exempting vessels employed by the American Colonisation Society in transporting coloured emigrants from the U. States to the coast of Africa from the provisions of the Acts of 22nd February and 2nd March, 1847, regulating the carriage of passengers in merchant vessels." the Act of 17th May, 1848, entitled "An Act to provide for the ventilation of passenger vessels, and for other purposes," and the Act of 3rd March, 1849, entitled "An Act to extend the provisions of all laws now in force relating to the carriage of passengers in merchant vessels, and the regulation thereof," are hereby repealed: But nothing in this Act contained shall in anywise obstruct or prevent the prosecution, recovery, distribution, or remission of any fines, penalties, or forfeitures which may have been incurred in respect to any vessels prior to the day this Act goes into effect, in respect to such vessels under the laws hereby repealed, for which purpose the said laws shall continue in force.

But the Secretary of the Treasury may, in his discretion, and upon such conditions as he shall think proper, discontinue any such prosecution, or remit or modify such penalties.—§ 19.

Chinese Passenger Ships.—Our readers are aware that there is at present (1855), and that there has been for some considerable time past, an extensive emigration from China to California and Australia. This emigration (especially that to Australia) has been principally carried on in British ships; and the abuses connected therewith have been such as to attract the attention of Parliament, which has been induced, in the view of putting them down, to enact the following statute:—

ACT FOR THE PREVENTION OF ABUSE IN CHINESE PASSENGER SHIPS, AND THEIR REGULATION.
18 & 19 VICT. c. 104.

Clause 1. defines the terms used in the act.

Clause 2nd authorises the legislature of Hong Kong to make regulations respecting passenger ships, providing that until such regulations be made those contained in the annexed schedule A. shall be in force: provided always, that no ordinance shall come into operation until H. M.'s confirmation of the same shall have been proclaimed in Hong Kong by the governor thereof.

Governor of Hong Kong to declare Length of Voyages.—It shall be lawful for the governor of Hong Kong to declare, by proclamation, for the purposes of this Act and of the said regulations, what shall be deemed to be the duration of the voyage of any Chinese passenger ship, and by such proclamation to alter the scales of dietary, medicines, and medical comforts contained in the annexed schedule A.—§ 3.

No Chinese Passenger Ship to clear out on Voyage of more than 7 Days without, &c.—No Chinese passenger ship shall clear out or proceed to sea on any voyage of more than 7 days' duration until the master thereof have received from an emigration officer a copy of the aforesaid regulations, and a certificate in the form contained in the annexed schedule B., or in such other form as may be prescribed by the legislature, which copy and certificate, with any documents to be attached thereto (herein designated as emigration papers), shall be signed by the said emigration officer, nor until the master shall, with two sufficient sureties, to be approved by the said emigration officer, have entered into a joint and several bond in the sum of 1000*l.* to H. M., her heirs and successors, in such form as may be prescribed by the said legislature.—§ 4.

Penalty of Bond, when recoverable.—The said penal sum of 1000*l.* shall be due and recoverable notwithstanding any penalty or forfeiture imposed by this Act or by the aforesaid regulations, and whether such penalties or forfeitures shall have been sued for and recovered or not.—§ 5.

Clause 6. authorises the commanders of ships of war, &c. to search ships, require production of papers, &c.

Penalty for neglect to comply with Regulations, &c.—In case of any neglect or refusal to comply with any of the provisions of this Act or any of the regulations aforesaid, or to perform any stipulation in any of the contracts made with passengers, the master of the ship, and any other person who may have been guilty of or have aided or abetted such neglect or refusal, shall each be deemed for each offence guilty of a misdemeanor.—§ 7.

Ship to be forfeited for clearing without Emigration Papers, &c.—If any Chinese passenger ship clears out or proceeds to sea on any voyage exceeding 7 days in duration without such emigration papers as aforesaid, or if the emigration papers of any Chinese passenger ship are forged or fraudulently altered, such ship shall, if she is a British ship, or if, not being a British ship, the offence is committed and the ship is seized in H. M.'s dominions or in the territories of the E. I. Company, be forfeited to H. M.—§ 8.

Penalties in addition to Forfeiture.—Every person who commits or aids or abets in committing any act or default by which any Chinese passenger ship may become liable to forfeiture shall be liable to a penalty not exceeding 100*l.* for each offence.—§ 9.

The following clauses refer to the mode of enforcing and applying forfeitures.

SCHEDULE A.

Regulations respecting Chinese Passenger Ships.

Note.—The wilful and fraudulent breach of any of these regulations by the person in charge of any Chinese passenger ship is punishable by forfeiture of the ship, and every person concerned in such breach is liable to a fine of 100*l.* for each offence.

I. No Chinese passenger ship shall clear out or proceed to sea on any voyage of more than 7 days' duration without a certificate from an emigration officer; and such certificate shall be in the annexed form.

II. No emigration officer shall be bound to give such certificate in respect of any Chinese passenger ship till 7 days after receiving notice that the ship is to carry passengers, and of her destination, and of her proposed day of sailing, but unless there are on board a surgeon and an interpreter approved by such emigration officer.

III. After receiving such notice the emigration officer shall be at liberty at all times to enter and inspect the ship, and the fittings, provisions, and stores therein, and any person impeding him in such entry or inspection, or refusing to allow of the same, shall be liable to a fine of not more than 100*l.* for each offence.

IV. The emigration officer shall not give his certificate unless he be satisfied,—

(1.) That the ship is sea-worthy, and properly manned, equipped, fitted, and ventilated; and has not on board any cargo likely from its quality, quantity, or mode of stowage, to prejudice the health or safety of the passengers:

(2.) That the space appropriated to the passengers in the 'tween decks contains at the least 12 superficial and 72 cubical feet of space for every adult on board; that is to say for every passenger above 12 years of age, and for every two passengers between the ages of 1 year and 12 years.

(3.) That a space of 5 superficial feet per adult is left clear on the upper deck for the use of the passengers:

(4.) That provisions, fuel, and water have been placed on board, of good quality, properly packed, and sufficient to supply the passengers on board during the declared duration of the intended voyage, according to the following scale:

Dietary Scale.

Rice	lbs.	1½ per diem.
Salted Provisions,—		
Who'ly pork; or		
⅔ pork and ⅓ fish; or	,,	½ do.
⅓ pork, ⅓ beef, and ⅓ fish		
Salted vegetables or pickles	,,	½ do.
Water, imperial quarts		3 do.
Firewood	lbs.	2 do.
Tea	oz.	½ do.

(5.) That medicines and medical comforts have been placed on board according to the following scale:

For every 100 passengers, and in like proportion for any greater or less number.

Calomel	3 oz.
Blue pill	2 ,,
Rhubarb powder	2 ,,
Compound jalap powder	12 ,,
Ipecacuanha powder	12 ,,
Opium	2 ,,
Dover's powder	2 ,,
Magnesia	2 ,,
Epsom salts	6 lbs.
Chloride of lime	20 ,,
Tartar emetic	4 drams.
Quinine	2 oz.
Antimonial powder	0½ ,,
Extract of colocynth, compound	1 ,,
Carbonate of ammonia	1½ ,,
Assafœtida	1 ,,
Camphor	1½ ,,
Camphorated liniment	16 ,,
Catechu	2 ,,
Prepared chalk	2 ,,
Tincture of opium	8 ,,
Turpentine	16 ,,
Senna leaves	8 ,,
Blistering plaister	8 ,,
Sulphur, sublimed	16 ,,
Sulphur, ointment	12 ,,
Linseed flour	4 lbs.
Country soap	24 oz.
Castor oil	6 bottles.
Oil of peppermint	2 oz.
Adhesive plaister, spread	2 yards.
Simple ointment	16 oz.
Ringworm ointment	16 ,,
Jeremie's opiate	2 oz. phial.
Aromatic spirits of hartshorn	4 ,,
Cholera pills in phial	12 drams.
Cubebs powder	4 lbs.
Sweet spirits of nitre	16 oz.
Copaiba	16 ,,
Sulphate of copper	2 ,,
Sulphate of zinc	1 oz.
Lunar caustic	4 drams.
Lime juice	36 quarts.
Rum or brandy	36 ,,

Instruments, &c.

1 Set of amputating and other surgical instruments (if there be any person on board competent to use them).
1 One ounce glass measure.
1 Minim glass measure.
1 Pestle and mortar (Wedgewood).
1 Set of weights and scales (grains in box).
1 Set of common splints.
1 Set of bleeding lancets.
1 Silver catheter.
1 Spatula.
1 Dressing scissors.
1 Infusion box.
1 Quire of country paper.
1 Penknife.
2 Metal bed pans.
2 Trusses for hernia, right and left.
2 Small syringes.
4 Ounces prepared lint.
2 Pieces cloth for bandages.

V. The master of any Chinese passenger ship being a British ship and proceeding on a voyage of more than 7 days' duration shall, during the whole of the intended voyage, make issues of provisions, fuel, and water, according to the aforesaid dietary scale, and shall not make any alteration, except for the manifest advantage of the passengers, in respect of the space allotted to them as aforesaid, or in respect of the means of ventilation, and shall not ill-use the passengers or require them (except in case of necessity) to help in working the vessel; and shall issue medicines and medical comforts, as shall be requisite, to the best of his judgment, and shall call at such ports as may be mentioned in the emigration officer's clearing certificate for fresh water and other necessaries; and shall carry them without unnecessary delay to the destination to which they have contracted to proceed.

VI. The emigration officer shall not give his certificate until he has mustered the passengers, and ascertained to the best of his power that they understand whither they are going, and comprehend the nature of any contracts of service which they have made; he shall also take care that a copy of the form of such contracts, or an abstract of their substance, signed by himself, is appended to the said certificate: if any of the passengers are in bad health, or insufficiently provided with clothing, or if the contracts are unfair, or if there is reason to suspect that fraud or violence have been practised in their collection or embarkation, he may detain the ship, and, if he shall think fit, may order all or any of the passengers to be re-landed.

SCHEDULE B.

Emigration Officer's Certificate, &c.

I hereby authorise the Chinese passenger ship to proceed to sea for the port of in ; and I certify that the said ship can legally carry adults, and that there are on board passengers, making in all adults, viz., men, women, male children, and female children, such children being between the ages of 1 and 12 years: that the space set apart and to be kept clear for the use of such emigrants is as follows:—On the upper deck, superficial feet, being [*here describe the space*], and in the between decks superficial feet, being [*here describe the space*]; that the ship is properly manned and fitted, and that the means of ventilating the part of the between decks appropriated to passengers are as follows [*here describe the means of ventilation*]; that the ship is furnished with a proper quantity of good provisions, fuel, and water for days issues to the passengers according to the * annexed dietary scale, and with a proper quantity of medicines, instruments, and medical comforts according to the * annexed scale of medical necessaries; that I have inspected the contracts between the emigrants and their intended employers (the terms of which are annexed to this certificate), and consider them reasonable; that no fraud appears to have been practised in collecting the emigrants; and that there are on board a surgeon † [and interpreter] approved by me, and designated [respectively and]

‡ [The master of the ship is to put into and for water and fresh vegetables.].

(Signed)
Emigration Officer.

Dated this day of 18

* These scales must be those prescribed by the regulations in schedule A.

† In case the ship has been authorised to proceed without an interpreter, omit the part between brackets, and add "and that the ship has been authorised to proceed without an interpreter."

‡ The part between brackets is to be inserted or not, as may be required.

Exclusive of the statutes and regulations now referred to, and in cases to which they may not apply, the relation between masters of ships and passengers is governed by the general rules of maritime law. "Whatever," says Lord Tenterden, "is necessary for the security of the vessel, the discipline of the crew, the safety of all on board, the master may lawfully require, not only of the ships' company who have expressly contracted to obey him, but of those also whom he has engaged to carry to their destination on the implied condition of their submission to his rule." (*Law of Shipping*, part ii. cap. 8. p. 180, Shee's ed. 1854.) Hence in certain cases, such as those of imminent

peril, from whatever cause arising, passengers are to be considered as a portion of the crew, and may be called upon to contribute by their exertions to the safety of the ship and cargo. And in the event of their refusing so to act, they make themselves amenable to such reasonable punishment as the captain may choose to inflict. A passenger is not, however, bound to remain on board ship in the hour of danger, but may quit it if he have an opportunity; and he is not required to take upon himself any responsibility as to the *conduct* of the ship. If he incur any responsibility, and perform extraordinary services in relieving a vessel in distress, he is entitled to a corresponding reward. The goods of passengers contribute to general average; and their conduct should in all cases be such as may be consistent with the good order and discipline of the ship. They are not to set a bad example to the crew, or excite a spirit of insubordination, but to assist in maintaining the just and proper authority of the captain. The latter, however, in repressing disorder and improper conduct on the part of passengers, should act with much circumspection, and exercise his authority within the limits required by the exigencies of the case. His conduct in regard to passengers is always viewed with considerable jealousy; and though the courts of law will support him in the exercise of his authority when circumstances require it, they will not go beyond what is necessary; much less support him in any wanton or oppressive exercise of his authority. (See Tenterden, in *loco citato;* Holt's *Navigation Laws*, 2nd ed. p. 425, &c.)

PATENT, a privilege from the Crown granted by letters patent (whence the name), conveying to the individual or individuals specified therein the sole right to make, use, or dispose of some new invention or discovery, for a certain specified period.

The power to grant patents seems to exist at common law; but it is limited and defined by the famous statute 21 Jac. I. c. 3., which enacts, "That any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of 14 years or under, thereafter to be made, of the sole working or making of any manner of new manufactures within this realm, to the *true and first* inventor and inventors of such manufactures, which others at the time of making such letters patent and grants shall not use, so as also they be not contrary to the law, nor mischievous to the state, by raising prices of commodities at home, or hurt of trade, or generally inconvenient. The said 14 years to be accounted from the date of the first letters patent, or grant of such privilege thereafter to be made; but that the same shall be of such force as they should be if that act had never been made, and none other."

Policy of Patents.—The law with respect to patents is unavoidably encumbered with several difficulties. The expediency of granting patents has been disputed; though, as it would seem, without sufficient reason. Were they refused, the inducement to make discoveries would, in many cases, be very much weakened; at the same time that it would plainly be for the interest of every one who made a discovery to endeavour, if possible, to conceal it. And notwithstanding the difficulties in the way of concealment, they are not insuperable; and it is believed that several important inventions have been lost, from the secret dying with their authors. On the other hand, it is not easy to decide as to the term for which the patent, or exclusive privilege, should be granted. Some have proposed that it should be made perpetual; but this would be a very great obstacle to the progress of improvement, and would lead to the most pernicious results. Perhaps the term of 14 years, to which the duration of a patent is limited in England, is as proper a one as could be suggested. It may be too short for some inventions, and too long for others; but, on the whole, it seems a pretty fair average.

Specification.—Previously to the reign of Queen Anne, it was customary to grant patents without any condition, except that they should be for really new inventions. But a condition was then introduced into all patents, and is still retained, declaring that if the inventor did not, by an instrument under his hand and seal, denominated a specification, *particularly describe* and ascertain the nature of his invention, and in what manner the same is to be performed, and also cause the same to be enrolled in Chancery within a certain time (generally a month), the letters patent, and all liberties and advantages whatever thereby granted, should utterly cease and become void. This was a very judicious regulation. It secured the invention from being lost; and the moment the patent expired, every one was in a situation to profit by it. The deliverance of the specification is now made precedent to granting the letters patent; and they will not be granted unless it be distinct and explicit.

Letters patent were formerly obtained upon petition and affidavit to the Crown setting forth that the petitioner had, after great labour and expense, made a certain discovery, which, he believed, would be of great public utility; and that he was the first inventor. The petition was then referred to the Attorney and Solicitor-General, who were separately attended by the applicant and all competitors if there were any.

But it was found that this was a very clumsy and inconvenient mode of proceeding; and after a great many abortive attempts at legislation, it was enacted in 1852, by the

Patent Law Amendment Act, the 15 & 16 Vict. c. 83., that the Lord Chancellor, the Master of the Rolls, the Attorney and Solicitor-General for England, the Lord Advocate and Solicitor-General for Scotland, and the Attorney and Solicitor-General for Ireland for the time being, with such persons as may from time to time be appointed by H. Majesty, should be commissioners of patents for inventions. The vice of the former system had been that the law officers of the Crown were the sole judges of what patents should or should not be granted. But whatever their ability as lawyers, these gentlemen might not have the scientific or peculiar knowledge required to decide in numerous patent cases; and such being the authority under which patents were granted, we need not wonder at the numbers of them which were overthrown. Now, however, parties distinguished for their scientific attainments may be named commissioners of patents; and it may fairly be presumed that their opinions will have considerable influence in deciding whether they should or should not be granted.

Mode of applying for Patents.—Persons applying for letters patent present petitions to the Commissioners, accompanied by a declaration and a provisional specification. The object of the latter is to state distinctly the nature of the invention; and if properly made, it secures the inventor in his invention for a period of 6 months, when he may proceed to apply for and take out letters patent. The application for the letters must be advertised in the Gazette. Parties who suppose they have a right to object to the letters patent being issued, may then, if they think fit, come forward; and their objections being heard and decided upon, the letters are either granted or refused. The peculiar forms to be observed, and the routine to be followed on applications of this sort, may be learned from the compendious treatises of Webster and Norman on the new patent law.

Formerly letters patent had to be separately taken out for England, Scotland, and Ireland. Now, however, the same patent serves for the whole U. Kingdom, and the expenses have been greatly diminished.

Caveats used formerly to be lodged at the offices of the Attorney and Solicitor-General describing inventions in general terms, and requiring notice to be given to the person entering the caveat, when application was made for a patent for a like invention, but this practice has been abolished, and caveats are no longer allowed to be lodged. Those who mean to contest patents, or who are afraid of the encroachments of others, must, consequently, keep a watchful eye upon the notices in the Gazette, as they afford the only information in regard to the claims made for patents.

General Conditions as to Patents.—The *novelty* and *utility* of the invention are essential to the validity of a patent; if it can be shown to have been in use previously to the grant of the patent, or to be of no utility, it will be void. It must also be for something vendible—something "material and useful made by the hands of man."—(*Lord Kenyon*, 8 T. R. 99.) A philosophical principle only, neither organised, nor capable of being so, is no ground for a patent; because it is an element and rudiment of science, and which, till applied to some new production from these elements, cannot, with justice to other inventors, be applied to the exclusive use of any one of them. In all patents there is required, in the words of Lord Tenterden, "something of a *corporeal or substantial nature*, something that *can be made* by man from the matters subjected to his art and skill, or at the least some *new mode of employing practically his art and skill.*"—(*Godson on the Law of Patents*, p. 81.) Previously to Lord Tenterden, it had been ruled that a new process or method was not the subject of a patent. But his Lordship having suggested that "the word manufacture (in the statute) may, perhaps, extend to a *new process* to be carried on by known implements, or elements acting upon known substances, and ultimately producing some other known substance, &c."—(*Godson*, p. 83.)—this principle of interpretation has now been adopted.

A patent for a machine, each part of which was in use before, but in which the *combination* of the different parts is *new*, and *a new result* is obtained, is valid. But, in order to its being valid, the specification must clearly express that it is in respect of such new combination or application, and of that only; and not lay claim to original invention in the use of the materials.

A patent may be granted for an addition to an old invention. But the patent must be *confined to the addition* or improvement, that the public may purchase it without being encumbered with other things. If the patent include the whole, it will be void; for the property in the addition or improvement can give no right to the thing that has been improved.—(*Godson*, p. 71.)

A valid patent may be obtained for an invention, "*new in this realm*," though it may have been previously practised in a foreign country.

A patent is void, if it be for several distinct inventions, and *any one of them* fail of originality.

The specification must be prepared with *great care*. It should set forth the invention fully and correctly. The terms used must be clear and unambiguous; no

necessary description must be omitted nor what is unnecessary be introduced; and the invention must be described in the *best and most improved state* known to the inventor. If any one of these conditions be not complied with, the patent will be void. Any inaccurate or defective statement, were it even inserted through inadvertency, will vitiate the whole.

An injunction may be obtained for the infringement of a patent, in the same way as for a violation of the copyright acts.

Patents have been sometimes extended by act of parliament beyond the term of 14 years, on the ground that the term was too short properly to reward the inventor.

We subjoin the forms referred to in the Patent Act, the *15 & 16* Vict. c. 83.

No

PETITION.

To the Queen's most excellent Majesty.

The humble petition of [*here insert name and address of petitioner*] for, &c.

Sheweth, — That your petitioner is in possession of an invention for

[*the title of the invention,*]

which invention he believes will be of great public utility: that he is the true and first inventor thereof; and that the same is not in use by any other person or persons, to the best of his knowledge and belief.

Your petitioner therefore humbly prays, that your Majesty will be pleased to grant unto him, his executors, administrators, and assigns, your royal letters patent for the United Kingdom of Great Britain and Ireland, the Channel Islands, and Isle of Man [*colonies to be mentioned, if any*], for the term of fourteen years, pursuant to the statutes in that case made and provided.

And your petitioner will ever pray, &c.

No.

DECLARATION.

I of in the county of do solemnly and sincerely declare, That I am in possession of an invention for, &c.

[*the title as in petition,*]

which invention I believe will be of great public utility; that I am the true and first inventor thereof; and that the same is not in use by any other person or persons, to the best of my knowledge and belief; [*where a complete specification is to be filed with the petition and declaration, insert these words:* — "and that the instrument in writing under my hand and seal, hereunto annexed, particularly describes and ascertains the nature of the said invention and the manner in which the same is to be performed;] and I make this declaration conscientiously believing the same to be true, and by virtue of the provisions of an act made and passed in the session of parliament held in the fifth and sixth years of the reign of his late Majesty King William IV., intituled "An Act to repeal an Act of the present Session of Parliament, intituled 'An Act for the more effectual abolition of Oaths and Affirmations taken and made in various Departments of the State, and to substitute Declarations in lieu thereof, and for the more entire Suppression of voluntary and extra-judicial Oaths and Affidavits,' and to make other Provisions for the Abolition of unnecessary Oaths." *A. B.*

Declared at this day of A. D. before me,

A Master in Chancery, *or* Justice of the Peace.

No.

PROVISIONAL SPECIFICATION.

I do hereby declare the nature of the said invention for

[*insert title as in petition,*]

to be as follows:—

[*here insert description.*]

Dated this day of A. D.

(*To be signed by applicant or his agent.*)

REFERENCE.

(*To be endorsed on the Petition.*)

Her Majesty is pleased to refer this petition to to consider what may be properly done therein.

, Clerk of the Commissioners.

WARRANT.

In humble obedience to her Majesty's command referring to me the petition of of , to consider what may be properly done therein, I do hereby certify as follows: That the said petition sets forth that the petitioner

[*Allegations of the petition.*]

And the petitioner most humbly prays,

[*Prayer of the petition.*]

That in support of the allegations contained in the said petition the declaration of the petitioner has been laid before me, whereby he solemnly declares, that

[*Allegations of the declaration,*]

That there has also been laid before me [a provisional specification signed , and also a certificate ,] *or* [a complete specification, and a certificate of the filing thereof,] whereby it appears that the said invention was provisionally protected [*or* protected] from the day of A. D. in pursuance of the statute:

That it appears that the said application was duly advertised.

Upon consideration of all the matters aforesaid, and as it is entirely at the hazard of the said petitioner whether the said invention is new or will have the desired success, and as it may be reasonable for her Majesty to encourage all arts and inventions which may be for the public good, I am of opinion: that her Majesty may grant her royal letters patent unto the petitioner, his executors, administrators, and assigns, for his said invention within the U. K. of Great Britain and Ireland, the Channel Islands, and Isle of Man [*colonies to be mentioned, if any*], for the term of fourteen years, according to the statute in that case made and provided, if her Majesty shall be graciously pleased so to do, to the tenor and effect following: viz.

Given under my hand, this day of A. D.

Seal of the Commissioners.

The letters patent are then issued.

The schedule of fees charged on applying for or taking out letters patent, in the 15 & 16 Vict. c. 83., has been repealed, and the following stamp duties have been imposed in their stead, 16 Vict. c. 5.

Schedule of Stamp Duties.

The reader will find a great deal of curious and instructive information with respect to patents, in the *Report of the Committee of the House of Commons* on that subject (No. 332. Sess. 1829), particularly in the evidence and papers laid before the Committee by Mr. Farey. The treatise on the *Law of Patents and Copyrights*, by Mr. Godson, and the late treatise on the *Law of Patents*, by Mr. Norman, are clear and able.

PATRAS, OR PATRASSO, a sea-port in the N. W. corner of the Morea, near the entrance of the Gulph of Lepanto, lat. 38° 14′ 25″ N., lon. 21° 46′ 20″ E. Population, in 1856, 19,499.

The port lies a little to the northward of the town; but the part fronting it is unsafe, and exposed to heavy seas, particularly in winter. Vessels, therefore, go a little farther up the gulph, where there is a mole or quay, and where they can lie close to the wharf. Patras has a more extensive trade than any other port of Greece. The principal exports are currants, oil, valonia, wine, raw silk, raw cotton, grain, wool, skins, wax, &c. Of these, currants are by far the most important. The fruit is larger, and freer from sand and gravel, than that of the Ionian Islands. They are shipped in casks of various sizes; but as the weight of the cask is included in that of the fruit, it is said to be, for the most part, heavier and stronger than necessary. Morea currants are preferred in most countries, except England; but here the currants of Zante are held in equal, or perhaps greater, estimation. The export of currants from Patras may, in good seasons, average from 150,000 to 200,000 cwts. a year. Hitherto the produce of the crop has varied extremely in different seasons. But within the last few years it

has been found that through the judicious application of sulphur in the cultivation of the plant, the attacks of blight are obviated, and the security of the crop greatly increased. The entire produce of currants in Greece may at present (1859) be estimated at from 18,500 to 20,000 tons. In 1857 we imported 398,849 cwt. currants, of which 263,426 cwt. came from Greece, by far the greater portion being shipped at Patras. The crops of oil, the next great article of export from Patras, are even more fluctuating than those of currants formerly were. The imports at Patras, as at the other Greek ports, consist principally of sugar, coffee, and other colonial products; plain and printed cotton stuffs, woollen goods, salted fish, iron, tin plates, hardware, coal, cordage, hemp, deals, &c. Imported articles are brought principally from the Ionian Islands, Malta, Venice, Leghorn, Marseilles, and Trieste; but, from the want of authentic details, it is quite impossible to form any perfectly accurate estimate of their amount either as respects Patras, or any other Greek port. The consul, Mr. Wood, gives the following

Statement of British Shipping and Trade at the Port of Patras during each of the 5 Years ending with 1857; and of the Foreign Shipping, &c., in 1857.

	Year.	Vessels.	Tonnage.	Imports.	Exports.	Remarks.
	1853	86	12,524	£34,484	£134,639	24 from England and 9 Malta.
	1854	52	8,690	25,582	67,628	7 do. 3 do.
	1855	66	12,641	33,795	243,816	4 do. 9 do.
	1856	131	29,095	115,427	705,905	6 do. 16 do.
	1857	102	25,270	112,510	447,672	16 do. 11 do.
						Mostly all sailed for England.
Foreign shipping, &c., in	1857	582	32,097	224,852	103,711	Of the foreign shipping, 381 were Ionian boats.

Money.—Since the revolution, the Greeks have established a system of coinage in imitation of that of France. The phœnix is a silver coin, that should contain 9-10ths of pure metal, and 1-10th of alloy, or 4·029 grammes of the former, and 448 do. of the latter, being worth about 8½d. sterling. The lepta is a copper coin, being 1-100th part of the phœnix. But the silver coins are already so much debased, that they have been refused even by the officers of government

Weights and Measures.—The quintal is divided into 44 okes, or 132 lbs. Hence, 100 lbs. of Patras=88 lbs. avoirdupois. Silk weight is 1-5th heavier.

A sack of currants weighs 140 lbs. of the common weight, or about 123 lbs. avoirdupois.

The staro, corn measure,=2⅞ Winch. bushels.

The long pic, or pik, used in measuring linens and woollens, =27 English inches. The short pic, used in measuring silks, =25 ditto.

Port Charges in the Kingdom of Greece.

When it is placed in the public magazine, for the same quantity and time	0 3

Observations on the Tonnage Duty.—1. Vessels arriving from abroad loaded, and which discharge their cargoes, and depart loaded, pay the whole duty.

2. Vessels arriving from abroad loaded, and which depart in ballast, pay two thirds of the duty, which is also exacted if they arrive in ballast, and depart loaded.

3. Vessels arriving from abroad in ballast, and departing without lading, or arriving and departing with cargo, and not discharging any of it, pay one third of the duty.

4. Vessels arriving from and going to another port of the kingdom pay but one half of the duty.

5. A vessel is considered as loaded, whether she be so fully or partially.

Exceptions.—1. Every vessel forced to enter a port, either by a storm or in consequence of damage, is exempted from all charges during 8 days.

2. Every vessel entering a port, from whatever cause, and destined to another port, and the master of which shall immediately make a declaration to the captain of the port, that he has no intention either of loading or discharging his goods, may remain 5 days without paying any duty except the light-house duty. He is permitted also to receive or to deliver letters or money, unless otherwise provided for by special ordinances.

Commerce, Shipping, &c.—The Greeks have particularly distinguished themselves by the spirit and success with which they have engaged in naval and mercantile enterprises. Their commerce, next to their freedom, was the grand source of the prosperity of Athens, Corinth, and other Greek cities of antiquity. "C'est, au reste, à cet esprit de commerce, qui s'empara de la plus grande partie des habitans de la Grèce, que ces peuples ont été redevables de ce degré de puissance et de considération dont ils ont joui pendant quelques siècles. Une nation commerçante est, en général, une nation active et industrieuse. Le traffic maritime surtout exige beaucoup de travail, de hardiesse, et de sagacité. Ces qualités influent nécessairement sur les mœurs, et rendent les esprits plus propres aux grandes entreprises."—(*Goguet, de L'Origine des Loix, &c.*, iii. 155.) And in these respects the modern Greeks have been no unsuccessful imitators of their illustrious progenitors. The great articles of export from Greece consist of currants, silk, figs, wool, olive oil, valonia, wine, sponge, wax, tobacco, &c.; the principal imports being manufactured cotton and woollen goods, corn, with a great variety of subordinate articles, principally from England, but partly, also, from France and Germany. The mercantile navy of Greece may at present (1859) be estimated at 4,500 vessels, of the aggregate burden of 325,000 tons, employing about 30,000 seamen. The Greeks have, in fact, attained to the distinction of being the carriers, factors, and traders of the Levant.

We avail ourselves of this opportunity to observe that the prejudices entertained in this country against the Greeks are alike unreasonable and ill-founded. It was not to be expected that they should be trodden under foot, and subjected for centuries to the

brutal tyranny of the Turks, without contracting many of the vices incident to so degraded a state. But their enterprise, ingenuity, and activity have not been impaired; and the bad habits that were foreed upon them in their enslaved condition are gradually disappearing. Whatever there is of industry, or improvement, in Turkey is wholly owing to the Greeks, or, if not to them, to some Christian tribe. The Turks have not made, and, we believe, we may safely affirm never will make, the smallest advance. Their character and their religion are insuperable obstacles to their progress; and their expulsion from Europe would be more for the advantage of this quarter of the world than anything else that appears possible. Neither have we any doubt that eventually they will be expelled. The Greeks are gaining every day upon the Turks; and, as the antipathy between the races is strong, deep-rooted, and all but ineradicable, the presumption is, that as soon as the Christians gain the ascendancy, the Turks will themselves withdraw to Asia. The selfishness of some of the Christian powers, and the miserable jealousies of others, may retard for a time this desirable consummation. But in whatever way it may be brought about, whether with or without Russian assistance, it will be most beneficial; and we hardly think that it is likely to be long delayed.

We borrow the following statement in relation to its commerce and navigation from Mr. Green's excellent paper on Greece, in the SUPPLEMENT to the *Geographical Dictionary*: —

"There are Greek vessels of between 600 and 700 tons register, and a considerable number between 300 and 400 tons; but the majority consist of boats of 6 or 7 tons, having a large hatch in midships.

"The principal shipping port is Syra, where 468 vessels are registered. At Galaxidi, 149 vessels, measuring 14,359 tons, are registered as engaged in foreign trade; while at Patras, the most important commercial place of Greece, there are but 2 vessels registered. The Piræus possesses 298 vessels. There is no branch of trade to which the Greeks particularly confine their energies and views; nevertheless Greek commerce may be divided into the following principal great branches:—

"1st. The corn trade of the Black Sea and Alexandria includes the transport in their own vessels, either under Greek or Russian colours, to the ports of Turkey, Italy, Spain, and France, and speculations on the most extensive scale whenever bad harvests or other circumstances open markets to them. Some idea may be formed of the importance of this carrying trade to the Greeks, from the fact that in Galatz 270 Greek vessels loaded in 1844, besides 104 under Turkish colours, and 98 under Russian, of which the great majority were Greek. At Ibraila, during the same year, 225 Greek, 143 Turkish, and 53 Russian vessels loaded. Yet these ports are insignificant as compared to Odessa and Taganrog; and I only mention them and the particular year 1844, from having the returns before me.

"2ndly. The exportation of the produce of Turkey, Greece, Egypt, Persia, and southern Russia, to England, Italy, and France, principally to London, Trieste, and Marseilles. The great advantage the Greeks possess over foreigners in the purchase of produce in Turkey and Greece, is their having relatives and connections on whom they can depend for the collection of small parcels in the interior of the country, and at the places of growth, so that they are not imposed upon by their agents, and avoid the profits of middlemen. The Greek trader considers nothing beneath his notice, and will gather together a few bags of rags, or a ton or two of bones and horns, while he is chartering perhaps 50 vessels to load corn and tallow.

"3dly. The supply of Turkey, Persia, and Greece, with the cotton and woollen manufactures of England and Germany. The extensive operations of the Greeks at Manchester, where they have their own establishments for purchasing, examining, and packing their goods, attest the importance of this branch of their commerce. In supplying Persia and Constantinople with the cotton manufactures of England, these parties have almost driven the English out of the market, and defied their competition. This has been occasioned by their thorough knowledge of these countries, and by their readiness to execute the smallest as well as the largest commissions of the shopkeepers of Turkey and Greece; while their correspondents open and retail the largest parcels of manufactures in the exact proportions required by the purchasers.

"4thly. Banking and exchange operations. This, perhaps, is the most wonderful part of the Greek system of commerce, and is largely and successfully carried on."

It is deeply to be regretted that Candia, or Crete, was not either added to the new kingdom of Greece, or made independent. We cannot help considering it as disgraceful to the Christian nations of Europe, that this famous island, where European civilisation first struck its roots, should be consigned to the barbarians by whom it is now laid waste. It is as well entitled to the favourable consideration of England, France, and Russia, as any part of Continental Greece; and we do hope that measures may yet be devised for rescuing it from the atrocious despotism by which it has been so long weighed down.

PATTERNS, are specimens or samples of commodities, transmitted by manufacturers to their correspondents, or carried from town to town by travellers, in search of orders.

PAWNBROKERS AND PAWNBROKING. A pawnbroker is a species of banker, who advances money, at a certain rate of interest, upon security of goods deposited in his hands; having power to sell the goods, if the principal sum and the interest thereon be not paid within a specified time.

1. *Advantages and Disadvantages of Pawnbroking.* The practice of impledging or pawning goods, in order to raise loans, is one that must necessarily always exist in

civilised societies, and is, in many cases, productive of advantage to the parties. But it is a practice that is extremely liable to abuse. By far the largest proportion of the *bonâ fide* borrowers of money on pawn consist of the lowest and most indigent classes; and were the lenders not subjected to any species of regulation, advantage might be taken (as, indeed, it is frequently taken, in despite of every precaution) of their necessities, to subject them to the most grievous extortion. But, besides those whose wants compel them to resort to pawnbrokers, there is another class, who have recourse to them in order to get rid of the property they have unlawfully acquired. Not only, therefore, are pawnbrokers instrumental in relieving the pressing and urgent necessities of the poor, but they may also, even without intending it, become the most efficient allies of thieves and swindlers, by affording them ready and convenient outlets for the disposal of their ill-gotten gains. The policy of giving legislative protection to a business so liable to abuse, has been doubted by many. But though it were suppressed by law, it would always really exist. An individual possessed of property which he may neither be able nor willing to dispose of, may be reduced to a state of extreme difficulty; and in such case, what can be more convenient or advantageous for him than to get a loan upon a deposit of such property, under condition that if he repay the loan, and the interest upon it, within a certain period, the property will be returned? It is said, indeed, that the facilities of raising money in this way foster habits of imprudence; that the first resort for aid to a pawnbroker almost always leads to a second; and that it is impossible so to regulate the business, as to prevent the ignorant and the necessitous from being plundered. That this statement, though exaggerated, is to a certain extent true, no one can deny. On the other hand, however, the capacity of obtaining supplies on deposits of goods, by affording the means of meeting pressing exigencies, in so far tends to prevent crime, and to promote the security of property; and it would seem as if the desire to redeem property in pawn would be one of the most powerful motives to industry and economy. At the same time, too, it must be borne in mind, that it is not possible, do what you will, to prevent those who are poor and uninstructed from borrowing; and that they must, in all cases, obtain loans at a great sacrifice, and be liable to be imposed upon. But the fair presumption is, that there is less chance of any improper advantage being taken of them by a licensed pawnbroker, than by a private and irresponsible individual. Although, however, the business had all the inconveniences, without any portion whatever of the good which really belongs to it, it would be to no purpose to attempt its suppression. It is visionary to imagine that those who have property will submit to be reduced to the extremity of want, without endeavouring to raise money upon it. Any attempt to put down pawnbroking would merely drive respectable persons from the trade, and throw it entirely into the hands of those who have neither property nor character to lose. And hence the object of a wise legislature ought not to be to abolish what must always exist, but to endeavour, so far at least as is possible, to free it from abuse, by enacting such regulations as may appear to be best calculated to protect the ignorant and the unwary from becoming the prey of swindlers, and to facilitate the discovery of stolen property.

2. *Obligations under which Pawnbrokers should be placed.* — For this purpose it seems indispensable that the interest charged by pawnbrokers should be limited; that they should be obliged to give a receipt for the articles pledged, and to retain them for a reasonable time before selling them; that the sale, when it does take place, should be by public auction, or in such a way as may give the articles the best chance for being sold at a fair price; and that the excess of price, if there be any, after deducting the amount advanced, and the interest and expenses of sale, should be paid over to the original owner of the goods. To prevent pawnbrokers from becoming the receivers of stolen goods, they should be liable to penalties for making advances to any individual unable to give a satisfactory account of the mode in which he became possessed of the property he is desirous to pawn; the officers of police should at all times have free access to their premises; and they should be obliged carefully to describe and advertise the property they offer for sale.

3. *Law as to Pawnbrokers.* — It may appear singular that pawnbrokers should hardly have been named in any legislative enactment till after the middle of last century. It was enacted by the 30 Geo. 2. c. 24. that a *duplicate* or receipt should be given for goods pawned; and that such as were pawned for any sum less than 10*l.* might be recovered any time within *two* years, on payment of the principal and interest; but the rate of interest was not fixed. This defect was supplied by the 25 Geo. 3. c. 48.; but the act 39 & 40 Geo. 3. c. 99. contains the latest and most complete regulations on the subject.

Every person exercising the trade of a pawnbroker must take out a licence, renewable annually, 10 days at least before the end of the year, for which he shall pay, within the cities of London and Westminster, and the limits of the twopenny post, 15*l.*, and every where else, 7*l.* 10*s.* No person shall keep more than 1 house by virtue of 1 licence; but persons in partnership need only take out 1 licence for 1 house. All persons receiving goods by way of pawn or pledge for the repayment of money lent thereon, at a higher rate of interest than 5 per cent., to be deemed pawnbrokers.

Upon every pledge *on* which there shall have been lent not exceeding 2*s.* 6*d.*, interest may be charged at the rate of ½*d.* per month;

£	s.	d.		£	s.	d.	
If 0	5	0	-	0	0	1	per month.
0	7	6	-	0	0	1½	—
0	10	0	-	0	0	2	—
0	12	6	-	0	0	2½	—
0	15	0	-	0	0	3	—
0	17	6	-	0	0	3½	—
1	0	0	-	0	0	4	—
2	0	0	and not exceeding				
2	2	0	-	0	0	8	—

And for every sum exceeding 10*s.* and not exceeding 10*l.* at the rate of 3*d.* in the pound by the calendar month, including the current month; and so in proportion for any fractional sum.

Pawnbrokers are to give farthings in exchange.

Persons applying to redeem goods pawned within 7 days after the first calendar month after the same shall have been pledged, may redeem the same without paying any thing for the first 7 days; and, upon applying before the expiration of 14 days of the second calendar month, shall be at liberty to redeem such goods, upon paying the profit payable for 1 calendar month and the half of another; and in all cases where the parties so entitled, and applying as aforesaid, after the expiration of the first 14 days, and before the expiration of the second month, the pawnbroker is allowed to take the interest of the whole second month; and the same regulations and restrictions shall take place in every subsequent month.

When goods are pawned for more than 5*s.*, the pawnbroker, before advancing the money, shall immediately enter in his books a description of the pawn, the money lent thereon, the day of the month and year, the name of the person pawning and the name of the street, and number of the house, if numbered, where such person resides, and use of the letter L, if the person be a lodger, and the letters H K, if a housekeeper; and also the name and abode of the owner of the party offering such pledge; and if the money lent shall not exceed 5*s.*, such entry shall be made within 4 hours after *the goods* shall have been pawned; and the pawnbroker shall, at the time of taking the pawn, give to the person so pawning a duplicate, corresponding with the entry in the book, which the party pawning shall take in all cases; and the pawnbroker shall not receive any pledge, unless the party so pawning shall receive such duplicate.

Rates payable for Duplicates.

	£	s.	d.
If under 5*s.* - - -	-		gratis.
5*s.* and under 10*s.*	- 0	0	0½
10*s.* and under 20*s.*	- 0	0	1
20*s.* and under 5*l.*	- 0	0	2
5*l.* and upwards -	- 0	0	4

The duplicate to be produced to the pawnbroker before he shall be compelled to redeliver the respective goods and chattels, except as herein-after excepted.

The amount of profits on duplicates shall be added on pledges redeemed, and such duplicate shall be kept by the pawnbroker for 1 year.

Persons pawning other people's goods without their consent may be apprehended by the warrant of 1 justice, and convicted in a penalty not exceeding 5*l.* nor less than 20*s.*, and the full value of the goods pawned; and if the forfeiture be not immediately paid, the justice shall commit the party to *the house of* correction, to be kept to hard labour for 3 calendar months; and if within 3 days before the expiration of the commitment the forfeiture shall not be paid, the justice may order the person to be publicly whipped, and the forfeitures shall be applied towards making satisfaction to the party injured, and defraying the costs; but if the party injured shall decline to accept such satisfaction and costs, or if *there be any* overplus, such forfeitures or overplus shall be paid to the poor of the parish.

Persons forging or counterfeiting duplicates may be seized and delivered to a constable, who shall convey them before a justice; and, upon conviction, such person shall be committed to the house of correction for any time not exceeding 3 calendar months.

Persons offering pledges, not giving a satisfactory account of themselves, or the means by which they became possessed of such goods, or wilfully giving any false information, or if there shall be reason to suspect that such goods are stolen, or illegally obtained, or if any person not entitled to redeem goods in pawn shall endeavour to redeem the same, they may be seized and delivered to a constable, to be carried before a justice; and if there should appear ground for a second examination, they shall be committed to the common gaol or house of correction, to be dealt with according to law; or where such proceedings are not authorised by the nature of the offence, the party shall be committed for any time not exceeding 3 calendar months.

Persons buying or taking in pledge unfinished goods, linen, or apparel, intrusted to others to wash or mend, shall forfeit double the sum lent, and restore the goods.

Peace officers are empowered to search for unfinished goods which shall be come by unlawfully.

When goods are unlawfully pawned, the pawnbroker is to restore them; and their houses may be searched during the hours of business, by a warrant from a magistrate for the discovery of such property.

Persons producing notes or memorandums are to be deemed the owners of the property.

Where duplicates are lost, the pawnbroker, upon affidavit made by the owner of such loss before a magistrate, shall deliver *another duplicate*.

Goods pawned are deemed forfeited at the end of a year; but, on notice from persons having goods in pledge, 3 months further are to be allowed beyond the year for redemption; such notice to be given before the twelvemonth is expired.

All goods pawned may be sold at the expiration of *one* whole year; and all goods so forfeited, on which above 10*s.* and not exceeding 10*l.* shall have been *lent*, shall be sold by *public* auction, and not otherwise; notice of such sale being twice given, at least 3 days before the auction, in a public newspaper, upon pain of forfeiting to the owner of the goods not more than 5*l.* nor less than 2*l.*

All pictures, prints, books, bronzes, statues, busts, carvings in ivory and marble, cameos, intaglios, musical, mathematical and philosophical instruments, and china, shall be sold by themselves, and without other goods, 4 times only in every year; viz. on the 1st *Monday* in *January*, *April*, *July*, and *October*, in every year.

Pawnbrokers are not to purchase goods, while in their custody, nor take in pledges from persons under 14 years of age, or intoxicated; nor take in any goods before 8 in the forenoon or after 8 in the evening between *Michaelmas-day* and *Lady-day*, or before 7 in the forenoon or after 9 in the evening during the remainder of the year, excepting only until 11 on the evenings of *Saturday*, and the evenings preceding *Good Friday* and *Christmas-day*, and every fast or thanksgiving day.

An account of the sale of pledges for more than 10*s.* is to be entered by pawnbrokers in a book, and the surplus is to be paid to the owner of the goods pawned, if demanded within *three years* of the sale, under penalty of 10*l.* and treble the sum lent.

Pawnbrokers are to place in view the table of profits; and their *name* and business is to be placed over the door, on penalty of 10*l.*

Pawnbrokers injuring goods, or selling them before the time specified, shall, upon application to a magistrate, be compelled to make satisfaction for the same; and if the satisfaction awarded shall be equal to or exceed the principal and profits, the pawnbroker shall deliver the goods pledged to the owners without being paid any *thing* for principal or profit.

Pawnbrokers shall produce their books before a magistrate; or, refusing so to do, shall forfeit a sum not exceeding 10*l.* nor less than 5*l.*

Pawnbrokers offending against this act, shall forfeit for every *offence not* less than 40*s.* nor more than 10*l.*

It has been held by the Court of King's Bench, that a pawnbroker has no right to sell unredeemed pledges, after the expiration of a year from the time the goods were pledged, if, while they are in his possession, the original owner tender him the principal and interest due. — (*Walter* v. *Smith*, 22d of January, 1820.) On a motion for a new trial, Lord Tenterden said, "I am of opinion, that if the pledge be not redeemed at the expiration of a year and a day, (and no notice given that 3 months further are to be allowed for its redemption,) the pawnbroker has a right to expose it to sale so soon as he can, consistently with the provisions of the act: but if at any time *before the sale has actually taken place*, the owner of the goods tender the principal and interest, and expenses incurred, he has a right to his goods, and the pawnbroker is not injured; for the power of sale is allowed him merely to secure to him the money which he has advanced, together with the high rate of interest which the law allows to him in his character of pawnbroker."

Such is the present state of the law with respect to pawnbrokers. On the whole, the regulations seem to be judiciously devised. Perhaps, however, the rate of interest on small deposits might be advantageously lowered. The law allows interest at the rate of ½*d.* per month to be charged on loans of 2*s.* 6*d.*, which is at the rate of 20 per cent.: but the same sum of ½*d.* per month is exigible from all smaller loans; and as very many do not exceed 1*s.* 6*d.*, and even 6*d.*, the interest on them is exceedingly oppressive. No doubt there is a great deal of trouble with respect to such loans; but still, considering the vast number of advances under 2*s.* 6*d.*, it would seem that the interest on them might be somewhat reduced. Perhaps, too, it might be advisable, still better to secure compliance with the statute, to enact that no one should be licensed as a pawnbroker without producing sufficient security for a certain sum, to be forfeited in the event of his knowingly or wilfully breaking or evading any of its provisions. This would prevent (what Colquhoun says is not an uncommon practice) swindlers from becoming pawnbrokers, in order to get the means of selling stolen goods. — (*Treatise on the Police of the Metropolis*, 2d ed. p. 156.)

It would be a useful regulation to oblige pawnbrokers to insure against losses by fire. Much mischief has been occasioned by the neglect of this precaution.

The duties on pawnbrokers' licences produced, in 1841, 16,365*l.*

4. *Notices of Pawnbroking in Italy, France, &c.* — The practice of advancing money to the poor, either with or without interest, seems to have been occasionally followed in antiquity. — (*Beckmann*, vol. iii. p. 14. 1st Eng. ed.) But the first public establishments of this sort were founded in Italy, under the name of *Monti di Pietà*, in the 14th and 15th centuries. As it was soon found to be impossible to procure the means of supporting such establishments from voluntary contributions, a bull for allowing interest to be charged upon the loans made to the poor was issued by Leo X. in 1521. These establishments, though differing in many respects, have universally for their object to protect the needy from the risk of being plundered by the irresponsible individuals to whom their necessities might oblige them to resort, by accommodating them with loans on comparatively reasonable terms. And though their practice has not, in all instances, corresponded with the professions they have made, there seems no reason to doubt that they have been, speaking generally, of essential service to the poor.

From Italy these establishments have gradually spread over the Continent. The *Mont de Piété*, in Paris, was established by a royal ordinance in 1777; and after being destroyed by the Revolution, was again opened in 1797. In 1804, it obtained a monopoly of the business of pawnbroking in the capital. Loans are made, by this establishment, upon deposits of such goods as can be preserved, to the amount of *two thirds* of the estimated value of all goods other than gold and silver, and to *four fifths* of the value of the latter. No loan is for less than 3 francs (*2s. 6d.*). The advances are made for a year, but the borrower may renew the engagement. Interest is fixed at the rate of *one* per cent. per month.

The *Mont de Piété* has generally in deposit from 600,000 to 650,000 articles, worth from 12,000,000 to 13,000,000 francs. The expense of management amounts to from 60 to 65 *centimes* for each article; so that a loan of 3 francs never defrays the expenses it occasions, and the profits are wholly derived from those that exceed 5 francs. At an average the profits amount to about 280,000 francs, of which only about 155,000 are derived from loans upon deposit, about 125,000 being the produce of other funds at the disposal of the company.

In some respects, particularly the lowness of interest upon small loans, and the greater vigilance exercised with respect to the reception of stolen goods, the *Mont de Piété* has an advantage over the pawnbroking establishments in this country. It may be doubted, however, whether it is, on the whole, so well fitted to attain its objects. The limitation of the loans to 3 francs would be felt to be a serious grievance here, and it can hardly be otherwise in France; nor is it to be supposed, that the servants of a great public establishment will be so ready to assist poor persons, having none but inferior articles to offer in security, as private individuals anxious to get business. And such, in point of fact, is found to be the case, not in Paris only, but in all those parts of the Continent where the business of pawnbroking is confined to a few establishments. And hence, though the question be not free from difficulty, it would seem that, were the modifications already suggested adopted, our system would be the best of any.

For further information with respect to this curious and interesting subject, the reader is referred to the *Traité de la Bienfaisance Publique* of Degerando, iii. 1—*55.*; besides giving a succinct historical notice of *Monts de Piété*, the learned author has discussed most part of the knotty questions connected with the proper organisation of these establishments, and with their influence on society, with equal sagacity and ability.

PEARL-ASH. See POTASH.

PEARLS (Du. *Paarlen*; Fr. *Perles*; Ger. *Perlen*; It. *Perle*; Lat. *Margaritæ*; Rus. *Shemtschug, Perlü*; Sp. *Perlas*; Arab. *Looloo*; Cyng. *Mootoo*; Hind. *Mootie*), are well known globular concretions found in several species of shell-fish, but particularly the mother-of-pearl oyster (*Concha margaritifera* Lin.). Pearls should be chosen round, of a bright translucent silvery whiteness, free from stains and roughness. Having these qualities, the largest are of course the most valuable. The larger ones have frequently the shape of a pear; and when these are otherwise perfect, they are in great demand for ear-rings. Ceylon pearls are most esteemed in England.

Value, &c. of Pearls.—Pearls were in the highest possible estimation in ancient Rome, and bore an enormous price. — (*Principium culmenque omnium rerum pretii, margaritæ tenent.—Plin. Hist. Nat.* lib. x. c. *35.*) Their price in modern times has very much declined; partly, no doubt, from changes of manners and fashions; but, more probably, from the admirable imitations of pearls that may be obtained at a very low price. According to Mr. Milburn, a handsome necklace of Ceylon pearls, smaller than a large pea, costs from 170*l.* to 300*l.*; but one of pearls about the size of peppercorns may be had for 15*l.*: the pearls in the former sell at a guinea each, and those in the latter at about 1*s. 6d.* When the pearls dwindle to the size of small shot, they are denominated *seed* pearls, and are of little value. They are mostly sent to China. One of the most

remarkable pearls of which we have any authentic account was bought by Tavernier, at Catifa, in Arabia, a fishery famous in the days of Pliny, for the enormous sum of 110,000*l.*! It is pear-shaped, regular, and without blemish. The diameter is ·63 inch at the largest part, and the length from 2 to 3 inches.

Much difference of opinion has existed among naturalists with respect to the production of pearls in the oyster; but it seems now to be generally believed that it is the result of disease, and is formed in the same manner as bezoar — (see BEZOAR); pearls, like it, consisting of successive coats spread with perfect regularity round a foreign *nucleus*. In fact, the Chinese throw into a species of shell-fish (*mytilus cygneus*, or swan muscle), when it opens, 5 or 6 very minute mother-of-pearl beads strung on a thread; and in the course of a year they are found covered with a pearly crust, which perfectly resembles the real pearl. — (*Milburn's Orient. Com.; Ainslie's Mat. Indica, &c.*)

Pearl Fisheries. — The pearl oyster is fished in various parts of the world, particularly on the west coast of Ceylon; at Tuticoreen, in the province of Tinnevelley, on the coast of Coromandel; at the Bahrein Islands, in the Gulph of Persia; at the Sooloo Islands; off the coast of Algiers; off St. Margarita, or Pearl Islands, in the West Indies, and other places on the coast of Colombia; and in the Bay of Panama, in the South Sea. Pearls have sometimes been found on the Scotch coast, and in various other places.

The pearl fishery of Tuticoreen is monopolised by the East India Company, and that of Ceylon by government. But these monopolies are of no value; as in neither case does the sum for which the fishery is let equal the expenses incurred in guarding, surveying, and managing the banks. It is, therefore, sufficiently obvious that this system ought to be abolished, and every one allowed to fish on paying a moderate licence duty. The fear of exhausting the banks is quite ludicrous. The fishery would be abandoned as unprofitable long before the breed of oysters had been injuriously diminished; and in a few years it would be as productive as ever. Besides giving fresh life to the fishery, the abolition of the monopoly would put an end to some very oppressive regulations, enacted by the Dutch more than a century ago.

Persian Gulph.—The most extensive pearl fisheries are those on the several banks not far distant from the island of Bahrein, on the west side of the Persian Gulph, in lat. 26° 50′ N., long. 51° 10′ E.; but pearl oysters are found along the whole of the Arabian coast, and round almost all the islands of the gulph. Such as are fished in the sea near the islands of Karrak and Corgo contain pearls said to be of a superior colour and description. They are formed of 8 layers or folds, whilst others have only 5, but the water is too deep to make fishing for them either very profitable or easy. Besides, the entire monopoly of the fishery is in the hands of the sheik of Bushire, who seems to consider these islands as his immediate property.

"The fishing season is divided into two portions — the one called the short and cold, the other the long and hot. In the cooler weather of the month of June, diving is practised along the coast in shallow water; but it is not until the intensely hot months of July, August, and September, that the Bahrein banks are much frequented. The water on them is about 7 fathoms deep, and the divers are much inconvenienced when it is cold; indeed, they can do little when it is not as warm as the air, and it frequently becomes even more so in the hottest months of the summer. When they dive, they compress the nostrils tightly with a small piece of horn, which keeps the water out, and stuff their ears with bees' wax for the same purpose. They attach a net to their waists, to contain the oysters; and aid their descent by means of a stone, which they hold by a rope attached to a boat, and shake it when they wish to be drawn up. From what I could learn, 2 minutes may be considered as rather above the average time of their remaining under water. Although severe labour, and very exhausting at the time, diving is not considered particularly injurious to the constitution; even old men practise it. A person usually dives from 12 to 15 times a day in favourable weather; but when otherwise, 3 or 4 times only. The work is performed on an empty stomach. When the diver becomes fatigued, he goes to sleep, and does not eat until he has slept some time.

"At Bahrein alone, the annual amount produced by the pearl fishery may be reckoned at from 200,000*l.* to 240,000*l.* If to this, the purchases made by the Bahrein merchants or agents at Aboottabee Sharga, Ras-ul Khymack, &c. be added, which may amount to half as much more, there will be a total of about 300,000*l.* or 360,000*l.*; but this is calculated to include the whole pearl trade of the gulph; for it is believed that all the principal merchants of India, Arabia, and Persia, who deal in pearls, make their purchases, through agents, at Bahrein. I have not admitted in the above estimate much more than *one sixth* of the amount some native merchants have stated it to be, as a good deal seemed to be matter of guess or opinion, and it is difficult to get at facts. My own estimate is in some measure checked by the estimated profits of the small boats. But even the sum which I have estimated is an enormous annual value for an article found in other parts of the world as well as here, and which is never used in its best and most valuable state, except as an ornament. Large quantities of the seed pearls are used throughout Asia, in the composition of majoons, or electuaries, to form which all kinds of precious stones are occasionally mixed, after being pounded, excepting, indeed, diamonds; these being considered, from their hardness, as utterly indigestible. The majoon, in which there is a large quantity of pearls, is much sought for and valued, on account of its supposed stimulating and restorative qualities.

"The Bahrein pearl fishery boats are reckoned to amount to about 1,500, and the trade is in the hands of merchants, some of whom possess considerable capital. They bear hard on the producers or fishers, and even those who make the greatest exertions in diving hardly have food to eat. The merchant advances some money to the fishermen at cent. per cent., and a portion of dates, rice, and other necessary articles, all at the supplier's own price; he also lets a boat to them, for which he gets one share of the gross profits of all that is fished; and, finally, he purchases the pearls nearly at his own price, for the unhappy fishermen are generally in his debt, and therefore at his mercy." — (*Manuscript Notes communicated by Major D. Wilson, late Political Resident at Bushire.*)

The fishery at Algiers was farmed by an English association in 1826, but we are ignorant of their success.

The pearl fisheries on the coast of Colombia were at one time of very great value. In 1587, upwards of 697 lbs. of pearls are said to have been imported into Seville. Philip II. had one from St. Margarita, which weighed 250 carats, and was valued at 150,000 dollars. But, for many years past, the Colombian pearl fisheries have been of comparatively little importance. During the mania for joint stock companies, in 1825, two were formed; — one, on a large scale, for prosecuting the pearl fishery on the coast of Colombia; and another, on a smaller scale, for prosecuting it in the Bay of Panama and the Pacific. Both were abandoned in 1826.

The best fishery ground is said to be in from 6 to 8 fathoms water. The divers continue under water from a minute to a minute and a half, or at most 2 minutes. They have a sack or bag fastened to the neck, in which they bring up the oysters. The exertion is extremely violent; and the divers are unhealthy and short-lived.

PEARL SHELLS, commonly called *Mother-of-pearl shells*, are imported from various parts of the East and consist principally of the shells of the pearl oyster from the Gulph of

Persia and other places, particularly the Sooloo Islands, situate between Borneo and the Philippines, the shores of which afford the largest and finest shells hitherto discovered. On the inside, the shell is beautifully polished, and of the whiteness and water of pearl itself: it has the same lustre on the outside, after the external laminæ have been removed. Mother-of-pearl shells are extensively used in the arts, particularly in inlaid work, and in the manufacture of handles for knives, buttons, toys, snuff-boxes, &c. The Chinese manufacture them into beads, fish, counters, spoons, &c.; giving them a finish to which European artists have not been able to attain. Shells for the European market should be chosen of the largest size, of a beautiful pearly lustre, thick and even, and free from stains. Reject such as are small, cracked or broken, or have lumps on them. When stowed loose as dunnage, they are sometimes allowed to pass free of freight.—(*Milburn's Orient. Com.*) The imports during the 3 years ending with 1842 amounted, at an average, to about 950,000 lbs. a year.

PEAS (Ger. *Erbsen*; Fr. *Pois*; It. *Piselli, Bisi*; Sp. *Pesoles, Guisantes*; Rus. *Goroch*). The pea is one of the most esteemed of the leguminous or pulse plants. It is supposed to be indigenous to the south of Europe, and was cultivated by the Greeks and Romans, the latter of whom probably introduced it into Britain. There are many varieties; but the common garden pea (*Pisum sativum*), and the common grey or field pea (*Pisum arvense*), are the most generally cultivated; being reared in large quantities in all parts of the country, particularly in Kent. But since the introduction of the drill husbandry the culture of the pea as a field crop has been to a considerable extent superseded by the bean. Sometimes, however, it is drilled along with the latter; for, being a climbing plant, it attaches itself to the bean, so as to admit the ground being hoed; at the same time that the free admission of air about its roots promotes its growth. It is not possible to frame any estimate of the consumption of peas. The field pea is now hardly ever manufactured into meal for the purpose of being made into bread, as was formerly the case in many parts of the country; but there is reason to think that the garden pea is now more extensively used than ever. — (*Loudon's Ency. of Agriculture*; *Brown on Rural Affairs*, vol. ii. p. 72. For an account of the laws regulating the importation, &c. of peas, see CORN LAWS AND CORN TRADE.) Leguminous crops are very extensively cultivated in India.

PECK, a dry measure for grain, pulse, &c. The standard, or Imperial peck, contains 2 gallons, or 554·55 cubic inches. Four pecks make a bushel, and 4 bushels a coomb. — (See WEIGHTS AND MEASURES.)

PELLITORY, the root of a perennial plant (*Anthemis pyrethrum*), a native of the Levant, Barbary, and the south of Europe. The root is long, tapering, about the thickness of the finger, with a brownish cuticle. It is imported packed in bales, sometimes mixed with other roots, from which, however, it is easily distinguished. It is inodorous. When chewed, it seems at first to be insipid, but after a few seconds it excites a glowing heat, and a pricking sensation on the tongue and lips, which remains for 10 or 12 minutes. The pieces break with a short resinous fracture; the transverse section presenting a thick brown bark, studded with black shining points, and a pale yellow radiated inside. It is used in medicine as a stimulant. — (*Thomson's Dispensatory.*)

PENCILS (Ger. *Pinsel*; Du. *Pinseelen*; Fr. *Pinceaux*; It. *Pennelli*; Sp. *Pinceles*), the instruments used by painters in laying on their colours. They are of various kinds, and made of various materials; some being formed of the bristles of the boar, and others of camel's hair, the down of swans, &c.

PENCILS, BLACK LEAD. See BLACK LEAD PENCILS.

PENKNIVES (Ger. *Federmesser*; Fr. *Canifs*; It. *Temperini*; Sp. *Corta plumas*), small knives, too well known to need any particular description, used in making and mending pens. The best and most highly ornamented penknives are manufactured in London and Sheffield.

PENNY, formerly a silver, but now a copper coin. This was the first silver coin struck in England by our Saxon ancestors, being the 240th part of their pound; so that its weight was about 22½ grains Troy.

PENS (Fr. *Plumes à écrire*; Ger. *Schreibfedern*; It. *Penne da scrivere*; Rus. *Pera Stwoli*), well known instruments for writing, usually formed of the quills of the goose, swan, or some other bird. Metallic pens have been occasionally employed for a lengthened period; but it is only within these few years that they have been extensively introduced. They are now, however, manufactured in vast quantities, and of an immense variety of forms. But though they have superseded, to a very considerable extent, the use of quills, and have some peculiar advantages, it does not appear possible to give them the elasticity of the quill, nor to fit them so well for quick and easy writing on common descriptions of paper.

PENNYWEIGHT, a Troy weight, being the 20th part of an ounce, containing 24 grains.

PEPPER (Fr. *Poivre;* Ger. *Pfeffer;* Du. *Peper;* It. *Pepe;* Sp. *Pimienta;* Rus. *Perez;* Lat. *Piper*), the berry or fruit of different species of plants, having an aromatic, extremely hot, pungent taste, used in seasoning, &c. The following sorts of pepper are met with in commerce: —

I. Black Pepper (Fr. *Poivre;* Ger. *Schwarzen pfeffer;* It. *Pepe negro;* Sp. *Pimienta;* Sans. *Mercha;* Hind. *Gol-mirch;* Malay, *Lada;* Jav. *Marihà*), the fruit of a creeping plant (*Piper nigrum*), one of the pepper genus, of which there are upwards of 80 species. It is cultivated extensively in India, Siam, the Eastern islands, &c. It requires the support of other trees, to which it readily adheres. It climbs to the height of 20 feet; but is said to bear best when restrained to the height of 12 feet. It begins to produce at about the 3d year, and is in perfection at the 7th; continues in this state for 3 or 4 years; and declines for about as many more, until it ceases to be worth keeping. The fruit grows abundantly from all the branches, in long small clusters of from 20 to 50 grains; when ripe, it is of a bright red colour. After being gathered, it is spread on mats in the sun, when it loses its red colour, and becomes black and shrivelled as we see it. The grains are separated from the stalks by hand rubbing. That which has been gathered at the proper period shrivels the least; but if plucked too soon, it will become broken and dusty in its removal from place to place. The vine produces two crops in the year; but the seasons are subject to great irregularities.

Pepper should be chosen of a pungent aromatic odour, an extremely hot and acrid taste, in large grains, firm, sound, and with few wrinkles — for of these it always has some. Reject that which is shrivelled, or small grained, or which on being rubbed will break to pieces.

In point of quality, the pepper of Malabar is usually reckoned the best; but there is no material difference between it and that of Sumatra, and the other islands. In the market of Bengal, where they meet on equal terms, the produce of Malabar is generally about 2 per cent. higher than the other. In Europe, there is generally a difference of ¼*d.* per lb. in favour of Malabar; but in China they are held in equal estimation.

Black pepper sold ground, is said to be often adulterated with burnt crust of bread.

II. White Pepper is made by blanching the finest grains of the common black pepper by steeping them for a while in water, and then gently rubbing them, so as to remove the dark outer coat. It is milder than the other, and is much prized by the Chinese; but very little is imported into England.

III. Cayenne Pepper is the produce of several varieties of the *Capsicum*, an annual plant, a native of both the Indies. The best, which is brought home from the West Indies ready prepared, is made from the *Capsicum baccatum* (bird pepper). It has an aromatic, extremely pungent, acrimonious taste, setting the mouth, as it were, on fire, and the impression remaining long on the palate. It is sometimes adulterated with muriate of soda; and sometimes with a very deleterious substance, the red oxide of lead; but this fraud may be detected by its weight, and by chemical tests. — (See Chillies.)

IV. Long Pepper. — This species is the produce of a perennial (*Piper longum*), a native of Malabar and Bengal. The fruit is hottest in its immature state; and is therefore gathered while green, and dried in the sun. It is imported in entire spikes, which are about 1½ inch long. It has a weak aromatic odour, an intensely fiery pungent taste, and a dark grey colour. The root of long pepper is a favourite medicine among the Hindoos.

The quantities of the last 3 species of pepper imported are quite inconsiderable, compared with the quantity of black pepper. — (*Milburn's Orient. Com.; Ainslie's Mat. Indica; Thomson's Dispensatory, &c.*)

Trade in Pepper. Consumption of, and Duties on, in England. — Pepper is extensively used, all over Europe and the East, as a condiment. It was originally imported into this country by way of the Levant (see *antè*, p. 540.); and for many years after the establishment of the East India Company, it formed the most important article of their imports. In nothing has the beneficial effect of opening the Indian trade been so unequivocally displayed as in the instance of pepper. The private traders have resorted to new markets, and discovered new sources of supply, which had hitherto been wholly unexplored; so that there has been not only a very great increase in the quantity of pepper brought to Europe, but also a very great fall in its price, which does not now exceed a third part of what it amounted to in 1814!

Pepper for a lengthened period was one of the most grossly over-taxed articles in the British tariff. Until 1823, the duty was 2*s.* 6*d.* per lb. — a duty so exorbitant, that one would be inclined to think it had been imposed to put a total stop to the use of the article. In 1826, the duty on pepper from a British possession was reduced to 1*s.* per lb.; but even this duty, as compared with the price of the article (3*d.* to 5*d.* per lb.), was quite oppressive, amounting to no less than from 240 to 400 per cent.; so that it was further and most properly reduced in 1837, to 6*d.* per lb. And in consequence principally of these reductions, the entries of pepper for home consumption,

which, previously to 1826, had not amounted to 1,450,000 lbs. in any one year, amounted in 1846 to 3,303,365 lbs.! Still, however, the duty, as compared with the price of pepper, is decidedly too high; and should not exceed 1*d.* or at most 2*d.* per lb. And in proof of this statement it is enough to mention that the entries for consumption have not sensibly increased since 1846; and in 1857 amounted to only 3,656,445 lbs. But, were the duty reduced to 1*d.* or 2*d.* per lb., pepper would become accessible to the lower classes, to whom its free use would be of much importance; and if so, the probability is, that the consumption would in no very lengthened period be doubled or more, which would either prevent the revenue from sustaining any loss by such a measure, or make it not worth mentioning.

Account of the Quantities of Pepper imported into the U. Kingdom in the undermentioned Years, and of the Quantities re-exported, and the Quantities entered for Consumption during the same Years.

Years.	Imports from India.	Imports from all Parts.	Quantities re-exported from U. Kingdom.	Quantities entered for Consumption.
1838	3,547,003 *lbs.*	3,682,342 *lbs.*	3,077,109 *lbs.*	2,635,130 *lbs.*
1840	5,874,366	5,927,859	5,049,423	2,741,953
1845	9,302,740	9,852,984	7,274,350	3,210,257
1850	7,388,405	8,082,319	3,727,183	3,174,425
1857	4,652,336	5,463,738	3,171,084	3,656,145

The duty of 6$\frac{3}{10}$*d.* per lb. produced, in 1857, 95,983*l.*

Supply of Pepper.—The following instructive details with respect to the supply of pepper are taken from the *Singapore Chronicle*, to which they were contributed by John Crawfurd, Esq. — than whom there can be no more competent authority as to such subjects.

Of all the products of the Eastern islands, and of the countries immediately in their neighbourhood, in demand among strangers, black pepper is the most important, both in value and quantity.

The pepper countries extend from about the longitude of 96° to that of 115° E., beyond which no pepper is to be found; and they reach from 5° S. latitude to about 12° N., where it again ceases. Within these limits we have Sumatra, Borneo, the Malayan peninsula, and certain countries lying on the east coast of the Gulph of Siam.

The whole produce of the island of Sumatra is estimated not to fall short of 168,000 piculs of 133$\frac{1}{3}$ lbs. each; the south-west coast being said to produce 150,000, and the north-east coast 18,000 piculs.

The pepper ports on the north-east coast of Sumatra are Lankat and Delli, with Sardang. The first 2 produce 15,000 piculs, and the latter 3,000 annually. The cultivation is carried on by the Batta nation in the interior.

The ports on the south-west coast, and the amount of their produce, as given in a recent estimate, are as follows: viz. port and district of Trumah, 40,000; district of Pulo Dua, 4,000; ditto of Ciuat, 30,000; coast from Tampat Tuan to Susu, 33,000; port of Susu, 1,000; Kualla Batta, 20,000; Analabu, 2,000; districts to the north of Analabu, 20,000; making in all, 150,000 piculs.

Here it is of importance to remark that the culture and production are extremely fluctuating.

During the last pepper season, there obtained cargoes on the west coast of Sumatra, 27 American ships, 6 country traders, 4 large French ships, besides the ships belonging to the East India Company, which generally take away 500 tons. Nearly the whole of this trade is in the hands of Europeans or Americans; the pepper finds its way to Europe, to America, and in a small proportion to China.

The north-east coast of Sumatra, from Pedier down to the Carimons, is estimated, as already mentioned, to produce 18,000 piculs. Prince of Wales Island is the principal *depôt* for this, from whence the greatest part is exported to India and China. The produce of Prince of Wales Island itself is about 15,000 piculs.

Of the islands at the mouth of the Straits of Malacca and Singapore, Bingtang, on which Rhio is situated, and adjacent islands, produce 10,000 piculs; and Lingga about 2,000. A large proportion of this is brought to Singapore, which exported last year about 21,000 piculs; some part to Bengal and China, but principally to Europe direct, in free traders.

The west coast of the Malayan peninsula produces no pepper, with the exception of about 4,000 piculs afforded by the territory of Malacca.

On the east coast of the peninsula, the production of pepper is very considerable. The ports of Patani and Calantan—chiefly the latter—yield about 16,000 piculs annually, and Tringanu about 8,000. A portion of this is brought to Singapore and Penang; but we believe the greater proportion goes direct to China in junks, of which 3 large ones frequent Tringanu annually, and 1 Calantan. The Americans, too, occasionally visit these ports. In the year 1821, 3 vessels of considerable burden obtained cargoes.

The east coast of the Gulph of Siam, from the latitude of 10$\frac{1}{2}$° to that of 12$\frac{1}{2}$° N., affords an extensive produce of pepper. This coast is scarcely known, even by name, to the traders of Europe. The principal ports here are Chantibun, Tungyai, Pongsom, and Kampop; the first 2 being under the dominion of Siam, and the latter under that of Kamboja. The whole produce is estimated at not less than 60,000 piculs; 40,000 of which are brought at once to the capital of Siam as tribute to the king, and the whole finds its way to China in junks. It remains only to estimate the produce of the island of Borneo. The whole produce of Borneo is estimated at about 20,000 piculs; of which a large share is carried to China direct in junks, some by Portuguese vessels; and about 7,000 piculs are now annually brought by the native craft of the country itself to Singapore in the course of that free trade, which is happily flourishing at this settlement. The data which have been stated will enable us to estimate the whole production of the Malayan Archipelago, including that of the peninsula of Malacca, and that of the east coast of the Gulph of Siam, at 308,000 piculs; and as there is no other part of the world that affords pepper, excepting the western coast of the peninsula of India, and this affords but 30,000 piculs, or less than 1-10th part of what the places we have enumerated produce, we have, accordingly, at one view, the whole production of the earth, being 338,000 piculs, or 45,066,666 lbs. avoirdupois. The average price of pepper has been lately about 9 Spanish dollars a picul; so that the whole value drawn into India from Europe, China, and the New World, on account of this single commodity, is 3,042,000 dollars. The quantity given in this statement may appear enormous; but if meted out to the whole population of the globe, or to 1,000,000,000 of people, it would be found that the average annual consumption of an individual would amount to no more than 323 grains.

Mr. Crawfurd has more recently supplied us with a revised estimate of the production of pepper as follows:—

	Lbs.		Lbs.
Sumatra (west coast) - -	20,000,000	Siam - - - -	8,000,000
Do. (east do.) - - -	8,000,000	Malabar - - - -	4,060,000
Islands in the Straits of Malacca -	3,600,000		
Malay peninsula - - -	3,733,333	Total -	50,000,000
Borneo - - - -	2,666,667		

The localities in the previous estimate are quite correct; and we, therefore, did not think it would be right to suppress it.

PERCH, a long measure, 16½ feet in length. — (See WEIGHTS AND MEASURES.)

PERIODICAL PUBLICATIONS. These, as the name implies, are publications which appear at fixed periods or stated intervals, and consequently include newspapers, monthly and other magazines, quarterly reviews, and journals, and all such books as appear at monthly or other intervals. But the term "periodical publications" is usually understood in a more confined sense, or as comprising only magazines and such political, literary, and scientific journals as appear at regular intervals, without including newspapers or works published in parts.

Even when thus restricted, this is a very extensive and important department of literature. No doubt a vast deal of trash gets into print by the agency of magazines that might not otherwise see the light; but most part of these publications contain at the same time some superior articles; and a few are ably conducted and embrace a wide range of topics. Since the establishment of the Edinburgh Review in 1802, the quarterly journals, especially those that embrace politics and literature, have risen to great eminence, and have had a powerful influence over the public mind. At present, however, and for some time past, the influence of this class of journals has been declining. An ably conducted daily paper is, at this moment, by far the most powerful engine the press can bring into the field.

In a mercantile point of view periodical literature is of more importance than most persons would probably be at first disposed to admit. We have inquired with some care into the subject, and we are inclined to think that the following estimate of its extent and value in 1853 may be relied on with pretty considerable confidence.

Monthly Magazines. — These in the U. Kingdom amount, including all descriptions, to about 300: and taking their average price at 7*d.*, and their average sale at 1,500 copies, their produce will be 13,125*l.* a month, and 157,500*l.* a year.

Quarterly Journals. — There are 35 of these; and taking the average price of each at 4*s.*, and their average sale at 2,000 copies, they will produce 14,000*l.* a quarter, and 56,000*l.* a year. Hence, supposing these estimates to be nearly accurate, the annual produce of the sale of periodical publications (exclusive of what they yield by advertisements) will amount to about 213,500*l.*

PERMIT, a licence or instrument, granted by the officers of excise, certifying that the excise duties on certain goods have been paid, and permitting their removal from some specified place to another.

The acts relative to permits were consolidated by the stat. 2 Will. 4. c. 16. The commissioners of excise provide moulds or frames for making the paper used in the printing of permits, which have the water mark "Excise Office" visible in its substance; and the counterfeiting of such frames or paper, or the having the latter in one's possession without being able satisfactorily to account for it, are felonies punishable by transportation. Permits are not delivered except on the receipt of "request notes," specifying the places from and to which the goods are to be conveyed. A penalty of 500*l.* is to be imposed on all persons counterfeiting "request notes," or fraudulently procuring or misapplying permits, and all goods, for the removal of which permits are necessary, if they be removed without them, are to be forfeited, and the various parties engaged in their removal are to be each amerced in a penalty of 200*l.* It is needless to dwell on the extreme inconvenience that would result from such regulations were permits in extensive use. But such is not the case, and they are now wholly dispensed with, except in the case of a very few articles.

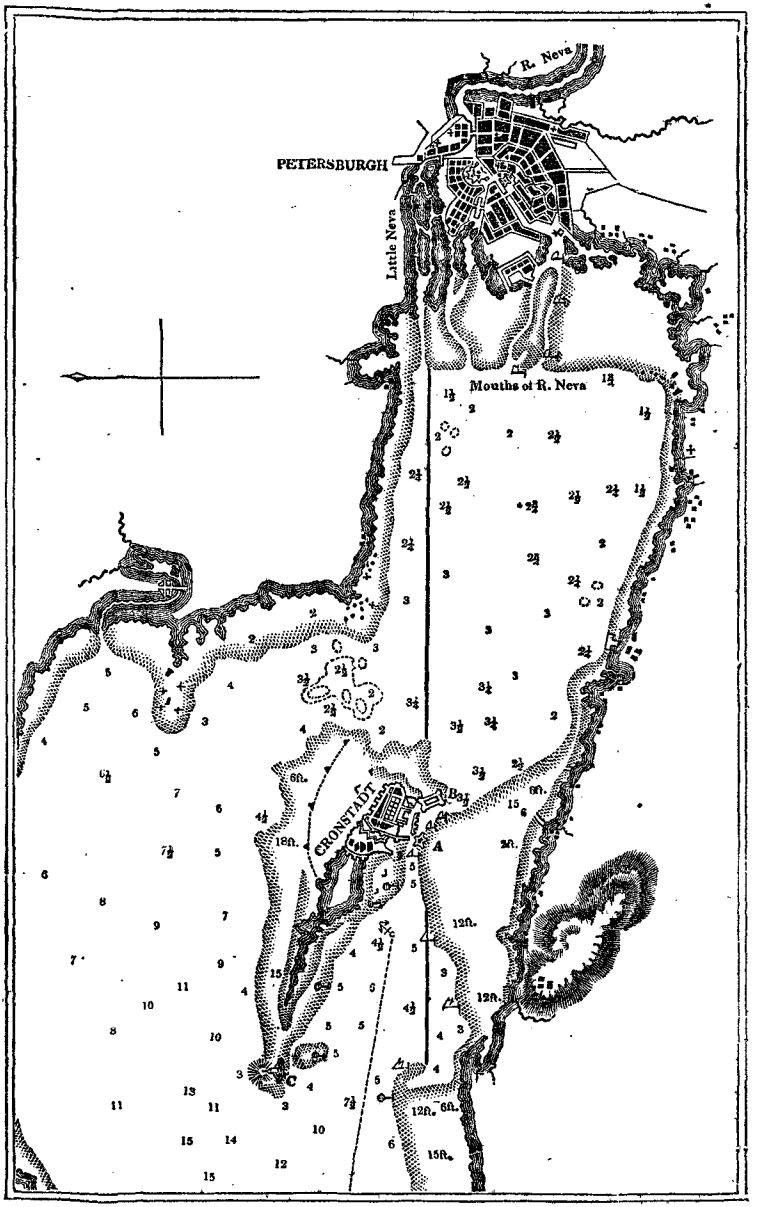
PERRY, a fermented liquor made from pears, in the same manner as cider from apples. The pears best fitted for producing this liquor are exceedingly harsh and tart; but it is itself pleasant and wholesome. — (See CIDER.)

PETERSBURG, the modern metropolis of the Russian empire, situated at the confluence of the river Neva with the eastern extremity of the Gulph of Finland, in lat. 59° 56′ 23″ N., lon. 30° 18¾′ E. Population in 1852, 532,241.

This flourishing emporium was founded by Peter the Great, whose name it bears, in 1703. In the same year, the first merchant ship that ever appeared on the Neva arrived from Holland: and the Czar, to mark his sense of the value of such visitors, treated the captain and crew with the greatest hospitality, and loaded them with presents. In 1714, 16 ships arrived at Petersburg; in 1730, the number had increased to 180; and so rapid has been the progress of commerce and civilisation in Russia since that period, that, at present, from 1,200 to 1,500 ships annually enter and clear out from Petersburg!

It is much to be regretted, that, although favourable to commerce, the situation of Petersburg is, in other respects, far from good. The ground on which it stands is low and swampy; it has, on different occasions, sustained great injury from inundations; and the country round is, generally speaking, a morass and forest, so that almost

every thing required for the subsistence of the inhabitants must be brought from a distance. No one less bold and daring than Peter the Great would have thought of selecting such a situation for the metropolis of his empire; and none possessed of less



References to Plan, — A, Cronslot; B, Men-of-war haven; C, Tolboken light-house, 88 feet high, furnished with a fixed light. Soundings in fathoms. It appears, from the above plan, that the depth of water between Cronstadt and Petersburg does not, in some places, exceed 6 or 7 feet; but it is increased about a foot by continued westerly, and is diminished about as much by continued easterly, winds. Cronstadt is, therefore, as already observed, in reality, the port of Petersburg; and has, indeed, no separate Custom-house or jurisdiction. The transfer of goods between the two places by means of lighters has of late years been materially facilitated by the employment of steam-tugs.

power and resolution could have succeeded in overcoming the all but insuperable obstacles which the nature of the country opposed to the completion of his gigantic schemes.

Cronstadt, situated on a small island about 20 miles W. of Petersburg, may, in some measure, be considered as the port of the latter. Almost all vessels bound for Petersburg touch there; and those drawing above 8 feet water load and unload at Cronstadt; the goods being conveyed from and to the city in lighters, the charges of which vary according to the demand at the time. The merchants' harbour at Cronstadt is fitted to contain about 600 ships; but it is exposed to the westerly winds. Cronstadt is strongly fortified, and is the principal station of the Russian fleet. Vessels bound for Petersburg must pass by the narrow channel to the south of the island, commanded by the fortifications of Cronstadt on the one side, and of Cronslot on the other. The woodcut on the previous page, taken from the official survey published by the Russian government, gives a better idea of the situation of Petersburg, Cronstadt, &c. than could be derived from any description.

Money.—Accounts are kept at Petersburg, and throughout Russia, in roubles of 100 copecks.

The only gold coin at present struck is the ½ Imperial, or 3 rouble piece, =16*s.* sterling very nearly. The silver rouble, worth 3*s.* 2¾*d.* sterling very nearly, was declared, by a ukase issued in 1839, to be worth 3½ paper roubles.

But another ukase, issued on the 14th June, 1843, directs that the old bank note roubles in circulation, amounting to the sum of 595,776,510, being equal, at the exchange of 3½, to 170,221,803 silver roubles, should be called in, and replaced by an issue of 170,221,000 *billets du credit*, to be exchangeable at the pleasure of the holder for silver roubles. This is a most important regulation, and if it be fully carried out, the distinction between silver and paper roubles will disappear; at the same time that additional security will be given to all sorts of industrious undertakings, and to the credit of the government.

Weights and Measures.—The Russian weights are the same for gold, silver, and merchandise, viz.—

3 Soltnicks = 1 Loth.	40 Pounds = 1 Pood.
32 Loths = 1 Pound.	10 Poods = 1 Berkovitz.

The Russian pound contains, according to Kelly, 6318·5 English grains. Hence, 100 lbs. Russian = 90·26 lbs. avoirdupois = 40·93 kilog. The pood = 36 lbs. 1 oz. 11 drs., but among merchants it is reckoned = 36 lbs. According to Nelkenbrecher, 100 lbs. Russian = 90·19 lbs. avoirdupois = 40·9 kilog. = 82·8 lbs. of Amsterdam = 84·444 of Hamburg.

The principal measure for corn is the chetwert, divided into 2 osmins, 4 pajocks, 8 chetwericks, or 64 gernitz. The chetwert = 5·77 Imperial bushels. Hence, 100 chetwerts = 72·12 Imperial quarters.

In liquid measure,	3 Wedros = 1 Anker.
11 Tsharky = 1 Krashka.	6 Ankers = 1 Oxhof.
8 Krashka = 1 Wedro.	2 Oxhoft = 1 Pipe.
40 Wedros = 1 Sorokovy.	In long measure,
The wedro = 3¼ English wine gallons.	16 Wershok = 1 Arsheen.
	3 Arsheen = 1 Sashen.
13 1/3 Bottles = 1 Wedro.	500 Sashen = 1 Verst.

1 sashen = 7 English feet. 1 arsheen = 28 English inches. 100 Russian feet = 114½ English feet. The verst, or Russian mile, = 5 furlongs 12 poles. The *English* inch and foot are used throughout Russia, chiefly, however, in the measuring of timber.—(*Kelly's Cambist*, art. *Russia*; *Nelkenbrecher, Manuel Universel.*)

In fixing freight to England, a ton is 63 poods of hemp, flax, tallow, iron, copper, and ashes; 44 poods of bristles, isinglass, leather, and wax; 5 dozen of deals; 3,500 hare skins; 8 chetwerts of wheat or linseed; and 60 pieces of sail-cloth.

The following regulations for the importation of foreign goods are strictly enforced:—

All goods imported must be accompanied by the following documents:—

1. The declaration of the captain, according to the form ordered by the Custom-house.

2. An attestation from the Russian consul, and, where there is no consul, from the Custom-house of the place, of the quantity and quality of the goods, and a declaration that they are not the produce, manufacture, or property of an enemy's country.

3. Bills of lading of all goods, in which the weight, measure, or quantity of each package must be specified. In case the bills of lading are not exactly after this regulation, the goods pay double duty as a fine. In case more is found than specified in the bill of lading, the surplus is confiscated; if less is found, the duty must be paid on the quantity specified. Of wine, it is not sufficient to specify the number of pipes or hogsheads only, but also their contents in gallons, &c. Of lemons, the number in each box must be specified. Of manufactured goods, the measure of each piece must be specified, and the number of pieces in each bale. It is indifferent whether the gross or the nett weight be specified. If the packages be all of the same weight, measure, or contents, a general specification will do; as, for example, 100 casks alum, of 17 lispound each. Of dye woods, the weight of the whole need only be mentioned. Of goods of small bulk, as pepper, &c., it is sufficient to state the weight of every 5 or 10 bales, but with specification of the numbers. There must not be any erasures or blots in the bill of lading. All goods not accompanied by these documents, or where the documents are not according to the above regulations, will be sent back.

Bills of lading may be made out either to some house, or to order.

The following charges have been fixed by the merchants of Petersburg:—

	Per cent.
Commission on sales and purchases	2
Extra charges on all goods	1
Commission and extra charges for goods delivered up	2
Brokerage on sales and purchases	½
Ditto on bills	¼
Ditto on freight, per ton, 60 copecks.	
Stamps	⅛

	Per cent.
Charges on duty, paid inwards	4
Ditto, paid outwards	4
Commission for collecting freight, or average inwards	3
Commission for procuring freight outwards	2
For clearances, 40 roubles.	

Dues to be paid to the church, 10 roubles each vessel.

Clearing of ships, of or under

25 lasts each,	40 roubles each vessel.
25 to 50 do.	60 —
50 — 75	80 —
75 — 100	100 —
100 — 150	150 —
150 or above,	200 —

Tare on Goods exported, as fixed by the Custom-house.

Dry Goods.	Per cent.
In barrels or chests	10
In sacks	2
In mats, or sacks made of mats	3
Except Muscovy leather, of which is deducted	5

Moist Goods.	Per cent.
Pressed caviare	13
Soap	3
Meat and salt fish	20
Tallow	10

Moist Goods.	Per cent.
Honey	17
Treacle	10
All other moist goods	17

Tare on Goods imported.

Dry Goods.	Per cent.
In barrels or chests	10
In vessels of glass or earthenware	20
In sacks	2

Dry Goods.	Per cent.
In double sacks	4
In mats	5

Dry Goods.	Per cent
In casks and mats together	5
In baskets	5

Moist Goods imported.—The following are some of the tares specified in the tariff:—

Olive oil in casks	17 per cent.
of Italy, in flasks and straw	20 —
of France, in flasks and earthenware	40 —
Salt fish in barrels	36 —
And generally on all moist goods in barrels	17 —
in glass and earthenware	20 —
Miscellaneous Goods.	
Cotton twist in bales	6 —
in chests and barrels	15 —

Cochineal must be weighed in the sacks after being taken from the casks; for every sack of from 4 to 7 poods	2 lbs.
sacks of from 2 to 3½ poods	1 —
Indigo in serons; every seron of from 5½ to 7 poods	34 —
in ½ serons, 2½ to 4 poods	20 —
of Guatemala	20 per cent.
in boxes	20 —

Bills drawn in Russia, and payable after date, are allowed 10 days' grace: but if payable at sight, 3 days only: Sundays and holidays are included in both cases. The Julian calendar, or old style, is still retained throughout Russia. This is 12 days later than the new style; and in leap-years, 13 days, after the month of February.

Port Charges. — The regular charges which British ships have to pay at the ports of Petersburg and Cronstadt, comprise the following fixed dues and expenses, viz. lastage, passes, clearing at Cronstadt, address money, Petersburg and Cronstadt church money, Cronstadt expedition and allowance to the Russia Company's agent, for all which a charge is made in the ship's account in one sum, proportionally to the ship's register tonnage, according to the following scale, viz.: —

	Silv. roub.		*Silv. roub.*
For 61 tons register - - -	48 0	For 322 to 341 tons register - -	136 0
62 to 81 — - - -	56 0	342 — 361 — - -	141 14

Trade, &c. — Petersburg has the most extensive foreign trade of any city in the north of Europe. This arises from its being the only great maritime outlet on the Gulph of Finland, and from its vast and various communications with the interior of the country. Few countries have such an extent of internal navigation as Russia. By means partly of rivers, and partly of canals, Petersburg is connected with the Caspian Sea. Goods are conveyed from the latter to the capital, through a distance of 1,434 miles, without once landing them! The iron and furs of Siberia, and the teas of China, are received at Petersburg in the same way; but owing to the great distance of those countries, and the short period of the year during which the rivers and canals are navigable, they take 3 years in their transit. Immense quantities of goods are also conveyed during winter upon the ice, in sledges, to the different ports, and to the nearest *pristans*, or places in the interior where barks are built for river or canal navigation. They are put on board in anticipation of the period of sailing, that the barks may be ready to take advantage of the high water, by floating down with the current as soon as the snow and ice begin to melt. The cargoes carried up the river into the interior during summer are principally conveyed to their ultimate destinations by the sledge roads during winter. The conveyance by the latter is generally the most expeditious; and it, as well as the internal conveyance by water, is performed at a very moderate expense.

The barks that come from the interior are mostly of a very rude construction, flat-bottomed, and seldom drawing more than 20 or 30 inches water. When they arrive at their destination, they are sold or broken up for fire-wood. Those that leave the ports for the interior are of a superior description, and are comparatively few in number; the commodities imported, being at an average, of much greater value relatively to their bulk and weight than those that are exported.

Principal Articles of Export. — The principal articles of export are tallow, hemp, and flax; grain, particularly wheat; linseed, timber, copper; hides, potashes, bristles, hempseed oil, furs, leather; fox, hare, and squirrel skins; canvass and coarse linen, cordage, caviare, wax, isinglass, quills, tar, &c. Tallow, both for candles and soap, is more largely exported from this than from any other port in the Baltic or elsewhere, and is an article of great commercial importance. — (See TALLOW.) Hemp is of good quality, though inferior to that of Riga: it is assorted, according to its quality, into *clean*, or firsts; *outshot*, or seconds; and *half-clean*, or thirds. The first sort should be quite clean, and free from spills; the second is less so; and the third, or *half-clean*, contains a still greater portion of spills, and is, besides, of mixed qualities and colours. Russian flax is much esteemed for the length of its fibre; it is naturally brownish, but becomes very white after the first bleaching. Three qualities are distinguished; viz. 12 head, 9 head, and 6 head. — (See HEMP, and FLAX.) Iron of good quality, and preferable to that from the other Russian ports, is of two kinds, old and new sables, the former being the best. It used to be exported in considerable quantities; but the shipments are now much reduced.* The grain trade between this country and Petersburg

* M. de Tegoborski observes in regard to the exportation of iron from Russia: — "Bien des personnes croient que puisque la Russie exporte du fer, c'est une preuve qu'elle en produit plus que ne porte les besoins de la consommation intérieure. C'est une manière de juger très-superficielle. D'abord, cette exportation n'a jamais été très-considérable; elle ne s'élève plus qu'à environ 700,000 ou 800,000 poods, représentant un valeur d'à peu près 1 million de roubles d'argent. Puis cette exportation, qui ne se soutient que par la bonne qualité de quelques espèces de nos fers, tres-recherchées pour certains usages, n'est nullement une preuve que les besoins de la consommation intérieure soient satisfaits, *car si le fer en Russie était à meilleur marché, on pourrait consommer plus du double de la production actuelle.*" (i. 300.)

is of very considerable importance; and Russia has become one of the principal sources of our foreign supplies.

But by far the larger portion of the wheat and all the Indian corn which comes to us from Russia, is brought from Odessa, Taganrog (which see), and other ports on the Black Sea and the Sea of Azoff. The oats come principally from Archangel, but the exports from Petersburg are also very considerable. The *Russian wheat*, so called to distinguish it from the *azemaia*, or soft wheat, and the *kubanka*, or hard wheat, is the lowest description of wheat shipped from Petersburg. It is small-grained, and dingy coloured; being though sound, unfit for the manufacture of fine bread. The azemaia is of a larger, though still not a large grain, and better colour, and has of late been extensively imported into England. The kubanka, or hard wheat, is a large semi-transparent grain. Its hardness has nothing of the flinty character of the Spanish hard wheat, which it most resembles. When first brought to London, the millers objected to it, on account of the difficulty experienced in grinding it; but it is now much esteemed. All the Russian wheats are well calculated for keeping, either in granary, or when made into bread: but the kubanka has this quality in a peculiar degree; and is in great demand for mixing with other wheats that are old, stale, or out of condition. A shipment of 100 chetwerts of wheat in Petersburg is found, when delivered here, to yield about 72 imperial quarters.

M. de Tegoborski, in his elaborate and excellent treatise on the *Forces Productives de la Russie* (i. 350.), gives the following—

Account of the Gross Quantities and Values of all Sorts of Corn (Wheat, Barley, Rye, and Oats, ex Indian Corn) exported from Russia in triennial Periods from 1824—26 to 1845—47, both included.

	Corn of all Sorts.	Value in Sil. Roub.		Corn of all Sorts.	Value in Sil. Roub.
1824—26 - - chet.	3,398,127	11,913,200	1836—38 - - chet.	7,540,299*	31,875,200
1827—29 - - —	7,486,012	24,141,500	1839—41 - - —	8,864,564	47,753,900
1830—32 - - —	11,324,831	39,407,400	1842—44 - - —	8,685,907	40,131,400
1833—35 - - —	2,241,266	10,357,900	1845—47 - - —	14,349,986	115,483,700

Imports.—The principal imports are sugar, especially from the Havannah; coffee; madder, indigo, cochineal, and dye woods; cotton wool, cotton stuffs and yarn; machinery and mill work; woollen fabrics and woollen yarn; linen and linen yarn; silk goods; coals and salt, our exports of the former to Russia in 1857 being 277,866 tons, and of the latter 79,826 tons; iron, lead, and shot; hardware and cutlery; wines, especially champagne; spices; fruits; tobacco; tea via Kaichta; with a great variety of other articles.

Commercial Policy.—The policy of Russia, previously to 1857, in regard to commerce, was of a mixed character with, however, a large predominance of illiberality. Machinery and mill-work, including ships with their tackle, steamers, &c., were admitted duty free; as were most other articles necessary to the prosecution of art and science. But most articles of consumption, and some even of those most necessary in production, were either excluded or loaded with oppressive duties. Those on iron, for example, were so very heavy that they went far to prohibit its importation, which did not exceed 10,000 or 12,000 tons a-year. And as the whole, or almost the whole of the iron made in Russia is smelted by means of wood, it cannot be furnished except at a very high price.

The government authorities admit that such is the case. Thus it is stated in the *Supplément au Journal de l'Intérieur* (p. 27), 4 March, 1853, that "*L'emploi exclusif de bois dans nos usines entrave d'une manière invincible le développement ultérieur de l'indu trie de fer.*" And it is further stated in the same article that such, in many parts of the empire, is the scarcity and high price of iron, that the peasants are all but ignorant of its use, and neither employ it in their implements, nor even in shoeing their horses, whose feet are left without any protection! It may be supposed, perhaps, that this can be true only of the more remote and backward districts; but such is not the case. And nothing is more common in the immediate vicinity of Petersburg and Moscow, than for horses to be unshod, and spades, ploughshares, harrows, and such like instruments, to consist wholly of wood.*

It is really astonishing that any government, and especially one so generally intelligent as that of Russia, does not eagerly adopt every possible means of putting an end to such a state of things, and of adding to the efficacy of the labour of its subjects. And to introduce a better system all that is required is to admit foreign iron and iron-ware free of duty; that is, to allow the people freely to exchange their corn, tallow, &c., for the iron and iron implements of England and the Netherlands. The extraordinary magnitude of the exports of corn from the empire, even with its present barbarous husbandry, shows what they might amount to were agriculture a

* See a remarkable and conclusive paragraph to the same effect in the work of Tegoborski, referred to above, i. 298.

little improved, and means of communication opened from the interior to the sea-ports. Under such circumstances there can be little doubt that the exportation of corn, tallow, flax, bristles, &c., would speedily be doubled or trebled; and the population and the government would be enriched by abandoning a system which confers no kind of advantage on any one, except, perhaps (for even that is very doubtful), a mere handful of forest proprietors.

But we are glad to have to state that a better system has been fairly inaugurated. The new tariff, introduced in 1857, though in many respects most objectionable, has effected sundry beneficial changes, and is a very great improvement on that by which it was preceded. It has repealed various prohibitions; and has effected large reductions in the duties on some important articles. Pig iron, bars, and rails that were formerly prohibited, are now admitted at reasonable duties; the duty on cotton twist has been reduced from 5 roub. per pood to 3 1-3rd do.; while cotton, linen, woollen, and silk fabrics, earthenware, sugar, salt, &c. may all be imported at considerably lower rates of duty than formerly. It is true that many of these duties are still much too high. But in matters of this sort it is a great thing to have laid the foundations of a better system. And as the reductions that have been made in the rates of duty have not occasioned any reduction of revenue, and have given a great stimulus to commerce, it would seem that their prospective reduction may be anticipated. There can be no question that it will be at once the readiest and most effective means of developing the productive capacities of this vast empire.

Notwithstanding its reduction the duty on raw sugar imported by sea rather exceeds 3*d.* per lb. English, which, for a country like Russia, is a great deal too high. But it has been imposed not so much for the sake of revenue, as to encourage the production of beet-root sugar, the duty on which is under 1*d.* per lb. Tegoborski has shown the pernicious influence of this system over the trade and revenue of the empire, and the interests of the consumers. And this immense sacrifice is incurred for no better purpose than to divert a portion of the scanty capital and labour of the country to a business of which the eventual success, even with this extraordinary encouragement, is, if not problematical, not worth the cost.

Speaking, generally, the duties are a good deal higher (frequently as much as a third part) on goods imported by sea than on the same goods when imported by land. This is a most unwise distinction. It matters not through what channel an article finds its way to the consumers. Its cost is the only thing to which they attend. And if they can get it cheaper by sea than by land, why force them to resort to the dearer mode of conveyance? If this distinction be resorted to as a means of raising revenue it is, perhaps, the very worst that can be devised. The business of government is to impose reasonable duties on commodities, leaving it to their subjects to import, or procure them through the cheapest channels.

According to Tegoborski (iii. 37.) the imports of raw cotton and cotton yarn into the empire since 1824–6 have been as under, viz.

Years.	Raw Cotton.	Cotton Thread.	Years.	Raw Cotton.	Cotton Thread.
	Poods.	*Poods.*		*Poods.*	*Poods.*
1824–6 av.	74,268	337,001	1842–4 av.	524,511	592,193
1827–9 —	98,100	440,582	1845–7 —	780,149	504,536
1830–2 —	115,996	553,690	1848–50 —	1,339,051	281,590
1833–5 —	171,189	649,399	1851 —	1,460,712	157,931
1836–8 —	282,799	626,713	1852 —	1,748,346	112,733
1839–41 —	355,774	542,125			

It is seen from this table that the annual imports of raw cotton have increased between 1824–26 and 1852, from a mere trifle to about 63,000,000 lbs., while the imports of yarn appear to have declined during the same period to about $\frac{1}{5}$th part of their amount at its commencement. But the imports of the latter have greatly increased since the introduction of the new tariff, though the check thereby given to smuggling may, perhaps, make them appear greater than they really are. But however this may be, we cannot but regard the extension of the cotton manufacture as a serious loss to Russia; for, to suppose that a country without coal, without improved means of communication, with iron at an exorbitant price, and whose inhabitants, thinly scattered over the surface, are mostly in a state of prædial slavery, should succeed in manufacturing industry, is to suppose what is contradictory and absurd. It may be fairly presumed that under a free commercial system the progress of Russia in agriculture and in the ruder and coarser species of manufactures, would be surpassed by few other countries. But she has no aptitude or means for the successful prosecution of the finer description of manufactures. And it is mere *felo de se* policy to make her, as has been done, neglect the former by forcing the cultivation of the latter.

In addition to those on imports, some of the most important articles of native growth were subjected to duties on their being exported; the effect of these being to increase

their price, and narrow their sale in the foreign market. But these have, for the most part, been either repealed or reduced. It is a common, though, perhaps, an exaggerated complaint that the customs authorities are extremely corrupt; and the procedure in contested cases slow, cumbrous, and expensive.

We may farther observe that the accuracy of the official returns of the trade of the empire is not always to be relied on. They frequently involve very grave errors. And though they were as accurate as they might be made, they would necessarily be very defective, inasmuch as they take no account of the smuggling which is extensively carried on.

The charge sometimes made against the Russians of designedly underrating the exports to England is wholly groundless. It arises from the circumstance of many of the ships destined for England clearing out for the Sound. And these being classed in the official returns, under the head of cleared for "other countries," it is proportionally though unintentionally exaggerated, while the clearances for England are proportionally and unintentionally diminished.

Inspection of Goods.—At Petersburg, Riga, and other Baltic ports, when goods are brought from the interior to be shipped, they are inspected and classified according to their qualities, by officers (*brackers*) appointed by government for that purpose, and sworn to the faithful performance of their duty. All sorts of timber, linen and canvass, flax and hemp, linseed and hempseed, ashes, wax, &c. are subject to such inspection. They are generally divided into three qualities: *Krohn* (crown), or superior; *Brack*, or middling; and *Bracks-Brack*, or inferior. This classification is said to be, in most cases, made with considerable fairness. A factor or commission agent in Russia, instructed to buy, on account of his correspondent in England or Holland, a specified quantity of any description of produce subject to the official visit, is not liable to any action in the event of the article being found upon delivery to be of inferior quality, provided he produce a certificate to show that it had been officially inspected, or *bracked*. But a factor is at liberty, should any article delivered to him be manifestly defected, to name 1 or 2 other *brackers* to decide whether the article be merchantable or not.

Native and Foreign Merchants, &c.—Every Russian carrying on trade must be a burgher, and have his name registered in the burghers' book. All whose names are in this book are either townsmen who have property within the city, or members of a guild. There are three guilds. Those who belong to the first must possess 15,000 silver roubles; they may engage in all sorts of commercial transactions, may establish banks, fit out privateers in case of war, and drive about the city in carriages drawn by two horses. Those belonging to the second guild declare themselves possessed of 6,000 roubles; they are not confined to inland trade, but they can only import foreign goods worth 90,000 roubles. A capital of 2,400 roubles entitles its owner to admission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amount to 1 per cent. upon their declared capital, the "statement of which is left to the conscience of every individual." Burghers are not obliged to serve in the army, but may provide a substitute, or pay a fine. The *guests*, or foreign merchants, who enrol themselves in the city register on account of their commercial affairs, enjoy privileges nearly similar to those enjoyed by members of the first guild.

Tegoborski gives (iii. 319.) the following account of the number of merchants inscribed in the different guilds, viz: —

Years.	1st Guild.	2nd Guild.	3rd Guild.	Total.
1838—1840 av.	917	1,874	33,516	36,304
1841—1843	908	1,941	35,877	38,726
1844—1846	874	2,132	36,671	39,674
1847—1849	862	2,293	37,774	40,926
1850—1852	924	2,594	42,327	45,642

Tegoborski supposes that the capital belonging to the merchants of the first guild may amount, at an average, to 100,000 silver roubles; to the second, to 40,000 roubles; and to the third, to 1,000 roubles. In addition to the above there are about 4,500 small dealers with certificates.

It is useless to enlarge on the impolicy of these distinctions. They prevent men of limited capital, but of enterprise and intelligence, from engaging in those branches in which they would be most likely to succeed. The duties on *guests*, or foreign merchants, may, at an average, amount to about 180*l.* or 190*l.* a year.

None but native Russians are allowed to engage in the internal trade of the country; and hence a foreigner who imports goods into Russia, must sell them to Russians only, and at the port where they arrive. A few foreigners, indeed, settled in Russia, and having connections with the natives, do carry on a trade with the interior; but it is contrary to law, and the goods are liable to be seized.

The merchants engaged in foreign trade are mostly foreigners, of whom the English are the principal. The peculiar privileges formerly enjoyed by the latter are now nearly obsolete and their rights, in common with those of other foreigners, are merely those of *guests*. The English factory is, at present, little more than a society formed of some of the principal English merchants, several of whom, however, do not belong to it: its power extends to little else than the management of certain funds under its control.

Purchase and Sale of Commodities, &c. — Owing to the scarcity of capital in Russia, goods the produce of the country are frequently paid for in advance; and foreign goods are most commonly sold upon credit. From the month of November till the shipping season in May, the Russians who trade in flax, hemp, tallow, bristles, iron, &c. either come themselves to Petersburg, or employ agents to sell their goods to foreigners, to be delivered, according to agreement, in May, June, July, or August. The payments are made according to the circumstances of the sellers and buyers; sometimes the buyer pays the whole amount, in the winter months, for the goods which are to be delivered in the summer or autumn; and sometimes he pays a part on concluding the contract, and the remainder on delivery of the goods. The manufacturers and dealers in linen usually come to Petersburg in March, and sell their goods for ready money.

Foreign goods were formerly almost entirely sold at a twelvemonth's credit, and some at a still longer term; but of late years several articles, as coffee and sugar, are sold for ready money; still, however, the great bulk of foreign goods for the supply of the interior is sold on credit. Most part of the Russians who buy goods on credit of foreigners, for the use of the interior, have no other connection or trade with Petersburg, than merely coming there once or twice a year to make purchases; which having accomplished, they set off with the goods, and the foreigner neither sees nor hears of them again till the bill becomes due.

It is obvious from this statement, that experience and sagacity are nowhere more requisite in a merchant than here. He has nothing, in fact, but his own knowledge of the native dealers to depend upon; and it is highly creditable to the Russians, that foreigners do not hesitate to trust them with immense sums on such a guarantee. A foreign merchant, carrying on business in Russia, must also be acquainted with the customary forms and obligations of contracts; the mode of making payments; the many formalities that encumber, and sometimes turn aside, the course of justice; the spirit, still more than the letter, of the tariff and the Custom-house regulations; the privileges claimed by the Crown, and the different orders; with a variety of other particulars, which attentive able men may learn on the spot, and nowhere else.

"Another circumstance connected with the British trade is too curious to be passed in silence. Every mercantile house in Petersburg employs certain men, called in the language of the country *artelschicks*, who are the counting-house men, and employed by every merchant to collect payment on bills, and to receive money, as well as, in many instances, to pay it in very considerable sums. This is an important part of their trust. There being no bankers in Russia, every mercantile house keeps its own cash; and as the payments between merchants, and for bills of exchange, are made entirely of bank notes of no higher value than 5, 10, 25, 50, and 100 roubles — most of them in so tattered a state as to require several hours to count over a sum of 2,000*l.* or 3,000*l.*— this business is performed by artelschicks; and very few instances have occurred of loss by their inattention, either in miscounting the notes, in taking false notes, or, where they are much torn, in receiving parts of different bank notes.

"These artelschicks are also employed to superintend the loading and unloading the different cargoes; they receive the most valuable into the warehouse, where they are left solely under their care; and in these warehouses, not merely merchandise, but often large quantities of dollars, are deposited. These Russians are mostly natives of Archangel, and the adjacent governments, of the lowest class: are often slaves, generally of the Crown; and the only security of the merchant arises in some degree from the natural reluctance of the Russian to betray confidence reposed in him; but in a much greater from their association, which is called an artel.

"An artel consists of a certain number of labourers, who voluntarily become responsible, as a body, for the honesty of each individual. The separate earnings of each man are put into the common stock; a monthly allowance is made for his support; and at the end of the year the surplus is equally divided. The number varies in different associations from 50 to 100; and so advantageous is it considered to belong to one of these societies, that 500 and even 1,000 roubles are paid for admission. These societies are not bound by any law of the empire, or even written agreement; nor does the merchant restrain them under any legal obligation; yet there has been no instance of their objecting to any just claim, or of protecting an individual whose conduct had brought a demand on the society." — (*Coxe's Travels in Russia*, vol. iii. p. 315.)

Few Russian merchants engage in foreign trade. It is carried on principally in foreign bottoms, of which by far the larger proportion are English. Marine insurances are generally effected in London or Amsterdam: there being no establishment for that department of business in Russia. An insurance company against fire has been established in Petersburg, and enjoys several privileges. It is a joint stock company, divided into actions or shares. It has been very successful: and its shares are at a high premium. No insurance on houses or goods in Russia, made in a foreign country, can be legally recovered; no official documents of loss being allowed to be furnished for such a purpose. A life insurance company has, also, been established.

Trade of the U. Kingdom with Russia.

A General Review of the Foreign Trade of Russia in 1857.

The foreign trade of Russia in 1857 compared with that of 1856, shows the following results, viz.:

To Europe and America.—

Exports—the amount was: 1856. 1857.

From Russia, S. Rs.	136,492,398	S. Rs.	141,363,189
From Poland —	10,279,496	—	12,056,784
To Asia —	10,593,882	—	11,945,598
To Finland —	2,884,096	—	4,322,563
Total S. Rs.	160,249,872	S. Rs.	169,688,134

The *Imports* amounted from Europe & America

1856.		1857.	
Into Russia S. Rs.	90,171,961	S. Rs.	117,941,761
Into Poland —	14,823,464	—	13,833,817
From Asia —	17,002,189	—	19,347,199
From Finland —	564,828	—	564,022
Total S. Rs.	122,562,442	S. Rs.	151,686,799

It appears from this that the export trade of Russia was greater in 1857 than in 1856 by 9,438,262 S. Rs., and the imports greater by 29,124,357 S. Rs.

Gold and silver coined, were exported—

From Russia	S. Rs.	17,778,304
Poland	—	146,554
To Asia	—	5,745,228
Total	S. Rs.	23,670,076

Gold and silver coined and in bars, were brought in—

To Russia	S. Rs.	8,286,980
Poland	—	291,795
From Asia	—	196,952
Total	S. Rs.	8,775,727

The Exports of the Principal Articles in 1856 and 1857 were

Articles.		1856.	1857.	Articles.		1856.	1857.
Corn	S. R.	56,602,374	51,588,981	Iron	poods	1,387,011	828,693
Wood	—	5,945,924	6,005,325	Coffee	—	171,388	161,570
Hides	—	1,450,716	4,643,969	Wool, sheeps'	—	634,298	1,036,350
dressed	—	1,151,787	1,537,460	Potashes	—	528,727	610,411

Tallow	—	3,945,325	3,503,594	Hemp and linseed	chet.	1,960,051	1,464,574
Hemp	—	3,340,540	2,932,606				

Trade with Finland.—The imports were almost the same in both years, 1856 and 1857, but the exports in 1857 were much higher.

All the import from Finland was for S. R. 564,022; 806 r. less than in 1856. The export to Finland was for S. R. 4,322,694; 1,438,467 r. more than in 1856.

The principal articles exported are—corn for 3,174,694 r.; tobacco for 135,187 r.; cordage for 129,706 r.; and stearine and tallow candles for 100,225. The imports are—iron, cast iron, and copper for 227,381 r.; and cotton manufactures for 144,838 r.

Trade with the Transcaucasian Provinces and the Caspian Sea.—Exports in 1856, S. R. 1,306,217; in 1857, S. R. 1,757,493. Imports in 1856, S. R. 4,350,063; in 1857, S. R. 4,775,263.

Principal export articles: silk, in 1857, for val. of 826,719 s. r.—247,942 r. more than in 1856; metal in bars and objects for 269,082 r.; hides for 185,284 r.; and silk manufactures for 61,676 r.

Principal import articles: from Asia—cotton manufactures for val. of 1,366,436 r.; silk manufactures for 403,158 r.; and fruits for 332,389 r. From Europe: sugar in loaf, for 507,034 r.; cotton manufactures for 414,926 r.; and silk manufactures for 82,382 r.

The export trade of Astrakhan in 1857 exceeded by 70,767 r. the export of 1856, and the imports were 172,052 r. less. The exports were copper, iron, and other metals, in bars and objects, for val. of 215,842 r. The import into Astrakhan was for val. of 1,045,848 r.; the principal articles were—silk, for 360,633 r.; fruits for 211,339 r.; and cotton for 115,972 r.

The trade on the Orenburg and Siberian lines has been very successful. Exports in 1856, val. S. R 2,935,289; in 1857, 3,838,867. Imports in 1856, val. S. R. 5,098,964; in 1857, 6,047,545.

The principal articles exported: cotton manufactures for 1,942,116 r.; hides dressed, 528,556 r.; corn, 297,852 r.; and metals, in bars and objects, 277,455 r.

The principal articles imported: cotton and cotton-yarn, 761,882 r.; cotton manufactures, 717,361 r.; hides, 659,152 r.; fruits, 169,522 r.; and leaf and brick-tea, 4,250 poods, for val. of 88,064 r.; cattle by barter from the Kirgises, for val. of 2,354,696 r.

Trade at Kiachta.—The trade was not only greater than in 1856, but more even than in 1848, which was the most profitable. In 1857 the imports of leaf tea, 165,202½ chests, and brick tea 45,599 chests; being 46,406 of the first, and 15,737 bales of the last, more than in 1856.

From this quantity and from the tea remaining at Kiachta of the former year, there were cleared out at the custom-house, leaf-tea, 146,714, and brick-tea, 43,479 chests.

There was paid to the Chinese in articles of all sorts, in gold and silver, the sum of 7,478,543 r.

The quantities and value of the woollens sold to the Chinese were 651,446 arshines, worth 1,416,298 r.

The custom duties produced 5,560,531 r.; being 1,150,372 r. more than in 1856.

Navigation in 1857.—English and Dutch ships were more numerous than any other: of the former there arrived 1,989, and of the latter, 959. Of ships which arrived under other flags were Russian, 780; Swedish, 677; Austrian, 512; Turkish, 498; Danish, 449; Sardinian, 449; and of other nations, 2,525.

Commercial Shipping in 1856 and 1857.

	Ships arrived.		Ships sailed.	
	1856.	1857.	1856.	1857.
Baltic ports	5,881	4,680	5,550	5,020
White Sea ports	842	779	880	794
Southern ports	4,252	3,379	4,040	3,272
Total	10,976	8,838	10,470	9,086
Of which:—				
With goods	5,178	4,517	9,448	8,427
In ballast	5,798	4,321		
Agg. tonnage in lasts	937,404	867,413	928,684	944,053

Foreign Steamers.—The steam communication with foreign ports has greatly increased. At Cronstadt steamers arrived from England 171 times, from Prussia 66, from Lubeck 50, from Holland 40, from France 23, from Denmark 17, from Sweden 10, from Italy 2, from Spain 1, from Belgium 1; in all 381 times.

At the port of Riga: from Lubeck 26 times, from England 15, from Prussia 10, from Denmark 1; in all 52 times.

At the port of Odessa: from Turkey 83 times, from England 41, from France 4, and from Italy 1; in all 129 times.

Coasting Steamers.—The Russian and Finnish steamers, which maintain a communication between Petersburg and the Finnish ports and ports of the Ostsea provinces, arrived at Petersburg 97 times. The steamers, which convey passengers and goods between Odessa, Cherson, and the other ports of southern Russia, made 557 trips. Besides steamers kept up a communication between the ports on the Sea of Azoff and on the Caspian Sea.

Custom-house Revenues in 1857.

	S. Ro.	Co.
Custom-house receipts, *i. e.* duties on imports and exports; lastage on ships, and other fines	31,667,379	66
Levies for various towns	1,027,360	1¼
Towards repayment of the loans for the construction of the Nicholas bridge, and for the quay of Vassily Ostrof	271,185	4
Excise of Crimean salt	249,183	63
For bonding goods and warehouse rent	247,197	18¾
Levy for the Lyceum at Odessa	60,106	67½
Total	33,522,491	20¾

Increase over 1856: in duties, 5,581,250 S. Ro. 34½ Co.; other fines, 321,251 S. Ro. 55½ Co.

The custom-house receipts in Poland, in 1857, were in all 2,276,090 S. Ro., being 88,458 S. Ro. 6¾ Co. more than in 1856.

We beg again to observe that this increase of the custom-house revenues concurs with the lowering of the tariff, though the new tariff was only in action about half a year.

Total	1,099,917	1,228,404	54,301	—	1,595,237	3,098,819	3,096,278

This statement sets the influence of the reduction of the duties in 1857 in the most striking point of view. It is most likely, indeed, as already observed, that the increase may have been in some degree occasioned by a decrease of clandestine importation. But, independently of this indirect effect, there can be no manner of doubt that there has been a large increase of consumption. And we would fain hope that the extremely advantageous results of the reductions already made may speedily lead to others. It may be observed with reference to our trade with Russia, that a large proportion of the British ships and produce destined for Odessa and other ports on the Black Sea, and the Sea of Azoff, clear out for Constantinople, and are included among the clearances and exports for Turkey.

Exports of Wool from Russia.

In addition to the modifications of the tariff, the measures that the Russian government have lately adopted in regard to the emancipation of the slaves, and the construction of railways, are of the highest importance. The capacities of production possessed by Russia are not surpassed by those of any other country, and their greater development cannot fail to give a vast stimulus to her trade and civilisation, and to add greatly to her political influence.

In compiling this article, we have consulted *Schnitzler, Essai d'une Statistique Générale de la Russie*, pp. 133—157.; and his *Russie, Pologne, et Finlande*, pp. 187—289.; *Ricard, Traité Général du Commerce*, ed. 1781, ii. pp. 268—317.; *Tegoborski, Forces Productives de la Russie, passim*; *Coxe's Travels in the North of Europe*, 8vo ed. iii. pp. 283—358, &c.; *Clark's Russian Trader's Assistant*, a valuable and useful work; *Supplement au Journal de St. Petersbourg*, for 1852—53; *Consular Returns* from Petersburg and Odessa; but we have derived our principal information from the official returns published by government, and *private communications* of eminent Russian merchants.

PEWTER (Ger. *Zinn, Zinngeisserzinn*; Fr. *Etain*; It. *Stagno*; Sp. *Estano, Peltre*; Rus. *Olowo*), a factitious metal used in making plates, dishes, and other domestic utensils. It is a compound, the basis of which is tin. The best sort consists of tin alloyed with about 1-20th or less of copper, or other metallic bodies, as the experience of the workmen has shown to be most conducive to the improvement of its hardness and colour, such as lead, zinc, bismuth, and antimony. There are 3 sorts of pewter, distinguished by the names of plate, trifle, and ley-pewter. The 1st was formerly much used for plates and dishes; of the 2d are made the pints, quarts, and other measures for beer; and of the ley-pewter, wine measures and large measures. — (*Ure.*)

PHILADELPHIA, a large city and sea-port of the United States, in Pennsylvania, near the confluence of the rivers Delaware and Schuylkill, lat. 39° 57′ N., lon. 75° 10′ 59″ W. Population, in 1855, 423,000.

Harbour, Light-houses, Pilotage, &c.—Vessels of the largest burden ascend the river as far as Newcastle, but those drawing above 18 or 20 feet water cannot reach Philadelphia, on account of a bar a little below the city. The entrance to the magnificent bay formed by the embouchure of the Delaware, has Cape May on its north, and Cape Henlopen on its south side. The former, in lat. 38° 57′ N., lon. 75° 47′ 45″ W., is a sandy headland, rising about 12 feet above the level of the sea. It has recently been surmounted by a light-house 60 feet in height. The light revolves once a minute; an eclipse of 50 seconds being succeeded by a brilliant flash of 10 seconds. It is seen in clear weather from 20 to 25 miles off. Cape Henlopen, marking the southern boundary of the bay, is in lat. 38° 47′ N., lon. 75° 4′ 45″ W. A little south from it is a hill, elevated about 60 feet above the level of the sea; and on it is erected a light-house, 72 feet in height, furnished with a powerful *fixed* light visible in clear weather 10 leagues off. To the N. of this principal light, and close to the extremity of the cape, a second light-house has been constructed, 36 feet above the level of the sea, which is also furnished with a *fixed* light, which may be seen about 6 leagues off. The channel for large ships is between Cape Henlopen and the banks called the Overfalls. The navigation is, however, a little difficult, and it is compulsory on ships to take pilots. The latter frequently board them at sea; but if not, as soon as a ship comes between the capes, she must hoist the signal for a pilot, and heave to as soon as one offers to come on board.—(*Coulier sur les Phares*, 2d ed. See *post*, for regulations as to pilotage.)

Trade. — The trade of Philadelphia is pretty extensive. She communicates by various canals (one of which, 395¼ miles in length, unites her with Pittsburg, on the Ohio) and railways with the interior, and is the grand dépôt for the coal of the Union, the increase of the trade in which has been quite unprecedented. Previously to 1825 no coal had been sent down the Schuylkill, and in that year only 5,306 tons were brought by that channel to Philadelphia, whereas in 1857 the quantity amounted to 3,042,378 tons, exclusive of about twice as much supplied by other channels. Large quantities of this coal are sent coastwise to other parts of the Union. Exclusive of coal and iron, the exports principally consist of wheat and wheat flour, Indian corn, of which large quantities have latterly been sent to England, and other agricultural products; but the exports of these articles have not increased much of late years; and Philadelphia is, in truth, becoming more a manufacturing than a trading city. The principal imports are cotton, woollen, and silk goods, sugar, coffee, and tea; iron and hardware; wines, brandies, spices, dye-stuffs, &c. In point of shipping, Philadelphia is the third port in the Union, being, in this respect, inferior only to New York and Boston. The registered, enrolled, and licensed tonnage belonging to the port on the 30th June, 1858, amounted to 219,852 tons, of which more than 2-3rds (158,615 tons) were engaged in the coasting trade, which is very large. The total value of the articles imported into Pennsylvania from foreign countries in the year ending the 30th of June, 1858, amounted to $12,892,215, and that of the exports to $6,036,411, of which $5,662,334 were domestic produce. The coasting trade of the port is, however, more extensive and of greater importance than its foreign trade.

There are numerous banks in Philadelphia, but they stand no higher in point of character than those in most other parts of the Union, and have over and over again suspended payments. The Bank of the United States had its head office here. Besides banks, there are numerous insurance companies and joint-stock associations.

The exports of flour, wheat, corn, &c., or of bread-stuffs, as they are called by the Americans, from Philadelphia to foreign countries, have been as follows: —

Years.	Flour.	Corn Meal.	Rye Flour.	Wheat.	Corn.

Banks. — Subjoined is a list of all, or mostly all, the banks of Philadelphia existing in 1857, with their capital, dividends, &c., in that year. It will be seen that the dividend payable in May was much greater than that payable in November; a consequence of a law passed in the interval, which restricted the dividends payable by banks that had suspended to the liberal allowance of 6 per cent. per annum.

The number of Insurance Companies seems to have been multiplied to an inconvenient and indeed absurd extent. In 1857 they amounted to 49, classified as follows, viz.: — Fire, marine, and inland, 22; fire only, 14; fire, buildings only, 2; fire and life, 1; fire and live stock, 1; fire and life, marine and inland, 1; life, trust, and annuities, 3; life and trust, 2; marine and inland, 3—each of which is of the "mutual" class. Besides the above, there are a few district mutual fire companies doing a limited local business in insurance on buildings.

Arrivals.—In 1857 there entered the port of Philadelphia 506 foreign ships, and 1267 coasters.

In Pennsylvania, the dollar is worth 7*s.* 6*d.* currency; so that 1*l.* sterling = 1*l.* 13*s.* 4*d.* currency.—(See NEW YORK.)

Weights and Measures same as those of England.

Regulations of the Port.—If any master or captain of any ship or vessel, or other person, shall refuse or neglect to comply with the directions of the harbour master, in matters within the jurisdiction of his office, such person shall, for each and every such offence, severally forfeit and pay any sum not exceeding 100 dollars. And the said harbour master shall, in full compensation for his services, be entitled to have, recover, and receive from the master, captain, owner, or consignee of each and every ship or vessel arriving at the port of Philadelphia (coasting vessels not exceeding the burden of 75 tons excepted) the sum of 1 dollar for each and every voyage by such ship or vessel performed, and no more.

Every ship or vessel that may arrive in this harbour, and that shall come to anchor in the stream anywhere between Almond and Vine Streets, having previously caused her gunpowder, if any she had on board, to be landed as the law directs, may remain in that situation 24 hours, and no longer, taking care to lie as near to the island or sand bar as may be consistent with safety. But if, from the circumstance of a vessel having servants on board, or from any other cause, it may be thought necessary or convenient to lie a longer time in the stream, then, and in every such case, the owner, master, pilot, or other person having the charge or direction of such vessel, shall remove her from opposite the city, and shall moor her, or cause her to be moored, to the northward of Vine Street with 1 anchor and cable up and 1 anchor and cable down the stream; and in both the above mentioned situations, the regulation contained in the next succeeding article to be duly attended to.

If any vessel properly moored in the stream shall have her anchor or cable overlaid by any other vessel in anchoring or mooring, the master or person having the care or direction of such last-mentioned vessel shall immediately, or as soon as may be after application made to him by the party aggrieved, cause the said anchor or cable so overlaying to be taken up and cleared. When any ship or vessel shall be hauled in to any wharf or dock, or alongside of another vessel that may be lying at such wharf or dock, the owner, master, pilot, or whoever may have the command, care, or direction of her, shall have her securely made fast; and if outside of another vessel, shall get one good fast from each end of the vessel to the shore, with sufficient fenders between them and the inside vessel; and shall cause the flukes of their anchors to be taken on board; and, within 24 hours thereafter, cause her jib boom, spritsail-yard, main boom, spanker and ringtail booms, if any they have, to be rigged in, and their lower yards topped up, in such a manner as least to interfere with vessels passing.

If the fasts of vessels when moored at a wharf shall extend across a dock, so as to obstruct the passing or repassing of shallops, lighters, or other craft or vessel, the master or other person having the command of such ship or vessel shall, upon the first application, immediately cause such fast or fasts to be cast off or slacked down.

No outward-bound vessel, putting off from a wharf, shall lie longer in the stream, between Vine Street and Almond, in the district of Southwark, above mentioned, than 24 hours. And if vessels lying at the end of wharfs so much interfere with each other as to prevent vessels hauling in and out of docks, the master, owner, pilot, or other person having the charge of the same, shall, immediately on application from any person so wanting to haul his vessel in or out of docks aforesaid, have the vessel or vessels so interfering, moved in such a manner as to accommodate the one applied for; in which case the vessel making room for another to haul in or out shall have liberty to make her warps fast to the most convenient place adjacent, for a reasonable time; and all sea vessels, when transporting or wanting to haul into a wharf or dock, or to make sail in order to proceed to sea, shall have the same privilege.

When any ship or vessel may be lying alongside any wharf, and not taking in or discharging, she shall make way for and permit any vessel that wants to unload or load, to come inside, next the wharf, until she discharges or loads her cargo; and the said vessel, when so discharged or loaded, shall haul outside and give way to the vessel that first occupied the wharf; provided that, from the 10th of December to the 1st of March, no vessel shall be compelled to move from her berth (only those

at Gloucester Point piers), excepting to let vessels in and out of docks.

No ship or vessel loading or discharging hemp at any wharf, or within any dock, shall be allowed to have any fire on board; neither shall any vessel lying outside or near her be permitted to have fire on board, while it may be considered dangerous. And no tar, turpentine, rosin, or pitch shall be heated on the wharf, or on board any vessel lying at any wharf within the limits of the city.

Rates of Pilotage.—Inwards, up to 12 feet, at 2·67 dollars per foot; above 12 feet, at 3·33 dollars.

Outwards, up to 12 feet, at 2 dollars; above 12 feet, at 2·67 dollars.

Every vessel arriving from, or bound to, a foreign port, is equired by law to receive a pilot, or to pay half pilotage in the warden's office, where the master of every such vessel is required, under a penalty of 10 dollars, to make report within 36 hours after his arrival, and again before his departure, signing his name to said report in the warden's book.

Every vessel of 75 tons and upwards arriving from, or bound to, any port within the United States, and the master of all such vessels, are bound as above.

The pilot of every vessel is required to inform the master of his having to report at the warden's office.

All vessels obliged to receive a pilot are required to pay 10 dollars in addition, as winter pilotage, from the 20th of November to the 10th of March, both days inclusive.

Foreign vessels, *i. e.* Spanish, Portuguese, Neapolitan, Danish, Russian, South American, and Haytian, to pay 2 dollars 67 cents in addition to other pilotage.

Every pilot detained more than 24 hours by any master, owner, or consignee, is entitled to 2 dollars per day for every day he is so detained.

Every pilot detained more than 48 hours by the ice, after he has conducted his vessel to a place of safety, is entitled to 2 dollars per day for every day he is so detained.

Every pilot compelled to perform quarantine is entitled to 2 dollars per day, for every day he is so detained, and cannot be discharged in less than 6 days, without his consent.

Every pilot obliged by the ice or stress of weather to proceed to another port, is, when there, entitled to his pilotage; and if there discharged, to 8 cents a mile for every mile he has to travel home.

Every pilot is required, under a penalty of 12 dollars, to make report, within 48 hours, at the warden's office, of every vessel he conducts to the city.

PHOSPHORUS, a substance of a light amber colour, and semi-transparent; but, when carefully prepared, nearly colourless and transparent. When kept some time, it becomes opaque externally, and has then a great resemblance to white wax. It may be cut with a knife, or twisted to pieces with the fingers. It is insoluble in water; its specific gravity is 1·77. When exposed to the atmosphere, it emits a white smoke, and is luminous in the dark. When heated to 148° it takes fire, and burns with a very bright flame. When phosphorus is inflamed in oxygen, the light and heat are incomparably more intense; the former dazzling the eye, and the latter cracking the glass vessel.—(*Thomson's Chemistry.*)

PIASTRES, OR DOLLARS, Spanish and American silver coins in very extensive circulation. Value, at an average, about 4*s.* 4*d.* sterling.—(See COINS.)

PILCHARDS, fishes closely resembling the common herring, but smaller, and at the same time thicker and rounder. They are rarely found on the British shores, except on the coasts of Cornwall and Devon, particularly the former, where they are taken in great numbers from the middle of July to the end of November, or even the middle of December. It is a saying of the Cornish fishermen, that the pilchard is the least fish in size, most in number, and greatest for gain, taken from the sea.

Pilchard fishery.—This is carried on along the coasts of Cornwall and Devon, from the Bolt Head in the latter, round by the Land's End to Padstow and Bossiney in the former. Its principal seats are St. Ives, Mount's Bay, and Mevagissey. The fish usually make their appearance in vast shoals in the early part of July, and disappear about the middle of October; but they sometimes reappear in large quantities in November and December. They are taken either by *seans* or by drift nets, but principally, perhaps, by the former. A sean is a net, varying from 200 to 300 fathoms in length, and from 10 to 14½ do. in depth, having cork buoys on one edge and lead weights on the other. Three boats are attached to each sean, viz. a boat (*sean boat*), of about 15 tons burden, for carrying the sean; another (*follower*), of about the same size, to assist in mooring it; and a smaller boat (*lurker*), for general purposes. The number of hands employed in these 3 boats varies from about 13 to 18, but may be taken, at an average, at about 16. But at St. Ives, where the fishery is conducted in a peculiar manner, or by *turns*, one crew serves for from 10 to 15 seans. When the shoals of fish come so near the shore that the water is about the depth of the sean, it is employed to encircle them; the fishermen being directed to the proper places for casting or shooting the nets by persons (*huers*) stationed for that purpose on the cliffs and in the boats.* The practice is to row the boat with the sean on board gently round the shoal; and the sean being, at the same time, thrown gradually into the water, assumes, by means of its buoys and weights, a vertical position, its loaded edge being at the bottom, and the other floating on the surface. Its 2 ends are then fastened together; and, being brought into a convenient situation, it is moored by small anchors or grapnels; sometimes, however, one or two smaller seans are employed to assist in securing the fish. At low water, the enclosed fish are taken out by a *tuck net*, and carried to the shore. A single sean has

* The tunny fish in the Archipelago was caught in a similar way:—"Ascendebat quidam (Anglicè *huer*, Græcè *thunoscopos*) in altum promontorium, unde thunnorum gregem specularetur, quo viso, signum piscatoribus dabat, qui retibus totum gregem includebant."—(*Bishop Bloomfield's Notes on the Persæ of Æschylus*, quoted by Dr. Paris, in his *Guide to Mount's Bay*, p. 150.)

been known to enclose at once as many as 4,200 hogsheads (1,200 tons) of fish! But this was the greatest quantity ever taken, and it is but seldom that as many as 1,200 hogsheads are caught at a time. The "take," in fact, depends on so many accidental circumstances, that while one sean may catch and cure in a season from 1,000 to 2,000 hogsheads, others in the neighbourhood may not get a single fish. In some places, the tides are so strong as to break the seans and set the fish at liberty. When the quantity enclosed is large, it requires several days to take them out, as they must not be removed in greater numbers than those who salt them can conveniently manage.

Drift nets are usually about ½ mile in length by about 4½ fathoms in depth; they are shot in the open sea, and entangle the fish in their meshes in the same way as the herring nets. The fish thus taken are said to be superior to those taken by the seans, though it be doubtful, from their being strangled in the nets whether they are so good for curing.

As soon as the fish are brought on shore, they are carried to cellars or warehouses, where they are piled in large heaps, having a sufficient quantity of salt interspersed between the layers. Having remained in this state for about 35 days, they are, after being carefully washed and cleaned, packed in hogsheads, each containing, at an average, about 2,600 fish*; they are then subjected to a pressure sufficient to extract the oil, of which each hogshead yields, provided the fish be caught in summer, about 3 gallons; but those that are taken late in the season do not yield above half this quantity. This oil usually sells for from 12 to 15 per cent. under the price of brown seal oil. The broken and refuse fish and salt are sold to the farmers, and are used as manure with excellent effect. The skimmings which float on the water in which the pilchards are washed are called *dregs*, and are chiefly sold as grease for machinery.

The fresh fish in a hogshead of pilchards weigh about 6 cwt., and the salt about 3½ cwt.; but the weight of the hogshead when cured and pressed is reduced to about 4¼ cwt.; including the weight of the cask, from 20 to 24 lbs. We subjoin

An Account of the Exports of Pilchards during each of the Nine Years ending with 1858; specifying the Places for which they were exported, the Quantity shipped for each, and their Price at the Port of Shipment.

Years.	Genoa.	Leghorn.	Civita Vecchia.	Naples.	Ancona, Venice, Trieste.	Total.	Price per Hogshead on Shore.

1858	1,881	1,429	791	6,686	4,992	18,479	60*s.* to 50*s.* to 47*s.*

Of the fish cured in 1857, 3,026 hhds. were caught eastward of Lizard; 3,768 in Mount's Bay; 7,641 in St. Ives; 1,480 North of St. Ives. Total, 15,915 hogsheads.

N.B.—Of the quantity sent to the Adriatic full 3-4ths have been sold in Venice, and the remainder chiefly in Ancona.

The export of pilchards has been rather declining of late years. This has been ascribed to various causes, such as the withdrawal of the bounty of 8*s.* 6*d.* a hogshead formerly paid on their export, the relaxed observance of Lent in the countries to which they are principally exported, and the imposition of a heavy duty on their importation into Naples. The falling off in the demand of the latter has, however, been in great measure compensated by the increased demand at Venice.

Pilchards are not used in England, except in Cornwall and Devon, where from 4,000 to 5,000 hhds. a year may at present be made use of; and the consumption increases slowly.

The sean fishery employs about 1,500 hands regularly throughout the season, and a vast number more when any considerable shoals are inclosed. There are at present (1859) about 260 seans afloat, of which above 180 belong to St. Ives. The first cost of a sean on the South coast is about 450*l.*; but a St. Ives sean does not cost above 300*l.* The drift fishery employs, during the season, from 900 to 1,000 men, and about 230 boats; the cost of each boat and nets amounting to about 250*l.* The labour in the cure of the fish may be taken at about 5*s.* a hogshead. The total capital embarked in the fishery has been estimated by those engaged in it at from 200,000*l.* to 250,000*l.*

The drift fishermen employ themselves, when not engaged in the pilchard fishery, in the mackarel, herring, and hook-line fisheries. The sean fishermen consist principally of agricultural labourers, miners, &c., attracted to the business in the expectation (in which, however, they are not unfrequently disappointed) of making a comparatively large sum by a few weeks' exertion. But at St. Ives only able-bodied and expert fishermen are employed. In all sean boats 3 or 4 individuals of the crew are regularly bred, expert fishermen.

Four fifths of the persons employed on shore in the salting, curing, packing, &c., of the fish, are women.

The wages of those employed in the fishery are made sometimes to depend on the number of fish taken; but in other instances they are independent of any such contingency.

The fishery at St. Ives is carried on under a particular act of parliament, passed in 1841. The exaction of a tithe of the fish is a very serious burden on the fishery; sometimes it is taken in kind, but is more generally compounded for.—(*Dr. Paris's Guide to Mount's Bay and the Land's End*, 2d ed. pp. 146—156.; *Beauties of England and Wales*, vol. ii. p. 471.: but we are principally indebted to *private information* obtained from the most authentic sources, and obligingly communicated, by Mr. Coulson, of Penzance.)

PILOTS AND PILOTAGE. The name of pilot or steersman is applied either to a particular officer, serving on board a ship during the course of a voyage, and having charge of the helm and the ship's route; or to a person taken on board at any particular place, for the purpose of conducting a ship through a river, road, or channel, or from or into a port.

It is to the latter description of persons that the term pilot is now usually applied; and pilots of this sort are established in various parts of the country by ancient charters of incorporation, or by particular statutes. The most important of these corporations are those of the Trinity House, Deptford Strond, with which the fellowship of the

* Mr. Pennant inadvertently states the number of fish in a hogshead at 35,900.—(*British Zoology*, iii. 344. ed. 1776.) Trusting to his authority, we fell into the same error in the 1st edition of this work.

pilots of Dover, Deal, and the Isle of Thanet, commonly called the *Cinque Port Pilots*, is now consolidated; and the Trinity Houses of Hull and Newcastle. The 5 Geo. 4. c. 73. established a corporation for the regulation and licensing of pilots in Liverpool.

Principles of the Law as to Pilots.—These are sufficiently obvious, and differ but little in most maritime codes. When a master is obliged by law to employ a pilot, and does so accordingly, the vessel having ceased to be under the command of their servants, the owners are no longer responsible for such loss or damage as may be occasioned by her mismanagement (17 & 18 Vict. c. 104. § 388.) unless it be made to appear that it arose from the neglect or misconduct of the master or crew in obeying or carrying out the orders of the pilot. It is, therefore, a very serious matter for a master or captain to interfere with or supersede a pilot in the exercise of his peculiar functions. But still there are cases, and those, too, not of rare occurrence, of such a nature as to make interference indispensable. Pilots are anything but infallible; and whenever it becomes evident to a master, or to the authorities on board, that the pilot is acting inconsiderately, or that he is drunk or incompetent, it is not the right only, but the bounden duty of the master to provide for the safety of the ship by resuming his authority, and taking the command upon himself. On this being done the responsibility of the pilot ceases of course; and the owners become liable for the proceedings of their servant, the master. In those cases, again, in which it is in the election or discretion of the master to take a pilot or not, and he thinks fit to take one, the pilot so taken is considered as the servant of the owners, who are responsible for his conduct.—(*Abbott on the Law of Shipping*, part ii. c. 5.; *Maude and Pollock on ditto*, c. 5. and the authorities there quoted.)

The statute 6 Geo. 4. c. 125. consolidated the laws with respect to the licensing, employment, &c., of pilots. But all that portion of the act which related to the Cinque Port pilots was repealed by the 16 & 17 Vict. c. 129. This statute united the Trinity House and Cinque Port pilots; or, rather, it included the latter in the former. It provided that the Cinque Port pilots should in future be subject to the same rules and regulations as the Trinity House pilots, and that they might pilot ships inwards and outwards within the limits for which they were licensed. The property belonging to the Cinque Port pilots was at the same time transferred to the Trinity House; and the act laid down the rules by which the debts and claims of the Cinque Port pilots on the Trinity House funds were to be adjusted.

The general rules and regulations now (1855) existing with respect to pilotage have been embodied in Part V. of the Merchant Shipping Act, 17 & 18 Vict. cap. 104. And as a knowledge of these rules and regulations is indispensable to masters and other parties engaged in shipping, we subjoin a full abstract of the portion of the statute now referred to.

POWERS OF PILOTAGE AUTHORITIES (GENERAL).

Jurisdiction of Pilotage Authorities.—Every pilotage authority shall retain all powers and jurisdiction which it now lawfully possesses, so far as the same are consistent with the provisions of this act; but no law relating to such authority, or to the pilots licensed by it, and no act done by such authority, shall, if inconsistent with any provision of this act, be of any force whatever.—§ 331.

To make and extend Exemptions from compulsory Pilotage.—Every pilotage authority shall have power, by byelaw made with the consent of H. Majesty in council, to exempt the masters of any ships, or of any classes of ships, from being compelled to employ qualified pilots, and to annex any terms or conditions to such exemptions, and to revise and extend any exemptions now existing by virtue of this act or any other act of Parliament, law, or charter, or by usage, upon such terms and conditions and in such manner as may appear desirable to such authority.—§ 332.

Powers of Pilotage Authorities.—Subject to the provisions contained in this Act, it shall be lawful for every pilotage authority, by byelaw made with the consent of H. M. in council, from time to time to do all or any of the following things within its districts, viz.:

(1.) To determine the qualifications to be required from persons applying to be licensed as pilots, whether in respect of their age, skill, time of service, character, or otherwise:

(2.) To make regulations as to the approval and licensing of pilot boats and ships, with power to establish and regulate companies for the support of such boats and ships, and for a participation in the profits made thereby; the companies so established to be exempt from the provisions of the Act, 7 & 8 Vict. c. 110.

(3.) To make regulations for the government of the pilots licensed by them, for insuring their good conduct, and their constant attendance to and effectual performance of their duty, either at sea or on shore:

(4.) To fix the terms and conditions of granting licences to pilots and apprentices, and of granting pilotage certificates as herein-after mentioned to masters and mates, and to make regulations for punishing any breach of the conditions committed by such pilots or apprentices or by such masters and mates by the withdrawal or suspension of their licences or certificates, as the case may be, or by the infliction of penalties to be recoverable summarily before two justices, so that no such penalty exceed the sum of £20., and so that every such penalty be capable of reduction at the discretion of the justices by whom the same is inflicted:

(5.) To fix the rates and prices or other remuneration to be demanded and received for the time being by pilots licensed by such authority, or to alter the mode of remunerating such pilots, in such manner as such authority may, with such consent as aforesaid, think fit, so that no higher rates or prices be demanded or received from the masters or owners of ships in the case of the Trinity House than the rates and prices specified in the table A. hereto annexed; and in the case of all other pilotage authorities, than the rates and prices which might have been lawfully fixed or demanded by such pilotage authorities respectively under any act of Parliament, charter, or custom in force immediately before the commencement of this Act:

(6.) To make such arrangements with any other pilotage authority for altering the limits of their respective districts, and for extending the powers of such other authority or the privileges of the pilots licensed by such other authority or any of them to all or any part of its own district, or for limiting its own powers or the privileges of its own pilots or any of them, or for sharing the said last-mentioned powers and privileges with the said other authority and the pilots licensed by it, or for delegating or surrendering such powers and privileges or any of them to any other pilotage authority constituted or to be constituted by agreement between such authorities, and to the pilots licensed by it, as may appear to such pilotage authorities to be desirable for facilitating navigation or for reducing charges on shipping:

(7.) To establish, either alone or in conjunction with any other pilotage authority or authorities, funds for the relief of superannuated, or infirm qualified pilots, or of their wives, widows, or children, or to make any new regulations with respect to any funds already applicable to such purposes with power to determine the amount, manner, time, and persons (such persons to be in the service of such pilotage authority) to and in which and by and upon whom the contributions in support of such existing or future funds may be made or levied; and further, to declare the persons or class of persons (such persons or class of persons being confined to men in the service of such pilotage authority, their wives, widows, or children), entitled to participate in the benefits of such existing or future funds, and the terms and conditions upon which they are to be so entitled:

(8.) To repeal or alter any byelaw made in exercise of the above powers, and to make a new byelaw or new byelaws in lieu thereof: And every byelaw duly made by any pilotage authority in exercise of the powers hereby given to it, shall be valid and effectual, notwithstanding any Act of Parliament, rule, law, or custom to the contrary.—§ 333.

Publication of Byelaws.—Every byelaw proposed to be enacted by any pilotage authority in pursuance of the foregoing powers shall, before it is submitted to H. M. in council for Her assent, be published in such manner as may from time to time be prescribed by the B. of Trade.—§ 334.

Byelaws to be laid before Parliament.—Every order in council made in pursuance of the provisions of this Act shall be laid before both Houses of Parliament as soon as possible after the making thereof.—§ 335.

Power of Appeal to Board of Trade.—If the greater part in number of the qualified pilots belonging to any port, or the Local Marine Board, where there is one, or at any port where there is no Local Marine Board, if any masters, owners, or insurers of ships, being not less than six in number, consider themselves aggrieved by any regulation or byelaw in force when this Act comes into operation or hereafter made under some authority other than the provisions of this Act, or by any defect or omission therein, they may appeal to the Board of Trade, and the said Board may thereupon revoke or alter any such regulation or byelaw or may make additions thereto in such manner as, having regard to the interests of the persons concerned, may appear to be just and expedient; and every order so made shall be conclusive in the matter.—§ 336.

RETURNS BY PILOTAGE AUTHORITIES (GENERAL).

Pilotage Authorities to make Returns to B. of Trade.—Every pilotage authority shall deliver periodically to the B. of Trade, in such form and at such times as such Board requires, returns of the following particulars with regard to pilotage within the port or district under the jurisdiction of such authority, viz.:

(1.) All byelaws, regulations, orders, or ordinances relating to pilots or pilotage for the time being in force:
(2.) The names and ages of all pilots or apprentices licensed or authorised to act by such authority, and of all pilots or apprentices acting either mediately or immediately under such authority, whether so licensed or authorised or not:
(3.) The service for which each pilot or apprentice is licensed:
(4.) The rates of pilotage for the time being in force, including therein the rates and descriptions of all charges upon shipping made for or in respect of pilots or pilotage:
(5.) The total amounts received for pilotage, distinguishing the several amounts received from British ships and from foreign ships respectively, and the several amounts received in respect of different classes of ships paying different rates of pilotage, according to the scale of such rates for the time being, and the several amounts received for the several classes of service rendered by pilots; and also the amount paid by such ships (if any) as have before reaching the outer limits of pilotage water if outward-bound, or their port of destination if inward-bound, to take or pay for two or more pilots, whether licensed by the same or by different pilotage authorities; together with the numbers of the ships of each of the several classes paying such several amounts as aforesaid:
(6.) The receipt and expenditure of all monies received by or on behalf of such authority, or by or on behalf of any sub-commissioners appointed by them, in respect of pilots or pilotage:

And shall allow the B. of Trade, or any persons appointed by such Board for the purpose, to inspect any books or documents in its possession relating to the several matters herein required to be returned to the B. of Trade.—§ 337.

The Jurisdiction of local Authorities failing to give the required Returns, to be transferred to Trinity House.—If any of such pilotage authorities as aforesaid (other than the Trinity House, or Sub-Commissioners of Pilotage appointed by it), fail to deliver to the B. of Trade the periodical returns above required within one year of such time as may be fixed by such Board for the purpose, or if any of such authorities do not allow the said Board, or any persons who may be appointed by it for the purpose, to inspect any books or documents in their possession relating to the matters herein required to be returned by them, it shall be lawful for H. Majesty, by and with the advice of her Privy Council, to direct that all the rights and powers of such authorities in respect of pilotage shall cease or be suspended during such time as H. M. directs; and thereupon the Trinity House shall thereafter or during such time as such suspension may continue, have and exercise the same powers of appointing Sub-Commissioners of Pilotage, and of licensing pilots, and of establishing and altering rates of pilotage, within the district within which the authority so making default has previously appointed or licensed pilots, as it is by this Act authorized to exercise in any district for which no particular provision is made by any Act of Parliament or charter for the appointment of pilots, and shall also during such time as aforesaid have and exercise the same rights, title, and powers to and in respect of any pilotage funds or other pilotage property which the said pilotage authorities would or might have had or exercised if not so suspended as aforesaid.—§ 338.

Returns to be laid before Parliament.—The B. of Trade shall without delay cause the several returns herein-before required to be made to such Board to be laid before both Houses of Parliament.—§ 339.

LICENSING OF MASTERS AND MATES (GENERAL).

Master or Mate, if examined and passed, to receive a Pilotage Certificate.—The master or mate of any ship may, upon giving due notice, and consenting to pay the usual expenses, apply to any pilotage authority to be examined as to his capacity to pilot the ship of which he is master or mate, or any one or more ships belonging to the same owner, within any part of the district over which such pilotage authority has jurisdiction; and such master or mate shall, if such authority thinks fit, thereupon be examined; and if found competent a pilotage certificate shall be granted to him, containing his name, a specification of the ship or ships in respect of which he has been examined, and a description of the limits within which he is to pilot the same, such limits to be within such jurisdiction as aforesaid; and such certificate shall enable the person therein named to pilot the ship or any of the ships therein specified, of which he is acting as master or mate at the time, but no other, within the limits therein described, without incurring any penalties for the non-employment of a qualified pilot.—§ 340.

Renewal of Pilotage Certificate.—The pilotage certificate so granted shall not be in force for more than one year, unless the same is renewed, which may from time to time be done by an indorsement under the hand of the secretary or other proper officer of the authority by whom such certificate was granted.—§ 341.

Board of Trade examine and grant Pilotage Certificates.—If upon complaint to the B. of Trade it appear to such board that any such authority as aforesaid has without reasonable cause refused or neglected to examine any master or mate who has applied to them for the purpose, or after he has passed the examination, has without reasonable cause refused or neglected to grant him a pilotage certificate, or that the examination of any such master or mate has been unfairly or improperly conducted, or that any terms imposed or sought to be imposed by such authority are unfair or improper, or that any pilotage certificate granted by such authority has been improperly withdrawn, the B. of Trade may, if in its judgment the circumstances appear to require it, appoint persons to examine such master or mate, and if he is found competent may grant him a pilotage certificate, containing the same particulars as would have been inserted in any certificate granted by such pilotage authorities as aforesaid, upon such terms and conditions, and subject to such regulations, as such board may think fit; and such certificate shall have the same effect as if it had been granted by such pilotage authority as aforesaid; and such certificate shall be in force for one year, and may be renewed from year to year, either by the said authorities in manner herein-before mentioned, or by the B. of Trade, if such board thinks fit, such renewal to be indorsed on the said certificate, either by such person as the B. of Trade may appoint for the purpose, or in manner herein-before provided as to certificates granted by any pilotage authority.—§ 342.

Fees paid upon Certificates and Renewals thereof.—All masters or mates to or for whom any such pilotage certificates are granted or renewed by any pilotage authority shall pay to such authority, or as it directs, such fees upon their respective certificates and upon the renewals thereof, as are from time to time fixed for that purpose by such authority, with the consent of the B. of Trade; and all masters and mates to or for whom any such certificates are granted or renewed by the B. of Trade shall pay to

such board, or as it directs, such fees upon their certificates and upon the renewals thereof as may be fixed by such board, so nevertheless that in the case of pilotage certificates granted or renewed by the B. of Trade, such fees shall in no case be less than the fees payable by the qualified pilots in the same district upon their licences and the renewal thereof; and such fees shall in the case of certificates and renewals granted by pilotage authorities be applicable either to paying the expense of the examinations, or any other general expenses connected with pilotage incurred by such authorities, or to the Pilots Superannuation Fund of the district (if any), or otherwise for the benefit of the pilots appointed by such authorities, as such authorities think fit; and such fees shall in the case of pilotage certificates granted or renewed by the B. of Trade be applicable to the expense of the examinations, and the surplus (if any) shall be applied for the benefit of the qualified pilots of the port or district to which such certificates apply, in such manner as such board thinks fit.—§ 343.

Power to withdraw Pilotage Certificates.—If at any time it appear to the B. of Trade or to any pilotage authority that any master or mate to whom a pilotage certificate has been granted by such board or authority has been guilty of misconduct, or has shown himself incompetent to pilot his ship, such board or such authority (as the case may be) may thereupon withdraw his certificate, and such certificate shall thenceforth cease to be of any effect whatever.—§ 344.

PILOT BOATS (GENERAL).

Pilot Boats how to be provided.—All boats and ships regularly employed in the pilotage service of any district shall be approved and licensed by the pilotage authority of such district, who may, at their discretion, appoint and remove the masters of such boats and ships.—§ 345.

Characteristics of Pilot Boats.—Every pilot boat or ship shall be distinguished by the following characteristics, viz:

(1.) A black colour painted or tarred outside, with the exception of the names and numbers herein-after mentioned; or such other distinguishing colour or colours as the pilotage authority of the district, with the consent of the B. of Trade, directs:

(2.) On her stern the name of the owner and of the port to which she belongs painted in white letters at least 1 inch broad and 3 inches long, and on each bow the number of the licence of such boat or ship:

(3.) When aflout, a flag at the mast-head or on a sprit or staff, or in some other equally conspicuous situation; such flag to be of large dimensions compared with the size of the boat or ship carrying the same, and to be of two colours, the upper horizontal half white, and the lower horizontal half red:

And it shall be the duty of the master of such boat or ship to attend to the following particulars: First that the boat or ship possess all the above characteristics; secondly, that the aforesaid flag is kept clean and distinct, so as to be easily discerned at a proper distance; and, lastly, that the names and numbers before mentioned are not at any time concealed; and if default is made in any of the above particulars he shall incur a penalty not exceeding 20*l.* for each default.—§ 346.

Qualified Pilot to display Flag though not in Pilot Boat.—Whenever any qualified pilot is carried off in a boat or ship not in the pilotage service he shall exhibit a flag of the above description, in order to show that such boat or ship has a qualified pilot on board; and if he fail to do so, without reasonable cause, he shall incur a penalty not exceeding 50*l.*—§ 347.

Penalty on ordinary Boat displaying Pilot Flag.—If any boat or ship, not having a licensed pilot on board, display a flag of the above-mentioned description, there shall be incurred for every such offence a penalty not exceeding 50*l.*, to be recovered from the owner or from the master of such boat or ship.—§ 348.

PILOT LICENCES (GENERAL).

Registry of Pilot Licence.—Every qualified pilot on his appointment shall receive a licence, containing his name and usual place of abode, together with a description of his person, and a specification of the limits within which he is qualified to act: and it shall be the duty of the principal officer of Customs at the place at or nearest to which any qualified pilot may reside, upon his request, to register his licence; and no qualified pilot shall be entitled to act as such until his licence is so registered; and any qualified pilot acting beyond the limits for which he is qualified by his licence shall be considered as an unqualified pilot.—§ 349.

Regulations to be furnished to qualified Pilot, and produced by him.—Every qualified pilot shall, upon receiving his licence, be furnished with a copy of such part of this Act as relates to pilotage, together with a copy of the rates, byelaws, and regulations established within the district for which he is licensed; and he shall produce such copies to the master of any ship, or other person employing him, when required to do so, under a penalty in case of default not exceeding 50*l.*—§ 350.

Qualified Pilot to produce Licence to Employer.—Every qualified pilot, while acting in that capacity, shall be provided with his licence, and produce the same to every person by whom he is employed, or to whom he tenders his services as pilot; and if he refuse to do so at the request of such person, he shall incur for each offence a penalty not exceeding 10*l.*, and shall be subject to suspension or dismissal by the pilotage authority by whom he is licensed.—§ 351.

Licences to be delivered up, when required, &c.—Every qualified pilot, when required by the pilotage authority who appointed him, shall produce or deliver up his licence; and on the death of any qualified pilot the person into whose hands his licence happens to fall shall without delay transmit the same to the pilotage authority who appointed the deceased pilot; and any pilot or person failing to comply with the provisions of this section shall incur a penalty not exceeding 10*l.*—§ 352.

COMPULSORY PILOTAGE (GENERAL).

Compulsory Pilotage, how enforced.—Subject to any alteration to be made by any pilotage authority in pursuance of the powers in that behalf given, the employment of pilots shall continue to be compulsory in all districts in which the same was by law compulsory immediately before the time when this Act comes into operation; and all exemptions from compulsory pilotage then existing within such districts shall also continue in force; and every master of any unexempted ship navigating within any such district who, after a qualified pilot has offered to take charge of such ship or has made a signal for that purpose, either himself pilots such ship without possessing a pilotage certificate enabling him so to do, or employs or continues to employ an unqualified person to pilot her, and every master of any exempted ship navigating within any such district who after a qualified pilot has offered to take charge of such ship or has made a signal for that purpose employs or continues to employ an unqualified pilot to pilot her, shall for every such offence incur a penalty of double the amount of pilotage demandable for the conduct of such ship.—§ 353.

Home Trade Passenger Ships to employ qualified Pilots, unless, &c.—The master of every ship carrying passengers between any places situate in the U. K., or the Islands of Guernsey, Jersey, Sark, Alderney, and Man, and any other place so situate, when navigating upon any waters situate within the limits of any district for which pilots are licensed by any pilotage authority under the provisions of this or any other Act, or upon any part thereof so situate, shall, unless he or his mate has a pilotage certificate enabling such master or mate to pilot the said ship within such district, employ a qualified pilot to pilot his ship; and if he fail so to do he shall for every offence incur a penalty not exceeding 100*l.*—§ 354.

Certificates, how to be granted to Masters and Mates.—Any master or mate of a ship which by the preceding section is made subject to compulsory pilotage may apply to the B. of Trade for a certificate, and the B. of Trade shall thereupon, on satisfactory proof of his having continuously piloted any ship within the limits of any pilotage district or of any part or parts thereof for two years prior to the commencement of this Act, or upon satisfactory proof by examination of his competency, or otherwise as it may deem expedient, cause to be granted to him, or to be indorsed on any certificate of competency or service obtained by him under this Act, a certificate to the effect that he is authorized to pilot any ship or

ships belonging to the same owner, and of a draft of water not greater than such draft as may be specified in the certificate within the limits aforesaid; and the said certificate shall remain in force for such time as the B. of Trade directs, and shall enable the master or mate therein named to conduct the ship or ships therein specified within the limits therein described to the same extent as if the preceding section had not been passed, but not further or otherwise; and every such master or mate shall, upon applying for such certificate or for any renewal thereof, pay to the B. of Trade or as it directs such fees not exceeding the fees payable on an examination for a master's certificate of competency under this Act as the B. of Trade directs; and such fees shall be applied in the same manner in which the fees payable on such last-mentioned examination are made applicable.—§ 355.

RIGHTS, PRIVILEGES, AND REMUNERATION OF PILOTS (GENERAL).

Qualified Pilot unable to board when entitled to Pilotage.—If any boat or ship, having a qualified pilot on board, leads any ship which has not a qualified pilot on board when such last-mentioned ship cannot from particular circumstances be boarded, the pilot so leading such last-mentioned ship shall be entitled to the full pilotage for the distance run as if he had actually been on board and had charge of such ship.—§ 356.

Allowance to qualified Pilot taken out of his District.—No pilot, except under circumstances of unavoidable necessity, shall without his consent be taken to sea or beyond the limits for which he is licensed in any ship whatever; and every pilot so taken under circumstances of unavoidable necessity or without his consent shall be entitled, over and above his pilotage, to the sum of 10*s.* 6*d.* a day, to be computed from and inclusive of the day on which such ship passes the limit to which he was engaged to pilot her up to and inclusive of the day of his being returned in the said ship to the place where he was taken on board, or up to and inclusive of such day as will allow him, if discharged from the ship, sufficient time to return thereto; and in such last-mentioned case he shall be entitled to his reasonable travelling expenses.—§ 357.

Penalty on Pilot receiving or Master offering improper Rate.—Any qualified pilot demanding or receiving, and also any master offering or paying to any pilot, any other rate in respect of pilotage services, whether greater or less, than the rate for the time being demandable by law, shall for each offence incur a penalty not exceeding 10*l.*—§ 358.

Penalty on making a Declaration as to Draught of Ship, &c.—If any master, on being requested by any qualified pilot having the charge of his ship to declare her draught of water, refuse to do so, or himself makes or is privy to any other person making a false declaration to such pilot as to such draught, he shall incur a penalty for every such offence not exceeding double the amount of pilotage which would have been payable to the pilot making such request; and if any master or other person interested in a ship make or is privy to any other person making any fraudulent alteration in the marks on the stern or stem post of such ship denoting her draught of water, the offender shall incur a penalty not exceeding 500*l.*—§ 359.

Qualified Pilot to supersede unqualified Pilot.—A qualified pilot may supersede an unqualified pilot, but it shall be lawful for the master to pay to such unqualified pilot a proportionate sum for his services, and to deduct the same from the charge of the qualified pilot; and in case of dispute the pilotage authority by whom the qualified pilot is licensed shall determine the proportionate sums to which each party is entitled.—§ 360.

Penalty on unqualified Person acting as Pilot.—An unqualified pilot assuming or continuing in the charge of any ship after a qualified pilot has offered to take charge of her, or using a licence which he is not entitled to use for the purpose of making himself appear to be a qualified pilot, shall for each offence incur a penalty not exceeding 50*l.*—§ 361.

Occasions on which unlicensed Persons may act as Pilots.—An unqualified pilot may, within any pilotage district, without subjecting himself or his employer to any penalty, take charge of a ship as pilot under the following circumstances, viz.—

When no qualified pilot has offered to take charge of such ship, or made a signal for that purpose; or

When a ship is in distress or under circumstances making it necessary for the master to avail himself of the best assistance which can be found at the time; or,

For the purpose of changing the moorings of any ship in port, or of taking her into or out of any dock, in cases where such act can be done by an unqualified pilot without infringing the regulations of the port or any orders which the harbour master is legally empowered to give.—§ 362.

Liability for and Recovery of Pilotage Dues.—The following persons shall be liable to pay pilotage dues for any ship for which the services of a qualified pilot are obtained, viz., the owner or master, or such consignees or agents thereof as have paid or made themselves liable to pay any other charge on account of such ship in the port of her arrival or discharge, as to pilotage inwards, and in the port from which she clears out as to pilotage outwards; and in default of payment such pilotage dues may be recovered in the same manner as penalties of the like amount may be recovered by virtue of this Act; but such recovery shall not take place until a previous demand thereof has been made in writing, and the dues so demanded have remained unpaid for 7 days after the time of such demand being made.—§ 363.

Power of Consignees to retain Pilotage Dues paid by them.—Every consignee and agent (not being the owner or master) hereby made liable for the payment of pilotage dues in respect of any ship may, out of any monies in his hands received on account of such ship or belonging to the owner thereof, retain the amount of all dues so paid by him together with any reasonable expenses he may have incurred by reason of such payment or liability.—§ 364.

OFFENCES OF PILOTS (GENERAL).

Penalties on qualified Pilots.—If any qualified pilot commits any of the following offences, viz.—

(1.) Keeps himself, or is interested in keeping by any agent, servant, or other person, any public house or place of public entertainment, or sells or is interested in selling any wine, spirituous liquors, tobacco, or tea;

(2.) Commits any fraud or other offence against the revenues of Customs or Excise or the laws relating thereto;

(3.) Is in any way directly or indirectly concerned in any corrupt practices relating to ships, their tackle, furniture, cargoes, crews, or passengers, or to persons in distress at sea or by shipwreck, or to their monies, goods, or chattels;

(4.) Lends his licence;

(5.) Acts as pilot whilst suspended;

(6.) Acts as pilot when in a state of intoxication;

(7.) Employs or causes to be employed on board any ship of which he has the charge any boat, anchor, cable, or other store, matter, or thing beyond what is necessary for the service of such ship, with the intent to enhance the expenses of pilotage for his own gain or for the gain of any other person;

(8.) Refuses or wilfully delays, when not prevented by illness or other reasonable cause, to take charge of any ship within the limits of his licence upon the signal for a pilot being made by such ship, or upon being required to do so by the master, owner, agent, or consignee thereof, or by any officer of the pilotage authority by whom such pilot is licensed, or by any principal officer of Customs;

(9.) Unnecessarily cuts or slips or causes to be cut or slipped any cable belonging to any ship;

(10.) Refuses, on the request of the master, to conduct the ship of which he has the charge into any port or place into which he is qualified to conduct the same, except on reasonable ground of danger to the ship;

(11.) Quits the ship of which he has the charge, without the consent of the master, before the service for which he was hired has been performed;

He shall for each such offence, in addition to any liability for damages at the suit of the person aggrieved, incur a penalty not exceeding 100*l.*, and be liable to suspension or dismissal by the pilotage authority by whom he is licensed; and every person who procures, abets, or connives at the commission of any such offence shall likewise, in addition to any such liability for damages as aforesaid, incur a penalty not exceeding 100*l.*, and, if a qualified pilot, shall be liable to suspension or dismissal by the pilotage authority by whom he is licensed.—§ 365.

Penalty on Pilot endangering Ship, Life, or Limb.—If any pilot, when in charge of any ship, by wilful breach of duty, or by neglect of duty, or by reason of drunkenness, does any act tending to the immediate loss, destruction, or serious damage of such ship, or tending immediately to endanger the life or

limb of any person on board such ship; or if any pilot, by wilful breach of duty or by neglect of duty, or by reason of drunkenness, refuse or omit to do any lawful act proper and requisite to be done by him for preserving such ship from loss, destruction, or serious damage, or for preserving any person belonging to or on board of such ship from danger to life or limb; the pilot so offending shall for each such offence be deemed guilty of a misdemeanor, and, if a qualified pilot, also be liable to suspension and dismissal by the authority by which he is licensed.—§ 366.

Penalty on Pilot in charge of a Ship doing her wilful Injury.—If any person, by wilful misrepresentation of circumstances upon which the safety of a ship may depend, obtains or endeavours to obtain the charge of such ship, such person, and every other person procuring, abetting, or conniving at the commission of such offence, shall, in addition to any liability for damages at the suit of the party aggrieved, incur a penalty not exceeding 100*l*., and, if the offender be a qualified pilot, he shall also be liable to suspension or dismissal by the pilotage authority by which he is licensed.—§ 367.

GENERAL POWER OF TRINITY HOUSE.

Power of Trinity House to alter Regulations.—The Trinity House may, in exercise of the general power herein-before given to all pilotage authorities of doing certain things in relation to pilotage matters, alter such of the provisions herein-after contained as are expressed to be subject to alteration by them in the same manner and to the same extent as they might have altered the same if such provisions had been contained in any previous Act of Parliament instead of in this Act.—§ 368.

SUB-COMMISSIONERS AND PILOTS (TRINITY HOUSE).

Power of Trinity House to appoint Sub-Commissioners.—The Trinity House shall continue to appoint sub-commissioners, not being more than 5 nor less than 3 in number, for the purpose of examining pilots in all districts in which they have been used to make such appointments, and may, with the consent of H. M. in council, but not otherwise, appoint like sub-commissioners for any other district in which no particular provision is made by any act of Parliament or charter for the appointment of pilots; but no pilotage district already under the authority of any sub-commissioners, appointed by the Trinity House, shall be extended, except with such consent as aforesaid, and no sub-commissioners so appointed shall be deemed to be pilotage authorities within the meaning of this Act.—§ 369.

Trinity House to license Pilots to act within certain Limits.—The Trinity House shall continue, after due examination by themselves or their sub-commissioners, to appoint and license under their common seal pilots for the purpose of conducting ships within the limits following or any portion of such limits; (that is to say,)

(1.) "The London district," comprising the waters of the Thames and Medway as high as London Bridge and Rochester Bridge respectively, and also the seas and channels leading thereto or therefrom as far as Orfordness to the North and Dungeness to the South; so nevertheless, that no pilot shall be hereafter licensed to conduct ships both above and below Gravesend:

(2.) "The English Channel District," comprising the seas between Dungeness and the Isle of Wight:

(3.) "The Trinity House Outport Districts," comprising any pilotage district for the appointment of pilots within which no particular provision is made by any Act of Parliament or charter.—§ 370.

Publication of Notice of Licences of Pilots by Trinity House.—Subject to any alteration to be made by the Trinity House, the names of all pilots licensed by the Trinity House shall be published in manner following, viz.:

(1.) The Trinity House shall at their house in London fix up a notice specifying the name and usual place of abode of every pilot so licensed, and the limits within which he is licensed to act:

(2.) The Trinity House shall transmit a copy of such notice to the Commissioners of Customs in London, and to the principal officers of Customs resident at all ports within the limits for which such pilot is licensed; and such notice shall be posted up by the commissioners at the Custom House in London, and by such officers at the Custom Houses of the ports at which they are respectively resident.—§ 371.

Bonds to be given.—Subject to any alteration to be made by the Trinity House, every Trinity House pilot on his appointment shall execute a bond for 100*l*. conditioned for the due observance on his part of the regulations and byelaws of the Trinity House, such bond to be free from stamp duty, and from any other charge except the actual expense for preparing the same.—§ 372.

Liability limited.—No qualified pilot who has executed such bond as is herein-before mentioned shall be liable for neglect or want of skill beyond its penalty and the amount of pilotage payable to him in respect of the voyage on which he is engaged.—§ 373.

Continuance and Renewal of Licences.—Subject to any alteration to be made by the Trinity House, no licence granted by them shall continue in force beyond the 31st day of January next ensuing the date of such licence, but the same may, upon the application of the pilot holding such licence, be renewed on such 31st day of January in every year, or any subsequent day, by indorsement under the hand of the Secretary of the Trinity House, or such other person as may be appointed by them for that purpose.—§ 374.

Power to revoke and suspend Licences.—The Trinity House shall have power to revoke or suspend the licence of any pilot appointed by them, in such manner and at such time as they think fit.—§ 375.

COMPULSORY PILOTAGE (TRINITY HOUSE).

Penalty on Masters employing unlicensed Pilots.—Subject to any alteration to be made by the Trinity House, and to the exemptions herein-after contained, the pilotage districts of the Trinity House within which the employment of pilots is compulsory are the London district, and the Trinity House outport districts, as herein-before defined; and the master of every ship navigating within any part of such district or districts, who, after a qualified pilot has offered to take charge of such ship, or has made a signal for that purpose, either himself pilots such ship without possessing a certificate enabling him so to do, or employs or continues to employ an unqualified person to pilot her, shall for every such offence, in addition to the penalty herein-before specified, if the Trinity House certify in writing under their common seal that the prosecution is at their liberty to proceed for the recovery of such additional penalty, incur an additional penalty not exceeding 5*l*. for every 50 tons burden of such ship.—§ 376.

Trinity House to ensure constant Supply of qualified Pilots at Dungeness.—Subject to any alteration to be made by the Trinity House, a sufficient number of qualified pilots shall always be ready to take charge of ships coming from the westward past Dungeness; and the Trinity House shall make such regulations with respect to the pilots under their control as may be necessary to provide for an unintermitted supply of qualified pilots for such ships, and to insure their constant attendance upon and due performance of their duty both by night and day, whether by cruising between the South Foreland and Dungeness, or by going off from shore upon signals made for the purpose, or by both such means, or by any other means, and whether in rotation or otherwise, as the Trinity House think fit.—§ 377.

Ship coming past Dungeness without Pilot to take the first qualified Pilot who offers.—Subject to any alteration to be made by the Trinity House, every master of any ship coming from the westward, and bound to any place in the rivers Thames and Medway, (unless she has a qualified pilot on board or is exempted from compulsory pilotage,) shall, on the arrival of such ship off Dungeness, and thenceforth until she has passed the South Buoy of the Brake, or a line to be drawn from Sandown Castle to the said buoy, or until a qualified pilot has come on board, display and keep flying the usual signal for a pilot; and if any qualified pilot is within hail, or is approaching and within ½ mile, and has the proper distinguishing flag flying in his boat, such master shall, by heaving to in proper time or shortening sail, or by any practicable means consistent with the safety of his ship, facilitate such pilot getting on board, and shall give the charge of piloting his ship to such pilot; or if there are two or more of such pilots offering at the same time, to such one of them as may, according to the regulations for the time being in force, be entitled or required to take such charge; and if any such master fail to display or keep flying the usual signal for a pilot in manner herein-before required, or to facilitate any such qualified pilot aforesaid getting on board as herein-before required, or to give the charge of piloting his ship to such pilot as before mentioned, he shall incur a penalty not exceeding double the sum which might have been demanded for the pilotage of his ship, such penalty to be paid to the Trinity House, and to be carried to the account of the Trinity House Pilot Fund.—§ 378.

Exemptions from compulsory Pilotage.—The following ships, when not carrying passengers, shall be exempted from compulsory pilotage in the London district, and in the Trinity House outport districts; viz.:

(1.) Ships employed in the coasting trade of the U. K.:

(2.) Ships of not more than 60 tons burden:

(3.) Ships trading to Boulogne or to any place in Europe north of Boulogne:

(4.) Ships from Guernsey, Jersey, Alderney, Sark, or Man, which are wholly laden with stone being the produce of those islands:

(5.) Ships navigating within the limits of the port to which they belong:

(6.) Ships passing through the limits of any pilotage district on their voyages between two places both situate out of such limits, and not being bound to any place within such limits nor anchoring therein.—§ 379.

NOTE 1. Foreign ships are to pay one-fourth more than British ships, except when privileged to enter the ports of the United Kingdom upon paying the same duties of tonnage as are paid by British ships, in which cases such ships are to pay the same rates of pilotage only as are payable by British ships.

NOTE 2. For half a foot exceeding the above draughts of water, the medium price between the two limits.—For intermediate distances a proportionate rate.

For putting a Pilot on board, and for Pilotage of Ships to the Anchorage to the Downs.*	60 Tons, and under 150.	150 Tons, and under 250.	250 Tons, and under 400.	400 Tons, and under 600.	600 Tons, and upwards.

„ above 1,000 „	2 2 0

RATES OF PILOTAGE (TRINITY HOUSE).

Rates of Pilotage.—Subject to any alteration to be made by the Trinity House, there shall continue to be paid to all Trinity House pilots, in respect of their pilotage services, such dues as are immediately before the time when this Act comes into operation payable to them in respect of such services. —§ 380.

Payment of Pilotage Due from Foreign Ships, &c.—Subject to any alteration to be made by the Trinity House, and notwithstanding anything herein-before contained, there shall be paid in respect of all foreign ships trading to and from the port of London, and not exempted from pilotage, the following pilotage dues, viz.: as to ships inwards, the full amount of dues for the distance piloted, and as to ships outwards, the full amount of dues for the distance required by law; and payment of such pilotage dues shall be made to the collector of customs in the port of London by some one or more of the following persons, viz.: the master or other person having the charge of such ship, or the consignees or agents thereof who have paid or made themselves liable to pay any other charge for such ship in the said port of London; and such pilotage may be recovered in the same manner as other pilotage dues.—§ 381.

Certificate of Payment of Pilotage to be given.—Subject to any alteration to be made by the Trinity House, the collector of Customs shall, on receiving any pilotage dues in respect of foreign ships, give to the person paying the same a receipt in writing; and no officer of Customs in the port of London shall grant a clearance or transire for any such foreign ship as aforesaid without the production of such receipt: and if any such ship attempts to go to sea without such clearance or transire, any such officer may detain her until the said receipt is produced.—§ 382.

Application of such Monies by Trinity House.—Subject to any alteration to be made by the Trinity House, the said collector shall pay over to the Trinity House the pilotage dues received by him in respect of any foreign ship; and the Trinity House shall apply the same in manner following:

1st, in paying to any pilot who may bring sufficient proof of his having had the charge of such ship such dues as would have been payable to him for such pilotage service if the ship had been a British ship, after deducting therefrom the poundage due to the Trinity House:

2nd, in paying to any unlicensed person who may bring sufficient proof of his having, in the absence of a licensed pilot, had the charge of such ship, such amount as the Trinity House may think proper, not exceeding the amount which would under similar circumstances have been payable to a licensed pilot, after deducting poundage:

And 3rd, shall pay over to the Trinity House Pilots Fund the residue, together with all poundage deducted as aforesaid.—§ 383.

Settlement of Difference as to Draught of Ship.—Whenever any differences arise between the master and the qualified pilot of any ship trading to or from the port of London as to her draught of water, the Trinity House shall upon application by either party, made, in case of a ship inward-bound, within 12 hours after her arrival or at some time before she begins to discharge her cargo, and in the case of a ship outward-bound before she quits her moorings, appoint some proper officer who shall measure the ship, and settle the difference accordingly: and there shall be paid to the officer measuring such ship, by the party against whom he decides, the following sums, viz., *1l. 1s.* if the ship be below and *10s. 6d.* if the ship be above the entrance of the London Docks at Wapping.—§ 384.

PILOT FUND (TRINITY HOUSE).

Payments to be made to the Pilot Fund.—Subject to any alteration to be made by the Trinity House, there shall continue to be paid to them, and carried over to the Trinity House Pilot Fund, the sums of money following, viz.:—

(1.) A poundage of sixpence in the pound upon the pilotage earnings of all pilots licensed by the Trinity House:

(2.) A sum of *5l. 3s.* to be paid on the 1st of January in every year by every person licensed by the Trinity House to act as pilot in any district not under the superintendence of sub-commissioners, or in any part of such district:

And any qualified pilot giving a false account of his earnings, or making default in payment of any sum due from him under this section, shall forfeit double the amount payable, and shall further be liable, at the discretion of the Trinity House, to suspension or dismissal.—§ 385.

Application of Fund.—Subject to any prior charges subsisting thereon, the Trinity House Pilot Fund shall be chargeable in the first instance with such expenses as the Trinity House may duly incur in performing their duties in respect of pilots and pilotage, and after payment thereof shall be administered by the Trinity House for the benefit of such pilots licensed by them after the 1st of October, 1853, as are incapacitated for the performance of their duty by reason of age, infirmity, or accident, or of the widows and children of pilots so licensed, or of such incapacitated pilots only.—§ 386.

APPOINTMENT OF SUB-COMMISSIONERS BY TRINITY HOUSES OF HULL AND NEWCASTLE.

Section 387 authorises the corporations of the Trinity Houses of Hull and Newcastle to appoint such sub-commissioners for the purpose of examining pilots in all districts in which they have been used to make such appointments.

SAVING OF OWNERS' AND MASTERS' RIGHTS.

Limitations of Liability of Owner where Pilotage is compulsory.—No owner or master of any ship shall be answerable to any person whatever for any loss or damage occasioned by the fault or incapacity of any qualified pilot acting in charge of such ship within any district where the employment of such pilot is compulsory by law.—§ 388.

Ballast.—All ships or vessels furnished with ballast by the Aberdeen harbour commissioners pay—

Vessels belonging to Aberdeen, 9*d.* per ton.

All other vessels, 1*s.* per ton.

Vessels launched at the port of Aberdeen to pay half dues on first voyage, if sailing in ballast, but if landing goods, to pay full dues.

Vessels entering the harbour for safety, or windbound, and not breaking bulk, to pay half dues, but if they break bulk, or take in goods (stores for their own use excepted), to pay full dues.

Foreign vessels to pay one-half more dues than British vessels.

One arrival and one sailing to constitute a voyage.

Vessels remaining in the harbour after 3 calendar months (and 14 days allowed for loading and discharging) to pay 1*d.* per register ton per calendar month, and for each part of a month, in advance.

It shall be in the option of the trustees to charge either the dues on the voyage, inwards or outwards, at the rates specified in the foregoing Table, according to the distance; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

Exemptions for shipping, not including loading, lights, &c. or pilotage—

All open boats under the burthen of 10 tons to be exempted from dues.

All ships, steamers, or vessels having made 50 voyages in any 1 year, from January to December inclusive, shall pay no more harbour dues for any additional voyages made by them within the same year.

Vessels sailing from the harbour and put back by stress of weather, or other cause, without having accomplished the voyage, shall not be liable in additional dues for such returns.

All ships or vessels belonging to, or exclusively employed in the service of H. M., the Customs, Excise, or Post-Office, or of the Commissioners of the Northern Lighthouses, or of the Corporation of the Trinity House of Deptford Strond, to be exempted from dues.

British vessels *bona fide* employed in the white fishery, to be exempted from the payment of harbour dues, provided they have no cargo on board but the fish caught, and their stores and fishery implements.

Pilotage.	£	s.	d.
Outside the Black Head, or outside the buoy of the Brigs, to the Whitehouse Roads:			
Vessels of 200 tons and upwards -	2	2	0
— above 100 and under 200 tons -	1	11	6
— not exceeding 100 tons - -	1	0	0
Outside the Grey Point, or outside Kilnot Point, to the Whitehouse Roads:			
Vessels of 200 tons and upwards -	1	1	0
— above 100 and under 200 tons -	0	15	0
— not exceeding 100 tons -	0	10	0

These charges are for out-pilots, stationed by the corporation at Groomsport, Donaghadee, Carrickfergus, and Island Magee, for the accommodation of strangers to the port, but it is optional with the masters of vessels to employ them or not.

Mooring Buoys.

At Garmoyle, vessels under 200 tons, per week -	0	10	0
At Garmoyle, vessels 200 and not exceeding 300 tons, per week - - -	1	0	0
At Garmoyle, vessels 300 tons and upwards, per week	0	15	0
At the quays, per ton - - -	0	0	1
In the old channel, per ton - -	0	0	1

Sand Ballast.

For every ton delivered at any place between the Pool of Garmoyle and Belfast Bridge - - 0 1 4

	£	s.	d.
For every ton delivered in the Pool of Garmoyle, or below it towards the sea - -	0	2	0
Foreign vessels to be charged one-third part more.			
For every ton delivered to any vessel at the ballast wharf - - - -	0	1	6

Stone Ballast.

Common stone ballast, per ton -	0	2	6
Small sea stone for cotton vessels, per ton -	0	3	0
An extra charge of 6d. per ton if sent from the quays to Garmoyle.			

Quayage at the Corporation Quays.

On vessels from foreign ports, per ton -	0	0	5
On vessels coastways, per ton -	0	0	3
On all vessels loading outwards, per ton -	0	0	3
On lighters loading or discharging, each -	0	7	0

Vessels discharging from one to the other pay half quayage.
Vessels are charged half quayage when loaded to the beams only; if above the beams, whole quayage.
Steamers to pay per special agreement.
Local lights or beacons. No charge.
Note.—Foreign vessels belonging to countries having treaties of reciprocity with Great Britain are charged with the like rates as are paid by British vessels to this corporation.

BERWICK.

Tonnage Dues.—Every vessel trading between Berwick and any place between Sunderland, in that port and Fifeness - -	2d.	per ton.
Ditto between the Humber and Aberdeen -	3d.	—
Ditto between the N. Foreland and Shetland	4d.	—
Ditto any other place in Great Britain, or any place in Ireland - - -	6d.	—
Ditto any place on the coast of Europe between Dunkirk and the North Cape -	6d.	—
Ditto any place in the Baltic Sea, or on the coast of Europe between Dunkirk and the Straits of Gibraltar - - -	7d.	—
Ditto any place in the White Sea, or in the Mediterranean Sea, the West Indies, America, Greenland, or any other foreign port or place not before mentioned -	9d.	per ton
For every vessel coming into the harbour for shelter, laden and not breaking bulk -	1½d.	—
Ditto, in ballast and departing in ballast -	1d.	—
Foreign vessels pay double the above rates and duties.		
For every ship or vessel coming into the harbour, over and above rates and duties -	3s. 4d.	Vess. per f
Pilotage.—In summer; viz. from April 1. to Oct. 1. -	1s. 4d.	
In winter; viz. from October 1. to April 1. -	1s. 6d.	

These rates are payable on bringing a vessel into the harbour and over again on taking her out.

BRISTOL.

Harbour Rates	Pilot Rates.	Ballast.	Local Lights and Beacons.
Upon Vessels delivering Cargoes in Coasting and Foreign Trade.

Pilotage. On all vessels whether British or Foreign, various rates, according to distance and tonnage, from 2s. 6d. to 5l. per vessel, authorized by bye-laws, &c. made by Corporation of Bridgwater in 1838.

Ballast Dues. Nil.

BRISTOL.

DOCK RATES AND DUES ON SHIPPING ENTERING THE PORT OF BRISTOL, THOSE LEAVING THE SAME BEING FREE OF ALL PORT CHARGES.

Dock Dues.

	£	s.	d.
For every vessel trading from Africa, Honduras, Surinam, and other ports in South America, the U. States of America, the East and West Indies, all the ports within the Straits of Gibraltar, the Southern Whale Fishery, the British Colonies, Portugal, Prussia, Russia, Spain, without the Straits, and Sweden, per ton	0	1	0
For every vessel trading from Flanders, France, without the Straits, Germany, Guernsey, Holland, Jersey, Norway, Poland, and Zealand, per ton	0	0	6
For every vessel trading from Ireland, the Isle of Man, Scotland, or as a coaster, not including vessels from Cardiff, Newport, and other ports to the eastward of the Holms, per ton	0	0	4
For every vessel from Cardiff, Newport, or any other port to the eastward of the Holms (not being vessels one third part of the lading of which shall consist of coal, scroff, iron, tin, tin plates, grain, copper, bricks, stone, coal, tar, slate, bark, timber, or wood) as follows:—			
If such vessel shall be under 40 tons burthen, for each voyage	0	7	6
If such vessel shall be 40 tons burthen, and under 75 tons, for each voyage	0	12	6
If such vessel be 75 tons burthen, and under 100 tons, for each voyage	0	16	0
If such vessels shall be 100 tons burthen or upwards, for each voyage	1	1	0
For every vessel from Cardiff, Newport, or any other port to the eastward of the Holms, one third part of the lading of which shall consist of coal, scroff, iron, tin, tin plates, grain, copper, bricks, stone, coal, tar, slate, bark, timber, or wood, as follows:—			
If such vessel shall not exceed 75 tons burthen, for each voyage	0	5	0
If such vessel shall exceed 75 tons burthen, for each voyage	0		6

N. B.—There are no dock rates or other port charges payable on vessels leaving the port of Bristol. And a vessel having once paid the dock dues on entering the port may remain for an indefinite period in the floating harbour without any further charge.

Anchorage and Moorage chargeable only on Vessels coming from Ports to the westward of the Holms.

	Anchorage and Moorage. s.	d.
All *coasting vessels*, from ports to the westward of the Holms, not exceeding 40 tons burthen, each voyage	0	9
Ditto, at and above 40 tons, ditto	1	6

	Anchorage each. s.	d.	Moorage per ton. s.	d.
All *other vessels*, not being coasters,				
— under 30 tons	2	6	0	0½
— above 30 and under 100 tons	5	0	0	0½
— above 100 tons	5	0	0	1

Mayor's Dues payable only by Vessels coming from Places westward of the Holms to the Port of Bristol, and payable by such Vessels not more than Three Times within the Space of Twelve Calendar Months.

	By voyage. s.	d.
60 tons and under 100 tons, each vessel	5	0
100 — 150 —	10	0
150 — 200 —	15	0
200 — 250 —	30	0
250 and upwards	40	0

Quay Warden's Fees.

	s.	d.
Vessels above 60 tons	5	0
— under —	2	6
Boat traw, or barge	0	4

Whether from eastward or westward of Holms.

The docks and quays in Bristol are not enclosed. The warehouses, whether bonded or otherwise, are all private property; they are for the most part close to the quays, and are all easy of access.

REGULATION AND RATES OF PILOTS.

All vessels navigating up, down, or upon the British Channel, to the E. of Lundy Island, except coasting vessels and Irish traders, shall be piloted, and navigated by pilots, duly authorised and licensed by the mayor, the burgesses, and commonalty of the city of Bristol; and the master, owner, or owners of every vessel which shall be navigated in the limits aforesaid, without a licensed pilot, shall forfeit double the sum that would have been demandable, for the pilotage of such vessel, together with 5l. for every 50 tons burthen of such vessel.

It shall be lawful for any licensed pilot to supersede any person not licensed as a pilot, in the charge of any vessel within the limits aforesaid; and every master who shall continue any person not licensed, after any licensed pilot has offered to take charge of such vessel; and every person assuming, or continuing in, the charge of any such vessel, without being duly licensed, after any other licensed pilot has offered to take charge thereof, shall, respectively, forfeit for every such offence, a sum not exceeding 10l.

For rates of pilotage from Lundy Island to Kingroad, &c., see art. Bristol, p. 527.

For each man employed on board, or for hauling or towing any vessel, and mooring or unmooring, from Bathurst or Cumberland Basin, to Hungroad Pill, and Broad Pill, and from either of those places to Cumberland or Bathurst Basin, the pilot shall receive and be entitled to 3s. 9d. per man; or from Bathurst or Cumberland Basin to Kingroad and Portshead, or either of them, or from either of those places to Cumberland or Bathurst Basin, he shall receive 3s. 9d. per man, and no more. When the pilot remains on board a vessel, he shall be entitled to 5s. per day, and the man to 3s. per day.

And the pilot shall be entitled to and shall receive for each tow-boat and yawl employed in towing or assisting, mooring and unmooring any vessel from Portshead, Kingroad, Hungroad, or Broad Pill, into Cumberland or Bathurst Basin, and out of Cumberland or Bathurst Basin to Portshead, Kingroad, Hungroad, or Broad Pill, the sums following, viz.—for a tow-boat, 6s.; for a yawl, 3s.

And he shall receive for every boat used in towing, unmooring and mooring any ship or vessel from either of the following places, to any part of such places, viz.—Portshead, Kingroad, Pill, or Hungroad; or for unmooring, new berthing, and again mooring any ship or vessel in either of the said last mentioned places, the sums following, viz.—for every yawl, 2s. 6d.

And every man who shall be engaged, or be discharged at Hungroad or Pill, without being employed to assist in mooring or unmooring, shall be entitled to, for his fee or wages, 2s. 9d.; and the pilot shall be entitled, for the boats not employed in so mooring and unmooring, for a tow-boat, 4s.; and for a yawl, 2s. 6d., and no more.

The pilot of all vessels above 300 tons shall be allowed for an assistant pilot in the river pilotage, the sum of 10s.—such an assistant being a licensed pilot; in default whereof, only 3s. 9d. shall be paid for such assistant.

There shall be allowed for each horse used in towing any ship or vessel, a sum not exceeding 6s., and to the driver, 1s.

	£	s.	d.
If under 100 tons reg. burthen	0	1	0
If 100 tons and under 200	0	2	0
If 200 and upwards	0	3	0

And that such sums shall be added to the pilotage note and paid therewith by the master and commander, merchant or owner of such ship or vessel.

In case any ship or vessel shall be in distress, either in the outward or homeward bound voyage, and any pilot or men shall run an imminent risk or hazard in going to the relief of such ship or vessel, the pilots or men assisting shall have reasonable satisfaction for the assistance so given, according to such assistance, and the risk and hazard run; and in case of a difference of opinion as to the amount of such satisfaction, the same to be ascertained by two of her Majesty's Justices of the Peace, acting for the city and county of Bristol.

If any licensed pilot shall proceed with any ship or vessel as far as Minehead, Combe, or Lundy Island, and shall be forced by stress of weather to return to Kingroad or Portshead, he shall be allowed one third part of the channel pilotage, according to the distance such vessel may have reached before she shall have put back.

Each pilot shall, within two days after his return from a voyage to the westward, return to the Haven-Master the number of the skiff so returned from the westward, the time of her sailing, the time of her return, the distance she has been, and the names of the persons employed in navigating her, and all the material particulars of the voyage; and each pilot who shall neglect to make such return, or shall make a false return, shall for each offence, forfeit and pay any sum not exceeding 40s.

Addenda to Pilotage.—From Lundy Island to Swansea.
An uniform charge of 4l. 4s.

From Lundy Island to Bridgwater.

	£	s.	d.
If such vessel be under 100 tons reg.	2	13	0
If 100 tons and under 200	3	10	0
If 200 — 300	4	7	6
If 300 and upwards	5	5	0

From Lundy Island to Cardiff.
The same rates as to Bridgwater.

From Lundy Island to Newport.
The same rates as to Kingroad.

COWES.

Description of Dues and Charges collected.

Anchorage and groundage for all boats, vessels, and barges liable to registry or licence, not registered at this port and which shall anchor within this harbour, for each vessel under 50 tons, 1s. 4d.; above 50 tons and not exceeding 100 tons, 2s. 6d.; above 100 tons, 5s.; payable to harbour-master of the port of Cowes.

On all vessels anchoring in Cowes Roads; viz. the sum of 4*s.* 6*d.* per vessel, on all foreign vessels; and the sum of 1*s.* on all British vessels; payable to the gunner of Cowes castle.

Ballast.—There are no regular charges for ballast within this port, each captain of a vessel employing whom he may choose, and paying such price as they may agree for.

CORK.

COLCHESTER.

Channel Dues on all Vessels, whether in the Coasting or Foreign Trade.	Pilotage Charges.	Ballast Charges.	Observations.
Vessels belonging to the port, under 50 tons, charged 1*d.* per ton; above 50 tons, 2*d.* per ton. Vessels not belonging to the port, under 50 tons, 3½*d.* per ton; above 50 tons, 5¼*d.* per ton. Vessels with coal, culm, and cinders, 6*d.* per ton on the quantity delivered, by the act 51 Geo. 3., Sept. 1811.	1*s.* 6*d.* per foot from East Ness to Pyefleet, and 1*s.* per foot from Pyefleet into the harbour, collected under the authority of the Trinity Board.	From 1*s.* to 1*s.* 3*d.* per ton, according to the description of ballast required; collected by consent, being private property.	The charge on vessels taking refuge in the harbour is 1*s.* per vessel for anchorage, and collected by prescriptive right.

DARTMOUTH.

Dues and Charges levied by Corporation of Dartmouth under Lease from Duchy of Cornwall.

	£	s.	d.
On vessels going upon the ground - -	0	1	0
On vessels anchoring - - - -	0	0	6
By prescription:			
On vessels graving their bottoms - -	0	2	6
On vessels going alongside the quays -	0	1	0
By consent:			
On vessels passing the Castle - - -	0	0	6

Dues and Charges levied by Corporation of Dartmouth under Lease from Duchy of Cornwall.

	£	s.	d.
On all vessels taking in ballast, per ton -	0	0	2½

Dues and Charges levied under Act 6 Geo. 4. c. 125.

Pilotage.—All ships, if boarded without the run of the Newstone East or the Blackstone West, are to pay as follows, viz.—

	£	s.	d.
Drawing 10 feet water and under, per foot -	0	2	6
— 10 to 12 feet — - -	0	3	0
— 12 to 14 feet — - -	0	5	6
— 14 to 16 feet — - -	0	4	0
— 16 feet and upwards — - -	0	5	0

All ships, if boarded within that line, are to pay ½ part less.
All ships boarded within the Castle are to pay only ¼ pilotage.
In carrying ships out of the harbour, the pilotage is to be in all cases ⅓ less than the inward pilotage.

DOVER.

Charges on Vessels when delivering Cargoes in whole or in part.

Foreign Vessels.

Dover harbour duty, per act 9 Geo. 4. c. 31., 3*d.* per ton.
Ramsgate harbour duty, per acts 32 Geo. 3. c. 74., and 55 Geo. 3. (1815), payable in respect of vessels which have passed that port on their voyages, viz. vessels privileged as British, if 20 tons, and not exceeding 300 tons, 2*d.* per ton.
Ditto, exceeding 300 tons, 4*d.* per ton.
On vessels not privileged as British, if 20 tons and not exceeding 300 tons, 4*d.* per ton.
Ditto, exceeding 300 tons, 1*d.* per ton.

Light Dues, payable for such Lights as have been passed on the Voyage.

Barque money, to fund for cast-away seamen, by prescription, 1*s.* per vessel.
Water-bailiff's fee, by prescription, 1*s.* per vessel.
Harbour-master's fee, by prescription, 3*s.* per vessel.

British Vessels.

Dover harbour duty, per act 9 Geo. 4. c. 31., 3*d.* per ton.
Ramsgate harbour duty, per acts 32 Geo. 3. c. 74., and 55 Geo. 3. (1815), payable in respect of vessels which have passed that port on their voyage, viz. if 20 tons and not exceeding 300 tons, 2*d.* per ton.
Ditto, exceeding 300 tons, ½*d.* per ton.

Light Dues, payable for such Lights as have been passed on the Voyage.

Water-bailiff's fee, by prescription, 6*d.* per vessel.
Harbour-master's fee, by prescription, 1*s.* per vessel.

Coasting Vessels, when not laden with Coals or Stone.

Dover harbour duty, per act 9 Geo. 4. c. 31., payable once only during the year, 3*d.* per ton.
Ramsgate harbour duty, per acts 32 Geo. 3. c. 74., and 55 Geo. 3. (1815), payable once only during the year, 2*d.* per ton.

Coasting Vessels, when laden with Coals or Stone.

Dover harbour duty on coals, 1½*d.* per chaldron.
Ditto on stone, 1½*d.* per ton.
Ramsgate harbour duty on coals, 1*d.* per chaldron.
Ditto on stone, 1*d.* per ton.

Light Dues, payable for such Lights as have been passed on the Voyage.

Water-bailiff's fee, by prescription, 6*d.* per vessel.
Harbour-master's fee, by prescription, 1*s.* per vessel.
Vessels taking refuge in the harbour only are liable to the above-mentioned charges, except light dues, and except also Dover harbour duty when in ballast.

Charges for Pilotage, per Act 6 Geo. 4. c. 125.

Per foot draught of water, in, 5*s.*
Ditto out, 5*s.*
Vessels are not compelled to employ pilots.
Charge for ballast, per charter under the Lord Warden and Assistants of Dover harbour, 1*s.* 5*d.* per ton.

N. B.—Vessels belonging to Dover are exempt from water-bailiff's and harbour-master's fees. Vessels belonging to the following ports are exempt from Dover harbour dues, and water-bailiff's and harbour master's fees; viz. Great Yarmouth, Ramsgate, Sandwich, Weymouth, and Melcombe Regis, Lyme Regis, and Arundel. And vessels belonging to Dover, Weymouth, Melcombe Regis, Lyme Regis, Great Yarmouth, and Arundel, are exempt from Ramsgate Harbour dues.

To or from any port in Great Britain or Ireland, including the Islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkneys - - - -	0 0 3
All vessels loaded with coals, lime, or manure only, from any port in Great Britain, &c., excepting Scotland - - - - -	0 0 2
All vessels loaded with coals, lime, or manure only, from any port in Scotland - -	0 0 1½
All vessels employed in the River Tay, carrying goods and entering the precincts of the port or harbour of Dundee - - -	0 0 1½
All steam vessels from any port in Great Britain or Ireland, including the Islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkneys, carrying passengers and their luggage exclusively - - -	£ s. d. 0 0 2
All steam vessels (from any port in Great Britain) employed on the river Tay, carrying passengers and their luggage exclusively, and vessels trading from the harbour, or carrying passengers to any port within the precincts - - -	0 0 1

All steam vessels carrying goods and passengers to pay the same rates as sailing vessels.

All vessels from any part of the river Tay, not exceeding 30 tons register, with stones, and having no other goods on board, and delivering their cargoes in the precincts of the said harbour to pay 2s. each voyage in name of tonnage dues, and 1s. for every 20 tons, or part of 20 tons, additional.

All vessels from any part of the river Tay with sand, and having no other goods on board, to pay 1s. for each trip in name of tonnage dues.

It shall be in the option of the trustees to charge either the tonnage dues on the voyage inwards or on the voyage outwards, at the rates specified in the above schedule; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of the dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

All vessels launched within the harbour of Dundee, or precincts thereof, to pay half dues on the voyage outwards, if sailing in ballast; but if loaded in whole or in part, or taking passengers, to pay full dues.

All vessels to be permitted to enter the harbour of Dundee for safety, by payment of one-half of the tonnage dues; but if such vessels shall remain in the harbour, or any of the docks, beyond the space of 21 days, or shall take goods on board (stores for their own use excepted), or break bulk, they shall be liable in the full tonnage dues.

All vessels remaining in harbour to pay, after 2 months, 1d. per register ton per month in advance, when they are lying in any of the tide-harbours, and 1½d. per ton when lying in any of the docks.

Each vessel, with the exception after-mentioned, entering the harbour and loading or unloading goods or ballast within the same, or performing both operations, before leaving the harbour, to pay, in name of plank-money (whether a plank be used or not) as follows:—

			£ s. d.
Vessels not exceeding 20 tons -	-	-	0 1 0
Vessels exceeding 20 tons	and not exceeding	50	0 1 6
—	50	— 100	0 2 0
—	100	— 150	0 2 6
—	150	— 200	0 3 0
—	200	— 250	0 3 6
—	250	— 300	0 4 0
—	300	— 350	0 4 6
—	350	— 400	0 5 6
—	400 tons and upwards		0 6 6

All vessels loaded with lime, coals, or manure only, and discharging their cargoes within the precincts of the harbour, to the eastward of the Rood Yards, or to the westward of the Magdalen Yard, to pay one-half of the dues in the above schedule.

Vessels with fish of any kind for curing, per ton register, or admeasurement, 2d.

Exemptions.

All vessels leaving the harbour for the purpose of taking on board ballast in any part of the River Tay, and returning to the said harbour, or precincts thereof, with ballast, shall not be liable in shore dues for such return.

Any vessel sailing from the port of Dundee, and put back by stress of weather or any other cause, without having accomplished her voyage, shall not be liable in additional dues for such return.

Vessels partly loaded with coals, lime, or manure, or in ballast, but having dunnage deals, or stow-wood on board, which have been used as such, and are intended to be unloaded; or having goods on board, which are neither to be landed nor reshipped into any other vessel within the harbour or precincts, shall be charged the same dues as vessels wholly loaded with coals, lime, or manure.

All vessels arriving in ballast for the purpose of being repaired in the graving-dock, or on the patent slip, and departing in ballast, shall be exempted from tonnage dues, provided such vessels enter for the dock or slip immediately on arrival, and sail within 1 month after leaving such graving-dock or patent slip; otherwise to be charged 1d. per register ton per month in advance, when they are lying in any of the tide-harbours, and 1½d. per ton when lying in any of the docks.

Vessels with cargoes, arriving for the express purpose of

being repaired in the graving-dock, or on the patent slip, shall not be liable in shore dues, provided they neither take goods on board (stores for their own use excepted) nor break bulk, except to lighten for getting into the dock, or upon the slip, and that they shall again re-load all the goods so landed.

All vessels loading or unloading goods within the precincts of the harbour of Dundee, to the eastward of the Rood Yards, and the westward of the Magdalen Yard, shall be exempted from payment of plank-money.

All vessels not carrying passengers arriving in the harbour in ballast, and departing again in ballast, shall be subject only in half dues; but if such vessels, after arriving in ballast, shall take in cargoes, or parts of cargoes, before their departure, they shall be liable in full dues.

Table of Rates for Pilots licensed by the Trustees of the Harbour of Dundee.

For vessels to or from foreign, boarded at the distance of not more than 3 miles outward of the Fairway Buoy of Tay, or at any point between that distance and the said buoy, and from thence to and including the harbour of Dundee, *3s. 6d.* per foot, according to the draught of water.

For vessels to or from foreign, boarded between the Fairway Buoy of Tay and the buoy on the Elbow-end, marked No. 3, and from thence to and including the harbour of Dundee, *2s. 6d.* per foot.

For vessels to or from foreign, boarded between the Elbow-end Buoy, No. 3, and Broughty Castle, and from thence to and including the harbour of Dundee, *1s. 3d.* per foot.

All coasting vessels boarded at the respective distances above mentioned, to pay as follows: viz. vessels boarded not more than 3 miles outward of the Fairway Buoy of Tay, to pay *3s.* per foot; between the Fairway Buoy of Tay and the Elbow-end Buoy, No 3, *2s.* per foot; and between the Elbow-end Buoy and Broughty Castle, to and including the harbour, *1s.* per foot.

All vessels, whether foreign or coasting boarded above Broughty Castle, to and including the harbour, *1s.* per foot.

In the event of vessels having to stop in Carolina Roads for want of water in the harbour, or otherwise, the master of the vessel shall have it in his option either to dispense with the services of the pilot, or detain him on board till the vessel can enter the harbour. In the former case the pilot shall be entitled to full pilotage dues; in the latter, the pilot shall be entitled, besides these dues, to *5s.* for each day, or part of a day, in name of river fees.

When pilots enter the river on board vessels bound for places above Dundee, the river or sea pilotage, including the harbour, shall be payable in full by such vessels when moored or off Carolina Roads.

All vessels boarded between 3 miles and 6 miles beyond the Buoy of Tay, to pay *10s. 6d.* additional for distance-money; and vessels boarded 6 miles beyond said Buoy of Tay, to pay *15s.* of distance-money.

In case of dispute, the distance to be ascertained by the bearings of the different headlands when the vessel was boarded.

Tay Light Duties (local).

The "Fraternity of Masters and Seamen of Dundee, incorporated by Royal Charter," possess the right, by charter, to levy, *inter alia*, the following dues on vessels arriving within the Firth of Tay, being the whole charges presently made in respect of said right; and those for and in name of the expense of erection and maintenance of 4 lighthouses owned exclusively by said fraternity, 2 of which are situated on the north side and 2 on the south side of said Firth; and of certain buoys placed in the Fairway thereof:—

On every British ship coming within the entrance of the Firth of Tay, whether with cargo on board or in ballast, or driven therewithin by stress of weather or otherwise, at the rate of *1s.* for every 10 tons register; under 10 tons, charged at the same ratio.

On every foreign ship, privileged, the same rate of dues when in either of the above situations; but the Trinity House makes good an equal amount to the said incorporation, in consequence of the half charge being only made on foreign vessels so privileged.

On every foreign ship, unprivileged, situated as above, the rate of charge is *2s.* for every 10 tons register; under 10 tons charged at this ratio.

No dues are levied on British ships, nor on foreign vessels privileged or otherwise, leaving the Tay on their outward voyage, whether laden or in ballast, excepting in the case of new ships, built within the ports of Dundee and Perth respectively, which pay the above dues on British shipping when leaving on their first voyage, whether foreign or coasting.

EXETER.—River Exe.

Harbour Dues.	Canal Dues.	Ballast.	Pilotage.	
One halfpenny per vessel, provided she proceeds above Powderham, payable to municipal corporation by prescription.	All vessels entering and passing through the canal, not otherwise, if less than 10 tons burthen, *5s.* each; if 100, and less than 110 tons, *6d.* per ton; if above 110 tons, *9d.* per ton each, up and down.	*4d.* per ton, payable to the lord of the manor.	As per annexed rate, established under act 6 Geo. 4. c. 125, but amended under sanction of the Trinity Board of 6th May, 1833.	Vessels coasting, or in the foreign trade, are liable to the same charges, except pilotage. Vessels taking shelter only, are not liable to any charges beyond pilotage.
		River Teign.		
One penny per ton for every British vessel, and *2d.* per ton if foreign, and not privileged as British. Sixpence upon every vessel not belonging to the port.	- - -	- -	As per annexed rate, established under act 6 Geo. 4. c. 125, but amended under sanction of the Trinity Board of 6th May, 1833.	Vessels coasting, or in the foreign trade, are liable to the same charges, except pilotage. Vessels taking shelter only are not liable to any charge beyond pilotage.

GRANTON, ADJOINING LEITH.

Tonnage Dues.

Classes of Voyages.	Per Registered Ton. Foreign Vessels, &c. £	s.	d.	British Vessels, &c. £	s.	d.
CLASS 1.—To or from any port or place in the river or Frith of Forth to the westward of St. Abb's Head and Fifeness, excepting vessels coming or going through the Forth and Clyde Canal, not exceeding	0	0	4	0	0	2
CLASS 2.—To or from any other port or place in Scotland, and to or from Newcastle and the River Tyne in England, or any other port or place in England to the north of the River Tyne, not exceeding	0	0	4½	0	0	3
CLASS 3.—To or from any port or place in Great Britain or Ireland, excepting those in classes first and second, not exceeding	0	0	6	0	0	4
CLASS 4.—To or from any port or place in Europe, excepting those in the preceding classes, not exceeding	0	1	0	0	0	8
CLASS 5.—To or from other parts of the world, not exceeding	0	1	6	0	1	0

A voyage shall comprehend an arrival at and departure from the pier or its boundaries, so that a vessel paying tonnage dues at its arrival shall not pay these dues at its departure, and *vice versâ*.

All vessels performing more than 10 voyages in one year shall pay the above rates and dues for each of the first 10 voyages only, and for each of the remaining voyages within the year, if these remaining voyages shall not exceed 90, they shall pay only half dues; and for all voyages above 100 in the year they shall pay only one-fourth dues.

All vessels performing more than one voyage in one day shall only be charged for one voyage that day.

The charges at Granton are not levied under any Board.

GREENOCK.

Harbour Rates.	Per Reg. Ton. Inw. d.	Outw. d.
Class 1. All British vessels, of every description, arriving at or departing from the Port of Greenock to or from Glasgow, or any of the intermediate ports on the river Clyde		½
Class 2. To or from any place inside of the Cumbrae Head; also from or to all places on the Forth and Clyde Canal, west of Grangemouth, including the Union and other canals leading into it	1	1
Class 3. To or from all places between the Cumbrae on the north and the Mulls of Galloway and Kintyre on the south, including Lochryan, Lochfine, &c. in these limits; also by the Forth and Clyde Canal to or from places on the Firth of Forth, extending from Stirling to Fifeness on the north side, and Dunbar on the south; likewise by the Crinan canal to or from all ports and places in the Highlands, situated betwixt West Loch Tarbert on the south, and the north end of the Isle of Skye, including Skye, Mull, Coll, Tiree, Islay, Jura, and other islands betwixt these and the mainland	1½	1½
Class 4. To or from any place situated betwixt the Mulls of Galloway and St. David's head on the British side of St. George's channel, including the Isle of Man, and, on the Irish side, from Tuskar along the east and north coasts of the island to Torry; and from the Mull of Kintyre to Cape Wrath, including all the Hebrides; also by the Forth and Clyde Canal to or from places betwixt Pittenies and Kinnaird's Head, and betwixt Dunbar and Flamborough Head	2	2
Class 5. To or from all places in Ireland extending from Torry along the west and south coasts of the island to Tuskar; and in England and Wales, betwixt the Land's End and St. David's Head; also in Scotland, betwixt Cape Wrath and Kinnaird's Head, including the Orkney and Shetland Islands; likewise to or from places north of Flamborough Head navigating otherwise than by the canals.	3	3
Class 6. To or from all places on the east and south coasts of England extending from Flamborough Head to the Land's End, including Scilly Islands	4	4
Class 7. To or from any port or places in Europe, or island in the European seas	4	4
Class 8. To or from any port or place in the British province of Canada, New Brunswick, Nova Scotia, Newfoundland, Iceland, the Greenland and Davis' Strait fisheries, and all ports or places on the south coast of the Mediterranean Sea	5	5
Class 9. To or from all ports or places in the United States of America, West Indies, and east coast of America, north of the river Amazon; also the west coast of Africa, from the Straits of Gibraltar to the equator, including the islands of these coasts.	5	5
Class 10. To or from any port, place, or island lying betwixt the River Amazon and Cape Horn in South America, and between the equator and Cape of Good Hope on the west coast of Africa	6	6
Class 11. To or from all ports, places, or islands south and east of the Cape of Good Hope and west of Cape Horn		

Class 12. All vessels navigating under foreign flags to pay double the foregoing rates, corresponding to their respective voyages.

Class 13. All vessels, British or foreign, arriving at or departing from the port of Greenock in ballast, and all steam-packets employed solely in carrying passengers, to be charged only a moiety of the rates, corresponding to their voyages.

Class 14. Whenever any vessel propelled by steam, whether employed in carrying goods, partly goods and passengers, or passengers solely, shall have entered inwards and cleared outwards so frequently as to have paid 13*s.* 4*d.* per ton of port charges, viz. of harbour rates, police dues, anchorage, and water money, inclusive, as chargeable to shipping; or when any sailing vessel shall have entered inwards and cleared outwards so often as to have paid 6*s.* 8*d.* per ton, including the above enumerated dues, such vessels shall be exempt from further payment of port charges, during whatever part of 12 current months may be unexpired from the date of making payment of first portion of said 13*s.* 4*d.* or 6*s.* 8*d.*, as the case may be. Owners or masters of either description of shipping, wishing to save trouble, may have a clearance of 12 months, by paying at the Harbour Dues Office 13*s.* 4*d.* per ton for steamers, and 6*s.* 8*d.* per ton for sailing vessels. The sums arising from vessels compounding as before-mentioned will fall to be allocated among the different trusts interested.

Class 15. All vessels not bound to or from the port of Greenock, but taking shelter in either of the harbours thereof, to pay, in addition to the anchorage dues, 1*d.* per ton.

Class 16. All vessels at clearing outwards shall pay the rate applicable to the most distant port of their intended voyage.

Class 17. All vessels outward bound for foreign ports from any other port in the river or channel, coming to anchor in the roadstead of this harbour for stores only, shall be exempt from harbour dues.

Class 18. All vessels outward bound for foreign ports from any other port in the river or channel, touching at the quays of this harbour for stores merely, and not taking in any cargo here, shall be admitted on payment of ½*d.* per ton of harbour dues.

Class 19. All vessels outward bound for foreign ports, partly laden at any other port or ports in the river or channel, and taking on board goods from this port, not exceeding one-third of a full cargo, shall pay 3*d.* per ton of harbour dues.

Class 20. All vessels coming into the port of Greenock to lay up for any space not exceeding 8 days, shall on arrival pay 4*d.* per ton, and on departure pay the like sum of 4*d.* per ton.

Class 21. All vessels discharging a cargo or part cargo of lime, or limestone, or flintsome, to be charged inwards as if arriving in ballast.

Class 22. All lighters from and for Glasgow and intermediate places are chargeable with harbour dues, when with

cargo, at ¼d. per ton per voyage, inwards and outwards making a voyage.

Class 23. All lighters with coals for the use of the inhabitants of the town, but not for the manufactories, are not chargeable with harbour dues inwards, but when loading a cargo are chargeable outwards at ¼d. per ton, and if departing light, without cargo, at ¼d. per ton.

Class 24. Vessels under 15 tons, excepting when entering at or clearing from the custom-house with cargo, are exempted from the payment of harbour dues, and pay only anchorage dues, as per anchorage table.

Class 25. All vessels arriving at this port in distress, or for repair (excepting such vessels as have sailed from the port and paid the outward dues) shall, upon arrival, pay the one-half harbour dues applicable to the most distant port or place for which such vessel was bound, and on sailing shall pay the full dues applicable to the port or place to which such vessel is destined.

Class 26. All vessels clearing for foreign ports in ballast, with stores only, and having to proceed to Troon, Ardrossan, or any other place in the United Kingdom, to load, are to be charged the ballast rates applicable to coasting vessels.

Class 27. All steamers plying to and from ports or places, as per Class 1 of harbour rates, when with passengers only, are chargeable at the rate of ¼d. per ton per trip, or ½d per ton per voyage, and when entering or clearing at the custom-house, or with cargoes, at the rate of ½d. per ton per trip, or 1d. per ton per voyage.

Class 28. All steamers plying to or from ports or places, as per Class 2 of harbour rates, when with passengers only, are chargeable at the rate of ½d. per ton per trip, or 1d. per ton per voyage; and when entering or clearing at the custom-house, or with cargo, at the rate of 1d. per ton per trip, or 2d. per ton per voyage.

Class 29. All steamers plying to or from ports or places, as per Class 3 of harbour rates table, and passing to or repassing from Glasgow with passengers only, are chargeable at the rate of 1d. per ton per trip, or 2d. per ton per voyage; and when entering at or clearing out from the custom-house, or with cargo, at the rate of 2d. per ton per trip, or 4d. per ton per voyage.

Class 30. All steamers plying to or from ports or places, as per Class 4 of harbour rates table, when with passengers only, are chargeable at the rate of 1d. per ton per trip, or 2d. per ton per voyage; and when entering at or clearing out from the custom-house, or with cargo, at the rate of 2d. per ton per trip, or 4d. per ton per voyage.

Class 30. All steamers plying to or from ports or places, as per Class 4 of harbour rates table, when with passengers only, are chargeable at the rate of 1d. per ton per trip, or 2d. per ton per voyage; and when entering at or clearing out from the custom-house, or with cargo, at the rate of 2d. per ton per trip, or 4d. per ton per voyage; and so on for steamers plying to or from ports or places, as per Classes 5 and 6 of harbour rates, according to the table.

The rates in the foregoing table are exclusive of the harbour police rates on shipping, and of the town dues for anchorage.

The charges levied for local lights on vessels arriving at or departing from the Port of Greenock (exclusive of those of the Trinity House, the Irish Ballast Board, and the Commissioners of Northern Lights) are the Cloch, Cumbrae, and Toward Lights, under the authority of 27 Geo. 2, 31st May, 1754, as follows:—

One penny per ton on British ships on foreign voyages inwards, and the same charge outwards.

One halfpenny per ton on British ships on coasting voyages inwards or outwards.

Twopence per ton on Foreign ships on foreign voyages, inwards or outwards.

One penny per ton on foreign ships proceeding to, or coming from any port in Great Britain.

The above charges are levied on all vessels, whether with or in ballast.

Rates of Pilotage on the Clyde.

1. From any place betwixt the Cumbray Light and the Cloch Light, or from the anchorages at Fairlie roads, Rothesay Bay, or Quarantine Station, Holy Loch, to Greenock Roads, and mooring, or to the quay and berthing, 1½d. per ton register.

2. When a vessel, inward bound, is boarded outside of the south entrance of Lamlash harbour, the pilot to receive ½d. per ton additional.

3. From any place inside of the Cloch Light, or from the anchorage at Gourock road, or the tail of the bank, to Greenock, 1d.

4. Vessels inward bound, not boarded until nearer Greenock than the Bay of Quick, ½d. per ton.

5. From Greenock to Port Glasgow, 1d. per ton.

6. From Greenock roads, unmooring, and bringing into any of the harbours or docks, a ship, &c., a brigantine, &c.

The same rates chargeable for like distances outwards, with the exception of the charge under article 2, which is leviable on outward-bound vessels only in the event of the pilot being required to proceed with the vessel so far as the south entrance of Lamlash harbour.

All vessels sailing under foreign flags to pay one-half more than the above rates.

Any vessel anchoring at the tail of the bank, outward bound, the pilot, if required, is afterwards to go and assist her out to any distance the master may require, betwixt the Cloch and the Cumbray, without any additional charge to the 1½d. per ton; failing the pilot's attending, another may be hired in his stead, who is to have 1d. per ton for taking the vessel from the tail of the bank out, leaving ½d. per ton as the allowance for piloting from the quay to the tail of the bank.

Any pilot going on board ship (liable to quarantine) at the request of the owner or master, is to be paid, in addition to his pilotage, 4s. 6d. per day of 24 hours for every day he may be detained on board.

Payable to the Trustees for the Maintenance of Dover Harbour under Act 9 Geo. 4.	Payable to the Trustees for the Maintenance of the Royal Harbour of Ramsgate, under Act 32 Geo. 3.	Payable to the Commissioners for the Maintenance of Scarborough Pier, under the Act 45 Geo. 3.
On vessels under 300 tons burthen, for each time of passing, if laden, 1½d. per ton.	On all vessels passing, whether laden or in ballast, if above 300 tons' burthen, ½d. per ton; if under 300 tons, 2d per ton.	On all coasters, if laden, for each time of passing Scarborough pier, 1d. for every five tons burthen.
Coasters to pay only once a year.	Coasters to pay only once a year.	

Dock and Harbour Dues payable to the Dock Company at Kingston-upon-Hull.

	£	s.	d.
For every ship or vessel coming to or going between the port of Kingston-upon-Hull, and any port to the northward of Yarmouth, in Norfolk, or any port to the southward of the Holy Island, for every ton	0	0	2
For every ship or vessel coming to or going between the port of Kingston-upon-Hull, and any port or place between the North Foreland and Shetland, on the east side of England, except as above, for every ton, the sum of	0	0	3
For every ship or vessel trading between the said port of Kingston-upon-Hull, and any other port or place in Great Britain, not before described, for every ton, the sum of	0	0	6
For every ship or vessel trading between the said port of Kingston-upon-Hull and any port or place in the Baltic Seas, and all other ports or places above the Sound, for every ton, the sum of	0	1	3
For every ship or vessel trading between the said port of Kingston-upon-Hull, and any port or place in Denmark, Sweden, or Norway, below Elsinore, or any port or place in Germany, Holland, Flanders, France to the eastward of Ushant, Ireland, the Islands of Guernsey and Jersey, for every ton, the sum of	0	0	10
For every ship or vessel trading between the said port of Kingston-upon-Hull and any island or port or place of Europe to the westward of Ushant, without the Straits of Gibraltar, for every ton, the sum of	0	1	3
For every ship or vessel trading between the said port of Kingston-upon-Hull and any port or place in the West Indies, North or South America, Africa, Greenland, or any place to the eastward of the North Cape of Norway, all places within the Straits of Gibraltar, and all islands and places in the ocean to the southward of Cape St. Vincent, not hereinbefore named, for every ton, the sum of	0	1	9
For every foreign ship or vessel coming to or going (with merchandize) from any of the above named ports or places, double the rates, tonnage, or duties above-mentioned, unless the said ships belong to British owners.			
For every ship or vessel sailing coastwise or otherways, or coming into the said haven in ballast to be laid up, for every ton (coasting duty included), the sum of	0	0	6

N.B.—River craft using the docks and harbour at Hull are not charged any tonnage dues, except in cases where they come from and go to other ports.

Mem.—It is important to note here, that the dues here given include any period of time during which a vessel may lie in the docks. It may also be stated that there is no trans-shipping duty on goods at Hull. There is no general dock-rate on goods; but for merchandize landed on the quays, wharfage is charged. The importer, however, may remove goods by lighters, &c., without placing them on the quays; and the quays are perfectly open to the merchant's labourers, if he choose to land them there, so that the charge of the company may, if the merchant and shipowner so desire, be strictly limited to the tonnage rates on the vessel, as stated in the above table.

An Account of Charges levied on Shipping by the Corporation of Hull.

	£	s.	d.
Buoyage and beaconage on British vessels.			
Vessels under 20 tons	0	2	0
And for every additional 10 tons	0	0	6
Buoyage and beaconage on Alien vessels			
Vessels under 65 tons	0	11	0
65 tons, and under 155 tons	0	14	0
155 — 170 —	0	17	0
170 — 180 tons	1	0	0
And for every additional 10 tons.	0	1	0

The above duty of buoyage and beaconage is payable once during the voyage, coasting or foreign, either inward or outward for the maintenance of the buoys, beacons, lighthouses, and vessels erected and placed in and about the river Humber, by the corporation of the Trinity House, Hull.

Fine on alien vessels importing a cargo, or part of a cargo	1	2	8
Fine on alien vessels exporting a cargo, or part of a cargo	6	13	4

Vessels taking refuge in the port are chargeable only with the buoyage and beaconage.

Authority:—Charter.

A Scale of ancient and usual Dues payable to the Corporation of Hull, upon Ships and Vessels Entering Inwards and Clearing Outwards, Foreign and Coastwise.

250 — 300 —	0	2	6	0	6	0	0	6	0
300 and upwards	0	2	6	0	7	0	0	6	6

Freemen are exempt from anchorage; but freemen, as well as non-freemen, pay jettage. The charge for jettage is not made, unless with goods landed at or taken in at Hull, or within the harbour.

British ships pay no hostage, and nothing for ballast.

The above charges are payable to the corporation by prescription and charter.

No charge made on vessels coming into port in distress, unless they take in cargo.

— 300 tons and upwards	—	0	1	6

Foreign vessels, unpriviledged, double the above rates.

All vessels bringing coals only, and departing in ballast only, half dues. All colliers bringing goods are charged full tonnage duty for the quantity of goods on board, in proportion the goods bear to the register tonnage of such vessel.

Pilotage.

The charges for pilotage, which are levied under the dock commissioners, are as follows:	Per Foot. £	s.	d
From the dock entrance to Downham Reach, for British vessels with one mast	0	1	0
For every British vessel with 2 or more masts	0	1	3
From Downham Reach to Levington Creek, and *vice versâ*	0	0	6
From Levington Creek to Harwich Harbour	0	0	6
Inwards from Harwich Harbour to Downham Reach	0	1	0
Outwards from Downham Reach to Harwich Harbour	0	1	0
For every foreign ship, double the aforesaid rates.			

Ballast.

The charge for ballast is, for Ipswich vessels, 11*d.* per ton, and 1*s.* 5*d.* per ton to all other vessels, which must be taken from the dock commissioners' ballast wharf, under the authority of 1 Vict. c. 74.

Water Bailiff's Dues.

This is a charge of 1*s.* 8*d.* for every vessel not belonging to the port, under charter of corporation.

— loaded with coal, from 20 to 40 dale - 0 0 6

— loaded with coal, from 40 to 50 dale - 0 0 9

— containing above 50 dale - - 0 1 0

Foreign vessels, of whatever burthen, to pay as formerly - - - - 0 5 0

Vessels coming into the harbour for London, or other ports, loaded with coals, and unloading any part of their cargo to take in other goods - 0 2 6

N.B. Vessels coming into the harbour loaded with corn or other goods, and going out again without breaking bulk, pay no berthage.

Harbour Dues (Act 28 Geo. 3. c. 58. s. 34.)

All vessels, whether ships, barques, or boats, (except drag-boats, haddock-boats, yawls, ferry-boats, and pinnaces), shall pay every time they come into the harbour for each ton of four-fifths of their burthen 0 0 1½

Ballast (Act 1 & 2 Vict. c. 55.)

	Per Ton. £ s. d.
Is shipped - - - -	0 1 3
Is landed - - - -	0 0 7

Dock Dues (Act 39 Geo. 3. c. 44. s. 23.)

For every ship or vessel from any port between Buchanness and Eyemouth, including the great canal and the river Clyde, as far down as Greenock, coming by the canal - - - 0 0 4

For every ship from any other port in Great Britain and Ireland - - - - 0 0 8

For every ship or vessel from Norway, Sweden, Denmark, Holstein, Hamburgh, Bremen, Holland, and Flanders, that is, without the Baltic, and no further south than Dunkirk - 0 0 10½

For every ship or vessel coming from the Baltic, all above the Sound, Onega, Archangel, Jersey or Guernsey, Portugal, France, and Spain, without the Straits of Gibraltar, Newfoundland, Madeira, or Western Islands - - - 0 1 1½

For every ship or vessel from within the Straits of Gibraltar, or from America - - 0 1 4

For every ship or vessel coming from the West Indies, Asia, Africa, or the Cape de Verde islands 0 1 8

For every ship or vessel from Greenland or Davis's Straits, first voyage - - - 0 2 0

For every ship or vessel from Greenland or Davis's Straits, second voyage - - - 0 1 8

But, if cleaned, to be charged as in ballast.

For every ship or vessel in ballast coming into the dock - - - 0 0 8

For all ships and vessels remaining in the dock

above 3 calendar months, for each after month, or any part thereof, excepting ships or vessels from Greenland or Davis's Straits - £ 0 0 2¾

For all foreign vessels from any of the before-mentioned ports or places, the aforesaid respective rates, and one-half more; but those privileged under the reciprocity act pay no more than British vessels.

For all loaded vessels not breaking bulk, and for all vessels in ballast which do not take in goods, coming into the present harbour, provided they do not make use of any of the docks, nor remain in the harbour above four weeks, one-half of the aforesaid respective rates or duties; applicable also to vessels taking refuge.

For every ship or vessel going from the port of Leith to any other port in the Frith of Forth to take in a part of a cargo, and return to Leith, upon her return - - - - £ 0 0 2

No ship or vessel is subjected in payment of the aforesaid rates and duties for more than 8 voyages in any one year.

Vessels loaded with coals, sold in retail to the inhabitants of Edinburgh and Leith, who are hereby debarred from entering the said dock, are exempted.

LONDON.

Port or Dock Duties.—The following rates are received by the officers of this port on all vessels, whether British or foreign, entering inwards or clearing outwards, except in ballast, under the authority of act 4 & 5 Will. 4. c. 32.; and the amount so received is paid into the chamber of the city of London, in conformity with the 6th section of the said act; viz.

From or to Denmark, Norway or Lapland, Holstein, Hamburgh, Bremen, or any other part of Germany bordering on or near the German Ocean, Holland, or any other of the United Provinces, Brabant, Antwerp, Flanders, the Netherlands, France (within Ushant), Finland, Russia (without or within the Baltic Sea), Livonia, Courland, Poland, Prussia, Sweden, or any other country or place within the Baltic Sea, ½*d.* per ton.

From or to all other places, 1*d.* per ton.

Ramsgate Harbour Duty (per act 32 Geo. 3 c. 74.), chargeable on all Vessels trading to or from Foreign Ports or Places passing the Harbour, Laden or in Ballast.

For every British vessel, or vessel belonging to foreign states under treaties of reciprocity—

Under 300 tons - - - 2*d.* per ton.
Above 300 — - - - ½*d.* —

For every vessel belonging to foreign states not under treaties of reciprocity—

Under 300 tons - - - 4*d.* per ton.
Above 300 — - - - 1*d.* —

For every British vessel trading coastwise passing the harbour, the British rates not oftener than once a year.

Also 1*d.* per chaldron on coals, and 1*d.* per ton on stone payable for each voyage.

Dover Harbour Duty (per act 9 Geo. 4.), chargeable on all Vessels, British or Foreign.

From 20 to 300 tons burthen *trading* over-sea, for each time passing the harbour, if laden, 1½*d.* per ton; also the like sum for entering the harbour.

Coasters:—The passing and entering, duty once a year; also 3*d.* per chaldron on coals, and ¾*d.* per ton on stone, each time passing.

Cinque Ports Surplus Pilotage Rates (per act 52 Geo. 3. c. 39.), chargeable on all foreign vessels not under treaties of reciprocity.

Not having corn or provisions for the greater part of the cargo, having come through the Cinque Port water, a fourth part of the Cinque Port pilotage rates.

Scarborough Pier Duty, chargeable on coasting vessels.

If laden, passing the pier, one-fifth of a penny per ton.

LONDONDERRY.

Tonnage.—Collected under 2 & 3 Will. 4.

Foreign ships, 6*d.* per ton; British ships from Foreign, 3*d.* per ton; coasters, 2*d.* per ton; vessels in distress, or taking refuge from stormy weather, free; vessels in ballast, free; vessels under 20 tons, free; no deduction on vessels delivering their cargo in part.

Pilotage.—Collected under 2 & 3 Will. 4., and reduced by bye-laws to the following rates, viz.:

British Ships of every Description, or Steam-Boats.

Inwards.

7 feet and under to pay 14*s.*					per foot, and inches in proportion.
Above 7 feet and under 8 to pay at the rate of			2	0	
8	—	9	—	2	2	
9	—	10	—	2	4	
10	—	11	—	2	8	
11	—	12	—	3	0

12	—	13	—	3	9	
13	—	14	—	4	0	
14 feet and upwards at the rate of				4	4	

Vessels of 30 tons burthen, per register, and under, shall pay 10*s.* inward pilotage, and 6*s.* outward pilotage; above 30 tons and not exceeding 40 tons, if bound coastways, and sailing in ballast, only 3*s.* outwards. Boats which have discharged potatoes, under 20 tons, 3*s.* 6*d.* outward pilotage, if British. Wind-bound vessels half pilotage in and half pilotage out, to or from Moville or Quigley's Point. Vessels towed by steamers 1-5th off, if demanded by the master or owner, or by any person for them, on producing a proper order.

All vessels laden with bark, under 120 tons, to pay 6*d.* per foot extra; 120 tons and not exceeding 150 tons, 9*d.*; exceeding 150 tons, 1*s.* per foot extra. All British ships from foreign ports, or, if bound to foreign ports, having on board half their registered tonnage of cargo, or with passengers, to pay 8*d.* per foot extra, in addition to the above charges.

Vessels which have cleared the Lough, and by stress of weather obliged to return:—It is hereby directed that as these vessels have paid the full amount of pilotage, they shall pay but 1-3rd in, and 1-3rd out, of the amount of their outward pilotage to be ascertained by the master's account from the collector of pilotage.

Pilots detained on board vessels, the sum of 2*s.* 6*d.* per day; when the measurement exceeds 150 tons, 3*s.* 6*d.* per day; detaining them unnecessarily in Derry, the like amount.

Ballast.—Collected under the 2 & 3 Will. 4. Masters of vessels may procure their own ballast in the best and cheapest manner; but those who may wish to be supplied by the Ballast office pay, for gravel, 1*s.* 3*d.* per ton; sand or sufficient ballast, 1*s.* per ton.

Anchorage.—Collected from time immemorial. Vessels with one mast, 1*s.* 6*d.*; Vessels with 2 masts or more, 2*s.* 6*d.* Vessels, unless they come to the ship quays, are not charged.

Merchant's Quays.—Vessels arriving or sailing with a cargo are free; the owners of the goods pay the wharfage.

Vessels arriving in ballast for the purpose of repairing, pay 2*d.* per ton on the register tonnage, for the berth and use of the quays.

Vessels coming to the quays for the purpose of discharging or taking in ballast, pay 2*d.* per ton on the quantity discharged or taken in.

Vessels arriving in ballast for the purpose of taking passengers, pay 2*d.* per ton on the register tonnage, for the berth and use of the quays, and the passengers' luggage is free.

Vessels that have discharged their cargoes, and take in ballast for the purpose of taking passengers, pay 2*d.* per ton on their register tonnage; the ballast and the luggage are free.

LYNN.

Town Dues. Foreign and Coasting Vessels.	*s.*	*d.*
Beaconage, per ton delivered - - -	0	1
Stakage, ditto - - - -	0	0½
Anchorage, per vessel - - -	0	6
Bulkbreaks, per vessel, to foreign parts and not belonging to Lynn - - - -	3	4
Ballast, for every 3 tons delivered. *Vide* Ballast.	0	4
Unprivileged vessels:		
Beaconage, per ton in addition - -	0	0½
Stakage, ditto - - - -	0	0½
Ballast — double.		

In addition to these charges, there is also a due of 4*d.* per chaldron (of 25 cwts.) of coals, payable by vessels not belonging to Lynn.

[This due is collected with the town dues. *It is* understood to have been assigned to the courts of guardians of the poor; and the produce of it is paid to the said guardians, and applied in relief of the poor rates.]

These dues are not payable from vessels taking refuge or discharging their cargoes for the purpose of repairs and are under the superintendence of the corporation

Mooring Dues.

2*d.* per ton delivered; unprivileged vessels double.

Not chargeable upon vessels taking refuge, &c.

Under the control of the commissioners under the pilot act.

Pilotage.	*s.*	*d.*
To 10 feet draught of water -	1	6 per foot.
Exceeding 10 feet to 12 feet -	1	9 —
— 12 — 14 ft. 6 in. -	2	0 —
— 14 ft. 6 in. - -	2	6 —

The rate is the same whether loaded or in ballast, and is chargeable each time up and away, as well as on vessels taking refuge or in distress. The company of pilots is under the control of the commissioners under the pilot act.

Ballast is supplied to vessels by private individuals at 1*s.* 3*d.* per ton. This charge is independent of that of ballast, under the head of Town Dues, which is payable from all vessels not belonging to freemen of the borough of King's Lynn.

MONTROSE.

Dues and Charges levied under the 1st Victoria, cap. 99.

Vessels from Foreign Parts.	£	*s.*	*d.*
For all vessels navigating to the southward of the Tropic of Capricorn, per register ton -	0	1	6
Between the Equator and the Tropic of Capricorn -	0	1	3
Between the Tropic of Cancer and the Equator -	0	1	0
To and from any port in North America, Greenland, Davis' Straits Fisheries, and all within the Straits of Gibraltar - - - - - -	0	0	8
To or from any port to the north of Drontheim, in Norway, or from Azores, Madeira, or Teneriffe Islands - - - - -	0	0	7
To or from any port between Gibraltar and Dunkirk, including Dunkirk, and from any port in the Baltic, per register ton - - - -	0	0	5
On Coasting Vessels.			
To or from any port in Great Britain or Ireland, including the islands of Guernsey, Jersey, Alderney, Sark, Man, the Shetland Islands, and Orkneys -	0	0	3
All vessels loaded with coals or lime only, from any port in Great Britain, &c., excepting Scotland -	0	0	2
All vessels loaded with coals or lime only, from any port in Scotland, and all vessels engaged in the herring trade - - - - - -	0	0	1½
All steam vessels from any port in Great Britain, or places enumerated in No. 7, carrying passengers and their luggage exclusively - -	0	0	2
All steam vessels carrying goods and passengers, to pay the same rates as sailing vessels.			

It is in the option of the harbour trustees to charge either the tonnage dues on the voyage inwards, or on the voyage outwards, at the rates specified in the above schedule, according to the distance; and if the charge be made on the voyage outwards, there shall be deducted from it the amount of the dues that may have been previously paid on the voyage inwards; but if such vessels sail in ballast, they shall be charged with dues on the inward voyage only.

All vessels launched at this port pay half tonnage dues on the voyage outwards, according to the distance of the port to which such vessels sail, provided they take goods on board, but if they sail in ballast no dues shall be charged.

All vessels with cargoes are permitted to enter this harbour

for safety or convenience by payment of one-half of the tonnage dues; but if they shall take goods on board (stores for their own use excepted), or break bulk, they shall pay full tonnage dues.

All vessels remaining in harbour pay, after 2 months, 1*d.* per register ton per month in advance.

Plankage.

Each vessel entering the harbour, and loading or unloading goods or ballast within the same, or performing both operations before leaving the harbour, pay, in name of plank money (whether a plank be used or not), as follows, viz.:—

				£	s.	d.
On vessels amounting to and not exceeding			20 tons	0	1	0
—	exceeding	20	and not exceeding 50 —	0	1	6
—	—	50	— 100 —	0	2	0
—	—	100	— 150 —	0	2	6
—	—	150	— 200 —	0	3	0
—	—	200	— 250 —	0	3	6
—	—	250	— 300 —	0	4	0
—	—	300	— 350 —	0	4	6
—	—	350	— 400 —	0	5	6
—	—	400	and upwards -	0	6	6

Local Lights and Beacons.

The harbour trustees are empowered by the before-mentioned act to charge at the rate of ¾*d.* per ton on vessels, for the support of the harbour lights and beacons, but finding that a less rate would cover the expenditure, they reduced it to ½*d.* per ton.

Pilotage.

By virtue of the powers conferred on the harbour trustees, the following rates of pilotage were fixed by them, viz:

Tons Register.	First Boat.		Second Boat.	
	Inwards.	Outwards.	Inwards.	Outwards.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
All under 40 tons	0 6 0	0 4 6	0 5 0	0 4 0
40 and under 50 —	0 7 0	0 5 3	0 6 0	0 4 6
50 — 60 —	0 8 0	0 6 0	0 6 6	0 5 0
60 — 70 —	0 9 0	0 6 9	0 7 0	0 5 6
70 — 85 —	0 10 0	0 7 6	0 7 6	0 6 0
85 — 100 —	0 12 0	0 9 0	0 8 0	0 6 6
100 — 120 —	0 15 0	0 11 3	0 9 0	0 6 9
120 — 150 —	1 0 0	0 15 0	0 10 0	0 7 6
150 — 175 —	1 5 0	0 18 9	0 11 0	0 8 3
175 — 200 —	1 7 6	1 0 7	0 12 0	0 9 0
200 — 250 —	1 10 0	1 2 6	0 13 0	0 9 9
250 — 300 —	1 15 0	1 6 3	0 14 0	0 10 6
300 and upwards.	2 0 0	1 10 0	0 15 0	0 11 3

The third boat is paid the same as the second, and the pilotmaster's charge is 6*d.* per mast on each vessel entering the harbour.

Ballast.

The charge for ballast at this port is 1*s.* per ton, 2*d.* of which is paid to the magistrates and town council for the privilege of removing the sand, and 10*d.* for the cartage thereof.

NEWCASTLE.

Description of Dues, &c.	Rates. British and Privileged Vessels.	Unprivileged Vessels.

PLYMOUTH.

Sallash Dues.

1*s.* per vessel of every description (except Spanish), whether taking refuge in the harbour only, or to deliver the cargo, or whole or in part.

6*s.* per vessel, Spanish, ditto.

SUTTON POOL.

Dues payable to the Sutton Pool Company.—Tolls on Ships.

For all ships or vessels belonging to foreign subjects, coming within the said harbour of Sutton Pool, 4*d.* per ton.

For all ships or vessels belonging to H. M.'s subjects, coming from foreign parts, 2*d.* per ton.

For all ships and vessels belonging to H. M.'s subjects employed in the coasting trade, or coming from Ireland, above 50 tons, 1*d.* per ton.

For all such ships or vessels of 50 tons, or under, ½*d.* per ton.

All vessels employed in fishing, and belonging to the port, 1*l.* 1*s.* per annum.

All barges, lighters, and other craft above 20 tons, 1*l.* per annum.

All barges, lighters, and other craft under 20 tons, 16*s.* per annum.

All ships or vessels lying within the said harbour more than 3 calendar months, (unless under repair at a shipwright's yard) shall pay, at the expiration thereof, the same dues as if she had again entered the harbour; and so on at the expiration of every 3 months she shall continue therein.

For the Use of the Graving Beach.

For every ship or vessel of 60 tons, and under 80 tons, 2*s.* per week.

of 80 tons and under 100 tons, 2*s.* 6*d.* per week.

of 100 tons and under 200 tons, 3*s.* per week.

of 200 tons or upwards, 5*s.* per week.

For the Use of the Mooring Chains.

For every ship under 200 tons, 3*s.* per week.

Above 200 and under 250 tons, 4*s.* per week.

Above 250 tons, 5*s.* per week.

For the anchorage and groundage of every ship or vessel entering or coming into Sutton Pool, 1*s.* 8*d.*

For moorage, 8*d.*

(The aforegoing charges are levied per acts 51 Geo. 3. and 2 Will. 4.)

DEVONPORT.

Dues charged on Vessels entering Mutton Cove, New Passage, and Stonehouse Quay.

Foreign ships, per ton register, 4*d.*

British ships of 80 tons register, each, 6*s.*

British ships under 80 tons, 4*s.* 6*d.*

British sloops, 3*s.* 6*d.*

British barge or hoy 20 tons, and not exceeding 40 tons register, 1*s.*

British boats or vessels under 20 tons, laden, 6*d.*

For vessels lying up, per week, 2*s.* 6*d.*

For the use of the graving beach, 3*s.*

(Levied, by prescription, by the lord of the manor.)

Rates for Pilotage.

1. All British ships of 14 feet water and upwards, except East Indiamen, if boarded without the land off Penlee Point or the Mewstone, which must be known by the western land being open off the Ram Head, shall pay 5*s.* per foot pilotage, if carried into the harbour of Hamoaze, Catwater, or Sutton Pool.

2. British ships under 14 feet water down to 8 feet, boarded as above stated, are to pay 4*l* per foot for the like service.

3. Ships above 14 feet, within that line, are to pay only 4*s.* per foot; and ships under 14 feet, boarded as above, only 3*s.* per foot for the like service.

4. All ships under 8 feet water are to pay as above stated, as if the vessel was of that draught.

5. All the above rates are to be paid in proportion for every half foot water, but no allowance is to be made for any draught of water less than half a foot.

6. In carrying ships to sea from the said harbours, the pilotage is to be in all cases the same as the inward pilotage.

7. All ships which may anchor on their arrival either in Cawsand Bay or Plymouth Sound, are to pay only ½ of the before-mentioned rates of pilotage.

8. All pilots employed to carry ships from any one of the harbours to another, is to be paid the same pilotage as if the said ship had been boarded within the headlands coming from sea.

9. Should any ship above 17 feet water be boarded while the western land is open off the Ram Head by one of the second class pilots, and he runs the ship as far in as either of the buoys on the Panther or Shovel, and is there superseded by one of the first class, he shall be entitled to ½ of the pilotage.

10. Masters of ships taking a pilot at sea

	£	s.	d.
3 leagues without a line drawn from the Ram Head to the Mewstone, are to pay - - -	3	3	0
6 leagues ditto - - - - -	4	4	0
10 leagues ditto - - - - -	6	6	0

and proportionably for intermediate distances.

11. Ships not having British registers are to pay ½ more than ships having British registers, except when such first-mentioned ships shall, by any order of H. M.'s most honourable privy council, be privileged to enter the ports of this kingdom, upon paying the same duties of tonnage as are paid by British ships, in which case such ships and vessels not having British registers shall pay the like rates of pilotage only as are payable by ships having British registers.

12. If a master choose to retain or employ a pilot whilst at anchor, the rate for the lay-days is to be 7*s.* 6*d.* a day, not including the day coming in or going out.

The aforegoing rates are levied by authority of the Trinity Board, under an act of parliament, 6 Geo. 4. cap. 125.

There are no charges levied for local lights or beacons at this port.

There is no regulated charge for ballast, nor any Board appointed for its supply: the parties obtain it on the best terms they can from different quarters, the quarries here abounding with matter fit for the purpose.

PORTSMOUTH.

Harbour Dues payable to the Corporation of the Borough of Portsmouth, per act 3 Vict. in respect of all Ships or other Vessels arriving and casting Anchor, or making fast to the Harbour of Portsmouth, for each and every time such Ship or other Vessel shall enter or come into the Harbour—

Under 30 tons	-	-	-	1*s.* per ship.
30 and under 60 tons	-	-	-	2*s.* —
60 — 150 —	-	-	-	3*s.* —
150 — 200 —	-	-	-	4*s.* —
200 — 300 —	-	-	-	5*s.* —
300 — 400 —	-	-	-	8*s.* —
400 and upwards	-	-	-	10*s.* —

Steam-boats to be charged only once a day.

Exemptions. — Pilot-boats, fishing-vessels, boats not decked, and ships and vessels arriving in distress.

Tonnage dues payable in respect of all ships, boats, or other vessels, lading or unlading, upon or from the wharfs and quays or other works, or in the Camber, within a line drawn from the north-east angle of Mr. Lindegren's Store, to the south-west angle of the New Gun Wharf.

To or from Rye or Salcombe, or any port or place between them, 2*d.* per ton.

To or from any port or place in Great Britain or Ireland, coastwise, 3*d.* per ton.

To or from parts (foreign), 4*d.* per ton.

General Exemptions.—H. M.'s ships, vessels, or boats, or any ship, vessel, or boat in the service or employ of H. M.'s Customs or Excise, or Board of Ordnance.

No charge for local lights and beacons at this port.

Pilotage into and out of Portsmouth Harbour, per Act 6 Geo. 4. c. 125.

Vessels drawing not exceeding 17 feet water, 2*s.* per foot above 17 feet water, 3*s.* per foot.

On unprivileged ships, ½ more than the above rates.

SOUTHAMPTON.

Vessels, whether coasting or foreign, entering the port of the town of Southampton, and not belonging to the port, are chargeable with a boomage duty:—

Under 50 tons	1s. 6d. per vessel.
Above 50 and under 100 tons	2s. 6d. —
100 tons and upwards	5s. —

And all vessels, upon loading or unloading in the roads, at the legal quays, or in the docks, 2d. per ton, register tonnage, each voyage.

The above are collected under the authority of the acts of 43 Geo. 3. c. 21., and 50 Geo. 3. c. 168.

Rates on Shipping in the Southampton Dock, per Act 6 Will. 4 c. 26.

All vessels landing or shipping cargo in the dock, not being coasters, per register ton, 1d., with privilege to remain 3 weeks from date of entry.

	£	s.	d.
Rent after 3 weeks, per register ton, per week	0	0	0¾
Coasters landing cargo or passengers, or loading out, with 1 week's privilege			free.
Rent after 1 week, per register ton, per week	0	0	0¾
Colliers, transhipping their cargoes into vessels in dock, per collier	1	1	0

The docks are part of the port of Southampton, and, consequently, vessels using them are subject to no extra dues of pilotage.

Rates of Pilotage for the Port of Southampton.

From any place within the Isle of Wight to Southampton, Hamble, or Bursledon:	Per Foot. £	s.	d.
For vessels drawing 17 feet water and under	0	2	0
For vessels drawing more than 17 feet	0	3	0
From any place within the Isle of Wight to Eling, Redbridge, Northam, or Chapel, 1s. per foot more than the above rates.			
From Southampton to sea:			
For vessels drawing 17 feet water and under	0	6	0
— 17 feet and not exceeding 20 feet	0	7	0
more than 20 feet	0	9	0
Vessels belonging to the port of Southampton are to pay one-half only of the above rates.			
For removing vessels from one place to another within the Southampton Water, or within the Isle of Wight, the following rates; viz.			
From Southampton to Redbridge, Eling, Northam, or Chapel, and *vice versâ*	0	1	0
From Southampton to Hamble, Bursledon, Lepe, or Buckler's Hard, or Beaulieu, and *vice versâ*	0	1	6

and for any intermediate distance a proportionate part of the above rates.

If a master choose to retain or employ a pilot whilst at anchor, the rate for the lay-days is to be 7s. 6d. per day, exclusive of the day on which the vessel comes in or goes out.

STOCKTON.

Foreign Trade.

	Per Ton Register. £	s.	d.
Vessels inwards, with cargoes	0	0	6
Vessels outwards, with general cargoes	0	0	6
Vessels outwards, with coals	0	0	3

And these vessels 4s. 9d. per mast per voyage.

Coasting Trade.

Vessels inwards, with general cargo,	0	0	4
Vessels inwards, with hazlewood, corfe rods, pit props, old lead, and old iron	0	0	0¾
Old lead and old iron from the port of London considered general cargo.			
Vessels outwards, with general cargo	0	0	4
Vessels with coals	0	0	3

And these vessels pay 3s. 3d. per mast per voyage.

Exempt from Dues.

Ships in ballast, or with manure, lime, bluestone, or ships taking refuge within the Tees by stress of weather.

The above dues are levied and collected under acts 48 Geo. 3. c. 48 and 9 Geo. 4. c. 57.

And all vessels entering the Tees bay, 2s. 6d. per voyage for anchorage and plankage dues to the Stockton Corporation, leased by them from the Bishop of Durham, who holds the same as owner of the port; whether by ancient charter, prescription, or by what right unable to ascertain.

Life-boats, by consent, on vessels above 140 register tons, 6d. per voyage.

Life-boats, by consent, on vessels under 140 register tons, 3d. per voyage.

Ballast discharged at the Middlesboro' Crane at 5d. per ton.

Rates of Pilotage for every Foot of Water the Vessel draws.

		British Ships. s.	d.	Foreign Ships. s.	d.
From the sea and any intermediate place, and *vice versâ*.	To the 8th buoy, being the first safe place of anchorage, as allowed by act of parliament.	1	3	1	9
	To Cargo Fleet	1	9	2	9
From Cargo Fleet, and any intermediate place, and *vice versâ*.	To Middleburg	0	6	1	0
	To Stockton	1	6	2	6

Between the 1st day of October and 1st day of April, 3d. per foot extra, and for every foreign vessel having lee boards, 5s. over and above the said rates to be paid for lee boards from sea, and in the river likewise.

N. B. Owners and masters of ships using the Tees and port of Stockton are not to pay more, or any other rates of pilotage, than the above-mentioned rates; and all pilots acting under the licence and authority of the master, wardens, &c. of this Trinity House, are hereby ordered and directed not to ask, demand, or receive for pilotage any more than the rates as above stated.

SUNDERLAND.

Vessels taking refuge in this harbour are subject to no other charge than pilotage, at the above-named rates.

Vessels not exceeding 50 tons register, arriving from or sailing to any port in Ireland, are not required to take pilots or pay tonnage duty.

Vessels laden, two-thirds laden, or having 20 tons potatoes, without any other goods on board, arriving at the port of Waterford, and retailing same at the quay, are not charged any of the aforesaid rates and duties.

Water Bailiff's Fees.

Late Currency.

Tonnage dues on British and foreign vessels 1*d.* per ton.
Anchorage for vessels not exceeding 20 tons register - - - 1*s.* 6*d.* each vessel.
Ditto, exceeding 20 and not exceeding 50 tons register - - - - 2*s.* 6*d.*
Ditto, exceeding 50 tons register, and upwards - - - - - 5*s.*

Colliers requiring the use of beams, scales, and weights, are supplied with same at the following rates; viz. —

	s.	*d.*
For every vessel not exceeding 50 tons register, for use of each set of beams, scales, and weights - - -	5	0
Ditto, exceeding 50 and not exceeding 100 tons register, ditto - - - - - -	4	0
Ditto — 100 — 150, ditto, ditto -	5	0
For every vessel exceeding 150 and not exceeding 200 tons - - - - -	6	0
Ditto — 200 — 250 — ditto, ditto -	7	0
Ditto — 250 and upwards — ditto, ditto -	8	0

WESTPORT.

Pilotage. — From Clare Island to Dornick, being about 9 miles, and called the Out Pilotage, per vessel - - - -	£	*s.*	*d.*
	1	1	0
From Dornick to the quay, vessels are conducted up and down by a river pilot, the charge per foot up, and the same down - -	0	2	0
Harbour dues, quayage. — Vessels taking in or delivering cargoes, pay per ton - - -	0	0	4
Vessels coming in ballast and departing with cargo, per ton - - - -	0	0	3

N. B. — There is no charge for anchorage in any of the lower roads or harbour.

Ballast. — Delivered to vessels - -	0	1	0

No charge on discharging from the vessel, the master paying the labourers himself, as per agreement.

Lighterage. — When large vessels finish their loading down the river, per ton of goods delivered	0	2	0

The foregoing charges, with the exception of ballast discharged and lighterage, are levied by prescription under the harbour commissioners of Westport.

WEXFORD.

Dues and Charges.	Tonnage.	Ballast.	Pilotage.
	Per Ton. £ *s. d.*	*Per Ton.* £ *s. d.*	*Per Ton.* £ *s. d.*
For every vessel which shall enter within the limits of said harbour, and be entitled to the privileges of a British ship, upon every ton such vessel shall measure - - -	0 0 5		
For every vessel not so entitled - - - - -	0 1 0		
For every ton of ballast taken in by any vessel (though the act levies 1*s.* 3*d.* per ton), there is however at present only levied		0 0 10	
For every ton of ballast discharged from any vessel - -		0 0 2	
For every vessel discharging and receiving cargo, upon every ton such vessel shall measure - - - - - -			0 0 5
For every vessel that shall enter into the harbour or leave the same in ballast, or shall discharge her cargo, or any part thereof, without taking in any new cargo, or shall, without discharging her cargo or any part thereof, take in new cargo, then, in any of those cases, for every ton such vessel shall measure - - - - - - - -			0 0 4
For every vessel taking refuge in the harbour - - -			0 0 2

Steam vessels liable only to one-half the foresaid rates of pilotage.

WHITEHAVEN.

Charges on Vessels in the Foreign and Coasting Trade.

Harbour Tonnage Dues.

Inwards.	£	*s.*	*d.*
On vessels with goods, in whole or in part, or in ballast, viz:

	Foreign vessels not privileged, double rates.			
Pilotage - -	All vessels, in and out, per ton register - - - -	0	0	3
Lights - -	The same rates for Scotch, English, and Irish lights as at other ports. No local lights.			

YARMOUTH.

Dues upon Vessels delivering Cargoes.

3*d.* per ton burthen per register of such vessel, and an additional ½*d.* per ton upon her first entry in each and every year, and also 1*s.* for every vessel for the use of the pier-master.

N. B.—Fishing vessels, with their catch of fish, are exempted (except fishing vessels not belonging to the port of Great Yarmouth, which shall pay 1*s.*, for the use of the pier-master).

Foreign vessels to pay double the duties, except such as are privileged, which pay the like rates only as are payable by vessels having British registers.

Dues upon Vessels taking Refuge.

2*d.* per ton burthen per register of such vessels, and an additional ½*d.* per ton upon her first entry in each and every year, to be paid but once in respect of the same voyage on which the first dues have been paid by such vessel, and 1*s.* for the pier-master.

Foreign vessels to pay double the duties, except such vessels as are privileged by H. M.'s most honourable privy council to enter ports of the kingdom upon paying the same duties of tonnage as are paid by British vessels, in which case such vessels shall pay the like rates only as are payable by vessels having British registers.

Fishing vessels (except fishing vessels belonging to the port of Great Yarmouth) to pay 1*s.* only for the use of the pier-master.

Charges for Pilotage in and out of the Haven, and also the Gatways or Channels.

Into and Out of the Haven.	Per Foot. £	s.	d.
Vessels drawing 8 feet water and under -	0	1	6
— 8 — 9 feet -	0	1	9
Vessels drawing 9 feet water and under 10 feet -	0	2	0
— 10 — 11 — -	0	2	3

—	under 14 —	2	2	0

Charges for Ballast.

5*d.* per ton for every ton of ballast which is brought alongside of the vessel in lighters, and if it is put on board by the lightermen, an additional 6*d.* per ton for heaving.

Local lights and beacons - - nil.

PIMENTO, ALLSPICE, OR JAMAICA PEPPER (Fr. *Poivre de Jamaïque*; Ger. *Nelkenpfeffer*; It. *Pimenti*), the fruit of the *Myrtus pimenta*, a beautiful tree which grows in great plenty on the hills on the north side of Jamaica. The berries are spherical, and, when ripe, of a black or dark purple colour. But, as the pulp is in this state moist and glutinous, the berries are plucked when green; and being exposed in the sun to dry, they lose their green colour, and become of a reddish brown. They are packed in bags and hogsheads for the European market. The more fragrant and smaller

they are, the better are they accounted. They have an aromatic, agreeable odour, resembling that of a mixture of cinnamon, cloves, and nutmegs, with the warm, pungent taste of the cloves. Pimento is used in medicine; but its principal use is in the seasoning of soups and other dishes.

"The returns," says Mr. Bryan Edwards, "from a pimento walk in a favourable season are prodigious. A single tree has been known to yield 150 lbs. of the raw fruit, or 100 lbs. of the dried spice; there being commonly a loss in weight of ¼ in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plenteous crop occurs but once in 5 years. The price in the British market, as may be supposed, fluctuates accordingly; but I believe its average for some years past may be set down at 7*d.* per lb., exclusive of the duty (3*d.*)."—(Vol. ii. p. 372. ed. 1819.) The price of pimento in bond, in the London market, has varied of late years from 4*d.* to 5½*d* per lb.

At the period when Edwards's work was published, the annual imports of pimento from Jamaica, which supplies more than 9-10ths of the pimento brought to England, amounted to about 672,000 lbs., and were decreasing every year — (*loc. cit.*). But at an average of the 3 years ending with 1832, the annual imports were 2,349,893 lbs.; and in 1833 they amounted to 4,844,973 lbs.; since then, however, there has been a considerable falling off in the imports, which in 1841 were only 1,013,400 lbs. We subjoin

An Account of the Quantities of Pimento entered for Consumption in the U. Kingdom, during each of the 3 Years ending with 1842, and of the Amount of the Duties thereon.

Quantities.			Duties.								
1840.	1841.	1842.	1840.			1841.			1842.		
Cwts.	*Cwts.*	*Cwts.*	£	*s.*	*d.*	£	*s.*	*d.*	£	*s.*	*d.*
3,031	2,654	4,074	4,577	2	7	3,900	19	1	1,846	1	4

The duty on pimento, which amounted, when the former edition of this work was published, to 5*d.* per lb., was reduced in 1836 to 3*d.* per lb., and in 1842 to 5*s.* a cwt. Its price averages in the London market from 2½*d.* to 3*d.* per lb., ex. duty.

PINCHBECK (Ger. *Tomback*; Du. *Tombak*; Fr. *Tambac, Similor*; It. *Tombacco*; Sp. *Tambac, Tumbaga*), a name given to one of the many imitations of gold. By melting zinc in various proportions with copper or brass, some alloys result, the colours of which approach more or less to that of gold. This composition is frequently employed as a substitute for gold, in the formation of watch-cases, and various other articles of a like description. Pinchbeck is sometimes called *Tambac*, and sometimes *Similor*, and *Petit-or*.

PINE, OR FIR, a species of forest tree, next, if not superior, to the oak, in point of utility and value. There are above 20 species of pine. They do not bear flat leaves, but a species of spines, which, however, are real leaves. They are mostly, though not all, evergreens; but the appearance of the tree, as well as the quality of the timber, varies with the species, and also with the situation in which it grows. Generally speaking, the timber is hardest and best in exposed cold situations, and where its growth is slow. We shall only notice those species, the timber of which is most in use in this country.

1. SCOTCH PINE (*Pinus sylvestris*) is a native of the Scotch mountains, and of most northern parts of Europe; being common in Russia, Denmark, Sweden, Norway, and Lapland. It is straight, abruptly branched, rising in favourable situations to the height of 80 or 90 feet, and being from 3 to 4 feet in diameter. It is at perfection when 70 or 80 years old. The colour of the wood differs considerably; it is generally of a reddish yellow, or of a honey yellow, of various degrees of brightness. It has no larger transverse septa, and it has a strong resinous odour and taste. In the best timber, the annual rings are thin, not exceeding $\frac{1}{10}$th of an inch in thickness; the dark parts of the rings of a bright reddish colour; the wood hard and dry to the feel, neither leaving a woolly surface after the saw, nor filling its teeth with resin. The best Norway is the finest of this kind, and the best Riga and Memel are not much inferior. The inferior sorts have thick annual rings; in some, the dark parts of the ring are of a honey yellow, the wood heavy, and filled with a soft resinous matter, feels clammy, and chokes the saw. Timber of this kind is not durable, nor fit for bearing strains. In some inferior species, the wood is spongy, contains less resinous matter, and presents a woolly surface after the saw. Swedish timber is often of this kind.

Scotch fir is the most durable of the pine species. It was the opinion of the celebrated Mr. Brindley, "that red Riga deal, or pine wood, would endure as long as oak in all situations." Its lightness and stiffness render it superior to any other material for beams, girders, joists, rafters, &c. It is much used in joiners' work, as it is more easily wrought, stands better, is much cheaper, and is nearly, if not quite, as durable as oak.

Scotch fir is exported from Norway and Sweden, under the name of *redwood*. Norway exports no trees above 18 inches diameter, consequently there is much sapwood; but the heart wood is both stronger and more durable than that of larger trees from other situations. Riga exports a considerable quantity under the name of masts and spars: pieces from 18 to 25 inches diameter are called *masts*, and are usually 70 or 80 feet in length; those of less than 18 inches diameter are called *spars*.—(See RIGA.) Yellow

deals and planks are imported from various parts of Norway, Sweden, Prussia, Russia, &c. Tar, pitch, and turpentine are obtained from the Scotch fir.—(See these titles.) When the tree has attained to a proper age, it is not injured by the extraction of these products.

2. SPRUCE PINE.—Of this there are 3 species: the Norway spruce, or *Pinus abies;* white spruce, or *Pinus alba;* and black spruce, or *Pinus nigra.* These are noble trees, rising in straight stems from 150 to 200 feet in height. They yield the timber known by the name of *white fir,* or *deal,* from its always being imported in deals or planks.

Deals imported from Christiania are in the highest estimation.—(See CHRISTIANIA.) The trees are usually cut into 3 lengths, generally of about 12 feet each: and are afterwards cut into deals by saw-mills, each length yielding 3 deals. The Norway spruce thrives very well in Britain, and produces timber little inferior to the foreign: it is somewhat softer, and the knots are extremely hard.

The white spruce, or *Pinus alba,* is brought from British North America. The wood is not so resinous as the Norway spruce: it is tougher, lighter, and more liable to twist in drying.

The black spruce, or *Pinus nigra,* is also an American tree; but it is not much imported into this country. The black and white spruce derive their names from the colour of the bark; the wood of both being of the same colour.

The colour of spruce fir, or white deal, is yellowish or brownish white; the hard part of the annual ring a darker shade of the same colour; it often has a silky lustre, especially in the American and British grown kinds. Each annual ring consists of two parts; the one hard, the other softer. The knots are generally very hard. The clear and straight-grained kinds are often tough, but not very difficult to work, and stand extremely well when properly seasoned. White deal, as imported, shrinks about $\frac{1}{10}$th part in becoming quite dry.

3. WEYMOUTH PINE, or WHITE PINE (*Pinus strobus*), is a native of North America, and is imported in large logs, often more than 2 feet square and 30 feet in length. It is one of the largest and most useful of the American trees, and makes excellent masts; but it is not durable, nor fit for large timbers, being very subject to dry rot. It has a peculiar odour.

4. SILVER FIR (*Pinus picea*) is a native of the mountains of Siberia, Germany, and Switzerland, and is common in British plantations. It is a large tree, and yields the Strasburg turpentine. The wood is of good quality, and much used on the Continent both for carpentry and ship building. The harder fibres are of a yellow colour, compact, and resinous; the softer nearly white. Like the other kinds of fir, it is light and stiff, and does not bend much under a considerable load; consequently, floors constructed of it remain permanently level. It is subject to the worm. It has been said to last longer in the air than in the water; and, therefore, to be fitter for the upper parts of bridges, than for piles and piers.

5. LARCH (*Pinus larix*). There are 3 species of this valuable tree; 1 European, and 2 American. The variety from the Italian Alps is the most esteemed, and has lately been extensively introduced into plantations in Great Britain. It is a straight and lofty tree, of rapid growth. A tree 79 years of age was cut down at Blair Athol, in 1817, which contained 252 cubic feet of timber; and one of 80 years of age, at Dunkeld, measured 300 cubic feet. The mean size of the trunk of the larch may be taken at 45 feet in length, and 33 inches diameter. The wood of the European larch is generally of a honey yellow colour, the hard part of the annual rings of a redder cast; sometimes it is brownish white. In common with the other species of pine, each annual ring consists of a hard and a soft part. It generally has a silky lustre; its colour is browner than that of the Scotch pine, and it is much tougher. It is more difficult to work than Riga or Memel timber; but the surface is better when once it is obtained. It bears driving bolts and nails better than any other species of resinous wood. When perfectly dry, it stands well; but it warps much in seasoning.

It is in all situations extremely durable. It is useful for every purpose of building, whether external or internal: it makes excellent ship timber, masts, boats, posts, rails, and furniture. It is peculiarly adapted for flooring boards, in situations where there is much wear, and for staircases: in the latter, its fine colour, when rubbed with oil, is much preferable to that of the black oaken staircases to be seen in some old mansions It is well adapted for doors, shutters, and the like; and, from the beautiful colour of its wood when varnished, painting is not necessary.—(We have abstracted these particulars from *Mr. Tredgold's* excellent work, *The Principles of Carpentry,* pp. 209—217.)

PINE-APPLE, OR ANANAS, though a tropical fruit, is now extensively cultivated in hothouses in this country, and is well known to every one. When of a good sort and healthy, it is the most luscious, and, perhaps, the best fruit that this country produces; and when carefully cultivated, is superior in point of quality to that produced in the West Indies. A pine-apple raised at Stackpool Court, Pembrokeshire, and

served up at the coronation dinner of George IV., weighed 10 lbs. 8 oz. — (*Vegetable Substances*, p. 379., *Lib. Entert. Knowledge.*)

PINT, a measure used chiefly in the measuring of liquids. The word is High Dutch, and signifies a little measure of wine. The English pint used to be of 2 sorts; the one for wine, the other for beer and ale. Two pints make a quart; 2 quarts a pottle; 2 pottles a gallon, &c. The pint, Imperial liquid measure, contains 34·659 cubic inches.

PIPE, a wine measure, usually containing 105 (very nearly) Imperial, or 126 wine gallons. Two pipes, or 210 Imperial gallons, make a tun. But, in practice, the size of the pipe varies according to the description of wine it contains. Thus, a pipe of port contains 138 wine gallons, of sherry 130, of Lisbon and Bucellas 140, of Madeira 110, and of Vidonia 120. The pipe of port, it is to be observed, is seldom accurately 138 gallons, and it is usual to charge what the vessel actually contains.

PIPE-CLAY, a species of clay abounding in Devonshire, and other parts of England, employed in the manufacture of various sorts of earthenware, and in bleaching.

PIRACY, consists in committing those acts of robbery and violence upon the seas, that, if committed upon land, would amount to felony.

Pirates hold no commission or delegated authority from any sovereign or state, empowering them to attack others. They can, therefore, be only regarded in the light of robbers or assassins. They are, as Cicero has truly stated, the common enemies of all (*communes hostes omnium*); and the law of nations gives to every one the right to pursue and exterminate them without any previous declaration of war; but it is not allowed to kill them without trial, except in battle. Those who surrender, or are taken prisoners, must be brought before the proper magistrates, and dealt with according to law.

By the ancient common law of England, piracy, if committed by a *subject*, was held to be a species of treason, being contrary to his natural allegiance; and, by an *alien*, to be felony only: but since the statute of treasons (25 Edw. 3. c. 2.), it is held to be only felony in a subject. Formerly this offence was only cognisable by the admiralty courts, which proceed by the rules of the civil law; but it being inconsistent with the liberties of the nation that any man's life should be taken away, unless by the judgment of his peers, the statute 28 Hen. 8. c. 15. established a new jurisdiction for this purpose, which proceeds according to the course of common law.

It was formerly a question whether the Algerines, and other African states, should be considered pirates: but, however exceptionable their conduct might have been on many occasions, and however hostile their policy might be to the interests of humanity, still, as they had been subjected to what may be called regular governments, and had been admitted to enter into treaties with other powers, they could not be treated as pirates.

Pirates having no right to make conquests, or to seize upon what belongs to others, capture by them does not divest the owner of his property. At a very early period of our history, a law was made for the restitution of property taken by pirates, if found within the realm, whether belonging to strangers or Englishmen: but any foreigner suing upon this statute must prove that, at the time of the capture, his own sovereign and the sovereign of the captor were in mutual amity; for it is held that piracy cannot be committed by the subjects of states at war with each other.

Piracy was almost universally practised in the heroic ages. Instead of being esteemed infamous, it was supposed to be honourable. — (*Latrocinium maris gloriæ habebatur.* — *Justin.* lib. xliii. c. 3.) Menelaus, in the Odyssey, does not hesitate to inform his guests, who admired his riches, that they were the fruit of his piratical expeditions — (lib. iv. ver. 90.); and such, indeed, was the way in which most of the Greek princes amassed great wealth. — (*Goguet, Origin of Laws*, vol. i. p. 383. Eng. trans.)

The prevalence of this piratical spirit in these early ages may, perhaps, be explained by the infinite number of small independent states into which the country was divided, and the violent animosity constantly subsisting amongst them. In this way ferocious and predatory habits were universally diffused and kept alive; and it is not to be supposed that those who were at all times liable to be attacked by hosts of enemies, should very accurately examine the grounds upon which they attacked others. According, however, as a more improved system of government grew up, Greece, and a few states, as Athens, Corinth, &c., had attained to distinction by their naval power, piracy was made a capital offence: but though repressed, it was never entirely put down. Cilicia was at all times the great stronghold of the pirates of antiquity: and in consequence of the decline of the maritime forces of Athens, Rhodes, &c., which had kept them in check, they increased so much in numbers and audacity as to insult the majesty of Rome herself; so that it became necessary to send Pompey against them, with a large fleet and army, and more extensive powers than had been ever previously conferred on any Roman general.

During the anarchy of the middle ages, when every baron considered himself a sort of independent prince, entitled to make war on others, piracy was universally practised. The famous Hanseatic League was formed chiefly for the purpose of protecting the ships of the confederated cities from the attacks of the pirates by which the Baltic was then infested. The nuisance was not finally abated in Europe till the feudal system had been subverted, and the ascendancy of the law everywhere secured. In more modern times, some of the smaller West India islands have been the great resort of pirates: latterly, however, they have been driven from most of their haunts in that quarter. They are still not unfrequently met with in the Indian seas east of Sumatra.

Besides those acts of robbery and depredation upon the high seas, which, at common law, constitute piracy, some other offences have been included under that term. Thus, by the stat. 11 & 12 Will. 3. c. 7., if any natural-born subject commits any act of hostility upon the high seas against others of his Majesty's subjects, under colour of a commission from any foreign power, this, though it would only be an act of war in an alien, shall be construed piracy in a subject. And further, any commander or other seafaring person betraying his trust, and running away with any ship, boat, ordnance, ammunition, or goods, or *yielding them up voluntarily to a pirate*, or conspiring to do these acts; or any person assaulting the commander of a vessel, to hinder him from fighting in defence of his ship, or confining him, or causing or endeavouring to cause a revolt on board, shall for each of these offences be adjudged a pirate, felon, and robber, and shall suffer death, whether he be principal, or merely accessory by setting forth such pirates, or abetting them before the fact, or receiving them, or concealing them or their goods after it; and the stat. 4 Geo. 1. c. 2. expressly excludes the principals from the benefit of clergy. By the stat. 8 Geo. 1. c. 24., the trading with known pirates, or furnishing them with stores or ammunition, or fitting out any vessel for that purpose, or in any wise consulting, combining, confederating, or corresponding with them; or the forcibly boarding any merchant vessel, though without seizing or carrying her off, and destroying or throwing any of the goods overboard, shall be deemed piracy; and such accessaries to piracy as are described by the statute of King William are declared to be principal pirates, and all pirates convicted by virtue of this act are made felons without benefit of clergy. To encourage the defence of merchant vessels against pirates, the commanders and seamen wounded, and the widows of such seamen as are slain in any engagement with pirates, are entitled to a bounty, to be divided among them, not exceeding the *one fiftieth* part of the value of the cargo saved; and the wounded seamen are entitled to the pension of Greenwich Hospital. — (11 & 12 *Will.* 3. c. 7.; 8 *Geo.* 1. c. 24.) The first of these statutes also enacts, that if any mariner or inferior officer of any English ship decline or refuse to fight when commanded by the master, or shall utter any words to discourage the other mariners from defending the same, he shall lose all the wages due to him, together with such goods as he hath in the ship, and be imprisoned and kept to hard labour for 6 months.

The 6 Geo. 4. c. 49. enacts that a bounty shall be paid to the officers and crews of such of his Majesty's ships of war as may be engaged in the actual taking, sinking, burning, or otherwise destroying any vessel or boat manned by pirates, of 20*l.* for each pirate taken or killed during the attack, and of 5*l.* for every other man of the crew not taken or killed, who shall have been alive on board the said piratical vessel at the attack thereof.

The same statute (§ 3.) enacts that vessels and other property taken from pirates, proved to have belonged to any of his Majesty's subjects, are to be delivered up to them, on their paying a sum of money as salvage, equal to 1-8th part of the true value of the same.

PISTACHIA OR PISTACHIO NUTS (Ger. *Pistaschen*; Du. *Pistasjes*; Fr. *Pistaches*; It. *Pistacchi*, *Fastucchi*; Sp. *Alfocigos*; Lat. *Pistaciæ*), the fruit of the *Pistachia vera*, a kind of turpentine tree. It grows naturally in Arabia, Persia, and Syria; also in Sicily, whence the nuts are annually brought to us. They are oblong and pointed, about the size and shape of a filbert, including a kernel of a pale greenish colour, covered with a yellowish or reddish skin. They have a pleasant, sweetish, unctuous taste, resembling that of sweet almonds; their principal difference from which consists in their having a greater degree of sweetness, accompanied with a light grateful flavour, and in being more oily. Pistachias imported from the East are superior to those raised in Europe. — (*Lewis's Mat. Med.*)

PITCH (Ger. *Pech*; Fr. *Poix*, *Brai*; It. *Pece*; Sp. *Pez*; Rus. *Smola gustuja*), the residuum which remains on inspissating tar, or boiling it down to dryness. It is extensively used in ship building, and for other purposes. Large quantities are manufactured in Great Britain; but exclusive of these, 13,284 cwts. imported from foreign countries were entered for consumption in 1841. The duty, which was then 10*d.* a cwt., after being reduced in 1842 to 6*d.*, was finally abolished in 1853.

An allowance is to be made for tare on pitch, of 93 lbs. each on Archangel casks, 36 lbs. each on Swedish do., and 56 lbs. each on American do.

PLANE, a forest tree, of which there are 2 species; the Oriental plane (*Platanus Orientalis*), and the Occidental plane (*Platanus Occidentalis.*)

The Oriental plane is a native of the Levant, and other Eastern countries, and is considered one of the finest of trees. It grows to about 60 feet in height, and has been known to exceed 8 feet in diameter. Its wood is much like beech, but more figured, and is used for furniture and such like articles. The Occidental plane is a native of North America, and is one of the largest of the American trees, being sometimes more than 12 feet in diameter. The wood of the Occidental plane is harder than that of the Oriental. It is very durable in water.

The tree known by the name of plane in England, is the sycamore, or great maple (*Acer pseudo-platanus*). It is a large tree, grows quickly, and stands the sea spray better than most trees. The timber is very close and compact, easily wrought, and not liable either to splinter or warp. It is generally of a brownish white or yellowish white colour, and sometimes it is very beautifully curled and mottled. In this state it

takes a fine polish, and bears varnishing well. It is chiefly used in the manufacture of saddle trees, wooden dishes, and a variety of articles of furniture and machinery. When kept dry, and protected from worms, it is pretty durable; but it is quite as liable as beech to be attacked by them. — (*Tredgold*, p. 196.)

PLANKS (Ger. and Du. *Planken*; Da. *Planker*; Sw. *Plankor*; Fr. *Planches, Bordages*; Rus. *Tolstüle olosku*), thick strong boards, cut from various kinds of wood, especially oak and pine. Planks are usually of the thickness of from 1 inch to 4. They are imported in large quantities from the northern parts of Europe, particularly from the ports of Christiania, Dantzic, Archangel, Petersburg, Narva, Revel, Riga, and Memel, as well as from several parts of North America.

PLANTAIN, OR BANANA, the pulpy fruit of the *Musa paradisiaca*, an herbaceous plant, extensively cultivated in most intertropical countries, but especially in Mexico. It is not, like most other fruits, used merely as an occasional luxury, but is rather an established article of subsistence. Being long and extensively cultivated, it has diverged into numerous varieties, the fruit of which differs materially in size, flavour, and colour. That of some is not above 2 or 3 inches long, while that of others is not much short of a foot; some sorts are sweet, and of a flavour not unlike nor inferior to that of a good mellow pear; but the larger kind are, for the most part, coarse and farinaceous. The latter are either used fresh or dried in the sun, in which latter state they are occasionally ground into meal and made into bread. In Mexico, the sweeter sorts are frequently pressed and dried, as figs are in Europe; and, while they are not very inferior to the last mentioned fruit, they are infinitely cheaper.

"I doubt," says M. Humboldt, "whether there be any other plant that produces so great a quantity of nutritive substance in so small a space. Eight or 9 months after the sucker is planted, it begins to develope its cluster. The fruit may be gathered in the 10th or 11th month. When the stalk is cut, there is always found, among the numerous shoots that have taken root, a sprout (*pimpollo*), which, being 2-3ds the height of its parent plant, bears fruit 3 months later. Thus a plantation of bananas perpetuates itself, without requiring any care on the part of man, further than to cut the stalks when the fruit has ripened, and to stir the earth gently once or twice a year about the roots. A piece of ground of 100 square metres of surface will contain from 30 to 40 plants. During the course of a year this same piece of ground, reckoning the weight of the cluster at from 15 to 20 kilog. only, will yield 2,000 kilog., or more than 4,000 lbs., of nutritive substance. What a difference between this product and that of the cereal grasses in most parts of Europe! The same extent of land planted with wheat would not produce above 30 lbs.; and not more than 90 lbs. of potatoes. Hence the product of the banana is to that of wheat as 133 to 1, and to that of potatoes as 44 to 1." — (*Essai sur la Nouvelle Espagne*, tom. ii. p. 388. 2d. ed.)

The banana forms a principal part of the food of the people of Mexico; and the apathy and indolence of the natives in the *tierras calientes*, or hot regions, has been ascribed, and probably with good reason, to the facility with which it supplies them with subsistence. It is by no means in such extensive use in tropical Asia; and comes nowhere in it into competition with corn as an article of food.

PLATE, the denomination usually given to gold and silver wrought into articles of household furniture.

In order partly to prevent fraud, and partly for the purpose of collecting a revenue, the manufacture of plate is placed under certain regulations. Those who carry it on are obliged to take out a licence, renewable annually on the 31st of July. Assay offices are established in different places; and any one selling any article previously to its having been assayed and marked, forfeits 50*l.* — (24 *Geo.* 3. c. 53.) No plate is passed at the assay offices, unless it be of the fineness of the old standard or 11 oz. and 2 dwts., or of the new standard of 11 oz. and 10 dwts. Gold plate, with the exception of gold watch-cases, is to pay a duty of 17*s.* an oz., and silver plate a duty of 1*s.* 6*d.*; but watch-cases, chains, tippings, mountings, collars, bottle tickets, teaspoons, &c. are exempted. The 52 Geo. 3. c. 143. made the counterfeiting, or the transference from one piece of plate to another, of the marks, stamps, &c. impressed on plate by the assayers, felony without the benefit of clergy. But the offence is now punishable by transportation or imprisonment only. — (1 *Will.* 4. c. 66.)

The subjoined account (from *Porter's Progress of the Nation*, iii. 25.) gives a very complete view of the plate manufacture from 1800 downwards. It appears from it that the annual consumption of silver plate has increased from about 800,000 oz. at the commencement of the century, to about 1,050,000 oz. at present. Most persons may, perhaps, be inclined to think that this is not so great an increase as might have been anticipated from the increased wealth and population of the country. But it should be borne in mind that this account refers only to articles of standard silver and gold, and that the great consumption of the precious metals consists in plated and gilt articles, which are now made of a very superior quality. Owing also to the fact of old plate being held in the greatest estimation, but little of it is melted down to be remanufactured, so that the principal consumption is by new families. The returns for the year 1826, in the subjoined Table, afford a striking proof of this. During a considerable portion of that year a crowd of speculators, most of whom were previously worth little or nothing, believed they had made large fortunes, and launched out, with the proverbial ostentation of *parvenus*, into all sorts of lavish expenditure. Hence the wonderful increase in the demand for plate in the course of that year. No doubt, also, the consumption of plate appears less than it really is, from the facility with which the duties are evaded. We subjoin

Account of the Number of Ounces of Gold and Silver Plate upon which Duty was paid, and for which Drawback was allowed, showing the Quantity retained for Home Use in each Year, in the undermentioned Years, from 1800 to 1850.

Year ended 5th January,	Duty paid on		Drawback allowed on		Retained for Home Use.

1850	7,373	735,865	3	76,759	7,370	659,106

It is not easy to account for the nearly stationary demand for plate as exhibited in this return. Most probably it has been mainly occasioned by the greater use of plated articles, which have, to a great extent, been substituted for those made of silver. Perhaps, also, it may be in part accounted for by the fact of the cost of gold and silver having increased from 1809 down to 1849 or 1850. But a large increase in the consumption of the precious metals may now be expected to result from their increasing supply and diminishing value.

PLATINA, a metal which, in respect of scarcity, beauty, ductility, and indestructibility, is hardly inferior to gold, was unknown in Europe till about the middle of last century, when it began to be imported in small quantities from South America. It has since been discovered in Estremadura in Spain, and, more recently, in the Ural Mountains in Asiatic Russia, where it is now raised in very considerable quantities.

Platina is of a white colour, like silver, but not so bright, and has no taste or smell. Its hardness is intermediate between copper and iron. Its specific gravity is about 21·5, that of gold being 19·3; so that it is the heaviest body with which we are acquainted. It is exceedingly ductile and malleable; it may be hammered out into very thin plates, and drawn into wires not exceeding 1-1940th of an inch in diameter. In these properties it is probably inferior to gold, but it seems to surpass all the other metals. Its tenacity is such, that a wire of platina 0·078 inch in diameter is capable of supporting a weight of 274·31 lbs. avoirdupois without breaking. It is one of the most infusible of all metals; but pieces of it may be welded together without difficulty when heated to whiteness. It is not in the smallest degree altered by the action of air or water. — (*Thomson's Chemistry.*)

The late Dr. Wollaston discovered a method of fusing platina, and consequently, of rendering it easily available in the arts. The Russians have, within these few years, issued platina coins of the value of 3, 6, and 20 silver roubles. Platina first began to be an object of attention in Russia in 1824, when 1 pood 33 lbs. were collected. In 1836, the produce amounted to 138 poods 42 lbs. In 1831, a piece of native platina was discovered at Demidoff's gold mines, weighing 29 lbs. 2½ zolt. — (*Official Statements* published by the Russian Government.)

PLATTING, slips of bast, cane, straw, &c. woven or plaited for making into hats, &c. — (See Hats, Straw.)

PLUMS, the fruit of the *Prunus domestica*, are too well known to require any description. They were introduced into England in the 15th century, and are cultivated in all parts of the country. There are said to be nearly 300 varieties of plums.

PLUMBAGO. See Black Lead.

POMEGRANATE, POMEGRANATES (Ger. *Granatäpfel*; Fr. *Grenades*; It. *Granati, Melagrani*; Sp. *Granadas*), the fruit of the pomegranate tree (*Punica granatum*). This tree, which grows to the height of 15 or 20 feet, appears to be a native of Persia, whence it has been conveyed, on the one side, to Southern Europe, and on the other to the tropical parts of Asia, and eventually to the New World. The fruit is a pulpy, many-seeded berry, the size of an orange, covered with a thick, brown, coriaceous rind. The pulp has a reddish colour, and a pleasant subacid taste. The value of the fruit depends on the smallness of the seed and the largeness of the pulp. The finest, called by the Persians, *badana*, or seedless, is imported into India from Caubul and Candahar, where the pomegranate grows in perfection. The tree thrives all the way to the equator: but, within the tropics, the fruit is hardly fit for use. The pomegranates brought to England from the south of Europe and the West Indies are very inferior to those of Persia. — (*Private information.*)

POPLAR (Ger. *Pappel, Pappelhaum*; Du. *Popelier*; Fr. *Peuplier*; It. *Pioppa*;

Sp. *Alamo*; Lat. *Populus*). Of the poplar (*Populus* of botanists) there are about 15 species described; of these 5 are common in England; viz. the common or *White*, the *Black*, the *Aspen* or trembling poplar, the *Abele* or great white poplar, and the Lombardy poplar. In most favourable situations, the white poplar grows with great rapidity, sometimes sending forth shoots 16 feet long in a single season. The wood is soft, and not very durable unless kept dry; but it is light, not apt either to swell or shrink, and easily wrought. The Lombardy poplar grows rapidly, and shoots in a complete spire to a great height; its timber does not differ materially from that of the white poplar. It is very light; and is, therefore, well adapted for the manufacture of packing-cases. None of the species is fit for large timbers.—(*Tredgold's Principles of Carpentry; Veget. Sub., Lib. of Entert. Knowledge.*)

POPULATION. It would be quite inconsistent with the objects and limits of this work, to attempt giving in this place any explanation of the laws which regulate the progress of population. It may, indeed, be thought that the word has no business here. However, as it is frequently of importance in commercial questions, and in others affecting commercial interests, to be able to compare the consumption of an article with the population, we believe we shall gratify our readers by laying before them the following Tables, showing the results of the different censuses that have been taken of the population of Great Britain and Ireland, and showing also the increase in the population of the principal British cities.

I.—Table exhibiting the Population of Ireland in 1821, 1831, 1841, and 1851, according to the Censuses of these Years, and showing the Increase or Decrease per Cent. in the intervening Periods.

PORCELAIN, or CHINA WARE, a very fine species of earthenware. The first specimens of this fabric were brought to Europe from China and Japan. The best Chinese porcelain is of a very fine texture, white, semi-transparent, and sometimes

beautifully coloured and gilt; is infusible, and not subject to break by the sudden application of heat or cold. The Chinese term for the article is *tse-ki*. But the Portuguese, by whom it was first brought in considerable quantities into Europe, bestowed on it the name of porcelain, from *porcella*, a cup.

Common earthenware, sometimes of a very good quality, is manufactured in Canton, Fokien, and several other provinces of China. But it is a curious fact, that the beautiful porcelain imported into Europe is made only in the town of Kingtesing, in the province of Kyangsi. Its manufacture is fully described by Duhalde, in his account of China, under the head "Porcelain and China ware." The porcelain of Japan is decidedly inferior to that of China; very little is imported, and it is valued only as a curiosity.

After porcelain began to be imported, its beauty soon brought it into great request, notwithstanding its high price, as an ornament for the houses and tables of the rich and the great. The emulation of European artists was in consequence excited. Very little information was, however, obtained as to the mode of manufacturing porcelain till the early part of last century, when the process was developed in a letter from a French Jesuit in China, who had found means to make himself pretty well acquainted with the subject. The knowledge that thus transpired, and the investigations of Reaumur and other chemists, prepared the way for the establishment of the manufacture in Europe. It was first commenced at Dresden, which has been famous ever since for the beauty of its productions; but the finest and most magnificent specimens of European china have been produced at Sèvres, in France, in the factory carried on at the expense of the French government.

British Porcelain Manufacture.— This, though unable to boast of such fine specimens of costly workmanship as have been produced at Sèvres and Dresden, is of much greater national importance. Instead of exclusively applying themselves to the manufacture of articles fitted only for the consumption of the rich, the artists of England have exerted themselves in preference to produce China ware suitable for the middle classes; and have succeeded in producing articles at once excellent in quality, elegant in form, and cheap. We are principally indebted for the improvements made in this important manufacture to the genius and enterprise of the late Mr. Josiah Wedgwood. This extraordinary man owed none of his success to fortuitous circumstances. Devoting his mind to patient investigation, and sparing neither pains nor expense in accomplishing his aims, he gathered round him artists of talent from different countries, and drew upon the stores of science for aid in pursuing the objects of his praiseworthy ambition. The early and signal prosperity that attended his efforts served only as an incentive to urge him forward to new exertions, and as means for calling forth and encouraging talent in others, in a manner calculated to promote the welfare of his country. Previously to his time, the potteries of Staffordshire produced only inferior fabrics, flimsy as to their materials, and void of taste in their forms and ornaments; the best among them being only wretched imitations of the grotesque and unmeaning scenes and figures portrayed on the porcelain of China. But such have been the effects resulting from the exertions and example of this one individual, that the wares of that district are now not only brought into general use in this country, to the exclusion of all foreign goods, which had been largely imported, but English pottery has since been sought for and celebrated throughout the civilised world, and adopted even in places where the art was previously practised. An intelligent foreigner, M. Faujas de St. Fond, writing on this subject, says, — "Its excellent workmanship, its solidity, the advantage which it possesses of sustaining the action of fire, its fine glaze impenetrable to acids, the beauty and convenience of its form, and the cheapness of its price, have given rise to a commerce so active and so universal, that, in travelling from Paris to Petersburg, from Amsterdam to the farthest part of Sweden, and from Dunkirk to the extremity of the south of France, one is served at every inn upon English ware. Spain, Portugal, and Italy are supplied with it; and vessels are loaded with it for both the Indies and the continent of America." — See the quotation in the *Account of the Porcelain Manufacture*, p. 16., in *Lardner's Cyclopædia*; for the statistical details with respect to the manufacture, see the article EARTHENWARE, in this work.)

The British porcelain manufacture is principally carried on at the potteries in Staffordshire, and at Worcester, Derby, Colebrook Dale, and other places.

Murrhine Cups.—It was long a prevalent opinion among modern critics, that the *vasa murrhina*, so famous in Roman history, were formed of porcelain. Pompey was the first who brought them to Rome from the East, about 64 years before the Christian æra. They were used as drinking cups, and fetched enormous prices; Nero having given, according to the common method of interpreting, 58,000*l.* for a single cup! The extravagance of the purchaser may, in this instance, be supposed to have increased the price; so that the degree of estimation in which these cups were held may be more accurately inferred from the fact, that, of all the rich spoils of Alexandria, Augustus was content to select one for his share.—(*Sueton.* lib. ii. c. 71.) Pliny (lib. xxxvii. c. 2.) says they were made in Persia, particularly in Karamania. But those who contend they were China ware chiefly found on the following line of Propertius: —

Murrheaque in Parthis pocula COCTA FOCIS.—(Lib. iv. Eleg. 5. lin. 26.)

In despite, however, of this apparently decisive authority, Le Blond and Larcher have, in two very learned dissertations (*Mémoires de l'Academie des Inscriptions*, tom. xliii.), which Robertson has declared are quite satisfactory, endeavoured to prove that the *vasa murrhina* were formed of transparent stone, dug out of the earth in some Eastern provinces, and that they were imitated in vessels of coloured glass.—(*Robertson's Disquisition on India*, note 39.) Dr. Vincent (*Commerce and Navigation of the Ancients*, vol. ii. p. 723.) inclines to the opposite opinion; but the weight of authority is evidently on the other side. At all events, it is plain that if the murrhine cups were really porcelain, it had been exceedingly scarce at Rome, as their price would otherwise have been comparatively moderate. But it is most probable that the ancients were wholly unacquainted with this article; which, indeed, was but little known in Europe till after the discovery of the route to India by the Cape of Good Hope.—(For some further details on this question, see *Kippingii Antiq. Rom.* lib. iv. c. 3.)

PORK, BACON, and HAMS consist, the first of the fresh or uncured flesh of the hog, the second of the sides and belly when cured or salted, and the third of the hind legs when cured.

These form important articles of food in this quarter of the world and in America. But they are rejected by many nations, and among others by the Jews and Moham-

medans, partly from superstitious motives, but in part, also, from sanitary considerations.—(See the profound work of *Michaelis on the Laws of Moses*, iii. 230. *Eng. Trans.*)

Previously to 1842, the duty on bacon and hams being 28*s.* a cwt. was in effect prohibitory of the former, and little or none was imported. It was then, however, reduced to 14*s.* a cwt. In 1846, the duty on bacon was entirely repealed, and that on hams reduced to 7*s.* a cwt.; the latter being, also, repealed in 1853. There has been, in consequence of the abolition of the duty, a great increase in the demand for foreign bacon. The imports in 1852, which amounted to 13,952 cwts., having increased, in 1857, to 346,083 cwts.; the exports of foreign bacon in the same year being only 23,368 cwts. The imports of hams are much less considerable. We subjoin

An Account of the Quantities of Bacon, Hams, and Pork imported into the U. Kingdom during the Year 1857, specifying the Countries whence they were brought, and the Quantities brought from each.

PORT. See WINE.

PORT-AU-PRINCE, the capital of Hayti, or St. Domingo, in lat. 18° 33′ 42″ N., lon. 72° 27′ 11″ W. Population variously estimated, probably from 15,000 to 18,000. It is situated on the west coast of the island, at the bottom of a large and deep gulph. It was founded in 1749; since which, with few intervals, it has been the capital of French St. Domingo. It is partially fortified; the harbour being protected by a battery on a small island at a little distance from the shore. The country round is low and marshy; and the heat in the summer months being excessive, the climate is then exceedingly unhealthy. The buildings are principally of wood, and seldom exceed 2 stories in height.

Harbour.—The entrance to the harbour is between White Island and the southern shore. The depth of water varies from about 18 feet at ebb to about 21 do. at full tide. It is customary, but not compulsory, to employ a pilot in entering the harbour. They are always on the look-out. Ships moor head and stern, at from 100 to 500 yards from shore; loading and unloading by means of boats, as there are neither docks nor quays to assist these operations. The harbour is perfectly safe, except during hurricanes, which may be expected from August to November.

Hayti is, next to Cuba, the largest of the West India islands. It was discovered by Columbus, on the 5th of December, 1492. Its greatest length may be about 400 miles, and its greatest breadth 155. Its superficies is estimated at about 29,500 square miles. Three principal chains of mountains (from which emanate smaller mountain arms) run from the central group of Cibao. The whole of these are described as fertile and susceptible of cultivation, even to their summits; affording great variety of climate, which, contrary to what is the fact in the plains, is remarkably healthy. The soil of the plains is, in general, a very rich vegetable mould, exceedingly fertile, and well watered. There are several large rivers, and an immense number of smaller streams, some tributary and others independent. The ports are numerous and good. The harbour of Cape St. Nicholas, the fortifications of which are now in ruins, is one of the finest in the West Indies; being inferior only to the Havannah. Timber of the finest description is most abundant; and mines of gold, silver, copper, tin, iron, and rock salt, besides other natural productions, are said not to be wanting. The French were therefore fully justified in designating this magnificent island, *La Reine des Antilles*. The principal towns, besides Port-au-Prince, are Cap Haïtien, formerly Cap François, on the north coast, St. Domingo on the south, Les Cayes, and Jacmel.

Previously to the revolt of the blacks, Hayti was divided in unequal portions between the French and Spaniards; the former possessing the west, and the latter the eastern and larger portion of the island. The revolution began in 1789; and terminated, after the most dreadful massacres, and the destruction of a vast deal of property, in the total abolition of slavery, and the establishment of an independent black republic. The Spanish part of the island and the French, after being consolidated in 1820, were again separated in 1844. Since which time, the former has been, speaking generally, a mock empire, and the latter a mock republic. But in both disorder and revolution have been recurring at short intervals.

Population.—In 1789, the French part of Hayti was by far the most valuable and flourishing colony in the West Indies. The population was estimated at 524,000; of which 31,000 were white, 27,500 people of colour, and 465,500 slaves. The Spanish part of the island was much less densely peopled; the number in 1785 being estimated at 152,640; of which 122,640 were free people of all colours, mostly mulattoes, and the rest slaves. The population of the entire island, in 1827, was estimated by Humboldt at 820,000, of whom 30,000 were whites: but there are good grounds for thinking that that estimate was exaggerated, and that the present population does not exceed 700,000 or 750,000.

Exports.— There has been an extraordinary falling off in the trade of Hayti since the revolution. The exports of sugar, for example, which amounted to above 141,000,000 lbs. in 1789, have wholly disappeared. The cultivation of the cane has not, however, been entirely relinquished; but its produce is now wholly converted into tafia, an inferior description of rum, of which the blacks are excessively fond. The produce of coffee has, also, fallen off; and its export, which may amount to about 60,000,000 lbs., is in great part derived from the old coffee plantations of the French, which are now almost wild. The remaining articles of export consist principally of mahogany, logwood, and other dye and fancy woods, which merely require to be cut down; with small quantities of cotton, cacao, tortoiseshell, honey, wax, &c. But so inconsiderable is their amount, that the entire value of the exports is not supposed to exceed 30,000,000 fr. or 1,200,000*l.*, not certainly 1-10th part of what it would amount to were the island occupied by a reasonably intelligent and industrious population. The greater part of its foreign trade is with the U. States: that with France and England is nearly equal. In 1857, the value of our exports to Hayti amounted to only 269,000*l.*, principally consisting of cottons (154,909*l.*) and linens. It is an instructive fact that it took from us no machinery, and only 2,511*l.* worth of iron!

Besides its imports from England, it imports flour, rice, mess and cargo beef, fish, &c., and timber, from the U. States; wines, satins, liqueurs, jewellery, toys, haberdashery, &c. from France; and linens, canvas, gin, &c. from Holland and Germany; but the amounts of the latter are inconsiderable.

The greater part of this extraordinary falling off is to be accounted for by the change in the condition of the inhabitants. The blacks, being no longer compelled to labour, and regarding with abhorrence the culture of sugar and the other occupations in which they had been principally engaged, sunk into a state of idleness and apathy. The condition of all the great branches of industry that were formerly carried on became, in consequence, most deplorable, and the commerce of the island was reduced within the narrowest limits. Its successive rulers have endeavoured, though with little success, to bring about a revival of industry. The *Code Rural*, enacted for this purpose by Boyer in 1826, was exceedingly stringent, its principal provisions being in fact copied from the regulations as to slaves embodied in the *Code Noir*. But even this code had little influence; and as a proof of the low state of industry in the island, it is enough to refer to the previous statements. And this result is, after all, only what should have been anticipated. To expect that half-civilised Africans, under a burning sun, and without the wants or desires of Europeans, should be equally industrious, is to expect what is contradictory, and all but absurd.

Port-Charges.—The charges on a native and foreign ship of 300 tons are the same, and as follows: —

	Dollars.
Tonnage duty	300
Administrator	12
Commandante de place	12
Commissaire de guerre	12
Commandante de port	12
Director of customs	12
Interpreter	12
Treasurer	12
Doctor	12
Stamps for entry and clearing	16 50
Fountain tax	20
Pilotage	2
Total, currency	434 50

Custom-house Regulations. — On arrival, the master of the vessel proceeds to the Custom-house with the interpreter, where he makes his declaration whether he discharges his cargo in the port. If he discharge, his invoices are translated, and the goods verified in the presence of the consignee, who is allowed to land and store them. On clearing outwards, the merchant pays the duties on the cargoes both ways, and exhibits a receipt at the office of the commissaire de guerre, commandante de place, and commandante de port, who sign a certificate that the vessel may depart.

Warehousing.—The warehousing and bonding system is established by law, but there are at present no buildings appropriated to the reception of bonded goods. Until very recently, goods were permitted to be bonded under this law in the merchants' stores; a late order has, however, suspended that indulgence. The rate is 1 per cent. per year, and no allowance made for waste or loss. Goods exported in the same vessel they arrive in, pay, if landed, ½ per cent. and wharfage fees.

Money.—The weight of the dollar is 216 grains; the ½ and ¼ dollar being in proportion. But nearly ⅛ the weight of the coin consists of tin or other alloy; so that the value of the dollar does not exceed 1*s.* 6*d.* sterling.

Weights in Hayti are divided as in avoirdupois and apothecaries' weight; but they are about 8 per cent. heavier than British weights.

Measures.— Same as those used in France.

Regulations as to Trade.—It is enacted, that all persons exercising any trade or profession, excepting that of cultivating the soil, must be provided with a patent or licence to carry on such trade or profession; that all strangers admitted as merchants into the republic, must, in the first place, procure the permission of the president to take out a patent, which, when obtained, only authorises them, under heavy penalties, to carry on a wholesale business, not with each other but with the Haytians, in the open ports, which are Port-au-Prince, Gonaives, Cap Haitien, Port-à-Plate, Santo Domingo, Jacmel, Les Cayes, and Jérémie. The minimum quantities of goods that may be sold are fixed by the same law. The Haytian consignee may be also a retailer, on taking out a corresponding patent.

A charge of 2,000 dollars is made for each patent to a foreigner trading to Port-au-Prince; 1,800 for Les Cayes, Cap Haitien, and Jacmel; and 1,600 for each of the remaining ports.

Duties.—The duties on all imported commodities consigned to foreign merchants are 17½ per cent. on an established tariff, whether they be brought in native or foreign ships, with the exception of those from the United States, which pay an additional 10 per cent. on the amount of the duties. Goods consigned to native merchants pay only 16½ per cent.

The coasting trade is entirely confined to Haytian citizens.

The commerce of Port-au-Prince is carried on by various classes of persons. The imports from Europe and America are principally consigned to European and North American commission houses, besides a few Haytian establishments.

We have derived these details with respect to Hayti partly from the published *Notes* of Charles Mackenzie, Esq., late consul in that island; and partly from consular and other returns.

PORT LOUIS, OR NORTHWEST PORT, the capital of the Mauritius, at the bottom of a triangular bay, the entrance to which is rather difficult, in lat. 20° 9′ 56″ S., lon. 57° 28′ 41″ E. Every vessel approaching the harbour must hoist her flag and fire 2 guns; if in the night, a light must be shown; when a pilot comes on board, and steers the ship to the entrance of the port. Though not very extensive, the anchorage in Port Louis is generally quite safe; and the dangers to which ships in it were sometimes exposed during the hurricane season have been in great measure obviated by the formation of docks. It used to be reckoned a convenient port for the careening and repair of vessels. But, owing to the greatly increased magnitude of the ships and steamers which now navigate the Indian seas, increased means of accommodation in this

respect became highly desirable; and these, we are glad to say, will speedily be supplied by the formation of a dry dock capable of admitting the largest ships, which is (1859) being constructed. The houses are low, and principally built of wood. The town and harbour are pretty strongly fortified. Almost all the foreign trade of the island is carried on here.

The Mauritius was so called by the Dutch in honour of Prince Maurice; but it was first settled by the French in 1720; and is indebted for most part of its prosperity to the skilful management of its governor, the famous M. de la Bourdonnais. It was taken by the English in 1810, and was definitively ceded to us in 1814.

Exports and Imports, &c.—Mauritius is pretty fertile, a considerable part of the surface being, however, occupied by mountains. Its shape is circular, being about 150 miles in circumference. The climate is healthy, but subject to hurricanes. The principal product is sugar, which is now cultivated to the almost total neglect of everything else, and the island may, indeed, be said to have become an immense sugar-factory. But it also produces excellent coffee, indigo, and cotton. The blackwood or ebony of the Mauritius is very abundant, and of superior quality. Very little corn or grain of any kind is raised; most articles of provision being imported. Previously to 1825, the sugar and other articles brought to Great Britain from the Mauritius were charged with the same duties as the like articles from India: but in the above-mentioned year this distinction was done away, and it was enacted (6 Geo. 4. c. 111. s. 44.), that all goods of the Mauritius should, on being imported into the U. Kingdom, be subject to the same duties and regulations as the like goods from the British West Indies; and that the trade with the Mauritius should be placed as nearly as possible on the same footing as that of the West India islands.

This was a great boon to the Mauritius, but it is not to it that the increase of its sugar cultivation is to be ascribed. The emancipation of the slaves was as injurious to the planters here as to those in the West Indies; but owing to its more convenient situation, vast numbers of Hill-coolies and other labourers from India, and some, also, from Madagascar, have been introduced into the Mauritius, and it is to the supply of labour that has thus been obtained that the prosperity of the island is wholly owing. All the best insular authorities admit that but for the immigration it would have retrograded; the emancipated negroes would not have engaged in any sort of severe labour; and it is in part by the example of the immigrants, but more through necessity, that the blacks have been stimulated to exert themselves. The number of Indian immigrants has been as follows, viz.: —

Number of immigrants at the end of 1857:—			
Males			107,072
Females			35,462
			142,534
Introduced in 1858:			
Men	18,435		
Women	6,963

The imports of sugar into the U. Kingdom from the Mauritius have increased from 516,076 cwt. in 1840, to 1,184,343 cwt. in 1857. But this statement does not give a fair view of the real increase of production, inasmuch as a far greater quantity of sugar is now sent to France, the Cape of Good Hope, and Australia, than formerly. Thus, of the total shipments from the island in the season up to the 9th February, 1859, amounting to 177,613,000 lbs., only 107,409,000 lbs. were for the U. Kingdom, 26,563,000 lbs. being for France, 877,000 lbs. for the Cape of Good Hope, and the residue for Australia. The entire exports amounted in 1855 to 126,000 tons, and in 1858 to 118,000 tons; but, owing to the increase of price, the smaller produce brought more money than the greater. With the exception of rum, molasses, and ebony, the other exports are too trifling to deserve notice.

The principal imports consist of provisions, particularly grain and flour; the supply required for the use of the island being almost entirely derived from the Cape of Good Hope, Madagascar, India, Reunion, &c. Cotton stuffs; iron, hardware and cutlery; machinery, copper, linens, wine, coals, &c., are also largely imported. Guano has of late years been extensively imported, and has been found to be of the greatest service in the raising of sugar. The total declared value of the exports from the U. Kingdom to the Mauritius in 1857 amounted to 663,554*l.*

In 1856 the population of the Mauritius amounted, inc. military and seamen, to 261,651 souls; of whom between 10,000 and 12,000 were whites. The population of the Seychelles—small islands dependent on the Mauritius—amount to about 8,000.

Monies, Weights, and Measures.—According to the regulations of government, the franc is deemed equal to 10*d.*, and the Spanish dollar to 4*s.* 4*d.* The government accounts are kept in sterling money; but merchants, shopkeepers, &c. keep their accounts in dollars and cents, and dollars, livres, and sous.

The measures and weights are those of France previously to the Revolution. 100 lbs. French=108 lbs. English; the French foot is to the English foot as 100 to 93·89, but in practice they are supposed to be as 16 to 15. The velte=1 gallon 7·8 pints English; but in commercial transactions it is always taken at 2 gallons.

Duties, &c.—A new system of customs duties was introduced in 1854. Spirits are now charged with a duty of 6*s.* a gall.; ale, beer, and porter 9*d.* per 12 bottles, or 15*s.* per hhd.; silk manufactures, jewellery, plate, woollen and leather manufactures, hardware and cutlery, glass, and all other goods not enumerated, and not especially exempted from duty, 6 per cent. *ad valorem*. The exemptions comprise bread and biscuit, corn and grain unground, flour, provisions, machinery, books, animals, &c., &c.

A duty of 4½*d.* per 100 lbs., charged on all sugar when exported, was reduced in 1853 to 3*d.* per 100 French lbs.

The following charges are leviable, by an Ordinance of 1852, on all vessels entering or clearing from Port Louis:—

	£	s.	d.
For Pilotage.—Vessels remaining at the bell-buoy, per foot	0	2	6
Vessels entering the harbour:—			
Piloting inwards and mooring, per foot	0	5	0
Do. outwards and unmooring, per foot	0	5	0
Vessels under 100 tons of burthen entering the harbour shall not be required to take a pilot.			
For the Use of Warps and Boats, viz. Inwards, for each vessel of 100 tons burthen and above	3	0	0
The same, if the port office steamer be employed	1	0	0
Outwards	3	0	0
For the Use of Boats without Warps.—For each launch (manned) per day	1	10	0
Anchorage Dues.—Vessels trading with Madagascar or the dependencies of Mauritius per ton of register	0	0	3
Such vessels shall not be charged anchorage dues more than twice in any one year.			
Vessels entering the harbour in distress, or for repairs, provided that they do not receive cargo, nor break bulk, or that they discharge cargo solely for the purpose of repairs, and that the whole of the same be reshipped (excepting any part condemned as damaged)	Free.		
Vessels entering the harbour, but not breaking bulk nor receiving cargo, per ton of register	0	0	4
All other vessels breaking bulk or receiving cargo, per ton of register	0	0	8
Port and Police Clearance.—On vessels trading with Madagascar and dependencies of Mauritius, each	0	5	0
On all other vessels	0	15	0

	£	s.	d.
For the dredging Service.—An additional proportional amount on all other port charges (excepting the charges for the use of the steamer and for remaining swung upon the warps), levied upon all vessels, except those which remain at the bell-buoy, viz.			
On vessels under 350 tons, per register, 10 per cent.			
Of 350 tons or upwards, — 15 per cent.			
For tugging vessels by the post office steamer inwards or outwards, viz.—			
For vessels under 100 tons, each	3	0	0
— from 100 to 150 tons, — —	4	0	0
— — 150 to 200 — —	5	0	0
— — 200 to 400, per ton —	0	0	6
— above 400 tons, each additional 100 tons	1	0	0

§ 2. In order to prevent the crowding of the harbour with hulks, the harbour-master is empowered to grant licences for such a number of careening hulks as shall be fixed in the port regulations; and every such hulk is liable to a charge of 9*l.* quarterly, payable in advance to the harbour-master.

§ 3. All vessels abandoned at this port and sold must either be broken up or fitted for sea within six months from the date of sale, subject to a charge of 1*l.* per diem for every day after six months, during the time that the vessel remains not broken up or not fitted for sea.

§ 4. The owner or owners of all such careening hulks and other vessels abandoned, are bound to have a keeper and two men on board of each, and to moor the same severally with four bower anchors, two a-head and two a-stern, in the situation pointed out by the harbour-master. Any such owner or owners failing to comply with these provisions is subject to a penalty not exceeding 50*l.*

This island is, as everybody knows, the scene of St. Pierre's inimitable tale of Paul and Virginia. The wreck of the St. Geran, so striking and affecting an incident in the story, is a real event which took place on the 18th of August, 1744.—(This article has been compiled from information supplied by the *Port Louis Commercial Gazette*, the *Almanack de l'Isle Maurice*, &c.)

PORTO-RICO, the capital of the valuable Spanish island of the same name, on the north side of the island, on a peninsula joined to the main land by a narrow isthmus, lat. 18° 29′ 10″ N., lon. 66° 7′ 2″ W. The fortifications are very strong: the town, which stands on a pretty steep declivity, is well built, clean, and contains about 16,000 inhabitants.

Harbour.—The harbour of Porto-Rico has a striking resemblance to that of the Havannah, to which it is but little inferior. The entrance to it, about 300 fathoms in width, has the Morro Castle on its east side, and is defended on the west side by forts erected on 2 small islands. Within, the harbour expands into a capacious basin, the depth of water varying from 5 to 6 and 7 fathoms. On the side opposite to the town there are extensive sand banks; but the entrance to the port, as well as the port itself, is unobstructed by any bar or shallow.

The island of Porto-Rico lies in the same latitude as Jamaica. Though the smallest of the greater Antilles it is of very considerable size. Its form is that of a parallelo-

gram; being about 110 miles in length from east to west, with a mean breadth of about 38, containing an area of 3,750 square miles. Surface pleasantly diversified with hills and valleys; soil generally fertile. It has, however, suffered much from hurricanes; those of 1742 and 1825 having been particularly destructive. Since the breaking up of the old Spanish colonial system, the progress of Porto-Rico has hardly been less rapid than that of Cuba. Her population, which in 1778 was estimated at 80,650, amounted, according to a census taken in 1836, to 357,086, of whom 188,869 were whites, and only 41,818 slaves. It is obvious from this statement that a large proportion of the free inhabitants are coloured: but the law knows no distinction between the white and the coloured *roturier;* and this circumstance as well as the whites being in the habit of freely intermixing with people of colour, has prevented the growth of those prejudices and deep-rooted antipathies that prevail between the white and the black and coloured population in the U. States, and in the English and French islands. The population is now (1853), probably above 500,000.

Trade. — Sugar and coffee are by far the greatest articles of export. Next to them are molasses, tobacco, cotton, rum, &c. The imports consist principally of flour, fish, and other articles of provision, lumber, &c. from the U. States; cottons, hardware, machinery, &c. from England; wines, silks, jewellery, perfumery, &c. from Spain and France; linen from the Hanse Towns; iron from Sweden, &c. Large quantities of rice, maize, &c. are raised in the island. The pasture lands in the north and east are superior to any in the West Indies for breeding and fattening cattle.

Previously to 1815, Porto-Rico, being excluded from all direct intercourse with other countries, excepting Old Spain, was either stationary or but slowly progressive, the entire value of the exports in that year having amounted to only 65,274 dollars! But at that epoch a royal decree appeared, which exempted the trade between Spain and the Spanish colonies and Porto-Rico from all duties for 15 years; and she was then, also, permitted to carry on a free trade, under reasonable duties, with other countries. In consequence principally of these wise and liberal measures, but partly, also, of a considerable immigration of rich Spanish colonists from S. America, Porto-Rico has latterly made an extraordinary progress. Great improvements have been effected in the police and internal administration, and roads have been constructed in all parts of the island.

The following statements as to the trade of Porto-Rico, taken from the *Balanza Mercantil*, published in the capital, afford the most conclusive proofs of the advancing prosperity of the island.

Account of the Quantities of the different Articles of Colonial Produce exported from Porto Rico in 1851.

Articles.		Quantities.	Articles.		Quantities.
Sugar	lbs.	118,416,300	Cocoa-nuts		40,363
Coffee	—	12,111,900	Cocoa	lbs.	9,000
Tobacco	—	6,478,100	Ox horns	No.	6,925
Molasses	hhds.	45,976	Oranges	M.	1,669
Hides	lbs.	632,700	Plantains	—	675
Cotton	—	366,500	Cigars	—	34,800
Rum	hhds.	547	Lignum vitæ	tons	4
Oxen	No.	5,881	Logwood	—	178
Horses and mules	—	172	Pimento	lbs.	6,800
Bay water	galls.	6,161	Annatto	—	7,862
Corn	ears	1,429	Castor oil	qts.	600

Total value of exports 5,761,974 dols., of which 43⅝ per cent. to United States, 5½ to foreign West Indies, 9⅝ to Spain, 21⅛ to Great Britain, 6⅛ to British North America, 7⅛ to Germany, 1½ to Austria, 3 to Sardinia, 1½ to France, ⅝ to Cuba and Jamaica.

Total value of imports 6,073,870 dols., of which 19½ per cent. was from the United States, 32½ from West Indies, chiefly St. Thomas, 21½ from Spain, 12⅝ from South America, mostly in cocoa, 4⅛ from Great Britain, 4⅛ from B. N. America, 4 from Cuba, and 1½ from Germany, Sardinia, and France.

The number of vessels entered inward was 1,324, measuring 160,586 tons, of which 42 per cent. were American, 22⅛ Spanish; 21½ British. Customs revenue 1,069,418 dols. against 1,189,091 dols. in 1850.

* PORTS. See HARBOURS.

POSTAGE AND POST-OFFICE. Postage is the duty or charge imposed on letters or parcels conveyed by post; the Post-office being the establishment by which such letters or parcels are conveyed.

1. *Establishment of Post-offices.* — Regular posts or couriers were instituted at a very early period, for the safe, regular, and speedy transmission of public intelligence. Herodotus informs us (lib. viii. c. 98.), that in Persia, men and horses, in the service of the monarch, were kept at certain stations along the public roads; and that the despatches, being given to the first courier, were by him carried to the second, and so on, with an expedition that neither snow, nor rain, nor heat, nor darkness, could check. A similar institution, under the name of *cursus publicus*, was established at Rome by Augustus, and was extended and improved by his successors. Horses and carriages were kept in readiness at the different stations along the public roads, not only for the transmission of despatches, but also for the conveyance of official personages, or others who had obtained an order from authority allowing them to travel post. By this means government was speedily apprised of whatever took place in the remotest corners of the empire; and instructions or functionaries could be sent to, or recalled from, the most distant provinces, with a celerity that would even now appear considerable. — (*Bergier, Histoire des Grand Chemins*, liv. iv. c. 4.; *Bouchaud sur la Police des Romains*, pp. 136—151.)

Posts appear to have been established, for the first time, in modern Europe, in 1477, by Louis XI. They were originally intended to serve merely, as the ancient posts, for the conveyance of public despatches, and of persons travelling by authority of government. Subsequently, however, private individuals were allowed to avail themselves of this institution; and governments, by imposing higher duties or rates of postage on the letters and parcels sent through the Post-office than are sufficient to defray the expense of the establishment, have rendered it productive of a considerable revenue. Nor, while the rates of postage are confined within due limits, or not carried so high as to form any serious obstacle to correspondence, is there, perhaps, a more unobjectionable tax.

English Post-office. — The Post-office was not established in England till the 17th century. Postmasters, indeed, existed in more ancient times; but their business was confined to the furnishing of post-horses to persons who were desirous of travelling expeditiously, and to the despatching of extraordinary packets upon special occasions. In 1635, Charles I. erected a letter office for England and Scotland; but this extended only to a few of the principal roads, the times of carriage were uncertain, and the postmasters on each road were required to furnish horses for the conveyance of the letters at the rate of 2½*d.* a mile. This establishment did not succeed; and at the breaking out of the civil war, great difficulty was experienced in the forwarding of letters. At length a post-office, or establishment for the *weekly* conveyance of letters to all parts of the kingdom, was instituted in 1649, by Mr. Edward Prideaux, attorney-general for the Commonwealth; the immediate consequence of which was a saving to the public of 7,000*l.* a year on account of postmasters. In 1657, the Post-office was established nearly on its present footing, and the rates of postage that were then fixed were continued till the reign of Queen Anne. — (*Black. Com.* book i. c. 8.)

From the establishment of the Post-office by Cromwell, down to 1784, mails were conveyed either on horseback, or in carts made for the purpose; and instead of being the most expeditious and safest conveyance, the post had become, at the latter period, one of the slowest and most easily robbed of any in the country. In 1784, it was usual for the diligences between London and Bath to accomplish the journey in *seventeen* hours, while the post took *forty* hours; and on other roads their rate of travelling was in about the same proportion. In consequence of this difference in point of despatch, a very great number of letters were sent by those conveyances; the law being very easily evaded, by giving them the form of small parcels.

Under these circumstances, it occurred to Mr. John Palmer, of Bath, afterwards comptroller general of the Post-office, that a very great improvement might be made in the conveyance of letters, in respect of economy, as well as of speed and safety, by contracting with the proprietors of the coaches for the carriage of the mail; the latter being bound to perform the journey in a specified time, and to take a guard with the mail for its protection. Mr. Palmer's plan encountered much opposition, but was at length carried into effect. The consequences have proved most beneficial: the use of mail-coaches has extended to every part of the empire; and while the mail is conveyed in less than half the time that was required under the old system, the coaches by which it is conveyed afford, by their regularity and speed, a most desirable mode of travelling. Mr. Palmer was the author of several other improvements in the economy of the Post-office; nor is there any other individual to whose exertions this department owes so much. — (*Macpherson's Hist. of Commerce*, anno 1784.)

The Scotch Post-office was established on its present footing in 1710: but, owing to the backward state of Scotland, the limited amount of its trade and population, and the extreme badness of the roads — (see ROADS), — it was very defective in most parts of the country till after the American war. In proof of this, we may mention that the first mail-coach, from London to Glasgow direct, arrived at the latter on the 7th of July, 1788. Previously to that period, the course of post from London to Glasgow was five days; this, however, is not to be entirely ascribed to the slowness of the conveyance by horseback; for the mail came round by Edinburgh, and was detained there *twelve hours*, or till the usual Edinburgh despatch was made up for Glasgow in the evening!

The construction of railways between most of the great towns of the empire has, within these few years, gone far to supersede the use of mail-coaches on the principal lines of road, and has added prodigiously to the facilities of correspondence and travelling. The journey from London to Liverpool, which had been accomplished by the mail, when in its most improved state, in about 20 or 22 hours, is now accomplished by railway in 9 or 10 hours! and on other roads in the same proportion. The principal expense of the Post-office consists, however, not so much in the conveyance of letters from place to place, though that amounts to a very large sum, as in their previous collection and their subsequent distribution. This necessitates the establishment of a vast number of subordinate offices in the remoter parts of the kingdom, many of which do not repay their expenses. This is particularly the case in Ireland, and in the Highlands and islands of Scotland.

It does not really seem, though the contrary has been sometimes contended, that the Post-office could be so well conducted by any one else as by government. It is indispensable to its satisfactory working that it should be conducted with the greatest regularity and precision; and that all the departments should be made subservient to each other, and conducted on the same plan. It is plain that such results could not be obtained in any extensive country otherwise than by the agency of government; and the interference of the latter is also required to make arrangements for the safe and speedy conveyance of letters to, from, and through foreign countries.

The organisation of the Post-office supplies one of the most striking examples of the advantages resulting from the division and combination of employments. "Nearly the same exertions that are necessary to send a single letter from Falmouth to New York will send 50,000. If every man were to effect the transmission of his own correspondence, the whole life of an eminent merchant might be passed in travelling, without his being able to deliver all the letters which the Post-office forwards to him in a single evening. The labour of a few individuals devoted exclusively to the forwarding of letters, produces results which all the exertions of all the inhabitants of Europe could not effect, each person acting singly." — (*Senior on Political Economy.*)

Rates of Postage.— Previously to the introduction of the new system of a uniform penny rate of postage in 1839, under the provisions of the act 2 & 3 Vict. cap. 52., the following rates of postage, increasing progressively according to the distance, were charged on all letters (not privileged) conveyed by post from place to place in Great Britain and in Ireland, and from places in Great Britain to places in Ireland, and conversely.

Great Britain.	Postage of a Single Letter in Pence.
From any post-office in Great Britain to any place not exceeding 8 miles from such office	2
For any distance above 8 miles, and not exceeding 15 miles	4
15 — 20 —	5
20 — 30 —	6
30 — 50 —	7
50 — 80 —	8
80 — 120 —	9
120 — 170 —	10
170 — 230 —	11
230 — 300 —	12

And so in proportion; the postage increasing progressively 1*d.* for a single letter for every 100 miles.

Letters containing 1 enclosure charged with 2 single rates. Letters containing more than 1 enclosure, and not exceeding 1 ounce, charged with 3 single rates. Letters exceeding 1 ounce, whatever the contents may be, were charged with 4 single rates; and for every ¼ of an ounce above that weight, an additional single rate was chargeable.

Ireland.	Postage of a Single Letter in Pence.
From any post-office in Ireland to any place within the same, not exceeding 7 Irish miles from such office	2
Exceeding 7 and not exceeding 15 Irish miles	3
15 — 25 —	4
25 — 35 —	5
35 — 45 —	6
45 — 55 —	7
55 — 65 —	8
65 — 95 —	9
95 — 120 —	10
120 — 150 —	11
150 — 200 —	12
200 — 250 —	13
250 — 300 —	14

And for every 100 miles, Irish measure, above 300 miles, a further sum of 1*d.* Double and treble letters charged according to the same scale of advance as in England.

Great Britain and Ireland.

Rates of Postage taken in the Currency of the United Kingdom for the Port and Conveyance of Letters and Packets by Post, from any Place in Great Britain to any Place in Ireland, or from any Place in Ireland to any Place in Great Britain.

Distance.	Single Letter.	Double Letter.	Treble Letter or other under an Ounce Weight.	For every Ounce Weight, and for every Packet not exceeding an Ounce in Weight.
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
Not exceeding 15 miles, British measure	0 4	0 8	1 0	1 4
Exceeding 15, and not exceeding 20 such miles	0 5	0 10	1 3	1 8
20 — 30 —	0 6	1 0	1 6	2 0
30 — 50 —	0 7	1 2	1 9	2 4
50 — 80 —	0 8	1 4	2 0	2 8
80 — 120 —	0 9	1 6	2 3	3 0
120 — 170 —	0 10	1 8	2 6	3 4
170 — 230 —	0 11	1 10	2 9	3 8
230 — 300 —	1 0	2 0	3 0	4 0
300 — 400 —	1 1	2 2	3 3	4 4
400 — 500 —	1 2	2 4	3 6	4 8
500 — 600 —	1 3	2 6	3 9	5 0
600 — 700 —	1 4	2 8	4 0	5 4
700 —	1 5	2 10	4 3	5 8

Exclusive of an additional charge for the packets plying between the two countries.

On comparing the number of non-privileged letters conveyed by the general post with the gross amount of postage, it appears that of late years they had paid an average rate of about 7*d.* or 7⅛*d.* each.

Exclusive, however, of these rates of postage, letters posted in London and other large towns for delivery in such towns, were charged 2*d.* each in London, and 1*d.* each in the other towns in which such local posts were established.

In addition, too, to the letters on which postage was charged, all the principal officers of government, and the members of both houses of parliament, enjoyed (either to a greater or less extent) the privilege of "franking," or of sending and receiving letters by the post free of postage, and this privilege was very extensively exercised.

Post-Office Revenue. — The gross produce, deducting overcharges, of the post-office revenue of Great Britain, exclusive of Ireland, in the undermentioned years, has been —

The progress of the Scotch branch of the post-office revenue has been quite extraordinary. In 1698, Sir Robert Sinclair of Stevenson had a grant from William III. of its entire produce, with an extra allowance of 300*l.* a year, on condition of his keeping up the post; but, after trial, he abandoned the undertaking as disadvantageous. In 1709, the Scotch post-office revenue was under 2,000*l.*; whereas its amount in 1838 was 223,491*l. gross*, and 211,543*l. nett*; having increased more than a *hundred* fold in little more than a century! In 1781, the Glasgow post-office produced only 4,341*l.* 4*s.* 9*d.*, while in 1839 it produced 47,527*l.* — (*Stark's Picture of Edinburgh*, p. 144.; *Cleland's Statistics of Glasgow*; *Finance Book for* 1838 *and* 1839, *&c.*)

The expenses of collecting the post-office revenue amounted, under the old system, to from 24 to 30 per cent. on the gross receipt. In 1842, however, they amounted, for the U. Kingdom, to 966,759*l.*, being no less than 60 per cent. on the gross revenue.

Introduction of the New System. — The increase of the post-office revenue, as evinced by the above statements, has been very remarkable. It is mostly, no doubt, to be ascribed to the increase of population, the diffusion of education, and the growing intercourse among all classes of the community; though a good deal must also be ascribed to the efforts made in the early part of the reign of George III. to suppress some of the grosser abuses that had grown out of the privilege of franking, and still more to the additions that were repeatedly made to the rates of postage. Unfortunately, however, the latter were, in the end, carried far beyond their proper limits, imposing a heavy burden on the public, without any corresponding advantage to the revenue. This is obvious from the fact of the post-office revenue having continued stationary for the 20 years ending with 1839; though, from the great increase of population and commerce during that period, it is obvious, had the rates of postage not been so high as to force recourse to other channels, the revenue must have rapidly increased from the termination of the war downwards. When the rates of postage are moderate, the greater despatch and security of their conveyance by post, prevent any considerable number of letters being sent through other channels. But when the rates become oppressive, when, for example, a postage (as under the late system) of 11*d.* is charged on the conveyance of a single letter between London and York, of 13*d.* between London and Edinburgh, and so on, a serious interruption is given to that facility of intercourse which is so important, at the same time that a very large proportion of the correspondence which is carried on is unavoidably forced into private channels. It was, no doubt, attempted to prevent the transfer of letters from the post, by forbidding, under heavy penalties, their conveyance by private parties. But, as might have been anticipated, this prohibition could not be enforced, and had little or no effect. Considering, indeed, the facilities which have long existed for the transmission of letters in parcels between different parts of the country, and the oppressive rates of postage, the wonder is, not that the post-office revenue was nearly stationary previously to 1839, but that it did not fall off. Although, however, the rates of postage then existing, amounting, as already stated, to an average charge of about 7*d.* or 7½*d.* on all single letters conveyed by the general post, were very decidedly too high, it did not therefore follow that an invariable charge of 1*d.*, whether a letter were conveyed 1 mile or 1,000 miles, or singly or with 10,000 others, was the precise charge that should have been imposed! But, notwithstanding this was rushing blindfold from one extreme, or rather absurdity, to another, and endangering a large amount of revenue without any equivalent advantage, the ingenious project, brought forward by Mr. Rowland Hill, for a uniform penny postage, to be paid in advance, was eagerly adopted. It must be admitted, too, that it had various recommendations in its favour. Being calculated to obviate trouble and save expense to the public, it could not fail to be generally acceptable, (what reduction of taxation is not?) especially to mercantile men and others having an extensive correspondence. No doubt, however, the scheme was far more indebted for its popularity to the oppressiveness of the old rates of postage, than to any intrinsic merits of its own. Had these rates been properly redueed in 1837 or 1838, that is, had the postage of letters of ½ oz. weight passing between Scotland and Ireland and London been reduced to 4*d.* or 6*d.*, and other letters in proportion, and mercantile circulars, advertisements, and notices of sales, &c. been allowed to pass under covers open at the ends at 1*d.* or 2*d.* each, we venture to say that the clamour for a uniform penny postage would never have made any way. But government, though hostile to the project, took no step calculated to stop the agitation in its favour.

They neither reduced the old rates of postage, nor attempted to give any increased facilities for the conveyance of letters by post. And it happened in this, as it all but invariably happens on similar occasions, that those who decline making reasonable and necessary concessions at the outset, are, in the end, compelled to concede a great deal more than would at first have been satisfactory. Such, at all events, was the case in this instance. The clamour for a uniform penny rate became too powerful to be resisted; and parliament, whether it were so inclined or not, was obliged to lend its sanction to the measure. The act 2 & 3 Victoria, cap. 52., for regulating the duty on postage, did not indeed enact that the charge for conveying letters of a given weight, should, in all cases, be reduced to 1*d.*; but it was introduced for the avowed purpose of enabling the Treasury to take the necessary steps to bring the change about with the least inconvenience to all parties. In this view it gave the Treasury power to alter and reduce the rates of postage, without reference to the distance which letters may be conveyed, according to the weight of the letters, and not to the number or description of their enclosures; it also gave them power to adopt such regulations as they might think expedient as to stamped covers or envelopes: to suspend parliamentary franking, &c.

In virtue of the powers so conveyed, regulations have been issued (rendered permanent by the act 3 & 4 Vict c. 96.) by which all inland letters, without regard to the number of enclosures or the distance conveyed, provided they be paid when posted or despatched, are —

If not exceeding ½ oz. weight, charged 1*d.*; 1 oz. 2*d.*; 2 oz. 4*d.*; 3 oz. 6*d.*; and so on, 2*d.* being added for every additional ounce. At the outset of the system all packets that weighed more than 16 oz. were sent to the Dead Letter Office, except: —

1. Parliamentary petitions and addresses to her Majesty.
2. Parliamentary proceedings.
3. Letters and packets addressed to or received from places beyond sea.
4. Letters and packets to and from public departments.
5. Deeds, if sent open, or in covers open at the sides. They may be tied with string and sealed, in order to prevent inspection of the contents, but they must be open at the sides, that it may be seen that they are entitled to the privilege.
6. Bankers' parcels, despatched from London, and specially delivered at the General Post Office, under certain regulations.

But now (1859) there are no limits to the weight, but merely to the bulk of the parcels sent by the post.

All letters not paid when they are posted or despatched are charged *double the above rates*.

All parliamentary and official franking has been put an end to; but members of either house of parliament are entitled to receive petitions and addresses to her Majesty, and petitions to parliament, free of charge, provided such petitions and addresses be sent in covers open at the ends, and do not exceed 32 oz. weight.

The punctual delivery of letters may be insured by getting them *registered* when posted. A fee of 6*d.*, in the shape of additional stamps of that amount, is charged for the registration of each letter over and above the rate of postage to which it may be liable.

To facilitate the working of the plan, government furnish adhesive stamps of 1*d.* &c. each, which being pasted on letters, they are of course delivered to those to whom they are addressed free of any farther charge for postage; and it also furnishes stamped envelopes at the low rate of 24 for 2*s.* 3*d.*, the 3*d.* being for the paper and manufacture. Hence, as any quantity of stamps or of stamped envelopes may, in most parts of the country, be procured beforehand, the necessity that must otherwise have existed of paying the postage at the moment when letters are posted, has been pretty generally obviated.

Such are the more prominent features of the new system; and no doubt it has the recommendations of simplicity (if we may apply such a phrase to a uniform charge for services costing widely different sums) and cheapness in its favour, and has greatly facilitated correspondence. But it may, notwithstanding, be easily shown that its adoption was most unwise. It is, no doubt, very convenient for merchants, bankers, middlemen, retail dealers, and indeed for most persons, to get letters for 1*d.* that previously cost them 7*d.* or 7½*d.*; but their satisfaction is not the only thing to be attended to in forming a fair estimate of the measure. The public exigencies require that a sum of about 70 millions a year should be raised, one way or other; and so long as we are pressed by an unreasoning necessity of this sort, it is not much to say in favour of the repeal or diminution of any tax, that those on whom it fell with the greatest severity are delighted with the reduction. Sugar has, in England, become a necessary of life; and its consumption, to say the least, is quite as indispensable to the bulk of the people, and especially to the labouring classes, as the writing of letters. But would it, therefore, be a wise measure to repeal the duty on sugar, or to reduce it to 1*s.* a cwt.? It has been alleged, indeed, that taxes on the transmission of letters are objectionable on principle, and should therefore be repealed, independently altogether of financial considerations! But it is easier to make an allegation of this sort than to prove it. All taxes, however imposed, if they be carried (as was the case with the old rates of postage) beyond their proper limits, are objectionable; but provided these be not exceeded, we have yet to learn why a tax on a letter should be more objectionable than a tax on the paper on which it is written, on the food of the writer, or on fifty other things.

It was contended, when the plan was under discussion, that there would be no loss of revenue, and that the increase of correspondence growing out of the reduction of the postage would be so vast as fully to balance the reduced rate of charge! But though there has been a great increase in the number of letters, it has fallen far short of this. Notwithstanding all that has been said about the *furor scribendi*, letter-writing is generally looked upon as a duty rather than a pleasure; and it does not follow, when the expense of postage is reduced, that the occasions for writing letters are proportionally increased.

The total *gross* receipt of the Post-office revenue of the U. Kingdom, deducting overcharges and returned letters, amounted in 1838 (before the changes began) to 2,346,278*l.*, while the expenses of the establishment for the same year amounted to 686,768*l.*, leaving a *nett* revenue of 1,659,510*l.* In 1858, however, 18 years after the new system had been in full operation, and the Post-office had been converted into a great carrying establishment for the conveyance of books, &c., its gross revenue amounted to only 3,087,535*l.*, while the expenses of the establishment for the same year amounted to 1,926,103*l.*, leaving a nett revenue of only 1,161,427*l.*, being no less than 498,083*l.*, under its amount in 1838. This, however, is not all. Of the Post-office revenue in 1838, 45,156*l.* consisted of postage paid by public offices, which, being a mere charge by one government department against others, must be deducted in order to learn the nett available revenue produced by the Post-office. Owing, however, to the abolition of franking, the postage charged against government departments is now greatly increased, and in 1858 amounted to no less than 138,631*l.* Hence it will be found, on deducting these sums, that in 1838 the Post-office produced to government, over and above all charges, a clear available income of 1,614,354*l.*, which in 1858 was sunk to 1,022,796*l.*, being a nett diminution of 591,558*l.*! The subjoined account sets these important particulars in the clearest point of view.

An Account, showing the Gross and Nett Post Office Revenue, and the Cost of Management for the U. Kingdom, for the 21 Years ending the 5th January, 1859.

It is plain, therefore, that the adoption of the new Post-office system has occasioned the sacrifice of nearly 600,000*l.* a year of revenue, as compared with the revenue of 1838. And considering the extraordinary progress of the country in the interval, and especially the increase of population and commerce, the loss will immediately be seen to be very much greater, perhaps more than double that amount. And though it be true that a sacrifice of this amount might not, under other circumstances, have been of much consequence, it is to be borne in mind that it was incurred when the revenue was already inadequate to meet the expenditure, and when, consequently, the deficiency had to be otherwise provided for, though probably in some more onerous way. We should not, however, have thought the loss of revenue, nor even the introduction of a uniform penny rate, a valid objection to the new plan, had there been no means other than its adoption of getting rid of the inconveniences attached to the old system. But such was not the case. All its defects might have been effectually obviated without any, or with but a very inconsiderable, loss of revenue. Had frank-

ing been abolished, and the old rates of postage so reduced that the average charge might have been about 2½*d.* or 3*d.* a letter, the revenue would not probably have lost any thing, while every really advantageous object effected by the present system would have been secured. Indeed, we see no good reason why the present rates of postage should not, and very many why they should, be doubled, or increased to 2*d.* for a letter weighing ½ oz., 4*d.* for one weighing 1 oz., and so on. We are well convinced that, were this done, and the troublesome practice of forcing the prepayment of letters abandoned, the revenue would be nearly doubled, with little or no inconvenience to the public.

It redounds nothing to the credit of the new system that the Post-office revenue increases while it is maintained; for this must necessarily follow from the increasing population, wealth, commerce, and education of the country. The revenue would increase quite as fast under any reasonably well contrived system; all taxes on articles in general use are sure, provided they be not excessive, to increase with every increase of population and wealth.

The abolition of franking, which, however, is in nowise connected with a penny rate of postage, was by far the least exceptionable of the alterations introduced in 1837. Franked letters were in most instances addressed to those who could best afford to pay the expense of postage; and who in this way escaped a burden that fell with its full weight on their less opulent and less known neighbours.

Estimated Number of Chargeable Letters delivered in the U. Kingdom in the Year immediately preceding the first general reduction of Postage, on the 5th of December, 1839, and in the Years subsequent thereto; also (in the first year) the Number of Franks.

Year ending 31st December.	Delivered in England and Wales.			Total in England and Wales.	Total in Ireland.	Total in Scotland.	Total in United Kingdom.
	By Country Offices.	In London District, exclusive of Local Letters.	Local Letters in London District.				
Estimated No. of letters, 1839 - -	- -	- -	13,000,000	59,983,000	8,302,000	7,623,000	75,908,000
Estimated No. of Franks, 1839 - -	- -	- -	- -	5,172,000	1,055,000	336,000	6,563,000
Estimated No. of letters, 1840 -	88,071,000	23,560,000	20,372,000	132,003,000	18,211,000	18,551,000	168,768,000
Average of 5 years, 1841–45 -	121,708,000	31,587,000	25,838,000	179,135,000	24,226,000	24,419,000	227,777,000
„ „ 1846–50 -	179,651,000	44,089,000	34,883,000	258,622,000	31,757,000	33,627,000	327,006,000
„ „ 1851–55 -	232,569,000	54,043,000	43,168,000	329,783,000	39,384,000	40,999,000	410,166,000
Estimated No. of letters, 1856 -	275,454,000	64,961,000	47,895,000	388,310,000	41,851,000	48,233,000	478,394,000
„ „ 1857 -	291,636,000	66,233,000	52,134,000	410,003,000	42,806,000	51,612,000	504,421,000
„ „ 1858 -	300,506,000	68,961,000	58,401,000	427,871,000	44,208,000	50,795,000	522,874,000

This extraordinary increase is owing partly to letters and all sorts of circulars being now almost wholly sent by the post, which formerly was very far from being the case, and partly from increase of population, education, and civilisation, here and elsewhere.

Estimated Number of Book Packets and Chargeable Newspapers * delivered in the U. Kingdom in the Years 1856, 1857, and 1858.

Year ending 31st December.	Delivered in England and Wales.			Total in England and Wales.	Total in Ireland.	Total in Scotland.	Total in United Kingdom.

Money Orders. — The granting of money orders at the different post-offices for the payment of sums of 5*l.* and under, is a very great accommodation to the public, and is very extensively resorted to. Such orders cost 3*d.* if for 2*l.* or under, and 6*d.* for all sums between 2*l.* and up to 5*l.* As orders are not paid unless the parties in whose favour they are drawn, or other parties well known to the postmaster by whom they are payable, appear to receive payment, there is no risk of the money getting into improper hands. The following account shows the great increase in this department.

Number and Amount of Money Orders Issued in the U. Kingdom, during the 20 Years, ending with 1859.

Years.	England and Wales.		Ireland.		Scotland.		Total U. Kingdom.	
	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.
		£		£		£		£
1839 - - -	142,723	210,063	30,015	47,295	16,183	25,765	188,921	313,124

1856 - - -	5,231,736	10,099,366	461,723	806,942	485,523	899,253	6,178,982	11,805,562
1857 - - -	5,417,203	10,410,863	459,625	818,537	512,875	950,873	6,389,763	12,180,273
1858 - - -	5,674,441	10,821,901	485,220	857,558	529,735	982,646	6,689,396	12,662,105

In 1840 the commission on Money Orders was reduced as follows: — For any sum not exceeding 2*l.*, from 6*d.* to 3*d.* For any sum above 2*l.*, and not exceeding 5*l.*, from 1*s.* 6*d.* to 6*d.*

* By "Chargeable Newspapers" are meant newspapers not bearing the impressed newspaper stamp, and the postage of which is consequently paid in postage stamps or money.

Despatching of Letters.—Full details as to the posting of letters in London and elsewhere may be found in the *Postal Guide*, published quarterly—a useful and valuable publication, to which we beg to refer. It is sufficient here to state that, speaking generally, letters may be put into the receiving boxes of the different post-offices throughout the country at all hours of the day, and mostly, also, of the night. The mails for particular places are made up at certain specified hours, of which public intimation is given in the *Postal Guide*, and letters put in after those hours are not of course despatched till next mail.

We abridge from the *Postal Guide* the following statements, viz.—

Inland Letters.—The rates of postage on inland depend on weight only, and are as follows, if paid in advance:—

Letter weighing not more than ½ oz. . . . 1*d.* | Weighing not more than 1 oz. and not exceeding 2 oz. . 4*d.*
„ „ more than ½ oz. and not exceeding 1 oz. . 2*d.* | „ more than 2 oz. „ 3 oz. . 6*d.*

and so on; 2*d.* being charged for every additional ounce.

As a general rule, the postage, if not paid in advance, is doubled; and if the payment in advance be insufficient, double the deficiency is charged.

Petitions and addresses to Her Majesty, forwarded direct, are exempted from postage; and such petitions and addresses, and petitions to either House of Parliament, if sent to a member, are likewise exempted, provided they do not weigh more than 2 lbs., and are without covers, or are in covers open at the ends.

Newspapers and other periodical Publications bearing the Newspaper Stamp.—All periodical publications, inc. newspapers, published in the U. Kingdom, at intervals not exceeding 31 days, and which bear a stamp or stamps denoting the stamp duty, may be transmitted and re-transmitted through the post within the U. Kingdom free of postage under the following rules:—

Stamps impressed on the Publication.	Greatest Number of Sheets.	Greatest Superficial Extent of Letter-press on one side.
One Penny . . .	Two . . .	2,295 inches.
Three Halfpence . . .	Three . . .	3,443 „
Two Pence . . .	Four . . .	4,591 „

No publication, or portion thereof, can pass through the post unless the stamp which it bears be of the value of 1*d.* at least.

The title and date of the publication must be printed at the top of every page.

It must be folded in such a manner that the whole of the stamp or stamps shall be exposed to view, and be distinctly visible on the outside.

It must not be printed on pasteboard.

It must be posted within 15 days from the date of issue.

It must have either no cover or be open at the ends.

It must not contain any enclosure.

It must have no writing or other mark thereon, but the name and address of the person to whom it is sent; nor anything on the cover but such name and address, the printed title of the publication, and the printed name and address of the publisher or vendor who sends it.

Newspapers may also be sent abroad by the Post Office. But the regulations and postage to which they are liable vary so often that it would be useless to mention them here.

Parliamentary Proceedings.—Printed proceedings of Parliament, without covers, or in covers open at the ends, circulate within the U. Kingdom at the following rates of postage:—

Weighing not more than 4 oz. . . . 1*d.* | Weighing not more than 8 oz. and not exceeding 12 oz. 3*d.*
„ more than 4 oz. and not exceeding 8 oz. . 2*d.* | „ more than 12 oz. „ 16 oz. 4*d.*

and so on; 1*d.* being charged for every additional ¼ lb. or fraction of a ¼ lb.

The words Parliamentary Proceedings must be written or printed on the cover of the packet, otherwise it is liable to the letter-rate of postage.

Prepayment when the circulation is within the U. Kingdom is optional; and if it be made in part, the difference only is charged.

Parliamentary proceedings may be sent as books to all the colonies, and to those Foreign States between which and this country there is a book post.

Book Post, including Newspapers and other periodical Publications, and also Parliamentary Proceedings.—The following are the regulations of the Inland Book Post:—

Rates of Postage:

Weighing not more than 4 oz. . . . 1*d.* | Weighing not more than 8 oz. and not exceeding 16 oz. 4*d.*
„ more than 4 oz. and not exceeding 8 oz. . 2*d.* | „ more than 1 lb. „ 1½ lb. 6*d.*

and so on; 2*d.* being charged for every additional ½ lb. or fraction of a ½ lb.

The postage must be prepaid in full, by means of postage stamps.

Every packet must be sent either without a cover, or in a cover open at the ends or sides.

A book-packet may contain any number of separate books or other publications (inc. printed letters and printed matter of every kind), prints, or maps, and any quantity of paper, parchment, or vellum. And the books, &c. may be bound or unbound, &c.

No book-packet to contain anything sealed or otherwise closed against inspection; nor any letter, nor any communication of the nature of a letter, unless such letter or communication be printed.

No book-packet must exceed 2 feet in length, width, or depth; and if any such packet be presented at a post-office it will not be received.

Any packet not open at the ends or sides or which has any written letter or any communication of the nature of a letter written in it, or upon its cover, will be charged with the "unpaid" letter postage.

Book-packets (those to India and N. S. Wales not to exceed 3 lbs. weight), may be sent to the colonies, &c. at the following rates of postage, viz:—

To India, Ceylon, N. S. Wales, Victoria, Van Diemen's Land, S. Australia, W. Australia, New Zealand, Mauritius, and Hong Kong:—

	Viâ Southampton.	Viâ Marseilles.		Viâ Southampton.	Viâ Marseilles.
Weighing not more than 4 oz. . . .	4*d.*	6*d.*	Weighing not more than 1 lb. but not exceeding 1½ lb. .	2*s.* 0*d.*	3*s.*
„ more than 4 oz. but not exceeding 8 oz.	8*d.*	1*s.*	1½ lb. „ 2 lb. .	2*s.* 8*d.*	4*s.*
„ „ 8 oz. „ 1lb.	1*s.*4*d.*	2*s.*			

and so on; double rates being charged for every additional ½ lb. or fraction of ½ lb.

Book packets are forwarded to every other British colony, at the following rates, viz.:—

Weighing not more than 4 oz.	3d.	Weighing not more than 1 lb. but not exceeding 1½ lb.	1s. 6d.
„ more than 4 oz. but not exceeding 8 oz.	6d.	„ 1½ lb. „ 2 lbs.	2s. 0d.
„ „ 8 oz. „ „ 1 lb.	1s. 0d.		

and so on; 6d. being charged for every additional ½ lb. or fraction of ½ lb.

Book parcels may when necessary be delayed.

Registration.—By the prepayment of a fee of sixpence paid in stamps, any letter, newspaper, book, or other packet on which the postage has been prepaid in stamps, may be registered to any place in the U. Kingdom. The registration of a packet makes its transmission more secure by rendering it practicable to trace it, when inland, from its receipt to its delivery; and when colonial, if not to its delivery, at least to the port of despatch. The Post Office does not guarantee the safe delivery of the letter.

Money Orders.—Applicants for Money Orders should use printed "Forms," which save time, and afford greater security, than verbal messages, against mistakes. These Forms are sold by Postmasters at the rate of 10 per 1*d.*, or 5 or any smaller number for ½*d.*

The commission on a Money Order not exceeding 2*l.* is threepence, and on one above 2*l.* it is sixpence; no order being granted for more than 5*l.*

No order is allowed to contain a fractional part of a penny.

With few exceptions, no Money Order is issued unless the applicant furnish, in full, the surname and at least the initial of one Christian name both of the remitter who sends the order, and the payee (or person to whom the money is to be paid), together with the remitter's address.

An order once issued cannot be cancelled.

Money Orders do not require a receipt stamp.

Payment of an order must be obtained before the end of the second calendar month after that in which it was issued (for instance, if issued in January it must be paid before the end of March), otherwise the order becomes lapsed, and a new order will be necessary, for which a second commission will be charged. Persons presenting lapsed orders are furnished with copies of a printed notice headed "Lapsed Money Orders," containing directions how to proceed. If the order be not paid before the end of the twelfth calendar month after that in which it was issued (for instance, if issued in January, and not paid before the end of next January), all claim to the money is lost.

No application is entertained for compensation for alleged injury from the nonpayment of a money order at the expected time; and after once paying a money order, by whomsoever presented, the Office is not liable to any further claim.

All necessary information with regard to the sailing of packets, the postage to foreign countries, &c., may be found in the Postal Guide, in Kelly's Post Office Directory and other publications.

Local Postal Guides, price one penny, containing information special to the locality, are issued at the Post Offices at Birmingham, Belfast, Bristol, Cork, Dublin, Edinburgh, Glasgow, Leeds, Liverpool, Manchester, and Sheffield.

Post Office Establishment of U. K., 1st of January, 1858.

Offences against the Post-office.—The laws relative to offences against the Post-office were consolidated by the act 1 Vict. c. 36., of the more important parts of which we subjoin an abstract.

Contravening the Privilege of Post-Office.—Every person who shall convey otherwise than by the post a letter not exempted from the exclusive privilege of the postmaster general shall for every letter forfeit 5*l.*, and every person who shall be in the practice of so conveying letters not so exempted, shall for every week during which the practice shall be continued forfeit 100*l.*; and every person who shall perform otherwise than by the post any services incidental to conveying letters from place to place, whether by receiving, taking up, collecting, ordering, despatching, carrying, re-carrying, or delivering a letter not exempted from the exclusive privilege of the postmaster general, shall forfeit for every letter 5*l.*; and every person who shall be in the practice of so performing any such incidental services shall for every week during which the practice shall be continued forfeit 100*l.*; and every person who shall send a letter not exempted from the exclusive privilege of the postmaster general otherwise than by the post, or shall cause a letter not so exempted to be sent or conveyed other than by post, or shall tender or deliver a letter not so exempted in order to be sent otherwise than by post, shall forfeit for every letter

5*l.*; and every person who shall be in the practice of committing any of the acts last mentioned shall for every week during which the practice shall be continued, forfeit 100*l.*; and every person who shall make a collection of exempted letters for the purpose of conveying or sending them otherwise than by the post, or by the post, shall forfeit for every letter 5*l.*; and every person who shall be in the practice of making a collection of exempted letters for either of these purposes, shall forfeit for every week during which the practice shall be continued 100*l.* And be it declared that the term post shall herein include all post communications by land or by water (except by outward-bound vessels not employed by the Post-office or the Admiralty to carry post letters); and the above penalties shall be incurred whether the letter be sent singly or with any thing else, or such incidental service be performed in respect to a letter either sent or to be sent singly or together with some other letter or thing; and in any prosecution for the recovery of any such penalty the onus shall lie upon the party prosecuted to prove that the act in respect of which the penalty is alleged to have been incurred was done in conformity to the post-office laws.—§ 2.

Ship Letters retained after delivering of Letters to Post Office.—Every person, being either the master of a vessel inward-bound, or one of the officers, or one of the crew, or a passenger thereof, who shall knowingly have any letter in his possession not exempted from the privilege of the postmaster general, after the master shall have sent any part of his ship's letters to the post-office, shall forfeit for every letter 5*l.*; and every such person who shall detain any such letter after demand made, either by the officer of the customs or by a person authorised by the postmaster general to demand ship's letters, shall forfeit for every letter 10*l.*—§ 3.

Clause 4. relates to the abuse of the privilege of franking, and is no longer of importance.

Penalties on Masters of Ships not taking Letter Bags.—Every master of a vessel bound to Ceylon, the Mauritius, the East Indies, or the Cape of Good Hope, who shall refuse to take a post letter bag delivered or tendered to him by an officer of the post office for conveyance, shall forfeit 200*l.**; and every master of a vessel who shall open a sealed letter bag, with which he shall be intrusted for conveyance, shall forfeit 200*l.*; and every master of a vessel who shall take out of a letter bag with which he shall have been intrusted for conveyance a letter or any other thing shall forfeit 200*l.*; and every master of a vessel who shall not duly deliver a letter bag with the contents at the post-office on his arrival in port, without wilful or unavoidable delay on his arrival, shall forfeit 200*l.*; and every person to whom letters may have been intrusted by the master of a vessel to bring on shore who shall break the seal, or in any manner wilfully open the same, shall forfeit 20*l.*; and every master of a vessel who shall refuse or wilfully neglect to make declaration of having delivered his ship's letters to the post-office, shall forfeit 50*l.*; and every collector, comptroller, or officer of the customs who is required by the act 1 Vict. c. 34. to prohibit any vessel reporting until the requisites of such act have been complied with, who shall permit such vessel to report before the requisites of such act shall have been complied with, shall forfeit 50*l.*; and every master of a vessel (not having been able to send his letters ashore previous to his arrival at the port where the vessel is to report) who shall break bulk or make entry before all letters on board shall be sent to the post-office shall forfeit 20*l.*; and every master of a vessel, or any other person on board any ship liable to the performance of quarantine, who shall neglect or refuse to deliver to the person or persons appointed to superintend the quarantine all letters in his possession, shall forfeit 20*l.*—§ 6.

Penalties on the Carelessness of Persons engaged or employed in carrying, conveying, &c. Letters.—Every person employed to convey or deliver a post letter bag or a post letter who shall, whilst so employed, or whilst the same shall be in his custody, care, or possession, leave a post letter bag or a post letter, or suffer any person, not being the guard or person employed for that purpose, to ride in the place appointed for the guard in or upon any carriage used for the conveyance of a post letter bag or post letter, or to ride in or upon a carriage so used and not licensed to carry passengers, or upon a horse used for the conveyance on horseback of a post letter bag or a post letter, or if any such person shall be guilty of any act of drunkenness, or of carelessness, negligence, or other misconduct, whereby the safety of a post letter bag or a post letter shall be endangered, or who shall collect or receive, or convey or deliver, a letter otherwise than in the ordinary course of the post, or who shall give any false information of an assault or attempt at robbery upon him, or who shall loiter on the road or passage, or wilfully mispend his time so as to retard or delay the progress or arrival of a post letter bag or a post letter, or who shall not use due and proper care and diligence safely to convey a post letter bag or a post letter at the rate of speed appointed by and according to the regulations of the post-office for the time being, being thereof convicted, shall forfeit 20*l.*—§ 7.

Clauses 8. to 24. inclusive impose penalties on hackney carriages plying for hire opposite the general post-office in London or Dublin; exempt mail coaches from toll; and direct how penalties shall be sued for.

Opening or delaying Post Letters a Misdemeanour.—Every person employed by or under the post-office who shall, contrary to his duty, open or procure or suffer to be opened a post letter, or shall wilfully detain or delay, or procure or suffer to be detained or delayed, a post letter, shall in England and Ireland be guilty of a misdemeanour, and in Scotland of a crime and offence, and being convicted thereof shall suffer such punishment by fine or imprisonment, or by both, as to the court shall seem meet; provided always, that nothing herein contained shall extend to the opening or detaining or delaying of a letter returned for want of a true direction, or of a letter returned by reason that the person to whom the same is directed is dead or cannot be found, or shall have refused the same, or shall have refused or neglected to pay the postage thereof; nor to the opening or detaining or delaying of a post letter in obedience to an express warrant in writing under the hand (in Great Britain) of one of the principal secretaries of state, and in Ireland under the hand and seal of the lord lieutenant of Ireland.

Embezzlement, &c. of any Letter or Packet, Felony.—Every person employed under the post-office who shall steal, or shall for any purpose whatever embezzle, secrete, or destroy a post letter, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall, at the discretion of the court, either be transported beyond the seas for the term of 7 years, or be imprisoned for any term not exceeding 3 years; and if any such post letter so stolen or embezzled, secreted or destroyed, shall contain therein any chattel or money whatsoever, or any valuable security, every such offender shall be transported beyond the seas for life.—§ 26.

Stealing Money, &c. from or out of Letters, Felony.—Every person who shall steal from or out of a post letter any chattel or money, or valuable security, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for life.

Persons stealing Post Letter Bags, &c. to be transported for Life.—Every person who shall steal a post letter bag, or a post letter from a post letter bag, or shall steal a post letter from a post-office, or from an officer of the post-office or from a mail, or shall stop a mail with intent to rob or search the same, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for life.

Persons stealing Post Letter Bags or Post Letters to be transported for 14 Years.—Every person who shall steal or unlawfully take away a post letter bag sent by a post-office packet, or who shall steal or unlawfully take a letter out of any such bag, or shall unlawfully open any such bag, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and shall be transported beyond the seas for any term not exceeding 14 years.

* The 3 & 4 Vict. c. 96. extends this penalty to the master of *every* vessel *outward* bound who shall refuse to take a post letter bag delivered or tendered to him for conveyance.

Receivers of Property sent by the Post, and stolen or embezzled, guilty of Felony.— Every person who shall receive any post letter or post letter bag, or any chattel or money or valuable security, the stealing or taking or embezzling or secreting whereof shall amount to a felony under the Post-Office Acts, knowing the same to have been feloniously stolen, taken, embezzled, or secreted, and to have been sent or intended to be sent by the post, shall in England and Ireland be guilty of felony, and in Scotland of a high crime and offence, and may be indicted and convicted either as an accessory after the fact or for a substantive felony, and in the latter case, whether the principal felon shall or shall not have been previously convicted, or shall or shall not be amenable to justice; and every such receiver, howsoever convicted, shall be liable to be transported beyond the seas for life.

Fraudulently retaining, after Delivery thereof, &c.— Every person who shall fraudulently retain, or shall wilfully secrete or keep or detain, or being required to deliver up by an officer of the post-office, shall neglect or refuse to deliver up a post letter which ought to have been delivered to any other person, or a post letter bag or post letter which shall have been sent, whether the same shall have been found by the person secreting, keeping, or detaining, or neglecting or refusing to deliver up the same, or by any other person, shall in England and Ireland be guilty of a misdemeanour, and in Scotland of a crime and offence, and on conviction shall be liable to be punished by fine and imprisonment.

Stealing, &c. printed Votes or Proceedings in Parliament, &c.— Every person employed in the post-office who shall steal, or shall for any purpose embezzle, secrete, or destroy, or shall wilfully detain or delay in course of conveyance or delivery thereof by the post, any printed votes or proceedings in parliament, or any printed newspaper, or any other printed paper whatever, sent by the post without covers, or in covers open at the sides, shall in England and Ireland be guilty of a misdemeanour, and in Scotland of a crime and offence, and on conviction shall suffer such punishment by fine or imprisonment, or both, as the court shall direct.

Forging the handwriting of the Receiver General in England or Ireland, Felony.— Every person who shall knowingly and wilfully forge or counterfeit, or cause or procure to be forged or counterfeited, the name or handwriting of the receiver general for the time being of the general post office in England or Ireland, or of any person employed by or under him, to any draft, instrument, or writing whatsoever, for or in order to the receiving or obtaining of any money in the hands or custody of the governor and company of the bank of England or Ireland on account of the receiver general of the post-office, or shall forge or alter, or shall offer, utter, dispose of, or put off, knowing the same to be forged or altered, any draft, warrant, or order of such receiver general, or of any person employed by or under him, for money or for payment of money, with intent to defraud any person whomsoever, shall be guilty of felony, and on conviction shall be transported beyond the seas for life.

Clause 34. relates to the forging or altering franks.

The remaining clauses relate to the punishment of accessaries, determine the mode in which the postage duties shall be sued for, define terms, &c.

Irish Post-office.—The most gross and scandalous abuses were long prevalent in every department of the Irish post-office. The commissioners of Revenue Inquiry exerted themselves to abate the nuisance; but, as it would appear from the evidence of the Duke of Richmond before the committee of the House of Commons on public salaries, without much effect. His Grace, however, and subsequent postmasters, have laboured with laudable activity and zeal to introduce something like honesty, order, and responsibility into this department. The revenue of the Irish post-office amounted, in the financial year 1857-58, to 230,950*l.* The expenses of collection are still very heavy but they are no longer distinguished from those of the British post-office.

Amount of Postage collected at the undermentioned Towns of the U. Kingdom (inc. Postage Stamps sold by the Post Office and by the Office of Inland Revenue) during the Years 1856 and 1857.

— 1830	8,004	—	115,000
— 1840	13,468	—	155,739
— 1850	18,417	—	178,672
— 1853	22,320	—	217,745

Rates of Postage within the U. States.

For a single letter, sent not ex. 3,000 miles, if prepaid	3 cents.
If not prepaid	5 ,,
Sent over 3,000 miles, if prepaid	6 ,,
If not prepaid	10 ,,
For such a letter, conveyed wholly or in part by sea to or from a foreign country not ex. 2,500 miles	10 cents.
Sent over 2,500 miles	20 ,,
For a double letter, double the above rates; for a treble letter, treble do. Every letter or parcel not ex. ½ oz. weight is a single letter, and every additional weight of ½ oz. or of less than ½ oz. is charged with an additional single postage. When advertised, 1 cent. additional is charged on each letter. For a letter delivered by a carrier, there is an additional charge of 1 or 2 cents.	
For drop letters (not to be mailed) each	1 ,,
For all letters or packages (ship letters) conveyed by any vessel not employed in conveying the mail	2 ,,
To this charge of 2 cents is added 4 cents, when the letters are not transmitted through the mail, but are delivered at the post-office where deposited; and the ordinary rates of postage are	

* Including 142,261*l.* for postage charged to Government Departments.
† Including 135,517*l.* for postage charged to Government Departments.

added when the letter is transmitted through the mails.
Each newspaper, periodical, unsealed circular, or other article of printed matter, not ex. 3 oz. weight, to any part of the U. States - - 1 cent.
For every additional oz. or fraction of an oz. - 1 „
If the postage on any newspaper or periodical be paid quarterly or yearly in advance, at the office where the same is mailed or delivered, then ½ the above rates are charged. Newspapers and periodicals not weighing over 1½ oz., circulated in the State where published, are charged ½ the above rates. Small newspapers and periodicals, published monthly or oftener, and pamphlets not containing more than 16 8vo. pages each, when sent in single packages, weighing at least 8 oz. to one address, and prepaid by affixing postage stamps thereto, shall be charged only ½ cent for each oz. or fraction of an oz. Double postage charged on all transient matter, unless prepaid.
Books bound or unbound, not over 4 lbs., shall be deemed mailable matter, and shall pay,
For all distances under 3,000 miles, per oz. - 1 cent.
„ over 3,000 miles, - - 2 „
50 per cent. shall be added when not prepaid. All printed matter chargeable by weight to be weighed when dry.
No printed matter shall be sent at the above rates, unless either without any wrapper, or with one open at the ends or sides.

The total post-office revenue of the United States, in the year ended the 30th June, 1853, amounted to 4,946,725 dollars, the expenditure during the same year being 7,982,757 dollars.—(*American Almanack* for 1855.)

POST ENTRY. When goods are weighed or measured, and the merchant has got an account thereof at the Custom-house, and finds his entry, already made, too small, he must make a *post* or additional *entry* for the surplusage, in the same manner as the first was done. As a merchant is always in time, prior to the clearing of the vessel, to make his post, he should take care not to over-enter, to avoid as well the advance, as the trouble of getting back the overplus. However, if this be the case, and an over-entry has been made, and more paid or bonded for customs than the goods really landed amount to, the land-waiter and surveyor must signify the same, upon oath made, and subscribed by the person so over-entered, that neither he, nor any other person, to his knowledge, had any of the said goods over-entered on board the said ship, or anywhere landed the same without payment of custom; which oath must be attested by the collector or comptroller, or their deputies, who then compute the duties, and set down on the back of the certificate, first in words at length, and then in figures, the several sums to be paid.

POTASH (Da. *Potaske*; Fr. *Potasse*; Ger. *Pottasche*; It. *Potassa*; Pol. *Potasz*; Rus. *Potasch*). If vegetables be burned, the ashes lixiviated, and the solution boiled to dryness in iron vessels, the mass left behind is the *potash* of commerce—the impure carbonate of potass of chemists.

It is intensely alkaline, solid, and coloured brown by the admixture of a small portion of vegetable inflammable matter, which generally becomes moist. When potash is calcined in a reverberatory furnace, the colouring matter is destroyed, it assumes a spongy texture, and a whitish pearly lustre; whence it is denominated *pearl-ash*. The latter generally contains from 60 to 83 or 84 per cent. of pure carbonate of potass.

The ashes of those vegetables only which grow at a distance from the sea are employed in the manufacture of potash. Herbaceous plants yield the largest portion, and shrubs more than trees. It is principally manufactured in America, Russia, and Poland, the vast forests of which furnish an inexhaustible supply of ashes.

Potash is of great importance in the arts, being largely employed in the manufacture of flint glass and soft soap, the rectification of spirits, bleaching, making alum, scouring wool, &c. At an average of 1853 and 1854, the imports of pot and pearl ashes amounted to 132,765 cwt. a year. Of 155,739 cwt. imported in 1853, 98,774 cwt. were brought from the British possessions in North America, 37,604 cwt. from Russia, and 10,398 cwt. from the U. States, &c. The ashes of the U. States are the purest and bring the highest prices.

Ashes from Canada have always been duty free; but those from Russia and the United States used to pay a duty of 6*s.* a cwt., which, after being reduced in 1842 to 6*d.*, was finally repealed in 1845.

POTATOES (Ger. *Kartoffeln*; Du. *Aardappelen*; Fr. *Pommes de terre*; It. *Patate, Pomi de terra*; Sp. *Patatas manchegas*; Rus. *Jabloki semleniie*), the roots of the *Solanum tuberosum*, of innumerable varieties, and too well known to require any description.

I. *Historical Notice.* — The potato, which is at present to be met with everywhere in Europe, and forms a principal part of the food of a considerable proportion of its inhabitants, was entirely unknown in this quarter of the world till the latter part of the 16th century. It is a native of America, but whether of both divisions of that continent is doubtful.—(*Humboldt, Nouvelle Espagne*, liv. iv. c. 9.) Some authors affirm that it was first introduced into Europe by Sir John Hawkins, in 1545; others, that it was introduced by Sir Francis Drake, in 1573; and others, again, that it was for the first time brought to England from Virginia, by Sir Walter Raleigh, in 1586. But this discrepancy seems to have arisen from confounding the common, or Virginian potato (the *Solanum tuberosum* of Linnæus), with the sweet potato (*Convolvulus battatas*). The latter was introduced into Europe long before the former, and it seems most probable that it was the species brought from New Granada by Hawkins. Sweet potatoes require a warm climate, and do not succeed in this country; they were, however, imported in considerable quantities, during the 16th century, from Spain and the Canaries, and were supposed to have some rather peculiar properties. The kissing comfits of Falstaff, and such like confections, were principally made of battatas and eringo roots. —(See Collins' elaborate note to *Troilus and Cressida*, act. v. scene 2.) On the whole, we are inclined to think that we are really indebted for the potato (as well as for tobacco) to Sir Walter Raleigh, or the colonists planted by him in Virginia. Gerarde, an old English botanist, mentions, in his *Herbal*, published in 1597, that he had

planted the potato in his garden at London about 1590; and that it succeeded there as well as in its native soil, Virginia, whence he had received it. Potatoes were at first cultivated by a very few, and were looked upon as a great delicacy. In a manuscript account of the household expenses of Queen Anne, wife of James I., who died in 1618, and which is supposed to have been written in 1613, the purchase of a very small quantity of potatoes is mentioned at the price of 2s. a pound. The Royal Society, in 1663, recommended the extension of their cultivation, as a means of preventing famine. Previously, however, to 1684, they were raised only in the gardens of the nobility and gentry; but in that year they were planted, for the first time, in the open fields in Lancashire, — a county in which they have long been very extensively cultivated.

Potatoes, it is commonly thought, were not introduced into Ireland till 1610, when a small quantity was sent by Sir Walter Raleigh to be planted in a garden on his estate in the vicinity of Youghal. Their cultivation extended far more rapidly than in England; and have long furnished from $\frac{3}{5}$ to $\frac{1}{2}$ of the entire food of the people of Ireland!

Potatoes were not raised in Scotland, except in gardens, till 1728, when they were planted in the open fields by a person of the name of Prentice, a day labourer at Kilsyth, who died at Edinburgh in 1792.

The extension of the potato cultivation has been particularly rapid during the last 40 years. The quantity that is now raised in Scotland is supposed to be from 10 to 12 times as great as the quantity raised in it at the end of the American war; and though the increase in England has not been nearly so great as in Scotland, it has been greater than during any previous period of equal duration. The increase on the Continent has been similar. Potatoes are now very largely cultivated in France, Italy, and Germany: and, with the exception of the Irish, the Swiss have become their greatest consumers. They were introduced into India some 70 or 80 years ago; and are now successfully cultivated in Bengal, and have been introduced into the Madras provinces, Java, the Philippines, and China. But the common potato does not thrive within the tropics unless it be raised at an elevation of 3,000 or 4,000 feet above the level of the sea, so that it can never come into very general use in these regions. This, however, is not the case with the sweet potato, which has also been introduced into tropical Asia; and with such success, that it already forms a considerable portion of the food of the people of Java, and some other countries. So rapid an extension of the taste for, and the cultivation of, an exotic, has no parallel in the history of industry; it has had, and will continue to have, the most powerful influence over the condition of mankind. — (For further details with respect to the history of the potato, see *Sir F. M. Eden on the State of the Poor*, vol. i. p. 508.; *Humboldt, Essai sur la Nouvelle Espagne*, iii. 460—465. 2d ed.; *Sir Joseph Banks on the Introduction of the Potato*; *Phillips's History of Cultivated Vegetables*, vol. ii. art. *Potato*.)

2. *Influence of the Cultivation of the Potato on the Number and Condition of the People.* — There is a considerable discrepancy in the statements of the best authors as to the number of individuals that might be supported on an acre of land planted with potatoes, as compared with those that might be supported on an acre sown with wheat; some stating the proportion as high as *six* to *one*, and others at only *two* to *one*. According to Mr. Arthur Young, 1 lb. of wheat is about equal in nutritive power to 5 lbs. of potatoes. But Mr. Newenham, who has carefully investigated this subject, states that "3 lbs. of good mealy potatoes are, undoubtedly, more than equivalent to 1 lb. of bread," — (*Newenham on the Population of Ireland*, p. 340.); and his estimate is rather above Mr. Wakefield's. Supposing, however, that 1 lb. of wheat is fully equal to *four* lbs. of potatoes, still the difference in favour of the superior quantity of food derived from a given quantity of land planted with the latter is very great. According to Mr. Young, the average produce of potatoes in Ireland may be taken at 82 barrels the Irish acre; which, at 20 stone the barrel, is equal to 22,960 lbs.; and this being divided by *four*, to bring it to the same standard, in point of nutritive power, as wheat, gives 5,740 lbs. Mr. Young further estimates the average produce of wheat, by the Irish acre, at 4 quarters; which, supposing the quarter to weigh 480 lbs., gives in all 1,920 lbs., or about $\frac{1}{3}$ part of the solid nourishment afforded by an acre of potatoes. — (*Tour in Ireland*, Appen. pp. 12. 24. &c. 4to ed.) This estimate must, however, be somewhat modified, when applied to Great Britain; the soil of which, while it is better adapted to the growth of wheat, is generally supposed not to be quite so suitable for the potato as that of Ireland. But it notwithstanding admits of demonstration, that even here, "*an acre of potatoes will feed double the number of individuals that can be fed from an acre of wheat.*" — (*General Report of Scotland*, vol. i. p. 571.)

It is clear, therefore, on the most moderate estimate, that the population of a potato-feeding country may become, *other things being about equal*, from 2 to 3 times as dense as it would be, were the inhabitants fed wholly on corn. But it is exceedingly

doubtful whether an increase of population, brought about by the substitution of the potato for wheat, be desirable. Its use as a subordinate or subsidiary species of food is attended with the best effects — producing both an increase of comfort and security; but there are certain circumstances inseparable from it, which would seem to oppose the most formidable obstacles to its advantageous use as a *prime* article of subsistence. The discussion of this subject can hardly be said properly to belong to a work of this sort; but its importance may, perhaps, excuse us for making a few observations with respect to it.

It is admitted on all hands, that the rate of wages is principally determined by the species of food made use of in a country. Now, as potatoes form that species which is produced at the very least expense, it may be fairly presumed, on general grounds, that wages will be reduced to a minimum wherever the labouring classes are mainly dependent on potatoes; and the example of Ireland shows that this conclusion is as consistent with fact as with principle. It is clear, however, that when the crop of potatoes happens to be deficient in a country thus situated, the condition of its inhabitants must be in the last degree unfortunate. During a period of scarcity, men cannot go from a low to a high level: if they would elude its pressure, they must leave the dearer and resort to cheaper species of food. But to those who subsist on potatoes this is not possible; they have already reached the lowest point in the descending scale. Their wages being determined by the price of the least expensive sort of food, they cannot, when it fails, buy that which is dearer; so that it is hardly possible for them to avoid falling a sacrifice to absolute want. The history of Ireland abounds, unfortunately, in examples of this sort. Nothing is more common than to see the price of potatoes in Dublin, Limerick, &c. rise, because of a scarcity, to 5 or 6 times their ordinary price, and the people to be involved in the extreme of suffering; and yet it rarely happens, upon such occasions, that the price of corn is materially affected, or that any less quantity than usual is exported to England.

It may be said, perhaps, that, had potatoes not been introduced, wheat, or barley, or oats would have been the lowest species of food; and that, whenever they happened to fail, the population would have been as destitute as if they had been subsisting on potatoes. It must, however, be observed, that the proportion which the price of wheat, or any species of grain, bears to the price of butcher's meat, tea, beer, &c., is always decidedly greater than the proportion which the price of potatoes bears to these articles: and it therefore follows, that a people who have adopted wheat, or any species of corn, for the principal part of their food, are much better able to make occasional purchases of butcher's meat, &c.; and will, consequently, be more likely to have their habits elevated, so as to consider the consumption of a certain quantity of animal food, &c. as indispensable to existence. And hence it appears reasonable to conclude, that a people who chiefly subsist on corn would, in most cases, subsist partially on butcher's meat, and would enjoy a greater or less quantity of other articles; so that it would be possible for them, in a period of scarcity, to make such retrenchments as would enable them to elude the severity of its pressure.

But, though the population in corn-feeding countries were dependent on the cheapest species of grain, not for a part only, but for the whole, of their food, their situation would, notwithstanding, be less hazardous than that of a population subsisting wholly on potatoes.

In the *first* place, owing to the impossibility, as to all practical purposes at least, of preserving potatoes, the surplus produce of a luxuriant crop cannot be stored up or reserved as a stock to meet any subsequent scarcity. The whole crop must necessarily be exhausted in a single year; so that, when the inhabitants have the misfortune to be overtaken by a scarcity, its pressure cannot be alleviated, as is almost uniformly the case in corn-feeding countries, by bringing the reserves of former harvests to market. Every year is thus left to provide subsistence for itself. When, on the one hand, the crop is luxuriant, the surplus is of comparatively little use, and is wasted unprofitably; and when, on the other hand, it is deficient, famine and disease necessarily prevail.

In the *second* place, the general opinion seems to be, that the variations in the quantities of produce obtained from land planted with potatoes are greater than the variations in the quantities of produce obtained from land on which wheat, or any other species of grain, is raised.

And *lastly*, owing to the great bulk and weight of potatoes, and the difficulty of preserving them on shipboard, the expense of conveying them from one country to another is so very great, that a scarcity can never be materially relieved by importing them from abroad. In consequence, those who chiefly depend on potatoes are practically excluded from participating in the benevolent provision made by nature for equalising the variations in the harvest of particular countries by means of commerce, and are thrown almost wholly on their own resources.

We should, therefore, be warranted in concluding, even though we were not possessed

of any direct evidence on the subject, from the circumstance of the potato being a crop that cannot be kept on hand, from its natural fickleness, and from the incapacity of importing it when deficient, or of exporting it when in excess, that the oscillations in its price must be greater than in the price of wheat; and such, in point of fact, is the case. The oscillation in wheat is thought great when its price is doubled; but in a scarce year the potato is not unfrequently *six* times as dear as in a plentiful one!—(*Minutes of Evidence taken before the Agricultural Committee of* 1821, p. 212.) And the comparatively frequent recurrence of scarcities in Ireland, and the destitution and misery in which they involve the population, afford but too convincing proofs of the accuracy of what has now been stated.

It is, therefore, of the utmost consequence to the well-being of every people, and to their protection in years of scarcity, that they should not subsist principally on the potato. In this country, the pressure of a scarcity is evaded by resorting to inferior species of food, such as potatoes, and a lower standard of comfort; but if our people were habitually fed on the potato, this would be impracticable. The chances of famine would thus be vastly increased; while, owing to the low value of the potato as compared with most other things, the labourers would have less chance of preserving or acquiring a taste for animal food, or other necessaries and luxuries; and, consequently, of changing at any future period their actual condition for a better.

It is not easy to form any very accurate estimate of the profit and loss attending the cultivation of potatoes to the farmer, as compared with other crops. This is a point as to which the statements of those best qualified to give an opinion differ very considerably. Mr. Loudon says, "they require a great deal of manure from the farmer; while, generally speaking, little is returned by them; they are a bulky, unhandy article, troublesome in the lifting and carrying processes, and interfering with the seed season of wheat,—the most important one to the farmer. After all, from particular circumstances, they cannot be vended unless when raised in the vicinity of large towns; hence they are, in most respects, an unprofitable article to the agriculturist. To him, the real criterion is the profit which potatoes will return in feeding beasts; and here we apprehend the result will be altogether in favour of turnips and *rutabaga*, as the most profitable articles for that purpose."

It seems difficult to reconcile this statement with the rapid progress of the potato cultivation: but those who assent to what has been previously advanced with respect to the mischievous consequences that arise from the mass of the population becoming dependent on the potato as a principal article of food, will not regret though it should turn out to be accurate.

Dr. Colquhoun estimated the entire value of the potatoes annually consumed in Great Britain and Ireland at the end of the late war at *sixteen millions* sterling. But it is needless to say that there are no materials by which to form an estimate of this sort with any pretensions to accuracy. The one in question has been suspected, like most of those put forth by the same learned person, of exaggeration: and we incline to think that, had he estimated the value of the yearly produce of potatoes in the empire at *twelve millions*, he would have been nearer the mark. But on a point of this sort it is not possible to speak with anything like confidence.

POUND, the name given to a weight used as a standard to determine the gravity and quantity of bodies. — (See WEIGHTS AND MEASURES.)

POUND, a money of account, = 20*s*.

POWDER, GUN. See GUNPOWDER.

PRECIOUS METALS, a designation frequently applied to gold and silver. We have given, under the articles GOLD, and SILVER, a short account of each metal; and we now propose laying before the reader some details with respect to their supply and consumption.

To enter fully into this interesting and difficult subject would require a long essay, or rather a large volume. Mr. Jacob published, in 1831, an "Historical Inquiry into the Production and Consumption of the Precious Metals," in which he takes up the subject at the earliest period, and continues it to the above epoch. And, though far from being so learned, complete, or satisfactory as might have been expected, this work contains a good deal of valuable information, and deserves the attention of those who take an interest in such inquiries. But within the last eight or ten years the subject has acquired an interest and importance with which it was not previously invested.

1. *Supply of the Precious Metals.* — Since the discovery of America, the far greater part of the supplies of gold and silver have been derived from that continent. Previously to the publication of Humboldt's great work, *Essai Politique sur la Nouvelle Espagne*, several estimates, some of them framed by individuals of great intelligence, were in circulation, of the quantities of gold and silver imported from America. They, however, differed widely from each other, and were all framed from comparatively limited sources of information.* But these have been wholly superseded by the more extensive

* Humboldt brought these estimates together as follows:—

Authors.	*Epochs.*	*Dollars.*
Ustariz	1492—1724	3,536,000,000
Solorzano	1492—1628	1,500,000,000
Moncada	1492—1595	2,000,000,000
Navarete	1519—1617	1,536,000,000
Raynal	1492—1780	5,154,000,000
Robertson	1492—1775	8,800,000,000
Necker	1763—1777	304,000,000
Gerboux	1724—1800	1,600,000,000
The Author of the *Recherches sur le Commerce*, Amst. 1779.	1492—1775	5,072,000,000

(*Essai sur la Nouvelle Espagne*, tome iii. p. 412.)

and laborious investigations of Humboldt. This illustrious traveller, besides being acquainted with all that had been written on the subject, and having ready access to official sources of information unknown to the writers already alluded to, was well versed in the theory and practice of mining, and critically examined several of the most celebrated mines. He was, therefore, incomparably better qualified for forming correct conclusions as to the past and present productiveness of the mines, than any of those who had hitherto speculated on the subject. His statements have, indeed, been accused of exaggeration; and we incline to think that there are grounds for believing that this charge is, in some measure, well founded, particularly as respects the accounts of the profits made by mining, and of the extent to which the supplies of the precious metals may be increased. But this criticism applies, if at all, in a very inferior degree, to the accounts Humboldt has given of the total produce of the mines, and the exports to Europe. And making every allowance for the imperfection inseparable from such investigations, it is still true that the statements in question, and the inquiries on which they are founded, are among the most valuable contributions that have been made to statistical science.

According to Humboldt, the annual average supplies of the precious metals derived from America have been as follows: —

	Dollars a Year at an Average.		Dollars a Year at an Average.
From 1492 to 1500	250,000	From 1600 to 1700	16,000,000
— 1500 — 1545	3,000,000	— 1700 — 1750	22,500,000
— 1545 — 1600	11,000,000	— 1750 — 1803	32,300,000

(*Essai sur la Nouvelle Espagne*, iii. 428. 2nd ed.)

The following is Humboldt's estimate of the annual produce of the mines of the New World, at the beginning of the present century: —

Annual Produce of the Mines of America at the Commencement of the Nineteenth Century.

Political Divisions.	Gold.		Silver.		Value of the Gold and Silver in Dolls.
	Marcs of Castile.	Kilogs.	Marcs of Castile.	Kilogs.	
Vice-royalty of New Spain	7,000	1,609	2,338,220	537,512	23,000,000
Vice-royalty of Peru	3,400	782	611,090	140,478	6,240,000
Captain Generalship of Chili	12,212	2,807	29,700	6,827	2,060,000
Vice-royalty of Buenos Ayres	2,200	506	481,330	110,764	4,850,000
Vice-royalty of New Granada	20,505	4,714	- -	- -	2,980,000
Brazil	29,900	6,573	- -	- -	4,360,000
Total	75,217	17,291	3,460,840	795,581	43,500,000

Taking the dollar at 4*s.* 6*d.* this would give 9,666,000*l.* as the total annual produce of the American mines. Humboldt further estimated the annual produce of the European mines of Hungary, Saxony, &c., and those of Northern Asia, at the same period at about 1,000,000*l* more, making in round numbers their entire produce nearly 11,000,000*l.*

The *quantity* of gold produced in America at the beginning of the century, was to the quantity of silver as 1 to 46; in Europe the proportions were as 1 to 40. The *value* of equal quantities of gold and silver were then in the proportion of 15 or 15½ to 1.

From 1800 to 1810, the yield of the American mines continued to increase; and their produce, and that of the European and Russian mines was then probably rather above than below 11,000,000*l.* But in the last-mentioned year the contest began, which terminated in the dissolution of the connection between Spain and her American colonies. The convulsions and insecurity arising out of this struggle; the proscription of the old Spanish families, to whom the mines principally belonged, who repaired, with the wrecks of their fortunes, some to Cuba, some to Spain, and some to Bordeaux and the south of France; caused the abandonment of several of the mines, and an extraordinary falling off in the amount of their produce. There are no means of estimating the precise extent of this decline; but according to Jacob, who collected and compared all the existing information on the subject, the total average produce of the American mines, inclusive of Brazil, during the 20 years ending with 1829, may be estimated at 4,036,838*l.* a year: being less than ½ their produce at the beginning of the century! — (*Jacob*, ii. 267.)

It has, however, been supposed that Jacob rather exaggerated the falling off. And, at all events, the supplies of bullion obtained from Mexico and S. America began soon after the publication of his work (1831) to increase: and notwithstanding the anarchy to which they have continued to be a prey, that increase has been maintained down to the present time (1858).

It appears from the returns sent home by the British consuls, that the coinage of gold and silver in the Mexican mints, amounted in 1847, to 16,923,948 doll., and in 1848 to 19,506,754 doll. But it is well known that considerable quantities of these metals are

raised and exported from Mexico without being brought to the mints to be coined. And taking this item into account, we shall not, perhaps, be very wide of the mark, if we estimate the entire produce of the Mexican mines in 1847 and 1848 at about 19 and 21½ millions of dollars, of which from 17 to 20½ millions were in silver. And, notwithstanding the anarchy that has continued to prevail in the country, there has been a considerable increase in the interval.

In 1850, the produce of the Peruvian mines was estimated at about 6,000,000 dolls.; and it is not supposed to have varied much in the intervening period.

The produce of the Bolivian mines is usually estimated at about 1-third part of the produce of those of Peru.

In 1857 the value of the gold and silver in coin, bars, and ore, exported from Chili, amounted, according to the Custom-house returns, to 4,185,284 doll.; and we believe we shall not be far wrong if we estimate the total produce of the Chilian mines at 5,000,000 dolls.

The elaborate estimates of Birkmyre *, Chevalier (*Monnaie*, p. 228.), and other authorities, in regard to the produce of the mines of Brazil and other parts of America, differ very widely; and there is, in truth, little besides conjecture on which to form an estimate. Probably, however, it may amount (ex California) to about 4 million doll. The above results when brought together give for the

Estimated Produce of the American Mines (ex California) in 1857-58.

	Dollars.		Dollars.
Mexico	23,000,000	Chili	5,000,000
Peru	6,000,000	All other parts	4,000,000
Bolivia	2,000,000		
		Total	40,000,000

It is, perhaps, unnecessary to observe that all investigations into matters of this sort are liable to be affected by so many sources of error, that, even when they are most

* Birkmyre's estimate of the production of the precious metals in 1846 and 1850, the most elaborate and valuable of any hitherto published, appeared in the "Times" of the 19th May, 1851. We subjoin some of its principal portions.

* Exclusive of China and Japan, which produce large quantities of gold and silver, the amount of which is quite unknown to Europeans.

"The quantities of gold and silver produced at the under-mentioned epochs were,—

"In 1801, the quantity of pure gold produced in America was 46,331 lb.; in Europe and Northern Asia (exclusive of China and Japan), 4,916; total produce, 51,247 lbs. = 55,910 lb. British standard gold = 2,612,200*l.*

"In 1846 the quantity of pure gold produced in America was 25,503 lb.; in Europe, Africa, and Asia (exclusive of China and Japan), 89,171 lb.; total produce, 114,674 lb. = 125,108 lb. British standard gold = 5,846,772*l.*

"In 1850, the quantity of pure gold produced in America was 261,731 lb.; in Europe, Africa, and Asia (exclusive of China and Japan), 104,219 lb.; total produce, 365,950 lb. = 399,247 lb. British standard gold = 18,654,322*l.*

"The above quantities are probably less than the actual production. The duties on gold in Russia on the produce of the private mines are heavy, varying from 12 to 24 per cent.; in Austria they amount to 10 per cent., in Brazil to 5 per cent., and are understood to lead to a great deal of smuggling. In other countries, such as the United States, where there are no duties, the gold and silver stated in the table are only the quantities brought to the mints to be coined, there being no means of determining the quantity used in jewellery and other arts and manufactures."

skilfully and cautiously conducted, their results are not always to be depended on. But speaking generally, we are disposed to think that the foregoing estimates are rather within than beyond the mark. And it is worthy of notice that they do not differ much from Humboldt's estimate (43,500,000 doll.) of the produce of the American mines at the beginning of this century.

Russian Mines. — Small supplies of the precious metals have for a lengthened period been obtained from Russia. But since 1830, and more especially since 1840, the produce of the Russian mines and washings, but principally the latter, has been rapidly and largely increased. Thus the produce of gold from the Siberian washings and the mines of the Ural, which amounted (according to the official returns) to 3,875 kilog. in 1826, had increased in 1840 to 8,736 kilog., and in 1847 to 27,362 kilog. Since then, however the produce has rather fallen off; and during the three years ending with 1854, their average yield amounted to only 22,768 kilog. a year.* Formerly the value of the silver supplied by Russia greatly exceeded that of the gold; but since 1830 this has not been the case; for while the produce of gold has been so very greatly increased, that of silver has varied but little (from 17,000 to 18,000 kilog. a year,) so that the value of the former is now about twenty times that of the latter. The following table, extracted from the work of M. Otreschkoff, is founded on official returns, and gives a view of the production of the precious metals in Russia down to 1855: —

Account of the Quantity and Value of the Precious Metals produced in Russia from 1810 to 1855.

Years.	Gold.		Silver.		Annual Average of Total Prod.
	Kilog.	*Francs.*	*Kilog.*	*Francs.*	*Francs.*
1810 to 1825	16,485	54,830,448	189,189	42,077,480	6,459,856
1825 „ 1848	231,543	772,445,780	445,262	98,565,008	37,869,948
1848 „ 1851	73,547	252,054,380	55,959	11,998,348	88,000,908
1851 „ 1855	92,085	307,206,156	68,426	15,215,200	80,605,339
Totals	415,610	1,386,516,764	754,836	167,844,036	

The Russian authorities have ascribed the falling off in the produce of the mines and washings since 1847 to the exhaustion of the deposits and the unskilfulness of those engaged in the business. But though this be most probably the case to some extent, it is believed that it has been in part also occasioned by the heavy taxes imposed on the gold raised by private parties. These vary in amount, according to the productiveness of the mines and washings, from about 12 to 24 or 25 per cent., and are most oppressive.

While, however, it may be fairly assumed that these heavy duties have tended to lessen the produce of gold, there can be little doubt that their principal effect has been to defeat themselves by tempting the parties concerned to adopt every means for their evasion, which the notorious corruption of the revenue officers renders an easy matter. And in addition to the influence of these circumstances over the private mines, the depredations and carelessness of the parties employed to work the crown mines tells quite as much over their produce: so that we need not be surprised that it has been doubted whether from a third to a half, or more, of the gold furnished by the Russian mines and washings be not omitted in the official returns. But, taking the deficit at a fourth part only, and supposing the official produce of the washings and mines to amount at present (1858) to about 70,000,000 fr. a year, the real produce would be equal to 87,500,000 fr. or 3,500,000*l.* sterling. It is said that the Russian government intend to throw open the crown mines and washings to the public, and at the same time to make a large reduction in the duties on the produce obtained from the private mines. This would be sound policy; and if it be adopted, a considerable increase in the supplies of gold and silver may be anticipated.

Produce of Gold and Silver in other parts of Europe.—It might have been supposed that the late extraordinary influx of the precious metals from California and Australia would have given a serious check to their production in Europe; such, however, has not been the case, but on the contrary it has considerably increased within the last ten or twelve years.

Our readers are aware that lead ore always contains a greater or less quantity of silver; and when the value of the latter is sufficient to repay the expense, it is usual to extract it by means of the process of "refining." This process has latterly been much improved, and is now profitably applied to ores to which it was formerly unsuitable. And as silver in Europe is mostly obtained from lead, this has been a principal source of its late increase.

In 1845 some rich mines of argentiferous lead were discovered in the provinces of Murcia and Granada in Spain, not far from Alicant; the yield of silver from which,

* Otreschkoff, *De l'Or et de l'Argent, &c.*, i. 179. The author is a councillor of state in the service of the Czar.

and the mines in other parts of the peninsula, is believed to amount to 500,000*l.* or 600,000*l.* a year. The produce of the Austrian and German gold and silver mines has also increased, and small quantities are furnished by Piedmont, France, and other parts of the Continent.

The reader may perhaps be surprised to learn that, in consequence principally of the improved process of refining already referred to, no fewer than 532,866 oz. of silver were obtained from lead in the United Kingdom in 1857, which at 5*s.* an oz., was worth 133,216*l.* 10*s.**

The total annual production of the precious metals in Europe, exclusive of Russia, may be roughly estimated to have amounted in 1857 and 1858 to 1,500,000*l.* or 1,600,000*l.* a year.

On the whole, therefore, it may reasonably be concluded that the aggregate production of the precious metals (excluding the produce of the Californian and Australian gold fields) in America, Asiatic Russia, and Europe in 1857, or rather in each of the three years ending with 1857, amounted to about 14,050,000*l.*, viz. : —

America	-	£9,000,000
Asiatic Russia	-	3,500,000
Europe	-	1,550,000
Total	-	14,050,000

And deducting from this sum the total estimated produce of the same countries in 1809, when the American mines had attained the maximum of their productiveness previously to the revolutionary disturbances (12,500,000*l.*), there is an increase of 1,550,000*l.*

In addition to the supplies of the precious metals already specified, further quantities are supplied by China and other parts of Asia, Japan, the Eastern Archipelago, &c., and also by various parts of Africa. There is, however, no authentic information in regard to this produce; and excepting small supplies of gold dust brought from some parts of the African coast, the bullion of the countries referred to has but little influence in the markets of the civilised world. M. Otreschkoff estimates, or rather conjectures, that the produce of gold and silver in Asia (exclusive of Russia), the Eastern Archipelago, Oceanica, &c., amounted at an average of the four years ending with 1854, to 114,527,820 fr. (4,581,000*l.*) a year, and that of Africa to 13,980,672 fr. (560,000*l.* a year.) (*De l'Or et de l'Argent, &c.* i. 287, 293.)

Supplies of Gold from California and Australia. The gold in these regions is found in the debris of the quartz rocks in which it has been imbedded, and in the rocks themselves. In the former case it is found in the hollows to which it has been carried down by rains or streams, at different depths, sometimes in grains or *flakes*, and sometimes in lumps or *nuggets*, of varying but occasionally of very considerable magnitude. Gold may be sought or dug for (hence *diggings*) either by single or associated individuals; but when quartz rock is crushed to obtain gold, expensive machinery is usually employed, and the work is for the most part carried on by companies. The business of the diggings has very much of the character of a lottery, with many blanks and a few large prizes: but in the crushing of quartz the returns are less irregular, and the business partakes more of the character of an ordinary branch of industry.

The Californian deposits were discovered late in May or early in June 1848; and notwithstanding the remoteness of the country, and the fact of its being almost destitute of inhabitants, above 5,000 persons were attracted to the spot by the end of the season, who are said to have realised above 1,000,000*l.* sterling. The news of the discovery and of the unexampled richness of the gold fields having spread on all sides with electrical rapidity, occasioned an extraordinary influx of immigrants from most parts of the world into California. The supplies of gold attained to an unexampled magnitude; cities rose in the wilderness as if by enchantment; the great bay of San Francisco, which had hitherto been entirely deserted, was crowded with ships and steamers from the most distant countries; and California speedily became one of the states of the Union, and has now a large population.

But here, as elsewhere, we have to regret the want of accurate information in regard to the production of gold. It appears, however, from the Custom-house returns that during the years 1856 and 1857, gold of the value of 51,142,269 and 49,340,186 dolls. was shipped from San Francisco. And, in addition to these quantities, large amounts, of which no account is taken, are conveyed away by parties returning to Mexico, to the Eastern States, Europe and China. Of these various estimates have been made. But the prevalent opinion in the best informed quarters, seems to be that, when they are in-

* During the year 1857, 5,190 tons argentiferous ores were imported, mostly from Chili, which produced 846,569 oz. of silver, worth, at 5*s.* an oz., 211,642*l.* This, however, is to be reckoned in the produce of Chili rather than of England. (Hunt's *Mining Records for* 1858, p. 30.)

cluded, and allowance is also made for the quantity retained at home, the total yield of gold in California in 1856 and 1857 may be moderately reckoned at from 60,000,000 to 65,000,000 dols., or from 13,300,000*l.* to 14,400,000*l.*, or nearly 14,000,000*l.* at an average.

But vast as it certainly is, this production has been equalled and sometimes surpassed by that of Australia. The deposits in the latter were not discovered till 1851, and they were so very rich, and the influx of immigrants so extraordinary, that the gold fields of Victoria only are estimated to have produced in 1852 no fewer than 4,247,152 oz.; which, at the then price of 70*s.* an oz. gives a gross amount of 14,866,799*l.* This, however, has been the *maximum* amount of production hitherto attained. In 1858 the same gold fields furnished only 2,421,461 oz. According to the carefully compiled and valuable returns of Mr. Khull of Melbourne, the yield of gold in Victoria since 1852 has been as follows, viz: —

Years.	Ascertained Ounces.	Unrecorded Ounces.	Total Ounces.	Price per Ounce.	Value.
1852	3,159,329	1,088,395	4,247,152	70*s.*	£14,866,799
1853	2,274,152	816,199	3,090,342	75	11,588,782
1854	1,831,434	361,264	2,192,699	80	8,770,796
1855	2,234,296	729,864	2,964,073	80	11,856,292
1856	2,530,383	1,003,144	3,533,527	80	14,134,108
1857	2,341,147	264,893	2,606,040	80	10,424,160
1858	2,253,117	168,344	2,421,461	80	9,685,844

In addition to the gold obtained from Victoria, a supply which in 1852 amounted to nearly 3,000,000*l.* was obtained from the Sydney or New South Wales district. The produce from this source has, however, rapidly declined, and is now (1858) so inconsiderable as hardly to be worth notice.

It would therefore appear that the entire annual produce of the precious metals in different parts of the civilised world might, in 1857 and 1858, be estimated as follows, viz.: —

America, excluding California	£9,000,000
Asiatic Russia	3,500,000
Europe	1,550,000
California	14,000,000
Australia	10,000,000
Total	38,050,000

The question in regard to the probable continuation, increase, or diminution of this supply is of the greatest interest. Unfortunately, however, nothing but the vaguest conjectures can be offered with respect to it. Those who think that the supplies of the precious metals are likely to increase may allege that, being very widely diffused, fresh deposits will be successively brought to light; that the processes followed in the diggings, in the crushing of quartz rocks, and in the smelting and refining of the metals, will be further improved; and that the increase of population will make a still greater amount of labour be devoted to the search after these metals. But while we admit that there is a good deal of probability in these statements, still we question whether the result which they point at will be realised. Though gold be very generally distributed, it is extremely doubtful whether there be many places in which the deposits are so rich and so extensive as in California and Australia; and even in these the produce, as already seen, is either stationary or has begun to decline. The myriads of adventurers that are attracted to prolific diggings being all animated by the "*auri sacra fames*," and putting forth their entire energies, can hardly fail, in no very lengthened period, to rifle the richest beds. And when this is done, — when the excitement inspired by the original discovery is worn off, and the great prizes in the gigantic lottery recur only at distant intervals, — then, unless new and equally promising discoveries should be made, a serious check will be given to the gold-seeking mania. The process of quartz-crushing is believed to produce only moderate profits, and is not of a kind to collect crowds of competitors. The few fortunes that have been realised in California and Australia have not been made by the miners, but by the merchants and others who have supplied their real or imaginary wants, and bought their gold-dust and nuggets on advantageous terms. Of those engaged on their own account in the search for gold, very few have retired from the pursuit with anything like a competence. The great majority have hardly realised the wages current in the districts before the deposits were discovered; and the conviction seems to be everywhere gaining ground that more is to be made by cultivating the surface of the earth than by digging in its bowels or crushing its rocks.

Consumption of the Precious Metals. — In order to form a reasonable conjecture in regard to the probable influence of this vast supply of the precious metals, it is necessary to inquire into their uses and probable consumption. And this inquiry, we regret to say, is still more difficult, and more likely to be infected with errors, than the inquiry in regard to their production.

The precious metals are used as coin or currency to facilitate exchanges; as wealth which may be conveniently kept or hoarded; and they are used in the arts in the shape of plate, and in gilding, and so on.

The quantities employed in these functions are very large indeed. They vary, however, in different countries and periods with the circumstances peculiar to each; such, for example, as the greater or less abundance of paper money, and the degree in which the use of coins is lessened by the various devices resorted to for economising currency; the fashion as to plate and furniture; the feeling of security at the time; and a number of other circumstances all liable to great and sometimes sudden changes.

The gold and silver employed in this country as currency, and in the customary reserves in the hands of the bankers, is supposed to amount to from 70,000,000*l.* to 75,000,000*l.** In France the precious metals employed in the same way, probably amount to nearly double the sum now mentioned, or to 130,000,000*l.* or 140,000,000*l.*† And we believe that we may safely estimate the entire sum employed as currency in Europe, America (North and South), Australia, the Cape of Good Hope, and Algeria, at from 490,000,000*l.* to 510,000,000*l.*, or 500,000,000*l* at a medium.‡ Now, supposing this sum to be employed as above stated, as currency, we have first to inquire into its probable wear and tear and loss, and then into the probable rate of its increase. And taking into account the extraordinary extension of navigation and emigration, and the proportional risk of loss from shipwreck and other casualties, we are disposed to think that the annual wear and tear and loss of coin may be estimated at about 1½ per cent. of the entire mass of the currency; which, taking the latter at 500,000,000*l.*, would amount to 7,500,000*l.* a year.

It is difficult to form any probable estimate of the rate at which the bullion used as currency may be likely to increase, supposing its value not to fall off. The extremely rapid increase of refinement and population in most parts of the civilised world, and especially in America and Australia, is known to every one. And it seems pretty certain that some important countries which have hitherto made comparatively little progress, are about to enter on a new career of industry and enterprise. In Russia, for example, the measures that are in progress for the construction of railways and the emancipation of the peasantry can hardly fail to awaken the dormant energies of the latter, and give new vigour to their exertions. And the capacities of that country are so very great, that it is not easy to imagine, were its resources at all developed, to what an extent its wealth and population might be increased.

At present some of the finest, best situated, most extensive, and of old the most populous and flourishing countries in the world, groan under the deadly influence of the superannuated but destructive despotism of the Turks. It is difficult, however, to suppose, despite the efforts that may be made to bolster it up, that this miserable fabric of superstition and tyranny should hold together much longer. And were it overthrown, and anything like an efficient government established in its stead, a fruitful and all but boundless field would be laid open to industry and enterprise.

But without insisting on such prospective considerations, and looking only to the advances that are now being made, we do not think that we shall exaggerate if we estimate the increase of currency that is now going on at 2 per cent. on its gross amount (500,000,000*l.*), or at 10,000,000*l.* a year.

It is impossible, however, supposing this estimate not to be very wide of the mark at present, to conjecture how long the currency will go on increasing in this ratio. It may, as we have seen, be safely taken for granted that the sphere of civilisation and commerce is destined rapidly to extend. But its expansion will no doubt be accompanied with various contrivances for economising the use of metallic money; so that the quantity of it in circulation may not increase for any very lengthened period at the rate above stated. If it did, it would absorb an immense supply of gold. In barbarous countries, and in those which are entering on the career of civilisation, the coins afloat may increase at the rate of 3 or 5 per cent., or more. But in countries which are more advanced their increase may be nothing, or less perhaps than even 1 per cent.

* It has been estimated as high as 90,000,000*l.*; but the best authorities look upon this estimate as greatly beyond the mark.

† It has been estimated by Levasseur (p. 106) and others at no less than 160,000,000*l.* But this includes a portion of the coins that have been hoarded, and which can no longer be reckoned in the currency.

‡ It would be inconsistent with the objects of this article, and with the limits within which it must be confined, to engage in a discussion of the numerous and often conflicting statements and details on which this estimate has been founded. Some information with respect to it may be found in Chevalier's valuable treatise *De la Monnaie* (p. 326, &c.), Paris, 1850; in Stirling's *Gold Discoveries*, p. 182; in the learned and excellent tract of Tegoborski, *Essai de la Découverte des Gites Aurifères en Californie et en Australie, &c.*, p. 65; Levasseur, *De la Question de l'Or*, p. 106; in the work of Otreschkoff, *De l'Or et de l'Argent;* and a host of other publications. The precious metals in circulation in Russia in the early part of 1851 were estimated in the *Petersburg Gazette* (October 12, 1852), at 326,000,000 roubles, equal, at 40*d.* per rouble, to 53,800,000*l.* The greater part (190,000,000 roubles) of this currency consisted of gold.

It is equally difficult to acquire any satisfactory information in regard to the quantity of bullion consumed in the arts. Jacob estimated its amount in Europe and America in 1830 at about 5,900,000*l.* a year. But it has since been repeatedly shown by various intelligent writers that this estimate was in many respects wide of the mark, and that on the whole it was a good deal underrated. And supposing the consumption of the precious metals in the arts to have amounted to 6,500,000*l.* or 7,000,000*l.* in 1830, it must now be very much greater. Everywhere, indeed, but more especially in England, America, Germany, and Russia, there has been an extraordinary increase of population and wealth during the last eight-and-twenty years. Plate and plated articles for use and ornamental purposes are now in extensive demand among all but the very lowest orders. Vastly more persons are raising themselves from poverty to competence and affluence than at any former period; and these are universally large buyers of plate and other costly articles. A taste for gilded saloons, magnificent glasses, and the gorgeous furniture of the age of Louis XIV., is at present all but universally diffused, and must have added greatly to the consumption of gold, which has been still further augmented by its increased outlay on the gilding of earthenware and china, harness, books, &c.* At the first blush of the matter, some of these items may not appear to the careless observer to be of much importance; but those who reflect a little on the subject, and who consider the immense and rapidly increasing demand for the articles referred to in this country and Europe generally, and in America and Australia, will be satisfied that the total consumption of the precious metals, and especially of gold, in the way now mentioned, must be quite immense.

We incline to think that the value of the precious metals in Great Britain in 1858, in the shape of plate, watches, jewels, and trinkets of all descriptions, may be safely estimated at about 4*l.* to each individual of the entire population, making in the aggregate a sum of about 88,000,000*l.* to which, if we add 12,000,000*l.* for Ireland, the whole will amount to 100,000,000*l.* And vast as this sum may appear, we believe it is inside the mark. Silver spoons and forks, silver tea-services, with trays, &c. are now universally met with throughout the middle, as well as the upper classes; while most families, of any antiquity or consideration of any kind, possess large quantities of ornamental as well as useful plate. In the Continent and the United States the bullion invested in the way now stated is very great indeed. In Italy and some other countries the lower classes, especially the women, though not generally so well off as in England, spend more money upon massive rings, chains, brooches, and such like articles, which they regard much as girls in England do their deposits in the savings' bank, as a reserve fund or capital.

We are aware that Jacob says, that "In the present day in this country the quantity of gold and silver in actual existence, including utensils, ornaments, jewellery, trinkets, and watches, is three or four times as great as the value of those metals which exists in the form of money." (*Historical Inquiry*, i. 210.) And as the value of the precious metals in Great Britain, in the shape of coin, is certainly not less at present (1858) than 70,000,000*l.* or 75,000,000*l.*, the value of the bullion in plate, jewellery, &c. ought, on this hypothesis, to amount to at least 210,000,000*l.* or 280,000,000*l.*! But there can be no manner of doubt that the lowest of these sums would be far beyond the mark. Tegoborski, indeed (*Gites Aurifères*, &c., p. 66), who is supported by Humboldt (*Nouvelle Espagne*, iii. p. 465, ed. 1827), estimates the value of the bullion vested in plate, watches, jewellery, &c., at only half the amount vested in coin. But this estimate, though not perhaps very far wrong if applied to the poorer countries of Europe, would undoubtedly, if applied to Great Britain, be as much under as that of Jacob is above the mark.

But, without pretending to an accuracy which, on such subjects, is unattainable, we run little risk in concluding that the expenditure of bullion in the arts — that is, in plate, jewellery, gilding, &c., — in Europe, America, and Australia, cannot at present (1858) be under, if do not exceed, 15,000,000*l.* or 16,000,000*l.* a year. But of this a portion, estimated at about one-fifth, or 20 per cent., is supposed to be obtained from the fusion of old plate, the burning of lace, picture-frames, &c. And hence, if we deduct from the 15,000,000*l.* used in the arts 20 per cent. for the old bullion, we have 12,000,000*l.* for the total quantity of the supplies from the mines annually disposed of in this way; a considerable portion of which, including that used in the gilding of rooms, earthenware, books, harness, buttons, &c., cannot be again recovered or applied to any useful purpose.

And however great it may appear to be, this amount will be largely increased with the increase of population and the spread of refinement in the arts, and still more by anything like a considerable fall in the value of bullion.

* Estimates have been made of the expenditure upon some of these items, but the data on which they are founded are too vague to entitle them to much attention.

Hence it would appear, putting these items together, that the annual consumption of bullion as currency, and in the arts, amounts to about 29,500,000*l.* viz.: —

Wear and tear and loss of coin - - -	£7,500,000
Increase of currency - - - -	10,000,000
Used in the arts - - - -	12,000,000
Total -	29,500,000

It will be difficult to show that these estimates are beyond the mark; and supposing them to be nearly correct, it follows, deducting the above sum from the previously estimated produce of the mines (38,050,000*l.*—29,500,000*l.*), that we have a surplus of 8,550,000*l.* to defray the sums required for hoarding, for exportation to the East, &c. And there certainly seems to be little reason for thinking that a supply of this amount will do more than meet the demands upon it.

It may be said, perhaps, that we must have exaggerated the consumption of the precious metals, inasmuch as the sum which we suppose is annually consumed considerably exceeds the entire produce of the mines previously to the supplies from California and Australia. But, while we admit the fact to be as stated, we deny the inference which is attempted to be drawn from it. The truth is, that while the discovery of the Californian and Australian deposits has added in so great a degree to the supply of bullion, it has also added very largely to its consumption. It has given an unparalleled stimulus to emigration and commerce. The population of California and Victoria has increased in a ratio hitherto unheard of, or from next to nothing a dozen years ago, the former to 507,000 in 1856 (*American Almanac* for 1858), and the latter to 463,000 on the 31st December, 1857. But despite this increase, wages, owing to the general desire to speculate on one's own account, continue to be extravagantly high. In California in 1856 miners readily obtained from 10*s.* to 25*s.* a day, according to their skill and capacity for enduring fatigue; common labourers from 8*s.* to 12*s.* a day; and house servants from 5*l.* to 6*l.* a month. For a while most articles were proportionally high, so that these extravagant wages were not so advantageous to the parties receiving them as might have been supposed. But there has latterly been a great fall in the price of manufactured goods and colonial produce; while, owing to the progress of agriculture, provisions have also been greatly reduced. Lodgings are still very dear, but not so exorbitant as formerly. In Australia, the state of things for a while after the discovery of the gold fields was not very dissimilar; wages, however, though still very high, are now (1858) a good deal lower there than in California; while in other respects there is but little difference between the two. And if, in addition to these unprecedented circumstances, we take into account the unsettled character of the population, with the absorbing pursuit of wealth on the one hand, and the utter recklessness of expenditure on the other, we must be satisfied that the currency of these countries cannot be otherwise than excessive as compared with their population.

The powerful influence of the late gold discoveries is not, however, confined to California and Australia. The emigration to these countries, and the new and rapidly increasing markets which they afford, have told effectually here, and indeed in every commercial country. In England the rise of wages cannot be estimated at less than from 10 to 30 per cent., while in Ireland it has been a good deal more. And though the rise of wages in the latter be in part ascribable to the famine of 1846–47, and in a still greater degree to the emigration to the United States, yet, as this emigration has been powerfully promoted by the efflux of emigrants from the Atlantic States to California, it is clear that the gold of the latter has been at bottom a prominent cause of the improvement in the condition of the Irish peasantry. The same may be said of the emigration from Germany, which has latterly become of first-rate importance. At an average of the seven years ended with 1852, it amounted to 103,591 individuals a year; the numbers in 1851 and 1852 being respectively 120,708 and 155,730, of which by far the greater portion was destined for the United States.—(*Report of Emig. Com.* for 1853, p. 104.) In 1854 the emigrants to the latter from Germany only, amounted to no fewer than 223,862; and though not so great since, they are still very numerous, having amounted, in 1857, to 91,781.—(*Hunt's Com. Mag.*, June, 1858, p. 768.)

The rise of wages consequent on these extraordinary mutations, and the increased exports of produce which they have occasioned, have exercised a powerful influence in the United States as well as in Europe. And there, consequently, as well as here, a greater supply of bullion is required to serve as currency. And while this influence is operating on the one hand, on the other the swarms of *parvenus* who are every day rising to opulence, contribute to swell the demand for all sorts of things, but especially for plate and plated goods, jewellery, and such like articles. And what is probably of still greater importance, the metallic basis of the currency is everywhere being enlarged; and the conviction is rapidly gaining ground in the United States as well as in Europe,

that no paper currency can be safe unless effectual measures be taken to maintain such a supply of the precious metals in the countries in which it circulates as may be necessary to insure its immediate conversion into coin.

Burying of Gold and Silver.—It is singular that, in estimating the consumption of gold and silver, Jacob did not make any allusion to the practice which has uniformly prevailed in all countries harassed by intestine commotions or exposed to foreign invasion, of burying treasure in the earth. Of the sums so deposited a very considerable proportion has been altogether lost; and this has no doubt been one of the principal means by which the stock of the precious metals has been kept down to its present level. Every one is aware that during the middle ages treasure trove, or money dug from the ground, formed no inconsiderable part of the revenue of this and most other countries.* And though the burying of money has long ceased in Great Britain, such has not been the case among our neighbours. Wakefield tells us that down to 1812 the practice was common in Ireland†; and though much fallen off in the interval, it continues to this day to be occasionally resorted to in that part of the kingdom. It has always prevailed, sometimes to a less and sometimes to a greater extent, in almost every part of the Continent.‡ The anarchy and brigandage that accompanied the revolution of 1789 made the practice be carried to an extraordinary extent in France; and there, owing to various causes which are too obvious to require being pointed out, it still maintains a broad and firm footing. So much so is this the case that, to use the words of a distinguished authority, "*En France nous enfouissons notre argent dans nos coffres, ou nous le cachons dans les murs de nos maisons et lès sillons de nos champs, selon les vieilles coutumes de l' Orient. Il y a peut-être un milliard* (Forty millions sterling) *de notre numéraire rendu ainsi stérile.*"§ And yet we doubt whether the burying of treasure be at present as prevalent in France as in many parts of Germany and in Hungary, Russia, Italy, Spain, and European Turkey. The feeling of insecurity that has prevailed in all these countries, especially since 1848, has given a stimulus to this practice which nothing can countervail. Of the many millions that were distributed among the countries round the Black Sea during the recent campaigns in that quarter, the greater portion is believed to be as much withdrawn from circulation as if it had never been dug from the mine. But the burying of treasure in Europe is but trifling compared to what it is in the East. There the practice has prevailed from the remotest antiquity down to the present time, and has been and is carried to an enormous extent. Bernier, indeed, and all the most intelligent travellers and inquirers who have visited India, Persia, China, and the East, generally concur in thinking that this burying of the precious metals is a main cause of their continued drain to India, &c., where they never seem to become more abundant. But as we have already noticed this part of our subject at considerable length (*antè*, p. 560. &c.), it is needless to dwell further upon it.

It is impossible, of course, to form any estimate of the sums that are thus annually placed, as it were, in mortmain. They vary from year to year, and are always greatest when wars or revolutionary disturbances are in progress, or when their occurrence is anticipated, or but little confidence is placed in the permanence of existing institutions. There can, at all events, be no question that the sums which have been disposed of in the way now stated in the different continental and oriental countries of late years have been quite enormous, and have far exceeded those absorbed by any of the other channels of expenditure.

Exportation of Gold and Silver to the East.—Humboldt estimated that, of the entire produce of the American mines at the beginning of this century, amounting, as already seen, to 43,500,000 dollars, no less than 25,500,000 were sent to Asia, 17,500,000 by the Cape of Good Hope, 4,000,000 by the Levant, and 4,000,000 through the Russian frontier.‖ But some years ago this immense drain began to diminish, and in 1832 and 1833 it actually set in an opposite direction. Since then it has fluctuated, sometimes inclining to the one side and sometimes to the other. With the exception, however, of the bullion received in payment of the 21,000,000 dollars due to us by China, under the treaty of 1842, there was not for some years any very decided movement of bullion from Europe to the East, or from the East to Europe, though, on the whole, the imports into the latter appear to have exceeded the exports; at least, this was certainly

* Blackstone, Com., b. I., cap. 8., § 13.

† Account of Ireland, i. p. 593.

‡ Storch, *Economie Politique*, i. p. 222, 1823.

§ Dupuynode, *De la Monnaie, du Crédit, &c.*, i. 182. Paris, 1853; one of the best of the late French publications on the important subjects of which it treats.

‖ Probably, however, this estimate was a good deal beyond the mark. "Humboldt, cela n'est plus douteux, estimait trop haut la valeur de l'or et de l'argent, qui s'écoulaient au commencement de ce siècle d'Europe en Asie, et portaient trop bas la déperdition qu'ils éprouvaient, dans la même temps, par le frottement et leur conversion en objets d'orfevrerie et de bijouterie."—(*Dupuynode de la Monnaie*, &c. i. p. 35.) There is no longer, we believe, any doubt in regard to the accuracy of the latter part of this statement; and it is pretty generally supposed that the first part is, also, well founded.

the case during the five years from 1844-45 to 1848-49, both inclusive. But more recently, or since 1850, the drain for bullion for the East has set in with renewed force; and for some years it has been wider and deeper than ever. This is evident from the following statements:—

Total Exports of Bullion from Great Britain to the East for each of the 7 Years ending 1857 (from Tables compiled by James Lowe, Esq., of Austin Friars).

Years.	Gold.	Silver.
1851	£102,280	£1,716,100
1852	921,739	2,630,238
1853	880,202	4,710,665
1854	1,174,299	3,132,003
1855	948,272	6,109,889
1856	404,749	12,118,985
1857	269,275	16,795,232
Total for 7 years	4,700,816	47,513,112
Annual average	671,545	6,787,587

Total Exports of Bullion from the Mediterranean Ports to the East, for each of the 5 Years ending with 1857.

Years.	Gold.	Silver.
1853	£93,528	£848,362
1854	48,456	1,451,014
1855	243,239	1,524,240
1856	74,039	1,988,916
1857	259,986	2,350,689
Total for 5 years	719,248	9,164,221
Annual averages	143,849	1,832,844
Total annual averages	815,394	8,620,431

Total annual average of gold and silver, £9,435,825.

To which have to be added the exports by the Black Sea, the Russian and Turkish frontiers, &c.

It is to be borne in mind that although India did not, for several years prior to 1850, derive any considerable supply of bullion from Europe, she drew during that period large supplies from China. This was a consequence of the vast increase of the importations of opium into the latter. With the exception of tea and silk, China has few native products, other than the precious metals, fit for foreign markets. And the exports of the former being for some years not much more than sufficient to pay for the products sent to her from Europe and America, a very considerable part of the cotton and opium she imported from India was paid for in bullion, the increased exports of which were said to have latterly brought her into serious difficulties. But the circumstances are now (1858) entirely changed. The demand for the silks, teas, &c., of China, in this and other western countries, has latterly become so immense, and has so far exceeded the value of the produce exported by them to China, that the balance in bullion received by the latter on her trade with them, has enabled her to meet with little or no difficulty the drain for bullion occasioned by the increased imports of opium from India. The following statements set these results in a sufficiently clear point of view:—

Account of the Total Value of the Exports from India to China, and of those from China to India, in each of the 5 Years ending with 1857-58, showing the Excess of the Former over the Latter.

Years.	Exports from India to China.	Exports from China to India.	Excess of Exports from India to China.
1853-54	£6,704,734	£810,337	£5,894,397
1854-55	6,445,134	915,049	5,530,085
1855-56	6,592,953	787,717	5,805,236
1856-57	7,568,984	599,672	6,969,312

N. B. These tables have been abstracted and made up from the Parliamentary Paper, No. 38., Sess. 2, 1859.

It is plain from these statements:

I. That, taking India and China together, the imports from them into this country have greatly exceeded the exports, leaving a heavy balance to be discharged by shipments of bullion. Last year (1858), indeed, this balance has been diminished by the great increase in the exports to India, and by the diminished imports from India and China. But we do not think that much stress should be laid on the present increase of the exports, for there can be no doubt that it is in great measure exceptional, and is mainly occasioned by circumstances connected with the late insurrection in India. Now that tranquillity has been restored, the probability is that the exports (except of iron for railways) will fall back to their old level; and that their increase, if it take place, will be but gradual.

II. In regard to China, the imports from which so greatly exceed the exports, it is difficult to form any anticipation of what may take place in future. There can, indeed, be little or no doubt that, great as the imports of silk and tea now are, they will become much greater in future. The real question is, Will the demand for British products in China extend in the same, in a less, or in a greater proportion? And though the question be by no means free from difficulty, we incline to think that the influence of the late treaty, and the greater facilities it affords for the importation of foreign products into China, will increase the amount of the imports. But we have no idea that they will, if ever, at least for many years to come, be equal to the exports; or that the balance between China and England will cease to be largely against the latter.

III. It is equally difficult to cast the horoscope of the future trade between India and China. The importation of opium into the latter is now legalised, and an increase of imports may, in consequence, be expected. But, on the other hand, opium is beginning to be extensively grown in China; and, if its home culture succeed, it is next to certain that the importation from India will be lessened. These, however, are matters which must be left to time and experience to clear up and decide.

IV. On the whole, however, it appears to be sufficiently plain, in whatever way bullion may be distributed among the eastern countries, that they will continue, as hitherto, to import large supplies from the western world. In truth it is much cheaper here than in the East; and, being so, it is advantageous to export it. There is therefore every prospect that the drain of bullion from the West to the East will go on, with occasional oscillations, for the time to come as it has done in times gone by; and that it will continue to absorb a very large proportion of the produce of the mines, perhaps as much as 5 or 6 millions a year.

It is seen from the previous statements that silver forms by far the larger portion of the bullion exported to the East. But this depends on peculiar circumstances; and it is by no means clear, nor indeed very likely, that silver will permanently continue, as heretofore, to be sent to India and China in preference to gold. On the contrary, it seems to be extremely probable, provided there be any material or indeed sensible decline in the value of gold, as compared with silver, that it will begin to be largely exported to these countries. It is extensively used in Hindostan for ornaments, and is preferred by many, both in India and China, to silver, as being more portable and better suited for hoarding. In the event, too, of these great countries becoming, as it is all but certain they will do, richer and more commercial, gold will no doubt be employed, whether legal tender or not, to a less or greater extent, in the settlement of pecuniary transactions. And, on the whole, we should be inclined to anticipate, that anything like a considerable fall in the value of gold would make it go far gradually to supersede

silver in shipments to the East, and open for it in that quarter an all but boundless market.

In all speculations in regard to the probable future supply of gold, it should be carefully borne in mind, that any considerable fall in its value would unavoidably check its production, and, consequently, tend to lessen or prevent its further fall. It is plain, for example, that a decline of 10 per cent. in the value of gold, would, *cæteris paribus*, occasion the abandonment of all those mines, diggings, washings, &c., which only yield a nett profit of that amount. We are aware, that owing to the production of gold, as at present carried on, having more of a gambling character than pertains to most branches of industry, the principle now stated would not operate so speedily as might, perhaps, be anticipated. But of its ultimate operation there can be no question. And it may, therefore, be laid down that any reduction in the value of gold, which is not accompanied by a corresponding improvement in the methods of its production, inevitably tends to correct itself, or to check or hinder its further reduction.

Substitution of Gold for Silver.—Hitherto both gold and silver coins have been legal tender in the U. States, France, and some other countries. Wherever such is the case, the value of the coins in respect of each other has to be fixed by authority; that is, it has to be enacted that debts may be discharged by payments either of gold or silver money, at the rate of so many dollars to the eagle, francs to the Napoleon d'or, shillings to the sovereign, and so on, as laid down in the mint regulations of the different countries. But however correct at the periods when they are made, these valuations speedily become incorrect; and whenever such is the case, it is for everybody's advantage to make all his payments in the metal which happens to be overvalued as compared with the other. And hence the use of gold as money in preference to silver in England, and of silver in preference to gold in France and the U. States.

In the improbable event of the mint valuations of gold and silver continuing for any considerable period to be nearly identical with their real values, the former would be sure to be preferred as money to the latter in all but petty transactions. Being much more valuable in proportion to its bulk and weight than silver, gold is more easily concealed and carried about. When notes circulate of a low value, the advantage now referred to on the side of gold is less obvious. But such low notes are in all respects most objectionable; and where, as in England, there are no notes in circulation for less than *5l.*, and in France for less than 50 francs, the use of gold as money is accompanied with so many advantages that we are disposed to think it would maintain its place even though it were somewhat underrated as compared with silver. Inasmuch, however, as gold has so many natural grounds of preference on its side, the true plan is to make it the only standard, and to use silver merely as a subsidiary currency. This plan has been followed since 1817 in this country with the most complete success; and there is no reason to doubt that it may be elsewhere adopted with equal advantage.

The late extraordinary demand for silver in India has been quite enough to make gold be substituted for it in those countries in which they are equally legal tender. In France, for example, where the metallic currency consisted, down to 1850, almost wholly of silver, it now consists principally of gold. This is evident from the following account of the gold and silver coinage in that empire from 1850 down to 1857, both inclusive:

Years.	Gold.	Silver.	Total.
	Fr.	*Fr.* *C.*	*Fr.* *C.*
1850 - -	85,192,390	86,458,485 20	171,650,875 20
1851 - -	269,709,570	59,327,508 90	329,036,878 90
1852 - -	27,028,270	71,918,445 50	98,946,715 50
1853 - -	312,964,020	20,099,488 20	333,063,508 20
1854 - -	526,528,200	2,123,887 20	528,652,087 20
1855 - -	447,427,820	25,500,305 50	472,928,125 50
1856 - -	508,281,996	54,422,214 —	562,704,209 —
1857 - -	572,561,225	3,809,611 —	576,370,836 —
Total -	2,749,693,491	323,659,745 50	3,073,353,235 50*
Equal in sterling to -	£109,987,740	£12,946,389	£122,934,129

In the U. States the coinage of gold has increased in a somewhat similar ratio, having risen from 9,007,761 dollars in 1849 to 62,614,492 dollars in 1851, and 59,343,465 dollars in 1856. Hence gold coin is now used in these two countries, as it is used in England, in all considerable payments which are not effected by notes or cheques; while large portions of the silver coin that has in consequence been disengaged have found their way to the East.

This substitution of gold for silver, while it materially enlarges the field for the employment of the former, proportionally narrows that for the employment of the latter. And hence a very considerable permanent addition may be made to the comparative supply of gold without its value, measured in silver, being materially affected. In the end, no doubt, the values of both metals will be proportioned, independently of varia-

* Levasseur, *Question de l'Or*, 8vo., p. 105, Paris, 1858.

tions of demand, to the respective costs of their production. But before this equalisation can take place, they must be distributed among the various countries of the world according to the circumstances peculiar to each, including therein their peculiar aptitudes for different purposes, and the novel conditions of their supply.

In India, where wages have always been very low, the great bulk of the coin in circulation has consisted of silver; and in 1835 it was made the only legal tender. But though not legal tender, gold coins continued to circulate in India; and a proclamation issued in 1841 directed them to be received at the public treasuries. Little attention was paid to this measure at the time; but after the discovery of the gold deposits in Australia, it became obvious, if gold coins continued to be received by the public departments, that eventually none else would be paid into them; that silver would cease to be employed except in petty payments; and that government, as well as individuals, would be injured by any fall that might take place in the value of gold. This contingency appears to have alarmed the government; and notice was accordingly given on the 22nd of December, 1852, that from and after the 1st of January next (1853) gold coins would not be received on account of taxes or other payments due to the public. Silver has, consequently, again become in fact as well as in law the sole legal tender of India.

But these appear to be most inadequate grounds for the course that was adopted. There are no sufficient reasons for supposing that any material, or indeed sensible injury, would have resulted either to the government or to individuals from the contingencies referred to; and there are at the same time various circumstances which make it much to be regretted that an attempt should have been made to exclude gold from the currency of India. Silver coins, being the only ones fitted to serve the purposes of the great bulk of the inhabitants, must always be in extensive demand in all parts of the peninsula. But had gold also been allowed to circulate as coin, it is most likely that it would have been extensively employed in making large payments, and it would also have been extensively hoarded. Even as it is, leaf and bar gold have been of late largely imported into India from China, to be used in the arts or buried. In 1855–6, for example, the imports in question amounted to no less than 1,508,541*l.*; the fair presumption being, that but for the suppression of gold as currency, they would have been very much greater. And if so, the increased demand for gold would, on the one hand, have in so far counteracted that fall in its value which has been so generally apprehended; while, on the other, it would, by lessening the demand for silver, have checked any tendency it may have had to rise. And for these, and other reasons that will readily suggest themselves to the reader, it would be good policy to re-introduce a gold currency. It is contrary to all principle, and indeed to the plainest dictates of common sense, to exclude it by forcible means from a field where it would otherwise be largely used, the more especially as by doing this we create an unnatural demand for silver at the very time when it is supposed to be rising in value as compared with gold.

A further substitution of gold for silver may probably be effected by using gold coins of less value than formerly. In the U. Kingdom, for example, gold might be advantageously coined into 5*s.* pieces. It would be inconvenient, perhaps, to have gold coins worth less than this; but of this value their employment would be beneficial, as well by economising the use of silver, as by their being more convenient and easily carried about.

Supposing that the substitution of gold for silver now referred to were fully effected, and that the production of gold as compared with silver were to go on as it has done since the discovery of the Californian and Australian gold-fields, the value of silver, measured in gold, could hardly fail to rise. This, however, will in great measure depend on the demand for silver for the East continuing at about its late average amount, or on its not falling off, which it would be sure to do, were gold again made legal tender. And there are, besides, but slender grounds for thinking that gold and silver will continue for any considerable period to be produced in the same proportions that they have been during the last ten years. The presumption, indeed, appears to be rather in favour of the future increase of silver than of gold.

We may perhaps, before proceeding further, notice in this place the following estimate which the Bank of England laid before the committee of the House of Commons on banks in 1857–58:—

Estimated Increase of the European Stock of Bullion in the 7 Years 1851–57, both inclusive.

Years.	Imports from Producing Countries.		Exports to the East from Great Britain and the Mediterranean.	
	Gold.	Silver.	Gold.	Silver.
1851	£8,654,000	£4,076,000	£102,000	£1,716,000
1852	15,194,000	4,712,000	922,000	2,630,000
1853	22,435,000	4,355,000	974,000	5,559,000
1854	22,077,000	4,199,000	1,222,000	4,583,000
1855	19,875,000	3,717,000	1,192,000	7,934,000
1856	21,275,000	4,761,000	479,000	14,108,000
1857	21,566,000	4,050,000	529,000	20,146,000
Total £	130,876,000	29,870,000	5,420,000	56,676,000

GOLD.

The total import of gold in seven years has been, say	£130,000,000
The exports of gold bullion and British gold coin to India, China, Australia, the Cape, Brazils, the West Indies, United States, &c., may be taken at	22,500,000
Which would leave as the increase to the European stock of gold	£107,500,000

SILVER.

The exports of silver to India and China have been	£56,676,000	
The imports from the producing countries	29,870,000	
Making the amount of silver abstracted from the European stock		26,800,000
And the estimated increase in the European stock of bullion		£80,700,000

In some respects this estimate might be advantageously modified. But supposing it to be, as it may be presumed it is, nearly accurate, still it is obvious that, to get the total addition made to the stock of European bullion during the 7 years ending with 1857, we must add to the addition from importations the bullion produced in Europe during the above period. And the latter being taken at 1,550,000*l.* a year, makes an aggregate sum of 10,850,000*l.*, which added to the above balance of 80,700,000*l.*, makes the total increase amount to 91,550,000*l.*

But, though immense, the demands which this fund has had to sustain have been equally immense. We have already seen that the coinage of gold in France during the 8 years ending with 1857, amounted to no less than 109,987,740*l.*; and during the 7 years ending with 1857, the period referred to in the Bank of England estimate, it amounted to 87,085,201*l.* A portion of this gigantic sum was derived from Dutch, English, and other European coin imported into France, and very considerable portions have been exported, partly to the Crimea, and thence to the adjacent Asiatic countries, for supplies for the French forces in that quarter, and partly to the East by way of Egypt, Smyrna, &c. Still, however, we feel satisfied that we shall be far within the mark if we assume that France has absorbed 35,000,000*l.* of new gold, during the period in question, in the shape of coin, which is partly employed as currency, and partly hoarded.* And if we be nearly right in this assumption, it follows that only 56,550,000*l.*, or 8,080,000*l.* a year, remains to supply all Europe,—1st, with new coins (ex France), and to make good the wear and loss of the old coins†; 2d, to supply the sums required for use in the arts; and 3rd, to supply those that are hoarded and carried away in the pockets of emigrants, &c. &c.

The last item now referred to is of much more importance than is generally supposed. Taking the entire number of emigrants from Europe to the U. States, Australia, and all other places at 400,000 a year, it is pretty certain that they do not take with them, at an average, less than from 2*l.* to 3*l.* in coin, besides plate, watches, rings, &c. Some estimates make the exports of bullion by emigrants much greater than this; but even on this very moderate hypothesis it will amount to 1,000,000*l.* a year in coin only.

Hence, as compared with the outgoings, the supply of bullion in Europe during the last seven or eight years, far from being in excess, has been scanty rather than otherwise. And without a diminution of the former, or an increase of the latter, most people amongst us will be but little sensible of the influence of Californian and Australian gold.

Past and probable future influence of the increased supply of bullion on prices and on its value.—The previous statements seem to be sufficient to show that the present supply of the precious metals is not more than adequate to meet the existing demand, and that, therefore there is no ground for anticipating a fall in their value unless the supply should be increased or the demand diminished.

It is now 10 years since the increased supplies of gold from California, and 7 since those from Australia, have been poured into the markets of Europe and America; and yet there has not, during that period, been anything like a general rise of prices. On the contrary, the prices of most articles are as low at this moment (December, 1858) as they were at the same time in 1850, while several are a good deal lower. And of the few that have risen in price since the latter epoch, there is not one of which the rise may not be satisfactorily explained by something peculiar to itself, and affecting either its demand or the conditions of its supply, or both. Thus, the rise that has taken place in the rate of wages in Great Britain and in Ireland is wholly ascribable, partly to the greater demand for labour, partly to the extent to which emigration has been carried, and partly to the potato rot and the consequent famine in Ireland. There is, in truth, nothing whatever, in comparing the prices of to-day with those of 10 years ago, to

* See in confirmation of the statement now made, Levasseur, *La Question de l'Or*, p. 106.

† A very considerable addition has been made to the metallic currency of the U. K. during the last ten years. Owing, however, to our gold coins being exempted from seignorage, they have no greater value than an equal weight of standard bullion, and are exported indifferently with the latter. Hence the accounts of the sums coined throw, if taken by themselves, little or no light on the increase or diminution of the currency.

entitle any one to affirm that the value of gold and silver has undergone the smallest change in the interval.

That there is but little probability that prices will be raised by a continuance of the present supplies of gold and silver, may be inferred from what took place after the discovery of America in 1492. It appears from the researches of Adam Smith* and other authorities, that the influx of the precious metals had exerted its full effect upon prices previously to or about 1640; and yet this influx was much greater then and subsequently than it had been at any previous period. According to the best information attainable, the average annual importation of the precious metals from America into Europe, from 1492 down to 1810, may be estimated as follows:

From 1492 to 1500	- - - - -	£54.300 a year	
„ 1500 „ 1545	- - - - -	651.600	„
„ 1545 „ 1600	- - - - -	2,389,200	„
„ 1600 „ 1700	- - - - -	3,475 200	„
„ 1700 „ 1750	- - - - -	4,887,030	„
„ 1750 „ 1803	- - - - -	7,667,160	„
„ 1803 „ 1810	- - - - -	9,016.920	„

Annual average of the entire period (1492–1810), 4,109,191*l.*

In 1640 or 1650, when the bullion of America had produced its full effect on prices in Europe, its annual influx amounted to about 3,000,000*l.* And yet, though its influx was nearly trebled between that epoch and 1803, it is admitted on all hands that, down to the last-mentioned year, there was no general rise of prices.† The increased demand of Europe was fully sufficient to take off this great increase of supply without any fall taking place in the value of silver. Indeed, it is contended by some high authorities that, instead of falling, it rose in value during the period referred to.

There can be no manner of doubt, not merely that the quantity of the precious metals employed in Europe and America is incomparably greater now than in the seventeenth and eighteenth centuries, but that the demand for additional quantities is also incomparably greater. And when it is seen that their value continued stationary from 1650 to 1800, despite the immense additional supplies that were thrown upon the market, there is, it is plain, little ground for wonder that their late increase, great as it has been, has not affected their value, or for anticipating that it will materially decline in the course of the next half century.

A fall in the value of the precious metals would, on the whole, be advantageous.—Should it, however, turn out that we are mistaken in these conclusions, and that a considerable fall in the value of the precious metals is about to commence, it is satisfactory to know that there are no really tenable grounds for supposing that such fall will be publicly injurious. It is indeed impossible for any change to take place in the measure of value without its exercising an injurious influence over a greater or less number of individuals. But if the loss it may inflict on A., B., and C. be countervailed by the advantages which it confers on X., Y., and Z., its effect in a public point of view may not be perceptible. It is easy, however, to see that, in the case now under consideration, the inconveniences resulting from a fall in the value of gold and silver would be a good deal more than compensated by the advantages of which it would be productive.

1. In the first place, we may observe that the mischievous influence resulting from a fall in the value of the precious metals depends in great measure on the rapidity with which it is brought about. If it were to take effect suddenly, and without giving any distinct warning of its approach, it would be much more injurious than if it took effect slowly and gradually; for, in the former case, it is difficult to take any measures by which to mitigate or avert the impending evil, whereas, in the latter, abundant opportunities are afforded for that being done; and though these were not availed of, a change that is brought about by a slow and all but insensible progress is but little felt, at least when compared with one that takes place suddenly or rapidly. Now it is sufficiently certain, supposing the value of the precious metals to be in the end reduced, that that reduction will be a very slow process; and that any one likely to be injuriously affected by its occurrence will have ample time to concert measures to secure himself, in as far as practicable, against its operation. That we are warranted in coming to this conclusion is obvious. When an unprecedented influx of bullion has been going on for ten years without having had any appreciable influence over its value, it would be contradictory to suppose that it is at all likely to be speedily and seriously affected by a continuance of the influx.

2. But supposing that these anticipations should not be realised, and that the supplies of the precious metals should be largely and rapidly increased, and their value reduced,

* *Wealth of Nations*, 1 vol. 8vo., p. 88

† Prices rose in this country subsequently to 1793; but this was entirely owing to the difficulties which the war that was then commenced threw in the way of importation, the waste of capital and the shock given to industrial undertakings which it occasioned, and the disorders of all sorts incident to national struggles.

the results are not of a kind that should be deprecated. "In every kingdom," says Hume, "into which money begins to pour in greater abundance than formerly, everything takes a new face: labour and industry gain life, the merchant becomes more enterprising, the manufacturer more diligent and skilful, and even the farmer follows his plough with greater alacrity and attention. But when gold and silver are diminishing, the workman has not the same employment from the manufacturer and merchant, though he pays the same price for everything in the market; the farmer cannot dispose of his corn and cattle, though he must pay the same rent to the landlord: the poverty, beggary, and sloth that must ensue are easily foreseen."—(*Essay on Money.*)

Hume appears to have supposed that the stimulus he has so well described, which is given by an influx of money to industry, is occasioned by the additional money coming first into the hands of capitalists, and enabling them to extend their businesses and employ more work-people. But though this would have some influence, the philosophical historian seems to have overlooked the mode in which an increase in the quantity, and a fall in the value of money, principally contributes to excite industry and enterprise. Such fall proportionally diminishes the many fixed money payments that are borne by the industrious classes. The prices of commodities vary with variations in the value of money; whereas taxes, rents, mortgages, and other pecuniary burdens, continue stationary for longer or shorter periods. The latter are rated or specified in certain amounts of money,—those to whom these are due being obliged to receive them in payment, though the value of money should have fallen 5, 10, or even 50 per cent. since the date of the contract or engagement in which the payments originate; while those by whom they are due are bound to pay them, however much the value of money may have risen. Hence the powerful influence of variations in its value over the different classes of society. When it declines, the debtor portion, or those who have fixed money payments to make, are benefited at the expense of the creditor portion, or those who have such payments to receive; and conversely when it rises. Fundholders, annuitants of all sorts, landholders during the currency of the leases of their estates, mortgagers, the army and navy, &c., suffer according to the diminution in the value of money; for, though their incomes and claims continue nominally the same, their value is really reduced, and they no longer have their former command over necessaries and conveniences. But while the farmer pays the same rent for his farm, and the same taxes to government, he sells his produce for a price increased proportionally to the reduced value of money. And while manufacturers, merchants, and tradesmen pay the same duties on their goods, the same port and market dues, the same tolls, the same rent for shops and warehouses, the same rate of interest for capital borrowed, and so on, they obtain increased prices for whatever they have to sell. In other words, the condition of these classes is improved at the expense of their landlords and creditors, and of annuitants, and other receivers of incomes which are either temporarily or permanently reduced through the fall in the value of money. The greater the fall, the more advantageous for them; and conversely.

Now, as fixed or stationary payments include the interest of the public debt, as well as the many outgoings of government which do not readily accommodate themselves to changes in the value of money, with the rents of farms and houses let on lease, or under equivalent agreements, feuduties, the interest of mortgages, and other stationary loans, the payments to private annuitants and clergymen, the fees of lawyers, physicians, &c., it is obvious that, in a country like this, they must amount in the aggregate to a vast sum. No doubt it sometimes, and indeed not unfrequently happens, that individuals belong to both classes, or that they have fixed payments to receive as well as to make, and that therefore neither the gain to the one party, nor the loss to the other, from fluctuations in the value of money, is so great as might be at first supposed. Still, however, there is no room for doubting that the greater proportion by far of fixed payments is made to the classes not engaged in business or in industrial undertakings by those who are; and hence the advantage which any considerable fall in the value of money confers on the latter,—that is, on those whose well-being, and that of the public, are commonly supposed to be identical. Such fall, by lightening the burden of taxation and of all fixed charges, increases universally the productiveness of industry and the rate of profit. And it is hardly necessary to add that this increased profit operates as a spur to production, that it quickens all the operations of trade, and occasions an increased demand for labour.

The opposite effects follow when, instead of falling, the currency becomes more valuable. Taxes and fixed charges being then augmented in an equal degree, the profits of those by whom they are principally borne are proportionally reduced, industry is depressed, and the situation of the productive classes changed for the worse. But though there cannot, as it appears to us, be a doubt that a fall in the value of money, however injurious to large classes, is on the whole advantageous, we hope it will not be thence inferred that we are disposed to approve in any degree of an intentional reduction of its value. Money being the standard or measure of value, to interfere with it, whether in the way of increase or diminution, would be an act of extreme injustice. Government is bound to protect, in as far as possible, the rights and interests of all classes of its subjects; and it cannot, without trampling on its most sacred duty, adopt, to benefit one part of them, any measure which might be injurious to another part. But a fall in the value of the precious metals caused by the greater facility of their production, or by the discovery of new sources of supply, is a wholly different matter. It depends in no degree on the theories of philosophers or the decisions of statesmen or legislators, but is the result of circumstances that are beyond human control. And though, like a fall of rain after a long course of dry weather, it may be prejudicial to certain classes, it is beneficial to an incomparably greater number, including all who are actively engaged in industrial pursuits; and is, speaking generally, of great public or national advantage.

On the whole, therefore, we are warranted in concluding—1. That there has been no fall in the value of the precious metals, and more especially in that of gold, during the ten years ending with 1858; 2. That there do not appear to be any good grounds for anticipating a speedy or considerable fall in the value either of gold or silver; and 3. That supposing a fall in the value of gold were to take place, its advantageous would much more than countervail its disadvantageous influence.

PREMIUM. See INSURANCE.

PRICES. By the price of a commodity is meant its value estimated in money, or, simply, the quantity of money for which it will exchange. The price of a commodity rises when it fetches more, and falls when it fetches less money.

1. *Price of freely produced Commodities.* — The exchangeable value of commodities — that is, their power of exchanging for or buying other commodities — depends, at any given period, partly on the comparative facility of their production, and partly on the relation of the supply and demand. If any two or more commodities respectively required the same outlay of capital and labour to bring them to market, and if the supply of each were adjusted exactly according to the effectual demand — that is, were they all in

sufficient abundance, and no more, to supply the wants of those able and willing to pay the outlay upon them, and the ordinary rate of profit at the time—they would each fetch the same price, or exchange for the same quantity of any other commodity. But if any single commodity should happen to require less or more capital and labour for its production, while the quantity required to produce the others continued stationary, its value, as compared with them, would, in the first case, fall, and in the second, rise; and, supposing the cost of its production not to vary, its value might be increased by a falling off in the supply, or by an increase of demand, and conversely.

But it is of importance to bear in mind that all variations of price arising from any disproportion in the supply and demand of such commodities as may be *freely produced in indefinite quantities*, are *temporary* only; while those that are occasioned by changes in the cost of their production are *permanent*, at least as much so as the cause in which they originate. A general mourning occasions a transient rise in the price of black cloth: but supposing that the fashion of wearing black were to continue, its price would not permanently vary; for those who previously manufactured blue and brown cloths, &c would henceforth manufacture only black cloth; and the supply being in this way increased to the same extent as the demand, the price would settle at its old level. Hence the importance of distinguishing between a variation of price originating in a change of fashion or other accidental circumstance — such, for example, as a deficient harvest — and a variation occasioned by some change in the cost of production. In the former case, prices will, at no distant period, revert to their old level; in the latter, the variation will be lasting.

When the *price* of a freely produced commodity rises or falls, such variation may evidently be occasioned either by something affecting its value, or by something affecting the value of money. But when the generality of commodities rise or fall, the fair presumption is that the change is not in them, but in the money with which they are compared. This conclusion does not, however, apply in all cases; and we believe that most part of that fall in the price of commodities, which has taken place since the peace, and which has been so generally ascribed to a rise in the value of money, occasioned by a decline in the productiveness of the mines, has been caused by the increased productiveness of industry, arising from the abolition of oppressive restraints on commerce, the opening of new and more abundant sources of supply, and the discovery of new means and improved methods of production. — (See PRECIOUS METALS.)

2. *Price of monopolised Commodities.* — Exclusive, however, of the commodities now alluded to, there is a considerable class, whose producers or holders enjoy either an *absolute* or a *partial* monopoly of the supply. When such is the case, prices depend entirely or principally on the proportion between the supply and demand, and are not liable to be influenced, or only in a secondary degree, by changes in the cost of production. Antique statues and gems; the pictures of the great masters; wines of a peculiar flavour, produced in small quantities, in particular situations; and a few other articles; exist under what may be called absolute monopolies; — their supply cannot be increased; and their price must, therefore, depend entirely on the competition of those who may wish to buy them, without being in the slightest degree influenced by the cost of their production.

Monopolies are sometimes established by law; as when the power to supply the market with a particular article is made over to one individual or society of individuals, without any limitation of the price at which it may be sold; which, of course, enables those possessed of the monopoly to exact the highest price for it that the competition of the buyers will afford, though such price may exceed the cost of production in any conceivable degree. Monopolies of this sort used to be common in England, particularly in the reign of Elizabeth: but they were finally abolished by the famous act of the 21 Jac. 1. c. 3. — an act which, by establishing the freedom of competition in all businesses carried on at home, has been productive of the greatest advantage. — (See MONOPOLY.)

The corn laws establish a partial monopoly of the supply of Great Britain with corn in favour of the agriculturists; but, as competition is carried to as great an extent in agriculture as in any other business, this monopoly does not enable them to obtain a higher price for their produce than is sufficient to pay the expenses of its production, though, owing to the peculiar circumstances under which this country is placed, this price is higher than the price in the surrounding countries. Hence it results that the monopoly is injurious to the public, without being of any advantage to those engaged in the business of agriculture. Neither, indeed, can it be truly said to be advantageous to the landlords. — (See *antè*, p. 422.)

The rights conveyed by patents sometimes establish a valuable monopoly; for they enable the inventors of improved methods of production to maintain, during the continuance of the patent, the price of the article at a level which may be much higher than is required to afford them the ordinary rate of profit. This advantage, however, by stimulating invention, and exciting to new discoveries, of which it is the natural and appropriate reward, instead of being injurious, is beneficial to the public. — (See PATENTS.)

There are also partial monopolies, depending upon situation, connection, fashion, &c. These, and other inappreciable circumstances, sometimes occasion a difference of 30 per cent. or more in the price of the same article in shops not very distant from each other.

Generally speaking, the supply of monopolised commodities is less liable to vary than the supply of those which are freely produced; and their prices are commonly more steady. But there are various exceptions to this rule, and of these the corn monopoly is one. The great variations in the harvests of particular countries, and their average equality throughout the world, exposes a nation which shuts foreign corn out of its ports to destructive vicissitudes of price, from which it would enjoy a comparative exemption were the ports open.—(See *antè*, p. 419.) Sometimes the expiration of a monopoly—a patent, for example—has occasioned a sudden and extraordinary increase of supply, and consequent fall of price; entailing, of course, a serious loss on the holders of large stocks of goods produced under the monopoly.

3. *New Sources of Supply.*—The effects on prices produced by the opening of new markets, or new sources of supply, are familiar to every one. The fall that has taken place in the price of pepper, and of most sorts of commodities brought from the East, since the opening of the trade in 1814, is a conspicuous proof of what is now stated.

4. *Influence of War on Prices.*—The effect of war in obstructing the ordinary channels of commercial intercourse, and occasioning extreme fluctuations in the supply and price of commodities, is well known. In this respect, however, the latter part of the late war is, perhaps, entitled to a pre-eminence. We had then to deal with an enemy who had extended his sway over most part of the Continent; and who endeavoured, by every means in his power, to shut us out of the Continental markets. Mr. Tooke has given, in his elaborate and valuable work on *High and Low Prices*, a variety of details which strikingly illustrate the effect that the regulations then adopted by the belligerent powers had on prices. "Among the means," says Mr. Tooke, "devised by the ingenuity and enterprise of adventurers to elude or overcome the obstacles presented by the decrees of the enemy, one in particular, which was resorted to on an extensive scale, deserves mention, as illustrating in a striking manner the degree in which those obstacles were calculated to increase the cost to the consumer. Several vessels laden with sugar, coffee, tobacco, cotton twist, and other valuable commodities, were despatched from England, at very high rates of freight and insurance, to Salonica, where the goods were landed, and thence conveyed on mules and horses through Servia and Hungary to Vienna, for the purpose of being distributed over Germany, and, possibly, into France. Thus it might happen that the inhabitants of that part of the Continent most contiguous to this country could not receive their supplies from us, without an expense of conveyance equivalent to what it would be, if they were removed to the distance of a sea voyage twice round the globe, but not subject to fiscal and political regulations." And in consequence of these, and other causes of the same sort, Mr. Tooke mentions that the price of sugar in France, and other parts of the Continent, during the latter years of the war, was as high as 5*s.* and 6*s.* a pound; that coffee rose to 7*s.*, indigo to 18*s.*, and so on.

But the sums charged for freight and insurance were the most extraordinary. Mr. Tooke states, that he has known instances in which the licence, freight, and other charges on account of a vessel of about 100 tons burden, making a voyage from Calais to London and back, have amounted to the almost incredible sum of 50,000*l.*! A ship, of which the whole cost and outfit did not amount to 4,000*l.*, earned during the latter period of the war, a gross freight of 80,000*l.* on a voyage from Bordeaux to London and back! The freight of indigo from London to the Continent does not at present exceed 1*d.* a pound; whereas it amounted, at the period referred to, to about 4*s.* 6*d.*—(*High and Low Prices*, 2d ed. p. 212.)

5. *Influence of Taxes on Prices.*—It is unnecessary to dilate on a topic so familiar to every one. When a tax is laid on a commodity, its price necessarily rises in a corresponding proportion; for otherwise the producers would not obtain the ordinary rate of profit, and would, of course, withdraw from the business. The rise in the price of several of the articles in the annexed table is principally to be ascribed to the increase of taxation.

These statements will probably suffice to give our readers a general idea of the principles which determine the value of commodities. To go deeper into the subject would involve us in discussions that belong to political economy, and are among the most intricate in that science. The influence of speculation on prices must not, however, be passed over in a work of this sort.

6. *Influence of Speculation on Prices.*—It very rarely happens that either the actual supply of any species of produce in extensive demand, or the intensity of that demand, can be exactly measured. Every transaction in which an individual buys produce in order to sell it again, is, in fact, a speculation. The buyer anticipates that the demand for the article he has purchased will be such, at some future period, either more or less

distant, that he will be able to dispose of it with a profit; and the success of the speculation depends, it is evident, on the skill with which he has estimated the circumstances that must determine the future price of the commodity. It follows, therefore, that in all highly commercial countries, where merchants are possessed of large capitals, and where they are left to be guided in the use of them by their own discretion and foresight, the prices of commodities will frequently be very much influenced, not merely by the actual occurrence of changes in the accustomed relation of the supply and demand, but by the anticipation of such changes. It is the business of the merchant to acquaint himself with every circumstance affecting the particular description of commodities in which he deals. He endeavours to obtain, by means of an extensive correspondence, the earliest and most authentic information with respect to every thing that may affect their supply or demand, or the cost of their production; and if he learned that the supply of an article had failed, or that, owing to changes of fashion, or to the opening of new channels of commerce, the demand for it had been increased, he would most likely be disposed to become a buyer, in anticipation of profiting by the rise of price, which, under the circumstances of the case, could hardly fail of taking place; or, if he were a holder of the article, he would refuse to part with it, unless for a higher price than he would previously have accepted. If the intelligence received by the merchant had been of a contrary description,—if, for example, he had learned that the article was now produced with greater facility, or that there was a falling off in the demand for it, caused by a change of fashion, or by the shutting up of some of the markets to which it had previously been admitted,—he would have acted differently: in this case he would have anticipated a fall of prices, and would either have declined purchasing the article, except at a reduced rate, or have endeavoured to get rid of it, supposing him to be a holder, by offering it at a lower price. In consequence of these operations, the prices of commodities, in different places and periods, are brought comparatively near to equality. All abrupt transitions, from scarcity to abundance, and from abundance to scarcity, are avoided; an excess in one case is made to balance a deficiency in another, and the supply is distributed with a degree of steadiness and regularity that could hardly have been deemed attainable.

It is obvious, from what has now been stated, that those who indiscriminately condemn all sorts of speculative engagements, have never reflected on the circumstances incident to the prosecution of every undertaking. In truth and reality, they are all speculations. Their undertakers must look forward to periods more or less distant; and their success depends entirely on the sagacity with which they have estimated the probability of certain events occurring, and the influence which they have ascribed to them. Speculation is, therefore, really only another name for foresight; and though fortunes have sometimes been made by a lucky hit, the character of a successful speculator is, in the vast majority of instances, due to him only who has skilfully devised the means of effecting the end he had in view, and who has outstripped his competitors in the judgment with which he has looked into futurity, and appreciated the operation of causes producing distant effects. Even in the securest businesses, such as agriculture and manufactures, there is, and must be, a great deal of speculation. An unlooked for change of season frequently disappoints the apparently reasonable expectations of those who undertake the former; while the equally capricious variations of fashion have to be encountered by those engaged in the latter; and each is, besides, liable to be affected by legislative enactments, by new discoveries in the arts, and by an endless variety of circumstances which it is always very difficult, and sometimes quite impossible, to foresee. On the whole, indeed, the gains of the undertakers are so adjusted, that those who carry them on obtain, at an average, the common and ordinary rate of profit. But the inequality in the gains of individuals is most commonly very great: and while the superior tact, industry, or good fortune of some enable them to realise large fortunes; the want of discernment, the less vigilant attention, or the bad fortune of others, frequently reduces them from the situation of capitalists to that of labourers.

The great cotton speculation of 1825 took its rise partly and chiefly from a supposed deficiency in the supply of cotton, partly from an idea that there was a greatly increased demand for raw cotton in this country and the Continent, and partly from a belief that the stocks on hand were unusually low. Now it is obvious that the success of those who embarked in this speculation depended entirely on two circumstances; viz. *first*, that they were right in the fundamental supposition on which the whole speculation rested, that the supply of cotton was no longer commensurate with the demand; and *second*, that their competition did not raise the price so high as to diminish the consumption by the manufacturers in too great a degree to enable them to take off the quantity to be actually brought to market. If the merchants had been well founded in their suppositions, and if their competition had not raised the price of cotton too high, the speculation would certainly have been successful. But, instead of being well founded, the hypothesis on which the whole thing rested was perfectly visionary. There was no deficiency in the supply of cotton, but, on the contrary, a great super-

so stated in the account. It is also necessary to remark, that the blue cloth now used for the Pensioners' coats is of a quality duction of 10 per cent.; and in the case of bricklayers', masons', and plumbers' wages, to a deduction of 7½ per cent.

abundance; and though there had been such a deficiency, the excess to which the price was carried must have checked consumption so much as to occasion a serious decline. The falling off in the imports of cotton from America, in 1824, seems to have been the source of the delusion. It was supposed that this falling off was not accidental, but that it was a consequence of the price of cotton having been for a series of years so low as to be inadequate to defray the expenses of its cultivation. The result showed that this calculation was most erroneous. And besides, in entering on the speculation, no attention was paid to Egypt and Italy, — countries from which only about 1,400,000 lbs. of cotton were obtained in 1824, but from which no less than 23,800,000 lbs. were obtained in 1825! This unlooked-for importation was of itself almost enough to overturn the combination of the speculators; and, coupled with the increased importation from America and other countries, actually occasioned a heavy glut of the market.

The risk to which merchants are exposed, when they either sell off any commodity at a reduced price in anticipation of a fall, or buy at an advanced price in anticipation of a future rise, is a consequence principally of the extreme difficulty of ascertaining the true state of the fact with respect to the grounds on which an abundant or a deficient supply, or an increasing or decreasing demand, may be expected. Rules can here be of no service; every thing depends upon the talent, tact, and knowledge of the party. The questions to be solved are all practical ones, varying in every case from each other; the skill of the merchant being evinced by the mode in which he conducts his business under such circumstances, or by his sagacity in discovering coming events, and appreciating their character and the extent of their influence. Priority, but, above all, accuracy of intelligence, is, in such cases, of the utmost consequence. Without well authenticated data to go upon, every step taken may only lead to error. The instances, indeed, in which speculations, apparently contrived with the greatest judgment, have ended in bankruptcy and ruin, from a deficiency in this essential requisite, are so very numerous, that every one must be acquainted with them. Hence the importance of selecting acute and cautious correspondents; and hence, also, the necessity of maturely weighing their reports, and of endeavouring, by the aid of information gleaned from every authentic accessible source, to ascertain how far they may be depended upon.

When a few leading merchants purchase in anticipation of an advance, or sell in anticipation of a fall, the speculation is often pushed beyond all reasonable limits, by the operations of those who are influenced by imitation only, and who have never, perhaps, reflected for a moment on the grounds on which a variation of price is anticipated. In speculation, as in most other things, one individual derives confidence from another. Such a one purchases or sells, not because he has any really accurate information as to the state of the demand and supply, but because some one else has done so before him. The original impulse is thus rapidly extended; and even those who are satisfied that a speculation, in anticipation of a rise of prices, is unsafe, and that there will be a recoil, not unfrequently adventure, in the expectation that they will be able to withdraw before the recoil has begun.

It may, we believe, speaking generally, be laid down as a sound practical rule, to avoid having any thing to do with a speculation in which many have already engaged. The competition of the speculators seldom fails speedily to render an adventure that might have been originally safe, extremely hazardous. If a commodity happen to be at an unusually reduced price in any particular market, it will rise the moment that different buyers appear in the field; and supposing, on the other hand, that it is fetching an unusually high price, it will fall, perhaps far below the cost of production, as soon as supplies begin to be poured in by different merchants. Whatever, therefore, may be the success of those who originate a speculation, those who enter into it at an advanced period are almost sure to lose. To have been preceded by others ought not, in such matters, to inspire confidence; on the contrary, it ought, unless there be something special in the case, to induce every considerate person to decline interfering with it.

The maintenance of the freedom of intercourse between different countries, and the more general diffusion of sound instruction, seem to be the only means by which those miscalculations, that are often productive of great national as well as private loss, can be either obviated or mitigated. The effects consequent to such improvident speculations being always far more injurious to the parties engaged in them than to any other class, the presumption is that they will diminish, both in frequency and force, according as the true principles of commerce come to be better understood. But, whatever inconvenience may occasionally flow from them, it is abundantly plain, that instead of being lessened, it would be very much increased, were any restraints imposed on the freedom of adventure. When the attention of many individuals is directed to the same line of speculation; when they prosecute it as a business, and are responsible in their

own private fortunes for any errors they may commit; they acquire a knowledge of the various circumstances influencing prices, and give by their combinations a steadiness to them, which it is easy to see could not be attained by any other means. It is material, too, to bear in mind, as was previously stated, that many, perhaps it might be said *most*, of those who press so eagerly into the market, when any new channel of commerce is opened, or when any considerable rise of price is anticipated, are not merchants, but persons engaged in other businesses, or living, perhaps, on fixed incomes, who speculate in the hope of suddenly increasing their fortune. This tendency to gambling seldom fails to break out upon such occasions; but, fortunately, these are only of comparatively rare occurrence; and in the ordinary course of affairs, mercantile speculations are left to be conducted by those who are familiar with business, and who, in exerting themselves to equalise the variations of price caused by variations of climate and of seasons, and to distribute the supply of produce proportionally to the effective demand, and with so much providence that it may not at any time be wholly exhausted, perform functions that are in the highest degree important and beneficial. They are, it is true, actuated only by a desire to advance their own interests; but the results of their operations are not less advantageous than those of the agriculturist who gives greater fertility to the soil, or of the mechanist who invents new and more powerful machines.

7. *Tables of Prices.* — It is superfluous, perhaps, to observe, that the precious metals are liable to all the variations of value already alluded to. Not only, therefore, are prices, as was already remarked, affected by variations in the cost and supply of commodities, but they are also affected by changes in the cost and supply of gold and silver, whether arising from the exhaustion of old, or the discovery of new mines, improvements in the art of mining, changes of fashion, &c. Hence it is, that Tables of the prices of commodities extending for a considerable period, communicate far less solid information than is generally supposed, and, unless the necessary allowances be made, may lead to the most unfounded conclusions. The cost or real value of any commodity depends on the quantity of labour required for its production; but supposing that we were to set about inferring this cost, or the ultimate sacrifice required to obtain the commodity, from its price, it might happen (had the quantity of labour required for its production declined, but in a less degree than the quantity required to produce gold and silver) that its value would appear to rise, when it had really been diminished. When, however, the rate of wages, as well as the price of commodities, is given upon authentic data, a Table of prices is valuable, inasmuch as it shows the extent of the command over the necessaries and conveniences of life enjoyed by the bulk of the community during the period through which it extends. The foregoing Table (pp. 1060, 1061.) of the prices of various commodities, and of the wages paid to different descriptions of tradesmen, at Greenwich Hospital, for the last 100 years, is the most complete of the sort that has been published; and is one of the few that are founded upon data the accuracy of which cannot be questioned. Unfortunately, it applies only to a small part of the country. But many important conclusions may, notwithstanding, be deduced from it. The reader will find, under the more important articles described in this work, pretty ample accounts of their prices. Sometimes, as in the case of corn, these accounts go back to a very distant period.

Those desirous of detailed information as to the prices of commodities in Great Britain, in remoter ages, may consult the elaborate Tables in the 3d volume of Sir F. M. Eden's work on the *Poor*; and the 4th volume of *Macpherson's Annals of Commerce*. *Arbuthnot's Tables of Ancient Coins, Weights, Measures, Prices, &c.* are well known; but the statements are not much to be depended upon. The *Traité de Métrologie* of M. Paucton, 4to, Paris, 1780, is the best work on this curious and difficult subject.

PRICE CURRENT; a list or enumeration of the various articles of merchandise, with their prices, the duties (if any) payable thereon when imported or exported, with the drawbacks occasionally allowed upon their exportation, &c. Lists of this description are published periodically, generally once or twice a week, in most great commercial cities and towns. — (For examples, see the articles GENOA, HAVRE, TRIESTE, &c. in this work.)

PRIMAGE, is a certain allowance paid by the shipper or consignee of goods to the mariners and master of a vessel for loading the same. In some places it is 1*d.* in the pound; in others 6*d.* for every pack or bale; or otherwise, according to the custom of the place.

PRINTS, impressions on paper, or some other substance, of engravings on copper, steel, wood, stone, &c., representing some particular subject or composition.

Prints, like paintings, embrace every variety of subject; and differ very widely in the manner in which they are engraved. Their prices vary according to the style of the engraving, the fineness of its execution, the goodness of the impression, its rarity, &c. The art seems to have taken its rise in the 15th century. But, as a dissertation on one of the most beautiful of the fine arts would be singularly out of place in a work of this

sort, we have introduced it for the purpose merely of stating the law with respect to the copyright of prints.

This is laid down in the acts 8 Geo. 2. c. 13., 7 Geo. 3. c. 38., and 17 Geo. 3. c. 57. By these acts, the copyright of all sorts of prints, including maps and charts, is secured to the engraver, or author, for *twenty-eight* years. The last-mentioned act declares that every individual who shall, within the said 28 years, engrave, etch, or work, or in any other manner copy, in the whole or in part, by varying, adding to, or diminishing from the main design; or shall print, reprint, or import for sale, or shall publish, sell, or otherwise dispose of any copy of any print whatever, which has been or shall be engraved, etched, drawn, or designed in Great Britain, without the express consent of the proprietor thereof first obtained in writing, signed by him with his own hand, in the presence of, and attested by, two or more credible witnesses, then every such proprietor may, by a special action upon the case to be brought against the person so offending, recover such damages as a jury, on the trial of such action, or on the execution of a writ of inquiry thereon, shall give or assess, together with double costs of suit.

In questions as to the piracy of prints, the courts proceed upon the same principles that are followed in those with respect to the piracy of books.—(See Books; see also *Mr. Godson's* excellent work on the *Law of Patents and Copyright*, pp. 287—301.)

Regulations as to Importation.— Where prints or maps are contained in and form part of a book, and serve merely to explain or illustrate the subject of such book, they are to be deemed a part of the work, and be charged with duty, by weight, as books; but when prints or maps are bound or stitched together without letter-press, or when the letter-press is merely descriptive of the prints or maps, then they are to be charged with duty by tale, as prints or maps.—(*Min. Com. Cus.* 5th of Sept. 1829.) But if satisfactory proof be adduced, that prints or maps, although imported separately, do really form part of a work, they may be charged with the book duty by weight; but in other cases they are to be charged with duty by tale. — (*Treas. Order*, 2d of June, 1830.)

Pictures, sketches, and drawings, brought from the Continent, and accompanied by the proprietor, are to be admitted to enter free of duty, upon proof, by oath of the proprietor, that the same were wholly executed by him for his amusement, and not intended for sale in this country.—(*Treas. Order*, 5th of Aug. 1817.)

PRISAGE, or BUTLERAGE, was a right of taking 2 tons of wine from every ship importing into England 20 tons or more; which was changed by Edward I. into a duty of 2*s.* for every ton imported by merchant strangers, and called butlerage, because paid to the king's butler. The term is now fallen into disuse. — (*Blackstone.*)

PRIVATEERS, ships of war fitted out by private individuals, to annoy and plunder the public enemy. But before commencing their operations, it is indispensable that they obtain *letters of marque and reprisal* from the government whose subjects they are, authorising them to commit hostilities, and that they conform strictly to the rules laid down for the regulation of their conduct. All private individuals attacking others at sea, unless empowered by letters of marque, are to be considered pirates; and may be treated as such, either by those they attack, or by their own government.

1. *Policy of Privateering.*—The policy of this system is very questionable. It seems to be a remnant of that species of private war which is exercised by all individuals in early ages, but which gradually disappears as society advances. And though by injuring individuals, it aggravates the suffering inseparable from national struggles, it has little or no tendency to accelerate their termination. Privateers rarely attack ships of war. Their object is merely to plunder and destroy merchantmen. And experience has shown that it is not possible, whatever precautions may be adopted, to prevent them from attacking neutrals and perpetrating all sorts of abuses. The wish to amass plunder is the only principle by which they are actuated; and such being the case, it would be idle to suppose that they should be very scrupulous about abstaining from excesses. A system of this sort, if it be ever useful, can be so only to nations that have little trade, and that may expect to enrich themselves during war by fitting out privateers to plunder the merchant ships of their enemies. In all other cases it seems to be productive only of mischief; though it is, of course, most injurious to those states that have the greatest mercantile navy. Instead, therefore, of encouraging the practice of privateering, a due regard to the rights and interests of humanity has lately suggested to the great powers the expediency of abolishing it altogether. A few efforts had, indeed, been already made towards this desirable object. Thus it was stipulated in the treaty between Sweden and the U. Provinces, in 1675, that neither party should, in any future war, grant letters of marque against the other. In 1767, Russia abstained from licensing privateers: and in the treaty between the U. States and Prussia, in 1785, a stipulation was inserted as to privateers, similar to that in the treaty between Sweden and the U. Provinces in 1675.—(*Martens, Essai concernant les Armateurs*, 1794.) But it required some such convention and agreement among the great powers as that which was happily come to at Paris in 1856, to effect its general abolition.—(See Art. *Neutrality* in this work.) Inasmuch, however, as the U. States have not subscribed the declaration of 1856 against privateering, it is not possible to say what might be the effect were a quarrel to occur, if these continue the practice; and hence the following statements may be allowed to keep their place:—

2. *Appointment of Privateers.*—The captain of a privateer is nominated by the owners, who may dismiss him at pleasure. The commission or letters of marque given to the owners, authorises them to attack and seize the ships of the power or powers specified therein; but they are not to look upon them as their property, or to appropriate them, or any part of them, to their own use, *till they have been legally condemned.* Besides the stimulus afforded by the hope of booty, government has been in the habit of allowing them 5*l.* for every man on board such enemy's ships of war or privateers as they may capture. — (33. Geo. 3 c. 66.) A privateer cruising under letters of marque against one state may, on obtaining authentic information of hostilities being commenced by her government against another, capture its ships

with full advantage to herself. The king has in all cases the right to release any prize previously to its condemnation; this being an implied exception in the grant of prizes by the Crown.—(*Chitty on Commercial Law*, vol. i. c. 8.)

In some privateering adventures, the crew are engaged on the terms no prize no pay; and, in such cases, the produce of whatsoever prizes may be taken goes half to the ship (for the owners), and half to the men, divided among them according to the articles of agreement; but when the men sail for wages, the captures belong entirely to the owners, except a small share, which is commonly stipulated to be given to the crew, over and above their wages, in order to stimulate their enterprise. Both ways of arming are regulated by the articles entered into between the owners and crews.

Privateers are forbidden from doing any thing contrary to the law of nations, as to assault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neutral; for the peace of such place must be preserved inviolable.—(*Molloy, de Jure Maritimo*, book i. c. 3.)

When letters of marque are granted, it is usual, in most countries, to exact security that the regulations with respect to the conduct of privateers shall be observed. In Great Britain, a bond for 1,500*l.* must be given by responsible persons, not concerned in the ship, for all ships carrying less than 150 men, and 3,000*l.* for every ship carrying more, that they will give full satisfaction for any damage or injury they may commit at sea, contrary to the regulations under which they are to act, and to their duty as privateers.

If privateers wilfully commit any spoil, depredation, or other injury, on friendly or neutral ships, or on the ships or goods of their fellow subjects, they are to be punished, according to the crime, either with death, or otherwise; and the vessels are subject to forfeiture.

Whether a ship taken be lawful prize, or not, shall be tried in the admiralty; and no ship or cargo, or part of a ship or part of a cargo, is to be sold, or disposed of in any way, till after judgment has been obtained.

If 2 ships with letters of marque accidentally meet with a prize at sea, though only one attack and take her, yet the other, being in sight, shall have an equal share of the prize, though he afforded no assistance in the capture; because his presence may be presumed to have struck terror into the enemy, and made him yield; which perhaps he would not have done, had his conqueror been single: so that all ships that are in sight, though they cannot come up to assist in the engagement, are entitled by the *common law* to a distribution of the spoil.—(*Beawes, Lex Mercatoria*, art. *Privateers*.)

If those to whom letters of marque are granted, should, instead of taking the ship and goods appertaining to that nation against which the said letters are awarded, *wilfully* take or spoil the goods of another nation in amity with us, this would amount to *piracy*; and the person so offending would, for such fault, forfeit their vessel, and the penalties in which their securities are, according to custom, bound on taking out such letters. But such penalties would not follow, unless the capture were made in a piratical manner. For if the circumstances incident to the captured vessel were such as to afford a strong presumption that she really belonged to the country against which the letters were granted, the captors would not be liable to punishment, though they might be to damages. "It being impossible," says Beawes, "always to determine an affair of this sort at sea, it is allowable to bring a dubious capture into port, in order to more nice and just scrutiny and inspection; otherwise the goods of an enemy would often escape. However, to guard against unlawful seizures, the government have wisely directed sufficient caution to be given (as before mentioned) for the due observance of the letters according to law, before they permit their issuing; and when there is a breach committed, the penalties are inflicted."—(*Lex Mercatoria*, art. *Privateers*.)

3. *Regulations for the Government of Privateers, &c.*—The following instructions to privateers were issued under an order in council, at the commencement of the last war with France, 16th of May, 1803:—

Art. I. *Against what, and where, Letters of Marque may act hostilely.*—It shall be lawful for the commanders of ships authorised by letters of marque and reprisals for private men-of-war, to set upon by force of arms, and subdue and take the men-of-war, ships and vessels, goods, wares, and merchandises, belonging to the French republic, or to any persons being subjects to the French republic, or inhabitants within any of the territories of the French republic; but so that no hostility be committed, nor prize attacked, seized, or taken within the harbours of princes or states in amity with us, or in their rivers or roads, within the shot of their cannon, unless by permission of such princes or states, or their commanders or governors in chief of such places.

Art. II. *Captures to be brought into Port.*—The commanders of the ships and vessels so authorised as aforesaid, shall bring all ships, vessels, and goods, which they shall seize and take, into such port of *England*, or some other port of our dominions, as shall be most convenient for them, in order to have the same legally adjudged by our High Court of Admiralty of *England*, or before the judge of any other admiralty court, lawfully authorised, within our dominions.

Art. III. *Conduct of the Captors after the Capture is brought into Port.*—After such ships, vessels, and goods shall be taken and brought into any port, the taker, or one of his chief officers, or some other person present at the capture, shall be obliged to bring or send, as soon as possibly may be, 3 or 4 of the principal of the company (whereof the master, supercargo, mate, or boatswain, to be always 2) of every ship or vessel so brought into port, before the judge of our High Court of Admiralty of *England*, or his surrogate, or before the judge of such other admiralty court as within our dominions, lawfully authorised aforesaid, or such as shall be lawfully commissioned in that behalf, to be sworn and examined upon such interrogatories as shall tend to the discovery of the truth, concerning the interest or property of such ship or ships, vessel or vessels, and of the goods, merchandises, and other effects found therein; and the taker shall be further obliged, at the time he produceth the company to be examined, and before any monition shall be issued, to bring in and deliver into the hands of the judge of the High Court of Admiralty of *England*, his surrogate, or the judge of such other admiralty court within our dominions, lawfully authorised, or others commissioned as aforesaid, all such papers, passes, sea-briefs, charterparties, bills of lading, cockets, letters, and other documents and writings, as shall be delivered up or found on board any ship: the taker, or one of his chief officers, or some other person who shall be present at the capture, and saw the said papers and writings delivered up, or otherwise found on board at the time of the capture, making oath that the said papers and writings are brought and delivered in as they were received and taken, without any fraud, addition, abduction, or embezzlement whatever, or otherwise to account for the same upon oath to the satisfaction of the court.

Art. IV. *Not to break Bulk before Judgment.*—The ships, vessels, goods, wares, merchandises, and effects taken by virtue of letters of marque and reprisals as aforesaid, shall be kept and preserved, and no part of them shall be sold, spoiled, wasted, or diminished, and the bulk thereof shall not be broken, before judgment be given in the High Court of Admiralty of *England*, or some other court of admiralty lawfully authorised in that behalf, that the ships, goods, or merchandises are lawful prize.

Art. V. *Privateers to assist Ships in Distress.*—If any ship or vessel belonging to us, or our subjects, shall be found in distress by being in fight set upon or taken by the enemy, or by reason of any other accident, the commanders, officers, and company of such merchant ships or vessels as shall have letters of marque and reprisals as aforesaid, shall use their best endeavours to give aid and succour to all such ship and ships, and shall, to the utmost of their power, labour to free the same from the enemy, or any other distress.

Art. VI. *Application to the Admiralty for Letters of Marque.*—The commanders or owners of such

ships and vessels, before the taking out letters of marque and reprisals, shall make application in writing, subscribed with their hands, to our high admiral of *Great Britain*, or our commissioners for executing that office for the time being, or the lieutenant or judge of the said High Court of Admiralty, or his surrogate, and shall therein set forth a particular, true, and exact description of the ship or vessel for which such letter of marque and reprisals is requested, specifying the burden of such ship or vessel, and the number and nature of the guns, and what other warlike furniture and ammunition are on board the same, to what place the ship belongs, and the name or names of the principal owner or owners of such ship or vessel, and the number of men intended to be put on board the same, and for what time they are victualled; also the names of the commanders and officers.

Art. VII. *Correspondence with the Admiralty.*—The commanders of ships and vessels having letters of marque and reprisals as aforesaid shall hold and keep, and are hereby enjoined to hold and keep, a correspondence, by all conveniences, and upon all occasions, with our high admiral of *Great Britain*, or our commissioners for executing that office for the time being, or their secretary, so as from time to time to render or give him or them, not only an account or intelligence of their captures and proceedings by virtue of such commission, but also of whatever else shall seem unto them, or be discovered and declared to them, or found out by them, or by examination of, or conference with, any marines or passengers of or in the ships or vessels taken, or by any other ways or means whatsoever, touching or concerning the designs of the enemy, or any of their fleets, ships, vessels, or parties, and of the stations, sea-ports, and places, and of their intents therein; and what ships or vessels of the enemy bound out or home, or where cruising, as they shall hear of; and of what else material in these cases may arrive at their knowledge; to the end such course may be thereon taken, and such orders given, as may be requisite.

Art. VIII. *What Colours a Privateer is to wear.*—No commander of any ship or vessel having a letter of marque and reprisals as aforesaid shall presume, as they will answer it at their peril, to wear any jack, pendant, or other ensign or colours usually borne by our ships; but, besides the colours usually borne by merchants' ships, they shall wear a red jack, with the union jack described in the canton, at the upper corner thereof, near the staff.

Art. IX. *Not to ransom any Capture.*—No commander of any ship or vessel, having a letter of marque and reprisal as aforesaid, shall ransom, or agree to ransom, or quit or set at liberty, any ship or vessel, or their cargoes, which shall be seized and taken.

Art. X. *To deliver their Prisoners to the proper Commissioners.*—All captains or commanding officers of ships having letters of marque and reprisals shall send an account of, and deliver over, what prisoners shall be taken on board any prizes, to the commissioners appointed, or to be appointed, for the exchange of prisoners of war, or the persons appointed in the sea-port towns to take charge of prisoners; and such prisoners shall be subject only to the orders, regulations, and directions of the said commissioners; and no commander or other officer of any ship, having a letter of marque or reprisal as aforesaid, shall presume, upon any pretence whatsoever, to ransom any prisoner.

Art. XI. *Commission forfeited for acting contrary hereto.*—In case the commander of any ship, having a letter of marque and reprisals as aforesaid, shall act contrary to these instructions, or any such further instructions of which he shall have due notice, he shall forfeit his commission to all intents and purposes, and shall, together with his bail, be proceeded against according to law, and be condemned to costs and damages.

Art. XII. *Copies of Journals.*—All commanders of ships and vessels having letters of marque and reprisals shall, by every opportunity, send exact copies of their journals to the secretary of the Admiralty, and proceed to the condemnation of the prizes as soon as may be, and without delay.

Art. XIII. *To observe all Orders.*—Commanders of ships and vessels having letters of marque and reprisals shall, upon due notice being given to them, observe all such other instructions and orders as we shall think fit to direct from time to time, for the better carrying on this service.

Art. XIV. *Violating these Instructions.*—All persons who shall violate these or any other of our instructions, shall be severely punished, and also required to make full reparation to persons injured contrary to our instructions, for all damages they shall sustain by any capture, embezzlement, demurrage, or otherwise.

Art. XV. *Bail to be given.*—Before any letter of marque or reprisal for the purposes aforesaid shall issue under seal, bail shall be given with sureties, before the lieutenant and judge of our High Court of Admiralty of *England*, or his surrogate, in the sum of 3,000*l.* sterling, if the ship carries above 150 men; and if a less number, in the sum of 1,500*l.* sterling; which bail shall be to the effect and in the form following:—

Which day, time, and place, personally appeared and who submitting themselves to the jurisdiction of the High Court of Admiralty of *England*, obliged themselves, their heirs, executors, and administrators, unto our Sovereign Lord the King, in the sum of pounds of lawful money of *Great Britain*, to this effect; that is to say, that whereas is duly authorised by letters of marque and reprisals, with the ship called the of the burthen of about tons, whereof he the said goeth master by force of arms to attack, surprise, seize, and take all ships and vessels, goods, wares, and merchandises, chattels and effects, belonging to the French republic, or to any persons being subjects of the French republic, or inhabiting within any of the territories of the French republic; excepting only within the harbours or roads within shot of the cannon of princes and states in amity with his Majesty. And whereas he the said hath a copy of certain instructions, approved of and passed by his Majesty in council, as by the tenour of the said letters of marque and reprisals, and instructions thereto relating, more at large appeareth: if therefore nothing be done by the said or any of his officers, mariners, or company, contrary to the true meaning of the said instructions, and of all other instructions which may be issued in like manner hereafter, and whereof due notice shall be given him; but that such letters of marque and reprisals aforesaid, and the said instructions, shall in all particulars be well and duly observed and performed, as far as they shall the said ship, master, and company any way concern; and if they shall give full satisfaction for any damage or injury which shall be done by them or any of them to any of his Majesty's subjects, or of foreign states in amity with his Majesty, and also shall duly and truly pay, or cause to be paid, to his Majesty, or the customers or officers appointed to receive the same for his Majesty, the usual customs due to his Majesty, of and for all ships and goods so as aforesaid taken and adjudged as prize; and moreover if the said shall not take any ship or vessel, or any goods or merchandise, belonging to the enemy, or otherwise liable to confiscation, through consent or clandestinely, or by collusion, by virtue, colour, or pretence of his said letters of marque and reprisals, that then this bail shall be void and of none effect; and unless they shall so do, they do all hereby severally consent that execution issue forth against them, their heirs, executors, and administrators, goods and chattels, wheresoever the same may be found, to the value of the sum of pounds before mentioned; and in testimony of the truth thereof they have hereunto subscribed their names.

By his Majesty's command.

(Signed) PELHAM.

PROMISSORY NOTES. See BANKS AND BANKING.

PROTECTION, in commercial legislation, means the protecting or bolstering up of certain branches of domestic industry by prohibiting the importation of the produce of such branches from abroad, or loading it when imported with heavy duties. This policy was at one time universally prevalent. But its extremely injurious influence having been demonstrated over and over again, it has been abandoned by all intelligent statesmen. And notwithstanding the powerful interests by which it was supported, it has nearly disappeared from our legislation; and it will, no doubt, eventually disappear from the legislation of all countries.

In mercantile navigation, protection is a privilege granted to certain descriptions of seamen, by which they are secured against impressment.—(See IMPRESSMENT.)

PROVISIONS. Under this term, taken in its most extensive sense, in reference to man, may be comprised all those articles used as food by the inhabitants of this and other countries; but among British merchants and in parliamentary language, it is understood to comprise only fresh and salted butchers' meat, hams, and bacon, butter and cheese, eggs, and a few other articles. We shall, however, include with these, in the following statement, an account of the imports of cattle.

Our readers are aware that previously to the 9th of July, 1842, the importation of cattle, sheep, and hogs, and of all sorts of fresh butchers' meat, was prohibited; and that a duty of 12*s.* a cwt. was imposed on all foreign salt meat when entered for consumption, and of 28*s.* a cwt. on bacon and hams. But in the tariff act of 1842, which came into operation at the above date, the prohibition of importing foreign cattle, sheep, hogs, and fresh meat was repealed, and their entry for home consumption admitted under reasonable duties; the duty on salted meat being, at the same time, reduced from 12*s.* to 8*s.*, and that on bacon and hams from 28*s.* to 14*s.* a cwt. We published at the time a short tract (*Memorandums on the proposed Introduction of Foreign Beef and Cattle*), in which we endeavoured to show by comparing the prices of cattle in the adjoining countries and in England, that this wise and liberal measure would not have the effects that were anticipated in reducing the price of stock in this country. Experience showed that we were right in this anticipation; the imports of cattle and sheep being comparatively inconsiderable. Sir Robert Peel, profiting by this experience, repealed, in 1846, the duties imposed in 1842 on the importation of cattle, sheep, &c. And the result has more than justified the soundness of the principles on which that great minister proceeded in taking this step. The imports of stock have been considerably, but not greatly increased in the interval. And, far from being injured by his liberal proceedings, the grazing farmers have gained immensely; and it is admitted, on all hands, that cattle and sheep have paid better of late years than they ever did at any antecedent period. It is, in truth, much easier to import supplies of corn than of beef or mutton; and the probability seems to be that our farmers will in time to come apply themselves rather to the production of the latter than of the former.

Account of the Numbers and Values of the Cattle, Sheep, Hogs, &c., and of the Quantities and Values of the Provisions, imported and entered for Consumption in the U. Kingdom, with the Rates of Duty on the same, in 1857.

It is impossible to say in how great a degree these importations may be increased in time to come; but it is most probable that they will be gradually augmented according as foreigners become better acquainted with the qualities suitable for our markets. But we have no idea that they will ever amount to any considerable proportion of our supply. The cheapness of cattle and provisions in foreign markets, of which we used to hear so much, was in great part imaginary; and where it did occur, it depended more on the difficulty of conveying them to other markets, or on their inferiority, than on anything else. The imports of fat cattle, though they were trebled, would not do our graziers the smallest injury; and

the importation of lean cattle, far from being injurious, would be highly for their interest. The great existing desideratum in our agriculture at this moment is, in truth, the want of markets whence we might import lean or half-fed stock. The demand in this country for all sorts of butcher's meat is quite immense; and the land suitable to the rearing of cattle is too circumscribed to afford a sufficient supply. Hence the high price of beef and mutton as compared with corn.

PRUNES AND PRUNELLOES, a species of dried plums, of which there are many varieties. The finest are imported from France, in the south of which this fruit is very abundant. The best prunes are packed in hampers or baskets made of white osiers, weighing from 6 to 10 lbs. each; the second quality in quarters, and the third in puncheons. The duty on prunes, which was previously fixed at the extravagant rate of 27*s.* 6*d.* a cwt., was most properly reduced in 1834, to 7*s.* a cwt., and is now 7*s.* + 5 per cent. or 7*s.* 4⅓*d.* This reduced duty produced, in 1852, 6,510*l.*, showing that 17,781½ cwts. had been entered for consumption. Previously to the reduction of the duty, the entries seldom exceeded 6,000 cwt.

PRUSSIAN BLUE. OR PRUSSIATE OF IRON (Ger. *Berlinerblau;* Fr. *Bleu de Prusse;* It. *Azurro Prussiano;* Sp. *Azul de Prussia;* Rus. *Lasor Bexlinskaja*), a beautiful deep blue powder, accidentally discovered at Berlin in 1710. It is of considerable importance in the arts, being extensively used by painters: it is manufactured in this country. Many attempts have been made to render Prussian blue available for the dyeing of broad cloths, but without much success. The difficulty is to diffuse the colour equally over the surface; for, from its extraordinary vivacity and lustre, the slightest inequalities strike and offend the eye. Prussian blue resists the air and sun extremely well; but it cannot be used in the dyeing of cottons, or any sort of stuff that is to be washed with soap, as the alkali contained in the soap readily dissolves and separates the colouring matter. — (*Bancroft on Colours*, vol. ii. pp. 60—94.)

Blue is a favourite colour with the Chinese, and in 1810-11 the imports of Prussian blue into Canton from England amounted to 1,899 piculs, or 253,200 lbs. But, for some years past, the Chinese have not imported a single pound weight. The cause of the cessation of the trade deserves to be mentioned. A common Chinese sailor, who came to England in an East Indiaman, having frequented a manufactory where the drug was prepared, learned the art of making it; and on his return to China, he established a similar work there, with such success that the whole empire is now amply supplied with native Prussian blue! The West has derived many important arts from the East; but we incline to think that this is the first well authenticated instance of any art having ever been carried from the West to the East, by a native of the latter. But, in all that respects industry, ingenuity, and invention, the Chinese are incomparably superior to every other people to the east of the Indus.

PRUSSIAN OR GERMAN COMMERCIAL UNION. Next to the efforts of the Prussian government to diffuse the blessings of education, their efforts to introduce a free commercial system into Germany constitute their best claim to the gratitude and esteem of their own subjects, and of the world. Germany, as every one knows, is divided into a vast number of independent, and mostly petty, states. Until a very recent period, every one of these states had its own custom-houses, and its own tariff and revenue laws; which frequently differed very widely indeed from those of its neighbours. The internal trade of the country was, in consequence, subjected to all those vexatious and ruinous restrictions that are usually laid on the intercourse between distant and independent states. Each petty state endeavoured either to procure a revenue for itself, or to advance its own industry, by taxing or prohibiting the productions of those by which it was surrounded; and customs officers and lines of custom-houses were spread all over the country! Instead of being reciprocal and dependent, every thing was separate, independent, and hostile: the commodities admitted into Hesse were prohibited in Baden, and those prohibited in Wirtemberg were admitted into Bavaria. It is admitted on all hands that nothing has contributed so much to the growth of industry and wealth in Great Britain, as the perfect freedom of internal industry we have so long enjoyed, and that intimate correspondence among the various parts of the empire, which has rendered each the best market for the products of the other. How different would have been our present condition had each county been an independent state, jealous of those around it, and anxious to exalt itself at their expense! But, until within these few years, this was the exact condition of Germany; and, considering the extraordinary obstacles such a state of things opposes to the progress of manufactures, commerce, and civilisation, the wonder is, not that they are comparatively backward in that country, but that they should be so far advanced as they really are.

But, thanks to the intelligence and perseverance of Prussia, this anti-social system has been well nigh suppressed; and the most perfect freedom of commerce established among the great bulk of the Germanic nations. The disadvantages of the old system had long been seen and deplored by well-informed men; but so many interests had grown up under its protection, and so many deep-rooted prejudices were enlisted in its favour, that its overthrow seemed to be hopeless, or, at all events, exceedingly distant. The address and resolution of the Prussian government, however, triumphed over every

obstacle. Being fully impressed with a strong sense of the many advantages that would result to Prussia and Germany from the introduction of a free system of internal intercourse, they pursued the measures necessary to bring it about with an earnestness that produced conviction, and with a determination, *coute qui coute*, to carry their point.

The first treaties in furtherance of this object were negotiated by Prussia with the principalities of Schwarzburg-Sondershausen and Schwarzburg-Rudolstadt, in 1818 and 1819, on the principle that there should be a perfect freedom of commerce between these countries and Prussia; that the duties on importation, exportation, and transit, in Prussia and the principalities, should be identical; that these should be charged along the frontier of the dominions of the contracting parties; and that each should participate in the produce of such duties, in proportion to its population. All the treaties subsequently entered into have been founded on this fair and equitable principle; the only exceptions to the perfect freedom of trade in all the countries comprised within the league or tariff alliance being confined, 1st, to articles constituting state monopolies, as salt and cards, in Prussia; 2d, to articles of native produce, burdened with a different rate of duty on consumption in one state from what they pay in another; and, 3d, to articles produced under patents conferring on the patentees certain privileges in the dominions of the states granting the patents. With these exceptions, which are not very important, the most perfect freedom of commerce exists among the allied states.

Since 1818, when the foundations of the alliance were laid, it has progressively extended, till it now comprises more than three fourths of the Germanic states, exclusive of Austria. Ducal Hesse joined the alliance in 1828, and Electoral Hesse in 1831; the kingdoms of Bavaria, Saxony, and Wirtemberg joined it afterwards, as have Baden, Nassau, and almost all the smaller states by which it had not been previously joined, with the exception of Mecklenburg-Schwerin and Mecklenburg-Strelitz. But these, with Hanover, will be very shortly included in the league.

In 1852, the tariff alliance comprised —

	German Sq. Miles.	Population in 1849.
Prussia	5,188	16,669,153
Luxemburg	47	189,783
Bavaria and her detached territories	1,396	4,526,650
Saxony (Kingdom of)	272	1,894,431
Wirtemberg and the two Hohenzollerns	384	1,805,558
Hesse (Electoral)	203	7,731,584
Hesse (Duchy) and Homburgh	154	862,917
The Thuringian States	237	1,014,954
Baden (Duchy of)	276	1,360,599
Brunswick (Duchy of)	63	247,070
Nassau	85	425,686
Frankfort	2	71,678
Totals	8,507	29,800,063

Throughout the whole extent of this immense country, from Aix-la-Chapelle, on the confines of the Netherlands, eastward to Tilsit, on the confines of Russia, and from Stettin and Dantzic southwards to Switzerland and Bohemia, there is nothing to interrupt the freedom of commerce. A commodity, whether for consumption or transit, that has once passed the frontier of the league, may be subsequently conveyed, without let or hindrance, throughout its whole extent. Instead of being confined within the narrow precincts of their own territories, the products of each separate country of the alliance may be sent to every one else; so that each may apply itself, in preference, to those departments in which it has some natural or acquired advantage; and each has to depend for its success, not on the miserable resource of customs regulations, but on its skill and industry. The competition thence arising is most salutary; and, should the peace of Europe be preserved, we run little risk in saying, that all sorts of industry will make more progress among the states comprised within the tariff alliance, during the next ten years, than they did during the half century previous to its being organised.

An assembly of representatives from the allied states meets annually, to hear complaints, adjust difficulties, and make such new enactments as may seem to be required. The Prussian tariff has been adopted, with certain modifications. The duties are received into a common treasury, and are apportioned according to the population of each of the allied states. In addition to its other advantages, the new system has reduced the cost of collecting the duties to a mere trifle, compared with its former amount; and has enabled hundreds of custom-houses, and thousands of customs officers, to be employed in the different departments of industry.

The existing discrepancy in the weights and measures used in different parts of Germany occasions considerable inconvenience; and we are glad to observe that the equalisation of weights and measures, and their reduction to a common standard in all the allied states, is declared to be one of the objects of the league.

It is also expressly provided that the tolls, or other charges in lieu thereof, shall, in all cases, whether they belong to the public or to private individuals, be limited to the sums *required to keep the roads in a proper state of repair*; and that the tolls existing in Prussia shall be considered as the highest that are to be levied, and shall not in any case be exceeded.

It was at first supposed by many persons in this country, and the opinion is not yet entirely abandoned, that the Prussian league was in some degree directed against us, and that, at all events, it threatened to be very injurious to our trade with Germany; we do not, however, believe that there is any foundation whatever for either of these opinions. The alliance was planned, and brought to its present advanced state, in the view, and with the intention, of putting down the galling and innumerable restraints by which the intercourse of the German states with each other was formerly interrupted; and not with the intention of throwing any obstacles in the way of the trade of the alliance with foreign countries; it is, indeed, quite absurd to suppose that it should have this effect. The freedom of internal commerce will do ten times more to promote the industry and prosperity of the allied states than any other measure, or system of measures, that their governments could have adopted; and, as population increases, and the inhabitants become more industrious and wealthy, there will, no doubt, be an augmented demand for foreign products. The league is now no new thing. It was formed several years since, and has been progressively augmented: but, hitherto, it has not had the slightest influence in diminishing our intercourse with Germany; our exports to it, including Holland and Belgium, being greater at present than at any former period!— (See *antè*, p. 713.) Generally speaking, the duties on imports are reasonable: at least, on all the finer descriptions of goods. It never, in fact, can be the policy of the alliance to make them oppressive; for, though certain states may erroneously suppose that their interests would be promoted by such means, others would undoubtedly be of a different opinion, and would resist any attempt to carry them beyond a reasonable amount. It is a mistake to suppose that Prussia has an overwhelming influence in the assembly. She must conciliate the other states, and carry them along with her; and this can only be done by acting on fair principles, and with a view to the common interests of the alliance.

Besides, if any of the existing duties be exorbitant, or if any of them, that are at present moderate, should be subsequently raised to an exorbitant pitch; does any one suppose that the over-taxed articles would not be immediately smuggled into all parts of the league? We, who occupy an island, and have revenue cruisers and coast guards on all the seas and shores most accessible to the smuggler, know from experience that it is not possible to hinder over-taxed commodities from making their way into our markets. But the facilities for smuggling into the territories of the league are incomparably greater. It has a land frontier of several thousand miles; and though the whole Prussian army were employed for that purpose, it would be found that it was utterly impotent to prevent the territories of the league from being deluged with such over-taxed commodities as were in demand by the inhabitants.

We are glad to be able to strengthen our view of the influence and objects of the Prussian commercial league, by laying before the reader the following extract from a work printed by order of the House of Representatives of the American States. "Prussia," it is there said, "has evidently taken the lead in this wise and important measure, to which the smaller states have gradually acceded. The whole commercial policy of this enlightened power has been distinguished for its liberality, being founded on the desire of placing her intercourse with all nations on the basis of reciprocity. The commercial league of Germany is intended to carry out this principle, and not to be directed, as has been supposed, against any particuler nation; as it is well known that Prussia, in her treaties with maritime powers, has invariably adopted the system of reciprocity, to whatever extent those with whom she negotiates are willing to carry it. The establishment of this community of commercial interests forms a part of the fundamental compact, by which the new Germanic confederation was created, after the dissolution of the Confederation of the Rhine; to be subsequently adopted, however, at the option of such of the co-states as should choose to accede to it. Its effects cannot fail to promote commerce, and every other branch of industry, as it removes all those vexatious and endless difficulties which previously obstructed the freedom of intercourse. Navigable rivers and highways are now opened to the unfettered use of the German people; the custom and toll-houses, with their officers and barriers, have been withdrawn from the interior, and the whole intercommunication resembles that of the subjects of any one of the states within its own territories. To these benefits may be added the assured prospect of improvement in the finances of the great and smaller sovereignties composing

the league. This advantage will grow out of the simplicity or unity of the new system, a saving in the cost of collection, and from the increased consumption which renovated industry and progressive prosperity so invariably cause." — (*Digest of Customs Laws*, vol. iii. p. 227.)

Prussian Duty on Cottons. — The duty on cotton goods being that in which we are most interested, we have taken some pains to ascertain its real influence. This duty amounts to 50 rix-dollars per Prussian quintal on all cotton goods, without respect to quality or price; and, taking the quintal at 113 lbs. avoirdupois, and the rix-dollar at 3*s.*, it is equal to 7*l.* 10*s.* per 113 lbs. Now, we have learned from statements obligingly furnished to us by a large wholesale house in the city,—

1st. That a quintal (113 lbs.) of *coarse shirting*, worth 4*d.* per yard, contains 497 yards; it consequently costs 8*l.* 6*s.*, and the Prussian or tariff alliance duty of 7*l.* 10*s.* on it is, therefore, equivalent to an *ad valorem* duty of 90 per cent.

2d. That a quintal of *superior shirting*, worth 1*s.* a yard, contains 437·65 yards; it consequently costs 22*l.* 17*s.* 7*d.*, making the Prussian duty on such goods 32½ per cent.

3d. That a quintal of *printed cottons*, worth 1*s.* 6*d.* a yard, contains 633 yards; it consequently costs 47*l.* 9*s.*, making the Prussian duty on such goods 15⅝ per cent.

4th. That a quintal of *fine printed cottons*, worth 2*s.* 6*d.* a yard, contains 678 yards; it consequently costs 84*l.* 15*s.*, making the Prussian duty on such goods 8⅜ per cent.

It is plain, therefore, that, except on the coarsest and cheapest species of goods, the Prussian or tariff alliance duty is very far from being oppressive; and, as the value of coarse goods is principally dependent on the cost of the raw cotton and the wages of labour, being but little influenced by superiority of machinery, it is not very probable that we should export them largely to Prussia, even were the duty materially reduced. No doubt, however, it would conduce greatly to the interests of the people comprised within the league, though we do not know that it would sensibly affect us, were the duty assessed on an *ad valorem* principle, and made 20 or 30 per cent. on all goods; and we should think that this might be done without any material difficulty.

The subjoined translation of the more important clauses of the customs treaty of the 22d of March, 1833, sets the principles on which the alliance is founded in a clear point of view.

Customs Treaty, concluded the 22d March, 1833, between the Kings of Bavaria and Wirtemberg, on the one part; and the King of Prussia, the Prince Electoral Co-regent of Hesse, and the Grand Duke of Hesse on the other part.

I. The existing customs unions between the states above named shall henceforth constitute a general Union, united by a common system of customs and commerce, embracing all the countries comprised therein.

II. In this general re-union are also comprised the states which have already adhered, either for the whole of their territory, or for a part, to the system of customs and commerce of one or other of the contracting states, having regard to their special relations, founded upon the conventions of adhesion concluded with the states which have intervened.

III. But there will remain excluded from the general re-union the parts separated from the countries of the contracting states which, because of their situation, are not yet included either in the re-union of the Bavarian or Wirtemberg customs, nor in those of Prussia and Hesse. Nevertheless, the regulations now in force to facilitate the commerce of these territories with the principal country will be maintained. Other favours of this kind cannot be accorded without the unanimous consent of the contracting states.

IV. In the contracting states there shall be established uniform laws for the duties of import, of export, and of transit, except such modifications as, without injury to the common object, result necessarily from the particular legislation of each contracting state, or from local interests.

Thus, exceptions and modifications to the common tariff may take place, as to rates of duties of entry, of export, and of transit, (according as the direction of the routes of commerce may require,) established upon articles recognised as of minor consequence in extensive commerce; provided always, that these modifications be preferred by separate states, and that they shall not be disadvantageous to the general interests of the Association.

The administration of the duties of import, export, and transmit, as well as the organisation of the authorities which are engaged therein, in all the states of the Association, shall be established upon a uniform footing, having regard, however, to the particular relations existing in those countries. The laws and ordinances which, according to those principles, ought to be uniform in the contracting states, and which are to constitute the law of the tariff and the regulations of the customs, shall be considered as an integral part of the present treaty, and shall be published at the same time.

V. There can neither be alterations, nor additions, nor exceptions, to the acts above

mentioned (Art. IV.), but by the unanimous consent of all the contracting parties, and in the form required for the making (*confection*) of the laws.

The preceding applies equally to all the ordinances which would establish, for the administration of the customs, dispositions entirely different.

VI. Liberty of commerce, and community of the receipts of customs, as regulated by the following article, will commence simultaneously with the operation of the present treaty.

VII. Dating from this epoch, all duties of import, of export, and of transit shall cease on the common frontier of the Bavaro-Wirtemberg and Prusso-Hessian customs re-unions. All articles of free commerce in one of those territories may be imported freely and without duty into all the others, except only as follows:—

A. Articles monopolised by the states (playing cards and salt) conformable to Articles IX. and X.

B. Indigenous articles, now subject in the interior of the contracting states to different duties, or excepted from all duty in one state, and imported into another, and which according to article II. ought consequently to be subject to a duty of compensation.

Finally, C. Articles which, without prejudice to patent rights or conceded privileges in one of the contracting states, cannot be imitated or imported, and ought consequently to be excluded during the existence of the patents and privileges from importation into the state which has granted them.

VIII. Notwithstanding the freedom of commerce, and the exemption from duties, established by Article VII., the transport of articles of commerce, subject by the common tariff to duties of import or export on the frontiers of the Association, cannot take place between the states of Bavaria and Wirtemberg, and the states of Prussia, of Electoral Hesse, or of Grand Ducal Hesse, and reciprocally, except by the public roads, military routes, and navigable rivers. For this purpose there shall be established, on the interior frontiers, common *bureaus* of verification, to which the conductors of merchandise must, on exhibiting their licences, declare what are the articles which they are employed to transport from one territory to another.

This disposition will not be applicable to retail commerce in raw materials, nor to the petty commerce of the frontiers or the fairs, nor to the effects of travellers. Process for the verification of merchandise will go no farther than is required for security of the duties of compensation.—(See Art. VII. B.)

XIII. The contracting parties reciprocally renew their adhesion to the principle, that the tolls, or other charges in lieu thereof, shall only be sufficient to defray the expense of maintenance and repairs of the roads; whether the tax be for the state or for private rights. It was thus that has been approved the supplement to the duty of customs, created in Bavaria and Wirtemberg, to replace the duty of tolls, paving, causeways, bridges, and generally of all analogous taxes.

The tolls, &c. now existing in Prussia, according to the general tariff of 1828, shall be considered as the *highest rates*, and shall not be exceeded in any of the contracting states.

In accordance with the principle thus announced, the individual duty for closing the gates of cities shall be abolished; as also the duty of paving of causeways, where it still exists; and all paved roads will be considered as causeways of a description liable only to the duty on causeways established by the general tariff.

XIV. The contracting governments agree to unite their efforts to introduce into the states a uniform system of coins, weights, and measures; to commence immediately the requisite negotiations for this purpose; and, subsequently, to direct their efforts towards the adoption of uniform custom-house weights.

The contracting states, in the impossibility of establishing this uniformity before this treaty goes into operation, agree, for facilitating the forwarding of merchandise where it has not already been done, to revise their tariff as to weights and measures, assuming for a basis the tariffs of the other contracting states. They will cause such modifications to be published, for the government of the public and of their custom-house *bureaus*.

The common tariff (Art. IV.) shall be divided into two principal divisions, according to the system of weights, measures, and monies of Bavaria, and that of Prussia.

The declaration of the weights and measures of articles subject to duty shall, in Prussia, be according to Prussian weights and measures; in Bavaria and Wirtemberg, according to those of Bavaria; and in the two Hesses, according to the weights and measures there legally established.

In expediting custom-house acts, the quantity of merchandise must be expressed according to the two principal divisions of the common tariff.

Until the contracting states agree upon a system of common money, the payment of duties in each state shall be made in the same currency as in use for payment of its other taxes.

But from the present time, the gold and silver coins of all the contracting states, with the exception of small money (*sheidemunze*), shall be received in all the *bureaus* of receipt of the Association; and for this purpose, tables of value shall be published.

XV. The duties of navigation upon the rivers, comprising therein those which apply to vessels, shall always be mutually acquitted according to the acts of the Congress of Vienna, or of special conventions, upon all the rivers to which these regulations apply, unless other determinations be adopted in this respect.

The contracting states agree to enter, without delay, into negotiations for that which particularly regards the navigation upon the Rhine and the neighbouring streams, in order to effect an arrangement by which the import, export, and transit of the productions of all the states of the Union upon said streams shall be, if not absolutely free, at least relieved as far as possible from duties of navigation, under the reserve of charges of reconnoissance.

All the advantages granted by one state of the Union to its subjects, in the exercise of the navigation upon said streams, shall extend equally to the navigation of the other associated states.

Upon the other streams to which neither the acts of the Congress of Vienna, nor any other treaties apply, the duties of navigation shall be according to the special regulations of the governments interested. Nevertheless the subjects of the contracting states, their merchandise and vessels, shall throughout be treated on those streams with perfect equality.

XVI. Dating from the day on which the general custom-house regulations of the Union shall come into operation, the duties of public stores (*étapes*), and of transshipments (*umschlagnechte*), which still exist in the territories belonging to the Association, shall cease, and no one shall be liable to forced delay, nor to the discharging and storage of his merchandise, except in cases authorised by the common regulations of the customs or navigation.

XVII. No duties shall be claimed for canals, locks, bridges, ferries, cranes, weighing and storage; and the establishments destined to facilitate commerce shall not be allowed rent, except when actually used. Charges cannot be increased; and the subjects of the other contracting states shall be on a perfect equality with the subjects of the countries having those establishments.

If the establishments for weighing and cranes are only used by the custom-houses, no charge shall be made, if the articles have been previously weighed at a custom-house.

XVIII. The contracting states engage to continue their common efforts for the encouragement of industry by the adoption of uniform regulations, so that the subjects of each state may enjoy, as extensively as possible, the privilege of seeking work and occupation in every other state.

From the coming into operation of the present treaty, the subjects of any one of the contracting states, trading or seeking employ in the territory of any other of those states, shall not be subject to any impost which does not equally affect the native similarly employed. Manufacturers and merchants who are only making purchases for their trade, or travellers who have not goods with them, but simply patterns for the purpose of soliciting commissions, shall not, when thus employed, have any duty to pay in another state, if authorised to carry on such commerce in the state where they have their domicile; or if employed in the service of native manufacturers or merchants.

When trading in the markets and fairs, or when they are selling the produce of the soil and fabrics, in any one of the states of the Association, the subjects of the other contracting states shall be treated in all respects as subjects of the same states.

XIX. The seaports of Prussia shall be open for commerce to all the subjects of the states of the Union, on payment of the same duties as are paid by Prussian subjects, and the consuls of the several states in the seaports or places of foreign commerce, shall be bound, in cases of need, to assist with their advice and support the subjects of the other contracting states.

XX. To protect against contraband their common custom-house system, and to insure the regular payment of the duty of consumption in the interior, the contracting states have concluded a reciprocal cartel, which shall be enforced as soon as possible, but, at the farthest, at the same time with the present treaty.

XXI. The community of receipts of the contracting states, stipulated by the present treaty, shall comprehend the product of duties of entry, of export, and of transit, in the Prussian states, the kingdoms of Bavaria and Wirtemberg, the Electorate, and the Grand Duchy of Hesse, comprising therein those countries which have down to the present time acceded to the custom-house system of the contracting states.

The following are excluded from the community of receipts, and remain reserved for the particular benefit of the respective governments:—

1. The imposts collected in the interior of each state on indigenous products, comprising therein the compensatory duties reserved in Article XI.

2. The toll on rivers, to which are applicable the regulations of the acts of the Congress of Vienna, or special conventions. (Article XV.)

3. Duties of paving, of causeways, of bridges, of ferries, of canals, of locks and ports, charges of weighing and storage, as well as similar receipts, whatever may be their name.

4. The fines and confiscations which, beyond the part allowed to informers, remain the property of each government throughout its territory.

XXII. The produce of the duties received into the common treasury shall be divided among the states of the Association, in proportion to the population which may be found in the Union, subject to deduction, 1st, of the expenses specified in Article XXX.; 2d, of the restitution of erroneous receipts; 3d, of the restoration of duties and diminutions made in consequence of special common conventions.

The population of every state which has entered or may enter into the Association, by treaty with one or other of the contracting states, under the engagement made by the latter, to make an annual contribution, for the participation of the former to the common revenue of the customs, shall be added to the population of the states which make this contribution.

There shall be made every three years, dating from a period to be hereafter fixed, an exact enumeration of the population of the associated states: the states shall reciprocally communicate the results thereof.

XXIII. All restitutions of duties not authorised by the legislation of the customs shall remain charged to the treasury of the government which shall have granted it.

Conventions, hereafter to be concluded, will regulate in what cases similar restitution may be accorded.

XXIV. In conformity with the object of this association of customs tending to facilitate a freer and more natural commercial intercourse, the favours accorded for the payment of custom-house duties at certain places in which fairs are held, especially the privileges of abatement (*rabat privilegien*) cannot be extended to those states of the association where they do not exist; on the contrary, they shall be restricted and abolished as far as possible, regard being had to the means of subsistence of the places heretofore favoured, and to the commercial relations which they have with foreigners; but others can on no account be granted without the general consent of the contracting parties.

XXXIII. There shall every year, on the 1st day of June, be an assembly of plenipotentiaries of the governments of the Union empowered generally to deliberate; and each state may send thither a duly authorised representative.

The plenipotentiaries will choose from among themselves a president, who, however, shall have no pre-eminence over the other members.

The first assembly shall be held at Munich.

At the close of each annual assembly, the place of next meeting will be determined, having reference to the nature of those subjects which will then come under discussion.

XXXIV. The assembly of plenipotentiaries will have under its consideration the following subjects:—

A. To consider the complaints which may have arisen in any of the states of the association, concerning the execution of the general treaty, of special conventions, of the law, and of custom-house regulations; also of the tariff, when these shall not have been adjusted during the year by correspondence between the different ministers.

B. The definitive reparation among the states of the Union of the total common receipts, based upon the observations made by the superior authorities, and verified by the central *bureau*, as may be rendered necessary by the common interest.

C. To deliberate upon propositions and suggestions made by the governments for the perfection of the administration.

D. Discussions upon alterations, demanded by any of the contracting states, in the laws, tariffs, and custom-house regulations, as well as in the organisation of the administration, and in general upon the development and perfection of the general system of customs and commerce.

XXXV. If, in the course of the year, when the plenipotentiaries are not in session, extraordinary incidents should occur, which require prompt decision on the part of the states of the Union, the contracting parties will consult upon these through their diplomatic agents, or they will order an extra sitting of their plenipotentiaries.

Recent Changes in the German Customs Union.—The discussions in the assemblies of the League have, especially of late years, been a good deal influenced by political considerations. A league, denominated the *Steurverein*, had been formed in opposition to, or in rivalry with, the Prussian league, by Hanover, Oldenburg, and Brunswick. It was evident, however, inasmuch as the interests of these and the other German states were identical, that it would be a great public advantage were these associations merged into one. But owing to political, commercial, and financial jealousies, this desirable object was of very difficult attainment. Happily, however, these difficulties have been surmounted; and a treaty negociated between Hanover and Prussia, on the 7th of September, 1851, provided for the incorporation, from the 1st of January, 1854, of the former kingdom, and the other states included in the Steurverein, with the Prussian Union. Some modifications have been introduced by the treaty into the basis of the League, but they are of little importance, except to the parties immediately interested.

Treaty with Austria.—More recently a great deal of discussion has taken place between Prussia and the subordinate German states on the one hand, and Austria on the other, in regard to the formation of a Customs Association which should include the latter; and in order to pave the way for this desirable consummation, Austria issued a new tariff on the 25th of November, 1851, in which she made many important modifications in the prohibitive system on which she had previously acted, at the same time that she established a free commercial intercourse between Hungary (which had previously a separate customs establishment) and the other states of the empire. And though this wise and liberal measure has not yet led to the incorporation of Austria into the Customs' Union, it has led to the conclusion of an extremely important commercial treaty between Austria and Prussia, dated the 19th of February of the current year (1853).

The contracting parties engage to suppress, with a few specified exceptions, *all* prohibitions against importing the products of the one into the territories of the other; they next establish a complete freedom of trade between the two countries in all articles of raw produce; and they further stipulate that the duties to be imposed on manufactured products shall be moderate and reasonable. It has a variety of other clauses, all of which have a liberal character. The duration of the treaty is limited to 12 years; but we have little doubt, should peace be preserved, that the advantages of which it will be productive will be so many and so great, that long before the expiration of 12 years its provisions will be still farther liberalised, and that it will lay the foundations of a lasting intercourse, of which we can neither foresee the extent nor the beneficial influence.

In consequence of these and other changes the duties in the tariff of the German Customs Union have undergone many modifications. But except on coarse and heavy goods, they continue, speaking generally, to be moderate. We subjoin

An Account showing the Proportion of the Revenues of the German Customs Union raised in the different States in 1851, and the Distribution thereof, according to their Population, from the official Returns, published at Berlin in 1852.

PUBLICANS, are persons authorised by licence to retail beer, spirits, or wines. Under the term publicans are comprised innkeepers, hotel keepers, alehouse keepers, keepers of wine vaults, &c. An inn differs from an alehouse in this, — that the former is a place intended for the lodging as well as the entertainment of guests, whereas the latter is intended for their entertainment only. If, however, ale or beer be commonly sold in an inn, as is almost invariably the case, it also is an alehouse; and if travellers be furnished with beds, lodged, and entertained in an alehouse, it also is an inn. It is not material to the character of an innkeeper that he should have any sign over his door;

it is sufficient that he makes it his business to entertain passengers and travellers, providing them with lodgings and other accommodations.

1. *Licensing of Publicans.* — The provisions with respect to the licensing of public houses are embodied in the 9 Geo. 4. c. 61., of which we subjoin an abstract.

General Meetings. — There shall be annually holden in county divisions, cities, and towns, a special session of justices, to be called the "*General Annual Licensing Meeting*," for the purpose of granting licences to persons keeping or about to keep inns, alehouses, &c.; such meetings to be held, in Middlesex and Surrey, within the first 10 days of the month of March; and in every other place between the 20th of August and the 14th of September, both inclusive.

Notice of General Meeting. — Within every division, 21 days before the annual licensing meeting, a petty session of justices to be held, a majority of whom shall fix the day and hour for holding the general annual meeting; and shall direct a precept to the high constable, requiring him, within 5 days after the receipt thereof, to order the petty constables to affix on the door of the church, chapel, or other public place, a notice of such annual meeting, and give or leave at the dwelling-house of each justice acting for the division, and of each person keeping an inn, or who shall have given notice of his intention to apply for a licence to keep an inn, a copy of such notice. — § 2.

The annual meeting may be adjourned, but the adjourned meeting is not to be held on any of the 5 days immediately following the adjournment; and every adjournment to be held in the month of March in Middlesex and Surrey, and in August or September in every other county. — § 3.

Sessions for Transfer of Licences. — At the annual meeting, justices to appoint not less than 4 nor more than 8 special sessions, to be held as near as possible at equidistant periods, for the purpose of transferring licences. — § 4.

Notice of holding any adjourned meetings, or of any special session for the transfer of licences, to be given in the same manner and to the same parties as mentioned above. — § 5.

Justices disqualified. — No justice who is a common brewer, distiller, maker of malt for sale, or retailer of malt or any exciseable liquor, shall act or be present at any annual licensing meeting, or adjournment, or special session for transferring licences, or take part in the adjudication upon any application for a licence, or upon an appeal; nor in the case of licensing any house, of which he is owner, or agent of the owner, or of any house belonging to any common brewer, maker of malt, &c. to whom he shall be, either by blood or marriage, the father, son, or brother, or with whom he shall be partner in *any other trade*; in any of these cases knowingly or wilfully to act, subjects to a penalty of 100*l*. But disqualification does not arise, where a justice, having no *beneficial interest* in a house licensed or about to be licensed, holds only the legal estate therein as trustee or for a charitable or public use. — § 6.

When in any liberty, city, or town, 2 qualified justices do not attend, the county justices may act. — § 7.

The power given to county justices not to extend to the Cinque Ports. — § 8.

Questions respecting licences to be determined, and licences to be signed, by a majority of the justices present. — § 9.

Application for a Licence. — Persons intending to apply for a licence to a house *not before licensed*, to affix a notice on the door of such house, and on the door of the church or chapel of the parish, and, where there shall be no church or chapel, on some other conspicuous place within the parish, on *three several Sundays*, between the 1st of January and the last day of February in the counties of Middlesex and Surrey, and elsewhere between the 1st of June and the last day of July, at some time between the hours of 10 in the forenoon and 4 in the afternoon, and shall serve a copy of such notice upon one of the overseers of the poor, and upon one of the constables or peace-officers of the parish, within the month of February in the counties of Middlesex and Surrey, and elsewhere within the month of July, prior to the annual meeting; such notice to be in a legible hand, or printed and signed by the applicant. The application must state the Christian and surname of the party, with the place of his residence, and his trade or calling during the 6 months previous to the serving of the notice. — § 10.

Notice to transfer Licence. — Persons desirous of transferring a licence, and intending to apply to the next special sessions, must, 5 days previously, serve a notice upon one of the overseers and one of the constables of the parish. Persons hindered, by sickness or other reasonable cause, from attending any licensing meeting, and proof thereof adduced *on oath*, may authorise another person to attend for them. — § 12.

Licences to be in force, in Middlesex and Surrey, from the 5th of April; elsewhere from the 10th of October, for one whole year. — § 13.

Provision for Death or other Contingency. — If any person licensed shall die, or become incapable, or a bankrupt or insolvent, or if he or his heirs, executors, or assigns, shall remove or neglect to apply for a continuation of his licence, the justices at special session may grant a licence to the heirs, executors, or assigns of such party, or to any new tenant; or if any man's house should be, or be about to be, pulled down for a public purpose, or rendered, by fire, tempest, or other unforeseen calamity, unfit for the purposes of an inn, licence may be granted to the occupier, if he intend to open another house as an inn. Such transferred licences shall continue only in force to the end of the year; and in case of removal to another house, notice must be given on some Sunday, within 6 weeks before the special session, in the manner and form before described. — § 14.

Fees for Licences. — The clerk of the justices may lawfully receive from every person to whom a licence is granted, for trouble and *all expenses*, the following sums —

	s.	*d.*
For constable or officer serving notices	1	0
For clerk of justices for licence	5	0
For precept to the high constable, and notices to be delivered by the petty constable	1	6

Clerks demanding or receiving more than these fees, to forfeit 5*l*. — § 15.

No sheriff's officer, or officer executing the process of any court of justice, qualified to hold or use any licence under this act. — § 16.

Excise Licences. — No licence for the sale of any exciseable liquors, to be consumed on the premises, shall be granted by the excise to any person, unless such person be previously licensed under this act. — § 17.

Penalties. — Any person *without a licence* selling or exchanging, or for valuable consideration disposing of, any exciseable liquor by retail, to be consumed in his premises; or *with a licence*, and so selling in premises other than those specified in his licence, shall for every offence, on conviction before 1 justice, forfeit not exceeding 20*l*. nor less than 5*l*. with costs; but the penalty not to attach in case of death or insolvency, and sale by the heir or assigns, prior to the next special sessions. — § 18.

Every licensed person shall, if required, sell all liquors by retail (except in quantities less than a ½ pint) by the gallon, quart, pint, or ½ pint, sized according to the standard; in default thereof to forfeit the illegal measure, and pay not exceeding 40*s*. with costs, to be recovered within 30 days before 1 justice. — § 19.

In cases of riot, or probability of riot, houses licensed in the neighbourhood may be closed by the order of 2 justices. — § 20.

Any person convicted of a *first offence*, before 2 justices, against the tenour of his licence, to forfeit not exceeding 5*l*. with costs; guilty of a *second offence* within three years of the first, to forfeit not exceeding 10*l*. with costs; and guilty of a *third offence* within 3 years, to forfeit not exceeding 50*l*. with costs: or

the case in the last instance may be adjourned to the petty sessions, for the annual meeting, or the general quarter sessions; and if the offender is found guilty by a *jury*, he may be fined 100*l.*, or adjudged to forfeit his licence or both, and rendered incapable of selling any exciseable liquor in any inn kept by him for 3 *years*. — § 21.

Proceedings at the session in certain cases may be directed by the justices to be carried on by the constable, and the expenses defrayed out of the county rates. — § 22.

Witnesses refusing to attend without lawful excuse may be fined not more than 10*l.* — § 23.

Penalties against justices may be sued for in any court of Westminster; a moiety to the king and a moiety to the party suing. — § 24.

Penalties adjudged by justices may be recovered by distress or the party imprisoned 1, 3, or 6 calender months. — § 25.

The next sections relate to the mode of prosecuting actions.

The last section of the act bears that the word "*inn*" shall include any inn, alehouse, or victualling house, in which is sold by retail any exciseable liquor, to be drunk or consumed on the premises; and the words exciseable liquor are to include all such fermented or spirituous liquors as may now or hereafter be charged with any custom or excise duty. — § 37.

The act does not affect the Universities, nor the privileges of the Vintners' Company, except those freemen who have obtained their freedom by redemption; and it does not alter the time of granting licences in the city of London.

Innkeepers are bound, by the tenour of their licence, to keep order in their houses, to prevent drunkenness and disorderly conduct, and gambling. If they fail in these respects, they forfeit their licence, and subject themselves to the penalties mentioned before. Allowing seditious or immoral books to be read in an inn, also forfeits the licence, and subjects to penalties. — (39 *Geo.* 3. c. 79. § 31.)

2. *Duties of Innkeepers.* — Innkeepers are bound by law to receive guests coming to their inns, and they are also bound *to protect their property when there.* Thy have no option to reject or refuse a guest, unless their house be already full, or they are able to assign some other reasonable and sufficient cause. Neither can they impose unreasonable terms on such as frequent their houses: if they do, they may be fined, and their inns indicted and suppressed. An innkeeper who has stables attached to his premises, may be compelled to receive a horse, although the owner does not reside in his house; but he cannot, under such circumstances, be compelled to receive a trunk or other dead thing. By the annual Mutiny Act, constables, or, in their default, justices of the peace, may quarter soldiers in inns, livery-stables, alehouses, &c., under the conditions and regulations set forth in the statute.

3. *Responsibility of Innkeepers.* — An innkeeper is bound to keep safely whatever things his guests deposit in his inn, or in his custody as innkeeper; and he is civilly liable for all losses, except those arising from *irresistible force*, or what is usually termed the act of God and the king's enemies. "It has long been holden," says Sir William Jones, "that an innkeeper is bound to restitution, if the trunks or parcels of his guests, committed to him either personally or through one of his agents, be damaged at his inn, or stolen out of it by any person whatever (except the servant or companion of the guest); nor shall he discharge himself of this responsibility by a refusal to take care of the goods, because there are suspected persons in the house, for whose conduct he cannot be answerable; it is otherwise, indeed, if he refuse admission to a traveller because he really has no room for him, and the traveller, nevertheless, insist upon entering, and place his baggage in a chamber without the keeper's consent. Add to this, that if he fail to provide honest servants and honest inmates, according to the confidence reposed in him by the public, his negligence in that respect is highly culpable, and he ought to answer civilly for their acts, even if they should rob the guests that sleep in their chambers. Rigorous as this law may seem, and hard as it may actually be in one or two particular instances, it is founded on the great principle of public utility, to which all private considerations ought to yield; for travellers, who must be numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of innholders, whose education and morals are usually none of the best, and who might have frequent opportunities of associating with ruffians or pilferers, while the injured guest could never obtain legal proof of such combinations, or even of their negligence, if no actual fraud had been committed by them. Hence the prætor declared, according to Pomponius, his desire of securing the public from the dishonesty of such men; and by his edict gave an action against them, if the goods of travellers or passengers were lost or hurt by any means except by inevitable accident (*damno fatali*): and Ulpian intimates, that even this severity could not restrain them from knavish practices or suspicious neglect."— (*Essay on the Law of Bailments*, 2d ed. pp. 95, 96.)

Even if an innkeeper bid the guest take the key of his chamber and lock the door, telling him that he cannot undertake the charge of the goods, still, if they be stolen, he is held to be responsible. In all such cases it is not competent to the innkeeper to plead that he took *ordinary* care, or that the *force* which occasioned the loss was truly irresistible. A guest is not bound to deliver the goods in special custody to the innkeeper, nor, indeed, to acquaint him that he has any. If he have property with him, or about his person, the innkeeper must be responsible for it without communication. But the innkeeper may require that the property of his guest be delivered into his hands, in order that it may be put into a secure place; and if the guest refuse, the innkeeper is not liable for its safety. The guest exonerates the innkeeper from liability when he takes upon himself the exclusive custody of the goods, so as to deprive the innkeeper of having

any care over them: thus, if a guest demand and have exclusive possession of a room, for the purpose of a shop or warehouse, he exonerates the landlord from any loss he may sustain in the property which he keeps in that apartment: but it is otherwise if he have not *the exclusive possession of the room.* The innkeeper cannot oblige the guest to take charge of his own goods; for this, in effect, would be a refusal to admit them into the inn. And it is no excuse for an innkeeper to say that he delivered the key of the chamber whence the property was stolen to the guest, who left the door open. A case of this sort occurred a few years ago, at Brighton. A lady having left the door of her bed-room, of which she had the key, open for a few minutes, 50*l.* were abstracted from her reticule. The innkeeper contended that the plaintiff, by selecting particular apartments, and taking the key, had exonerated him from his liability. The jury found for the plaintiff; and upon a motion for a new trial, Lord Tenterden said,—"By the common law of this country, and also by the civil law, the principle of the liability of innkeepers was founded on two reasons: first, to compel the landlord to take care that no improper company was admitted into his house; and, secondly, to prevent collusion. — The principle, as stated in the civil law, was this — '*Ne, quisquam putet graviter hoc in eos constitum esse; nam est in ipsorum arbitrio nequem recipient; et nisi hoc esset statutum, materia daretur cum furibus, adversus eos quos recipiunt, coeundi: cum ne nunc quidem abstinent hujusmodi fraudibus.*' It was true that, in the present state of society, it was very difficult to prevent the intrusion of improper company into inns. But still the principle was such as he had stated it to be, and it would be dangerous to relax it; and he did not think that the taking rooms in this way was sufficient to discharge the landlord. Then, as to the objection that the cases did not extend to money, it was clear that money was as much within the principle as goods, and that no substantial distinction could be made. He was therefore of opinion that the verdict was right."— Rule refused.

A landlord may exempt himself from liability, if he can show that the loss was occasioned by the misconduct of the guest; as, if his goods are stolen by his own servant or companion.

It has been decided that a man is a guest at an inn, if he leave his horse at it, though he has not gone into it himself. If a man come to an inn, and make a contract for lodging for a set time, and do not eat or drink there, he is no guest, but a lodger, and, as such, not under the innkeeper's protection; but if he eat and drink, or pay for his diet there, it is otherwise. Any innkeeper or alehouse keeper, knowingly receiving and harbouring any person convicted of an offence against the revenue laws, for which he has been in prison, or for which he has fled, shall forfeit 100*l.*, and have no licence for the future.

4. *Remedy of an Innkeeper against his Guest.* — An innkeeper may, without any agreement to that effect, detain the person of a guest who has eaten in his house, until payment; and he may do the same by the horses in his stable.

An innkeeper is not entitled to recover for spirits supplied to his guests, of the value of 20*s.* and upwards, unless supplied or contracted for at one time. — (23 *Geo.* 2. c. 40.)

By the custom of London and Exeter, if a man commit a horse to an hostler, and the expense of his keep become equivalent to his price, the hostler may appropriate the horse to himself upon the appraisement of four of his neighbours, or may have him sold. But innkeepers in other parts of the country have no power to sell horses detained by them.

A horse committed to an innkeeper cannot be detained as a security for the board of his master.

It is enacted by 11 & 12 Will. 3. c. 15. that innkeepers, alehouse keepers, &c., refusing to specify in an account the number of pints or quarts for which demand is made, or selling in unmarked measures, shall have no power to detain any goods or other things belonging to the person from whom demand is made, but shall be left to their action for recovery of the same.

PUMICE-STONE (Ger. *Bimstein*; Fr. *Pierre pouce*; It. *Pietra pomice*; Sp. *Piedra pomez*; Lat. *Pumex*), a light, spongy, vitreous stone, found usually in the neighbourhood of volcanoes. It is used for polishing metals and marble, and smoothing the surface of wood and pasteboard. It is said to form a good glaze for pottery. The lighter pumice stones swim on water, their specific gravity not exceeding ·914. The island of Lipari, in the Mediterranean, is chiefly formed of pumice stone, and may be said to be the magazine whence all Europe is supplied with this useful article. There are several species of pumice stones; but those only that are light and spongy are exported. The price varies in the London market from 8*l.* to 10*l.* a ton.

PUTCHOCK. An article of this name is imported in considerable quantities from the north-west coast of India into China, and is regularly quoted in the Canton price currents. It is the root of a plant that grows abundantly in Sinde. When burned, it yields a fine smoke, and a grateful and diffusive smell. The Chinese beat it into a fine powder, which they burn as incense in the temples of their gods. — (*Hamilton's New Account of the East Indies*, vol. i. p. 126.)

Q.

QUARANTINE, a regulation by which all communication with individuals, ships, or goods, arriving from places infected with the plague, or other contagious disease, or

supposed to be peculiarly liable to such infection, is interdicted for a certain definite period. The term is derived from the Italian *quaranta*, forty; it being generally supposed, that if no infectious disease break out within 40 days, or 6 weeks, no danger need be apprehended from the free admission of the individuals under quarantine. During this period, too, all the goods, clothes, &c. that might be supposed capable of retaining the infection, are subjected to a process of purification. This last operation, which is a most important part of the quarantine system, is performed either on board ship, or in establishments denominated *lazarettos*. — (See *post.*)

Policy of Quarantine. — The regulations as to quarantine are entirely precautionary; they have their origin in the belief that various diseases, but especially the plague, are contagious; and supposing such to be the case, the propriety of subjecting those coming from an infected or suspected place to a probation is obvious. Indeed, no government could, until the belief in question be proved to be ill founded, abstain from enforcing precautionary measures, without rendering itself liable to the charge of having culpably neglected one of its most important duties, — that of providing, by every means in its power, for the safety of its subjects. Latterly, however, it has been contended that the plague is never imported; that it is always indigenous; originating in some peculiar state of the atmosphere, or in something peculiar in the condition of the people; and that, consequently, quarantine regulations merely impose a heavy burden on commerce, without being of any real utility. But though there does not seem to be any reason for doubting that infectious diseases have originated in the way described, the fact that they have, in innumerable instances, been carried from one place to another, seems to be established beyond all question. Even if the evidence as to the importation of infectious diseases were less decisive than it is, or the opinions of medical men more divided, it would not warrant the repeal of the restraints on the intercourse with suspected ports. This is not a matter in which innovations should be rashly introduced; wherever there is doubt, it is proper to incline to the side of security. In some cases, perhaps, quarantine regulations have been carried to a needless extent; but they have more frequently, we believe, been improperly relaxed.

Institution of Quarantine. — The notion that the plague was imported from the East into Europe, seems to have prevailed in all ages. But it would appear that the Venetians were the first who endeavoured to guard against its introduction from abroad, by obliging ships and individuals from suspected places to perform quarantine. The regulations upon this subject were, it is most probable, issued for the first time in 1484. — (*Beckmann, Hist. of Invent.* vol. ii. art. *Quarantine.*) They have since been gradually adopted in every other country. Their introduction into England was comparatively late. Various preventive regulations had been previously enacted; but quarantine was not systematically enforced till after the alarm occasioned by the dreadful plague at Marseilles in 1720. The regulations then adopted were made conformably to the suggestions of the celebrated Dr. Mead, in his famous "Discourse concerning Pestilential Contagion."

Lazarettos or Pest-houses are establishments constructed to facilitate the performance of quarantine, and particularly the purification of goods. They have usually a port in which ships from a suspected place may anchor; and, when perfect, are provided with lodgings for the crews and passengers, where the sick may be separated from the healthy; and with warehouses, where the goods may be deposited; all intercourse between the lazaretto and the surrounding country being, of course, interdicted, except by permission of the authorities. The lazarettos at Leghorn, Genoa, and Marseilles are the most complete of any in Europe. The facilities they afford to navigation are very great; for, as ships from suspected places may discharge their cargoes in the lazaretto, they are not detained longer than they would be were there no quarantine regulations. The goods deposited in the lazaretto, being inspected by the proper officers, and purified, are then admitted into the market.

Compared with these, the quarantine establishments in this country are exceedingly defective. There is not, even in the Thames, a lazaretto where a ship from a suspected place may discharge her cargo and refit: so that she is detained, frequently at an enormous expense, during the whole period of quarantine; while, if she have perishable goods on board, they may be very materially injured. It is singular that nothing should hitherto have been done to obviate such grievances. The complaints as to the oppressiveness of quarantine regulations are almost wholly occasioned by the want of proper facilities for its performance. Were these afforded, the burdens it imposes would be rendered comparatively light; and we do not know that many more important services could be rendered to the commerce of the country, than by constructing a proper quarantine establishment on the Thames.

Bills of Health. — The period of quarantine varies, as respects ships coming from the same place, according to the nature of their bills of health. These are documents, or certificates, signed by the consul or other competent authority in the place which the

ship has left, describing its state of health at the time of her clearing out. A *clean* bill imports that at the time of her sailing, no infectious disorder was known to exist. A *suspected*, or, as it is more commonly called, a *touched* bill, imports that rumours were afloat of an infectious disorder, but that it had not actually appeared. A *foul* bill, or the *absence of clean bills*, imports that the place was infected when the vessel sailed. — (See BILLS OF HEALTH.) The duration of the quarantine is regulated by the nature of these instruments. They seem to have been first issued in the Mediterranean ports in 1665, and are obviously of great importance.

Quarantine Regulations. — The existing quarantine regulations are embodied in the act 6 Geo. 4. c. 78., and the different orders in council issued under its authority. These orders specify what vessels are liable to perform quarantine; the places at which it is to be performed; and the various formalities and regulations to be complied with. The publication in the *Gazette* of any order in council with respect to quarantine is deemed sufficient notice to all concerned; and no excuse of ignorance is admitted for any infringement of the regulations. To obviate, as far as possible, any foundation for such plea, it is ordered that vessels clearing out for any port or place with respect to which there shall be at the time any order in council subjecting vessels from it to quarantine, are *to be furnished* with an abstract of the quarantine regulations; and are *to furnish themselves* with quarantine signal flags and lanterns, and with materials and instruments for fumigating and immersing goods. The following are the clauses in the act as to signals: —

Every commander, master, or other person having the charge of any vessel liable to quarantine, shall, at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the U. Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal to denote that his vessel is liable to quarantine; which signal shall in the day time, if the vessel shall have a clean bill of health, be a large yellow flag, of 6 breadths of bunting, at the main-topmast-head; and if such vessel shall not have a clean bill of health, then a like yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting; and in the night time, the signal shall in both cases be a large signal lantern with a light therein (such as is used on board his Majesty's ships of war), at the same mast-head: and such commander, master, or other person, shall keep such signals hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the said coast or islands, and while so in sight, or within such distance, until such vessel so liable to quarantine shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof, such commander, master, or other person shall forfeit 100*l.* — § 8.

Every commander, master, or other person having the charge of any vessel on board whereof the plague or other infectious disease highly dangerous to the health of his Majesty's subjects shall actually be, shall at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the U. Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal, to denote that a vessel has the plague or other infectious disease; which signal shall be in the day time a flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main-topmast-head; and in the night time, the signal shall be 2 large signal lanterns, commonly used on board ships of war, one over the other, at the same mast-head: and such commander, master, or other person shall keep such signal hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the coast or islands aforesaid, while so in sight, or within such distance, until such vessel shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof, such commander, master, or other person shall forfeit 100*l.* — § 9.

If any commander, master, or other person, knowing that the same is not liable to the performance of quarantine, shall hoist such signal, by day or night, such commander or other person shall forfeit 50*l.* — § 10.

But, instead of printing the act, and the various orders in council that have grown out of it, it will be sufficient to lay the following abstract of them before the reader. This abstract has been prepared by the Custom-house; and contains a distinct summary of the various rules and regulations to be complied with.

ABSTRACT OF QUARANTINE REGULATIONS.

It is in the first place to be observed, that all persons are presumed to know and are bound to take notice, not only of the quarantine regulations established by act of parliament (as they are of any other public act), but likewise of every order in council made for the performance of quarantine, and published in the *London Gazette*; and as it is easily in their power to inform themselves of such regulations, and particular care is taken by this and other means to promulgate such of them as apply to their respective situations, *previously to their being actually put under quarantine*, when they will receive directions for their guidance from the quarantine officers, no plea of ignorance will be admitted as an excuse for any neglect, breach, or violation thereof; but, for the sake of example, and for the security of the public health, the pains, penalties, and punishments of the law will be enforced with the utmost severity.

Duty of Commanders and Masters of Vessels.

Upon arrival off the coast of the U. Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man,

To deliver to the pilot who shall go on board, a written paper, containing a true account of the name of the place at which his ship loaded, and of all the places at which he touched on the homeward voyage. Neglecting or refusing to deliver such papers, or making any false representation or wilful omission therein, subjects him to a penalty of 100*l.*

Upon entering or attempting to enter any port, and being spoke by any quarantine officers,

To give a true answer in writing or otherwise, and upon oath or not upon oath (according as he shall be required), to the preliminary questions put to him by such quarantine officer, for the purpose of ascertaining whether his vessel is or is not liable to quarantine. Neglecting or refusing to bring his vessel to as soon as it can be done with safety, in obedience to the requisition of the quarantine officer, subjects him to a penalty of 100*l.*

Refusing to answer such questions, or giving any false answer thereto (if not upon oath), subjects him to a penalty of 200*l.*

If upon oath, to the punishment for wilful and corrupt perjury.

If any infectious disease shall appear on board, the master is to repair to such place as his Majesty shall direct, and make known his case to the officer of customs, and he is to remain at that place until directions are given by the Lords of the Privy Council. He is not to permit any of the crew or passengers on board to go on shore, and he, his crew and passengers, are to obey such directions as are received from the Lords of the Privy Council.

Not acting in conformity to the regulations herein directed, or acting in disobedience to such directions as shall be received from the privy council, he incurs the penalty of 100*l*.

If informed by the pilot that his vessel has become liable to quarantine, by reason of any proclamation made subsequent to his departure, to hoist and keep hoisted a like signal, under the same penalty of 100*l*.

To give to the pilot coming on board a written paper containing a true account of the different articles composing his cargo. Neglecting or refusing to do so, or making a false representation or wilful omission, subjects him to a penalty of 50*l*.

Masters of vessels liable to quarantine, and other persons on board them or having communication with them, are to repair to the appointed quarantine stations, and may be compelled to do so by force.

The master of any vessel having disease on board, on meeting with any other vessel at sea, or within 2 leagues of the coast of the U. Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, is to hoist a signal to denote that his vessel has such disease on board, and is to keep such signal hoisted during such time as he shall continue within sight of such vessel, or within 2 leagues of the coast or islands aforesaid, while so in sight or within such distance, until the vessel shall arrive at the port where she is to perform quarantine, and until she shall be legally discharged from the performance thereof. Failing herein, the master incurs the penalty of 100*l*.

If he shall refuse or omit to disclose the circumstances of such infection prevailing either at any place at which he has been, or on board his vessel, in his answers to the preliminary questions put to him by the quarantine officer, or if he shall wilfully omit to hoist, and to keep hoisted, the proper quarantine signal to denote that his ship is liable to quarantine, he incurs the penalty of 300*l*.

Upon attempting to enter any port, which is not the port at which he ought to perform quarantine, he may be compelled to desist therefrom, in order that he may proceed to the proper quarantine ports, by guns being fired upon the ship, or any other kind of force being used that may be necessary for the attainment of that object.

Quitting or knowingly suffering any seamen or passenger to quit his ship, by going on shore, or by going on board any other vessel or boat, before discharged from quarantine, or,

Not repairing to the proper quarantine station within a convenient time after due notice given, incurs a penalty of 100*l*.

To repair in all cases to the proper quarantine port, as herein-after stated in the Appendix, according as he shall or shall not be furnished with a clean bill of health, and according to the port or place to which he shall be bound, as herein stated.

But if through ignorance, or by stress of weather, damage, loss, or accidents of the seas, he shall have passed the proper quarantine port, he may (having a clean bill of health on board, and upon giving satisfactory proof thereof upon oath, and by the oath of the pilot, if any on board, and that the same was not wilfully or intentionally done or occasioned) be permitted to proceed to some other quarantine port, in the discretion of the quarantine officer, keeping the proper quarantine signal hoisted during the whole time.

Upon his arrival at the proper quarantine port, to give true answers upon oath to all the quarantine questions, and to make oath to the truth of his log-book, and the times at which the entries were therein made: failing herein, he incurs the penalty of wilful and corrupt perjury.

He is also to repair to the particular station which shall be appointed by the quarantine officer for the said ship or vessel

To deliver up to the quarantine officer his bill of health, manifest, log-book, and journal.

Wilfully refusing or neglecting so to do, subjects him to a penalty of 100*l*.

If not bound to any port of the U. Kingdom, or the islands aforesaid, and attempting to enter any port thereof (except to wait for orders, or in consequence of stress of weather or accidents of the seas), he shall give satisfactory proof thereof to the quarantine officer, and give true answers upon oath to the preliminary questions, and strictly conform to all such directions as he shall receive from the quarantine officer, touching his continuance at such port, or departure from thence, or repairing to any other; and also with respect to all other quarantine regulations; in default of which, he may be compelled to proceed to sea by any means or by any kind of force that shall be necessary for that purpose.

Having performed quarantine in any foreign lazaret, the vessel is to be put under quarantine at some of the ports herein-after appointed, until the master shall produce to the quarantine officer the proper documents in proof thereof; upon production whereof the said vessel shall not be obliged to perform quarantine, but shall remain at such station until released by order in council.

Unshipping, or moving in order to unship, any goods from on board any vessel liable to quarantine, subjects to a penalty of 500*l*.

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any letter, goods, or other articles, from any vessel actually performing quarantine, subjects to a penalty of 100*l*.

Note. — Every commander or master of any vessel clearing out or about to sail for any port or place in the Mediterranean, or in the West Barbary on the Atlantic Ocean, or for any port or place respecting which there shall at the time be any order of his Majesty in council in force, subjecting vessels coming from thence to quarantine, is to receive from the principal officer of the customs at such port or place, this printed Abstract of the Quarantine Regulations, which such commander or master is to cause to be affixed on some convenient and conspicuous part of his said vessel, and to remain so affixed until his return with his said vessel to some port or place in the U. Kingdom or the islands aforesaid.

And every such commander and master is likewise to provide and take on board 1 at least of each of the proper quarantine signal flags and lanterns, and likewise materials and instruments for fumigation and immersion, and to keep the same on board, to be used upon his return to the U. Kingdom or the islands aforesaid.

Duty of Pilots.

Pilots are strictly to observe the following directions: —

To receive an account in writing from every commander or master of any vessel coming from foreign parts, of the places at which his vessel loaded, and at which he touched on his said homeward voyage.

To give notice to such commander or master of any proclamation, or order in council, made after the departure of such vessel from the U. Kingdom or the islands aforesaid, and then in force, by which vessels coming from any place mentioned in such account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To give a like notice of any proclamation then in force, by which vessels having on board any of the articles mentioned in the master's account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To remain on board in the same manner as any of the officers, crew, or passengers, and not to quit the said vessel before or after the arrival, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until she is regularly discharged from quarantine; and they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same. If they offend herein, they incur a penalty of 300*l*. and 6 months' imprisonment.

Not to bring any such vessel into any port or place other than the port or place appointed for the reception of vessels so liable to quarantine as stated in the Appendix, unless compelled by stress of weather, adverse winds, or accidents of the seas, of which the pilot, as well as the commander or master of the vessel, is to give satisfactory proof upon oath. If they offend herein, they incur a penalty of 200*l.*

To bring the ship to, as soon as it can be done with safety, in obedience to the requisition of the quarantine officer. Failing herein subjects them to a penalty of 100*l.*

Duty of other Persons.

When any infectious disease actually appears on board any vessel, all persons on board are to obey the direction of the privy council, under a penalty of 100*l.*

Not to quit such vessel, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until regularly discharged from quarantine; and if they quit the ship, they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same; and are also liable to a penalty of 300*l.* and 6 months' imprisonment.

Whether liable to quarantine, or actually performing quarantine, or having had any intercourse or communication with any such persons so liable to or under quarantine, all persons are to obey all such orders as they shall receive from the quarantine officer, and to repair to the lazaret, vessel, or place appointed for the performance of quarantine. Wilfully refusing or neglecting to repair forthwith, when required so to do by such officers, or escaping from or out of such lazaret, vessel, or place may be compelled to repair or return thereto by any kind of necessary force, and are subject to a penalty of 200*l.*

Landing or unshipping, or moving in order to the landing or unshipping, of any goods, packets, packages, baggage, wearing apparel, books, letters, or any other articles whatever, from vessels liable to quarantine, are liable to a penalty of 500*l.*

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any goods, letters, or other articles as aforesaid, from any vessel actually performing quarantine, or from the lazaret or other place where such goods or other articles shall be performing quarantine, are liable to a penalty of 100*l.*

Having quitted or come on shore from any vessel liable to or under quarantine, or having escaped from any lazaret or other place appointed in that behalf, may be seized and apprehended by any constable or other peace officer, or by any other person whatever, and carried before a justice of the peace, who may grant his warrant for conveying such person to the vessel, lazaret, or other place from which he shall have escaped, or for confining him in any place of safe custody (not being a public gaol) until directions can be obtained from the privy council.

Knowingly and wilfully forging or counterfeiting, interlining, erasing, or altering, or procuring to be forged, &c., any certificate directed by any order in council touching quarantine, or publishing the same as true, or uttering any such certificate with intent to obtain the effect of a true certificate, knowing its contents to be false, are guilty of felony.

What Vessels are liable to Quarantine.

All vessels (as well ships of war as all others) with or without clean bills of health, coming —

From or having touched at any place in the Mediterranean, or the West Barbary on the Atlantic Ocean.

From any other place from which his Majesty shall from time to time adjudge it probable (and shall so declare by proclamation or order in council) that the plague, or any other infectious disease or distemper highly dangerous to the health of his Majesty's subjects, may be brought.

Note. — They are considered as liable to quarantine from the time of their leaving any of the said places.

All vessels having communication with any of the before-mentioned ships or vessels, or receiving —

Any person whatever from or out of such vessel, whether such person shall have come from any of the said places, or shall have gone on board of such vessel, either in the course of her voyage, or upon her arrival off the coast of the U. Kingdom, &c. — Or,

Any goods, wares, or merchandise, packets, packages, baggage, wearing apparel, goods, letters, or any other articles whatever, from or out of such ship or vessel.

Note. — They are liable to quarantine from the time of their receiving any such persons or goods.

All vessels coming from any port or place in Europe without the Straits of Gibraltar, or on the continent of America, and having on board —

Any of the articles enumerated (a list of which articles see in the Appendix);

And not producing a declaration upon oath, made by the owner, proprietor, shipper, or consignee, stating either that such articles are not the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or stating of what place they are the growth, produce, or manufacture.

All vessels and boats receiving —

Any of the said goods, wares, and merchandise, or other articles enumerated.

Signals.

For vessels with the plague or other highly infectious disease actually on board —

In the day time — A flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main topmast-head.

In the night time — Two large signal lanterns, with a light therein, such as are commonly used on board his Majesty's ships of war, one over the other, at the same mast-head.

For vessels with clean bills of health —

In the day time — A large yellow flag, of 6 breadths of bunting, at the main-topmast-head.

In the night time — A large signal lantern, with a light therein, such as is commonly used on board his Majesty's ships of war, at the same mast-head.

For vessels without clean bills of health —

In the day time — A large yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting, at the main-topmast-head.

In the night time — Same as for vessels with clean bills of health.

Note. — Every commander or master of a vessel about to sail for the Mediterranean, or for any place respecting which an order in council shall be in force, subjecting vessels coming from thence to quarantine, to be provided with the quarantine signals above mentioned, and to keep the same on board, to be used on his return to the U. Kingdom.

Any commander or master hoisting either of the said quarantine signals, by day or night, knowing that his vessel is not liable to quarantine, incurs a penalty of 50*l.*

APPENDIX. — *A List of Articles enumerated considered as most liable to Infection.*

Apparel of all kinds
Artificial flowers
Bast or any articles made thereof
Beads, bracelets, or necklaces in strings
Beds and bed ticks
Books
Brooms of all kinds
Brushes of all sorts
Burdets
Camlets
Canvass
Carmenia wood
Carpets
Cordage not tarred
Cotton wool
Cotton yarn
Cotton thread
All articles wholly made of or mixed with cotton, silk, wool, thread, or yarn
Down
Feathers
Flax
Furriers' waste
Goats' hair
Gold or silver on thread, cotton, hair, wool, or silk, or any other substance herein-before mentioned
Grogram
Hats, caps, or bonnets of straw, chip cane, or any other material

Hemp
Hoofs
Horn and horn tips
Hair of all sorts
Leather
Linen
Lute strings, bathings or harp strings
Maps
Mattresses
Mats and matting
Mohair yarn
Nets new or old
Paper
Packthread
Parchment
Pelts
Platting of bast, chip, cane, straw, or horse hair
Quills
Rags
Sails and sail cloths
Silk, viz. — crapes, and tiffanies, husks and knubs, raw silk, thrown and organzine silk, waste silk, wrought silk
Skins, hides, and furs, and parts or pieces of skins, hides, and furs, whether undressed, or in part or wholly tanned, tawed, or dressed
Sponges
Straw, or any article made or mixed with straw
Stockings of all sorts
Thread, tow, vellum, whisks, wool whether raw or anywise wrought
Yarn of all sorts
And all other goods whatsoever, if they shall have arrived in or with packages consisting wholly or in part of any of the said articles.

QUARANTINE PORTS. — *For Vessels liable to Quarantine not coming from any Place actually infected, nor having any Infection actually on Board.*

Without clean Bills of Health.

All vessels, ships of war, &c. as herein-after specified, to perform quarantine at *Standgate Creek* or *Milford Haven*.

Ships of war, transports, or other ships in the actual service of government, under the command of a commissioned officer in the service of his Majesty's navy, whithersoever bound, to perform quarantine at the *Motherbank*, near *Portsmouth*, at a place marked out by yellow buoys.

With clean Bills of Health.

All ships and vessels bound to the following places, to perform quarantine at *Standgate Creek* : —

London, Rochester, Faversham, or any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Whiteboath Road*, between *Hull* and *Grimsby* : —

Leith	Wi-beach
Maldon	Boston
Colchester	Grimsby
Harwich	Hull
Ipswich	Bridlington
Woodbridge	Scarborough
Aldborough	Whitby
Southwold	Stockton
Yarmouth	Sunderland
Blackney and Clay	Newcastle
Wells	Berwick
Lynn	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Bamboro' Pool* near *Liverpool*, or *Milford Haven* : —

Carlisle	Liverpool
Whitehaven	Chester
Lancaster	Beaumaris
Preston	Isle of Man

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at the *Motherbank*, near *Portsmouth* : —

Sandwich	Arundel
Deal	Chichester
Dover	Portsmouth
Rye	Southampton
Newhaven	Cowes
Shoreham	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *St. Just's Pool*, within the mouth of the harbour of *Falmouth* : —

Poole	Fowey
Weymouth	Falmouth
Lyme	Gweek
Exeter	Penryn
Dartmouth	Truro
Plymouth	Penzance
Looe	Scilly

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *King Road* and *Portshute Pill* : —

Bridgewater	Chepstow
Minehead	Cardiff
Bristol	Swansea
Gloucester	

And any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Milford Haven* : —

St. Ives	Llanelly
Padstow	Pembroke
Bideford	Milford
Barnstaple	Cardigan
Ilfracombe	Aberystwith

Or any creeks or places belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at the *Motherbank*, near *Portsmouth*, or *St. Just's Pool*, within the mouth of the harbour of *Falmouth* : —

Jersey	Sark
Guernsey	Alderney

Or either of them, or any part of them, or either of them.

All ships and vessels bound to the following places, to perform quarantine at *Inverkeithing Bay* : —

The eastern coasts of Scotland, comprehending the ports of Leith	Anstruther
	Prestonpans
	Dundee
Burrowstoness	Perth
Alloa	Montrose
Dunbar	Aberdeen
Kirkaldy	

Or any member, creek, or other place belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Holy Loch*, in the *Frith of Clyde* ; —

The western coast of Scotland, comprehending the ports of Glasgow	Rothsay
	Fort William
	Ayr
Greenock	Port Patrick
Irvine	Stranraer
Campbell Town	Wigtown
Oban	

Or any member, creek, or other place belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Inverkeithing Bay* : —

The northern ports of Scotland, comprehending the ports of Inverness	Orkney
	Caithness
	Stornaway
Zetland	

Or any member, creek, or other place belonging to or within any or either of the above ports.

All ships and vessels bound to the following places, to perform quarantine at *Holy Loch*, in the *Frith of Clyde* : —

The south-west ports of Scotland, comprehending the ports of Dumfries and Kircudbright, or any member, creek, or other place belonging to or within any or either of the above ports.

Preliminary Questions.

1. What is the name of the vessel, and the name of the commander or master ?
2. Are you the commander or master ? Where does she belong ?
3. From whence do you come ?
4. To what place are you bound ?
5. At what ports have you touched since you left the port of your lading on your homeward voyage ?
6. What vessels have you had intercourse or communication with on your passage, and from whence did they come ?
7. Did the plague or any other infectious disease or distemper prevail in any degree at the place from whence you sailed on your homeward voyage or at any of the places at which you have touched ? If at any, say at which, and when. Are any persons on board your ship suffering under any infectious disease ? or have any persons died or been ill of a disease of that nature on the homeward passage ? and if any, what number ? And if any have died or been ill of such disease, were their bedding and clothes destroyed.

[If the vessel shall have sailed from any port in Europe without the Straits, or on the continent of America.]

8. Have you on board any goods enumerated in this list [Handing up a list of articles enumerated.]

If you have, specify the same, and whether they are of the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Harbary on the Atlantic Ocean, or of what other place ? Have you any declaration to prove of what place they are the growth, produce, or manufacture ?

[If the vessel comes from the Mediterranean, or from any other place respecting which there is any order in council in force concerning quarantine.]

9. Have you any, and what bill of health ?
10. What number of officers, mariners, and passengers have you on board ?

[And in cases of vessels coming from or having touched at any port or place on the continent of America, or the islands adjacent thereto, or coming from or having touched at any ports in the West Indies, the following questions are to be put, in addition to the aforesaid questions :]

11. In the course of your voyage have any persons on board suffered from sickness of any kind ? What was the nature of such sickness ? and when did it prevail ? How many persons were affected by it ? and have any of them died in the course of the voyage ?
12. How long after sailing from your port of lading, or having touched at any port on the continent of America or the islands adjacent thereto, or any of the ports in the West Indies, was the first appearance of disease observed ?
13. How had the persons attacked been employed before they came on board ?
14. Had they been employed in loading or unloading the vessel before they left the port ?
15. Had the place which they inhabited, before they sailed, the reputation of being healthy ? or was it subject particularly to the fever incident to the country ?
16. Had the fever been frequent in the place before the vessel sailed ?
17. Did the persons who were ill on board your vessel fall sick nearly about the same time, or within a few days of each other ? Or, did the disorder spread successively from one to another, and increase considerably ? Or, did it abate gradually, and cease to multiply as the distance from the ports you sailed from or touched at as aforesaid increased ?
18. What was the greatest number of persons ill at the most sickly period of your voyage ?
19. What was the whole number of persons on board your vessel when you sailed ?
20. What is the whole number of persons now ill on board your vessel ?

21 Can you state what were the symptoms of illness with which your crew were first attacked; and what was the daily succession and change in them till their death?
22 Whether any and what medicines have been used? and what methods have been adopted to prevent its spreading among the crew?
23. Whether attention has been paid to cleanliness and ventilation on board your vessel?
24. When did you sail from the port or place from whence you took on board your outward cargo? and at what place did you touch before you arrived at the port or place where you took in your present cargo?
25. Did you carry any bill of health with you to the port or place where you took in the cargo you have now on board? From what place? Were the said bills of health clean unclean, or suspected?

Quarantine Questions.

1. What is the name of the vessel, and the name of her commander or master?
2. Are you the commander or master?
3. To what port or place does she belong?
4. When did you sail from the port or place from whence you took on board your outward cargo? and at what places did you touch before you arrived at the port or place where you took in your present cargo?
5. Did you carry any bill or bills of health with you to the port or place where you took in the cargo you have now on board? From what places? Were the said bills of health clean, unclean, or suspected?
6. From what port or place does she now come? When did you sail from such port or place? and at what place or places have you touched in the course of the voyage?
7. Have you any bill or bills of health on board? From what place or places? Are the same clean, unclean, or suspected? Produce them.
[If the vessel shall have sailed from any port or place in Europe without the Straits, or on the continent of America.]
8. Of what articles does your cargo consist? Have you on board any goods enumerated in this list?
[Handing up a list of articles enumerated.]
If you have, specify the same, and whether they are of the growth, produce, or manufacture of Turkey, or of any place in Africa, within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or of what other place. Have you any declaration to prove of what place they are the growth, produce, or manufacture?
9. At what place or places was the cargo or any part thereof taken on board? On what day did you arrive at the place or places where you took in the whole, or any and what part of the cargo? And on what day did you sail from such place or places? And what part of your cargo was taken in at each place, and when?
10. Did the plague or any other infectious disease or distemper prevail in any degree at the places from whence you sailed, or at any of the places at which your cargo was taken on board, or at which you touched? If at any, say at which, and when.
11. Did you hear of any report, or are you aware of any suspicion having existed, at the time of your sailing, that the plague or any other infectious disease prevailed at the place from whence you sailed, or at any other place in the Mediterranean (or in America or the West Indies, as the case may be)?
12. What number of officers, mariners, passengers, or other persons have you on board? Describe the number of each.
13. At what port did you take on board your passengers?
14. Were they residents at that place, or had they been embarked as passengers on board any other vessel from any other places? and from what places and at what time?
15. Do the said officers, mariners, passengers, and other persons consist of the same individuals as were on board at the port from which you sailed upon your homeward voyage? If any other persons have been taken on board, or if any of your officers, crew, or passengers have quitted your vessel since you sailed from such port, or before your arrival at this place, or if any other alterations in that respect have taken place, specify the same, the causes and the time or times of such alterations.
16. What number of persons (if any) have died on board during the voyage outwards and homewards, or at any port at which you have touched? When, and in what part of the voyage did such person or persons die? Of what disease or distemper?
17. Have any of your officers, mariners, or other persons of your crew, who sailed with you on your outward voyage, died or left the vessel?
18. In the course of your voyage outwards or homewards, or at any port at which you have touched, have any persons on board suffered from sickness of any kind? What was the nature of such sickness? When did it prevail? How many persons were affected by it? Are there any convalescents on board? Or, are all persons on board at present in good health?
19. Were any of those who died, or who have been sick in the course of the voyage, or any port at which you have touched, affected, or suspected to have been affected, by any infectious disease or distemper? Were the bedding and clothes of such diseased and sick persons destroyed? If so, when and in what manner were any of the persons immediately employed about the sick afterwards taken ill? If so, of what disease? and in how many days after having been so employed?
20. At what precise time did such deaths happen? In how many days after being indisposed did the sick die? What were the most obvious appearances of the disease?
21. Have you spoken to or otherwise had any communication with any vessels at sea, during the voyage? What were the names of such vessels? and to what country, port, or place did they belong? From what ports or places were they coming, or at what ports or places had they touched on their voyage? and to what country, ports, or places were they bound? What was the nature of the communication held? What do you know respecting the state of health on board such vessels?
22. Have there been any letters, parcels, or other articles delivered out of or received into your vessel, from any vessel or boat met with on the voyage, or before or since your arrival at this place? And what were such letters, parcels, or articles? And where were the same delivered or received? and into or out of what vessel or boat?
23. Have you any packages or parcels which you have taken charge of? If so, what are their contents? and when and where did you take them on board?
24. What pilots or other persons from the shores of the U. Kingdom, or from the Islands of Scilly, Guernsey, Jersey, Alderney, Sark, or Man, have been or are now on board your vessel, or have had any communication whatever with the ship's company, or any of the passengers, during the voyage homewards, or before or since your arrival at this place? If any such pilots or other persons have come on board, and have afterwards quitted your vessel, specify the names of such persons, and the time, manner, and circumstances of their so quitting your vessel.
25. Did you leave any British vessels at any of the ports you sailed from? If you did, mention their names and the names of their commanders.
26. Were such vessels loading? were they near their departure? and whither were they bound?
27. Did you meet with any British vessels at any of the places you touched at? If you did, say when, where, and what were the names and destinations of such vessels; and to what ports or places did they belong?
28. Do you know whether any foreign vessels loading at the port from which you sailed, were bound beyond the Straits of Gibraltar? And if so, what were they? and whither were they bound?
29. Do you know whether any person whatever employed in loading your vessel, or in bringing any articles into it, or having any communication on board thereof, was taken ill during such employment or communication? or whether, in the absence of such person or persons in the course of such employment, any suspicion was entertained of their having been ill? If so, of what disease?
30. Do you know whether or not your cargo, or any part thereof, had been long in warehouse before its being taken on board? If you do, say how long. Have you any knowledge of its being packed or handled on shore, or conveyed from shore, or stowed on board, by persons affected with the plague or any other infectious disease or distemper?

QUASSIA (Ger. *Quassienholz*; Fr. *Bois de quassie*; Sp. *Leno de quassia*), a beautiful tall tree (*Quassia amara*), growing in North and South America, and the West Indies. The wood is of a pale yellow colour, and inodorous. Taste intensely bitter.

It is pretty extensively employed in the materia medica; and it is said by Dr. Cullen that "it will do all that any pure and simple bitter can do."—(*Rees' Cyclopædia*, art. QUASSIA.) It has been alleged that it is sometimes used by the brewers of pale and other ales, instead of or along with hops; but the use of it for this purpose is prohibited under severe penalties.—(See ALE and BEER, p. 8.) When imported it is in billets, which, previously to their being infused, are reduced to chips, or rasped by the druggists. Its price in bond varies from 20*s.* to 30*s.* a cwt. A prohibitory duty of 8*l.* 17*s.* 6*d.* a cwt. was imposed on quassia down to 1842, when it was reduced by Sir Robert Peel to 10*s.* 6*d.* (10*s.*+ 5 per cent.); and it has been farther reduced in 1853 to 1*s.* a cwt. In 1852 the imports and exports of the article amounted respectively to 675 and 516 cwt.

QUEBEC, the capital of L. Canada, on the north-west bank of the river St. Lawrence, about 340 miles from its mouth, in lat. 46° 48′ 49″ N., lon. 71° 10′ 45″ W. Population, in 1850, 40,233.

Quebec is situated on a ridge, or promontory, formed by the St. Lawrence on the S. and W., and the river St. Charles on the E. The extremity of this headland, called Cape Diamond, is about 345 feet above the level of the water, and on it the citadel is built. The town extends from the citadel, principally in a north-east direction, down to the water; and is, from the difference of elevation, divided into the upper and lower towns. The fortifications, which are very strong, extend across the peninsula; the circuit within them being about 2¾ miles. From their situation many of

the streets are uneven; they are also, for the most part, narrow; but they are either well paved or Macadamised. The greater number of the houses are built of stone, with shingle roofs. Some of the public buildings are elegant, and well adapted for their purposes. The harbour, or basin, lies between the town and the island of Orleans. It is safe and commodious: the water is about 28 fathoms deep, with a tide rising from 17 to 18 feet; and at springs from 23 to 25 ditto. Quebec was founded by the French in 1608. In 1629, it was taken by the English; but was restored in 1632. It was again taken by the English under General Wolfe, who fell in the engagement, in 1759; and was finally ceded to us by the treaty of Paris in 1763.

The rapid increase of population in, and of emigration to, Upper Canada has occasioned a proportional increase of intercourse between Quebec and Montreal, and the Canadian ports on Lakes Ontario, Erie, &c. The first steam-boat that plied on the St. Lawrence was launched in 1812; but there are now a great many steamers, some of them of large burden, employed in the conveyance of goods and passengers between Quebec and Montreal; and in the trade between Quebec and Halifax in Nova Scotia. And by means of the Rideau and Welland canals, an uninterrupted line of steam communication is formed between the Atlantic and Amherstburgh, one of the remote settlements of Upper Canada, a distance of more than 1,500 miles; which is now extended through lake Huron to the western extremity of lake Superior, about 700 miles beyond Amherstburgh; giving to Quebec a command of internal navigation inferior only to that of New Orleans. The navigation at Quebec closes at the end of November or beginning of December, and opens in April. Below Quebec the river is seldom frozen over; but the masses of floating ice, kept in constant agitation by the flux and reflux of the tide, render navigation impracticable. The waters of the St. Lawrence are very pure; and in point of depth and magnitude it is one of the noblest rivers in the world. — (*Bouchette's British Dominions in America*, vol. i. p. 272.) Quebec is a free warehousing port.

The trade of Quebec is very extensive. It engrosses, with Montreal, almost the entire trade of the province with the mother country, the W. Indies, &c. Great numbers of emigrants leave this country for Canada; but the larger number subsequently re-emigrate to the U. States. It has a regular intercourse, by means of steamers, with Montreal, and other ports higher up the St. Lawrence, and with Halifax, and other ports on the Atlantic. Still, however, it must not be forgotten that in so far as the United Kingdom is concerned, the trade with Canada and Quebec is, in some degree, forced and factitious, and has not been a source of profit, but the reverse. In former years it was, in fact, mainly a consequence of the discriminating duties laid in our ports on timber from the N. of Europe; and but for this preposterous arrangement, the trade between Great Britain and Quebec would have been extremely unimportant. Now, however, some branches of the trade appear to have acquired a solid footing; and notwithstanding the reduction of the discriminating duties in favour of Baltic timber, the imports from Canada and other parts of British America of red-pine, and of pine and spruce planks, especially the latter, have of late very largely increased. Excepting timber, furs and ashes are the most important articles sent from Canada. A considerable part of the corn and flour exported from Quebec is the growth of the U. States. The principal articles of import into Canada consist of corn, cottons, woollens, silk, and other manufactured goods; glass ware, spirits and wines, iron and hardware, sugar and tea, &c. The total value of the imports from Canada into the U. Kingdom in 1857 amounted to 3,397,827*l.*, and that of the exports from the U. Kingdom to Canada in the same year to 2,467,810*l.*

The excess of the imports over the exports is principally paid for by the Treasury at home, and should be regarded as the means sent out by England to pay the troops and meet the other heavy expenses she has to incur in the preservation of this great but unprofitable colony.

Reciprocity Treaty with U. States.—It must be obvious to any one who takes up a map of N. America, and observes the long continuous frontier of Canada and the U. States, and the magnificent lakes, or great inland seas, by which they are in part divided, that the trade between them can hardly fail to be most extensive. And such is the case. Down, indeed, to a comparatively late period, the intercourse between the two countries was subjected to various regulations and duties, contrived for the most part in a petty and jealous spirit, by which its development was cramped and impeded. But in 1854, the Reciprocity Treaty, which is printed in another part of this work (art. TREATIES, COMMERCIAL) introduced a better and more liberal system. It admitted the free transit of several most important articles from the U. States into Canada and the other provinces of British N. America, and conversely, and the reciprocal use of their seas, rivers, and canals. This judicious and well considered measure has led to a vast extension of the trade between the U. States and Canada and British N. America, and

has been of signal advantage to both. We subjoin a list of the articles which pass freely across the frontier.

"Grain, flour, and bread stuffs of all kinds; animals of all kinds; fresh, smoked, and salted meats; cotton wool, seeds, and vegetables; undried fruits, dried fruits; fish of all kinds; products of fish and of all other creatures living in the water; poultry; eggs; hides, furs, skins or tails undressed; stone or marble in its crude or unwrought state; slate; butter, cheese, tallow; lard, horns, manures; ores of metals of all kinds; coal; pitch, tar, turpentine; ashes; timber and lumber of all kinds, round, hewed, or sawed, unmanufactured in whole or in part; firewood; plants, shrubs, and trees; pelts, wool; fish-oil; rice, broom corn, and bark; gypsum, ground or unground; hewn or wrought or unwrought burr or grindstones; dye stuffs; flax, hemp, and tow unmanufactured; unmanufactured tobacco; rags."

The following table, compiled by the N. York Chamber of Commerce, shows the rapid increase of the trade between Canada and the U. States resulting from the Reciprocity Act.

Exports from U. States to Canada.		Imports from Canada into U. States.	
Years.	Total.	Years.	Total.
1851	$ 7,929,140	1851	$ 4,926,471
1852	6,717,064	1852	4,589,969
1853	7,829,099	1853	5,272,116
1854	17,300,706	1854	6,721,539
1855	18,730,334	1855	12,182,314
1856	20,883,241	1856	17,488,197
1857	16,574,895	1857	18,291,834

Quebec is a principal port for the importation of immigrants, 20,863 having been landed there in 1856, and 31,281 in 1857. Every adult pays on arrival a tax of 5s., and persons between 1 and 14 years pay 3s. 9d.

Account of the Quantities and Values of the Principal Articles of British Produce and Manufacture exported from the U. Kingdom to Canada in 1855, 1856, and 1857.

Money.—Previously to the present year (1859) accounts were kept in what was usually called currency, the 1*l.* sterling being reckoned at 1*l.* 4*s.* 4*d.* But in the course of the present year a new description of currency has been issued on the decimal plan. The 1*l.* currency, on which it is raised, contains 101·321 grs. standard gold, or 92·877 grs. pure gold.* The pound is divided into 100 centimes; and the new gold coins are for 100 and 50 centimes, with silver coins for 20, 10, and 5 ditto. The value of these coins agrees pretty closely, but not quite, with the values of the corresponding American coins. And it is supposed by some that it would have been better, seeing the intimate connection between the two countries, that the value of the Canadian coins should have been made to coincide exactly with that of the coins of the U. States.

State of Chartered Banks in Canada in July, 1857.

The liability of the shareholders in the banks marked * is limited to *twice* the amount of their shares.

Weights same as in England.

Measures.—Standard wine gallon, liquid measure of the province. The Canada minot for all grain, &c. except where specially agreed upon to the contrary; and this measure is about 1-8th larger than the Winchester bushel. The English Winchester bushel, when specially agreed for. The Paris foot, for all measures of lands granted previous to the conquest, and all measures of length, except an agreement is made to the contrary. The English foot, for measure of lands granted since the conquest, and wherever specially agreed upon. The standard English yard for measuring all cloths or stuffs, sold by the yard or measure of length. The English ell, when specially agreed upon.

* The 1*l.* sterling contains 193·274 gr. standard gold, and 113·001 gr. pure gold. Hence, 1*l.* 4*s.* 4*d.* : 1*l.* :: 123·274 to 101·321, and 1*l.* 4*s.* 4*d.* : 1 :: 113·001 to 92·877.

Rates of Pilotage for and below the Harbour of Quebec.

indigo; inventions and improvements in the arts, models of—provided that no article shall be deemed a model which can be fitted up for use; junk and oakum; lard; lime, the produce of British North American Provinces only; machinery, models of—provided the same cannot be put to *actual* use; Manilla grass; manures of all kinds; maps and charts in sheets, not mounted nor on cloth; maple in blocks or slabs, unpolished; meats, fresh, smoked, and salt; *menageries, horses, cattle, carriages*, and harnesses of, subject to regulations by the governor in council; military clothing for Her Majesty's troops *or militia*; *military stores* and materials for military clothing imported for the use of the provincial *militia*, under such restrictions and regulations as may be passed by governor in council; mosses and sea grass for upholstery purposes; musical instruments for military bands; nitre of saltpetre; oakum; oil cake or linseed cake; oils, cocoa-nut, pine, and palm—in their natural state; old nets; ordnance stores; ores of all kinds of metals; osier or willow, for basket-maker's use; packages of all kinds in which goods are usually imported, except the following, viz., spirit, wine, oil, beer, cider, and other casks for the containing of liquids, baskets of every description, trunks, snuff jars, earthenware jars, glass jars, bags and barrels containing seeds and peas; pig iron, pig lead; pitch and tar; philosophical instruments and apparatus, books, globes, maps, and charts—provided the same be specially imported by, and for the use of philosophical societies, universities, colleges, public schools, or institutes; plants, shrubs, and trees; provisions for army and navy, or Indian nations; rags; resin and rosin; rice; sail-cloth; sal-soda; sal-ammonia; salt; seeds of all kinds; ships' blocks; binnacle lamps; canvas, duck; bunting; compasses; dead eyes; dead lights; deck plugs; shackles; sheaves; signal lamps; travelling trucks; ship's water-casks in use, expressly imported for ship-building purposes and by ship-builders or sail-makers; silk hat felts; soda ash; specimens of natural history, mineralogy, or botany; stone, unwrought; slate; statues, busts, and casts of marble, bronze, alabaster, or plaster of Paris; paintings and drawings as works of art; specimens of sculpture; cabinets of coins, medals, gems, and all collections of antiquities; sulphur and brimstone; tin and zinc, or spelter, in block or pig; tallow; teasels; timber and lumber of all kinds, round, hewed, sawed, unmanufactured in whole or in part; trees, unmanufactured; tools and implements of trade of persons arriving in Canada, when accompanied into the province by the actual settler, and brought in by such settler for his own use, and not for sale; treenails; turpentine; type metal, in blocks or pigs; vegetables—not elsewhere specified; vehicles of travellers, except those of hawkers and pedlers; water lime, wine, spirits, and fermented liquors of all kinds, imported by travellers; mess, and the packages containing the same; woods for hoops, when not notched; woods of all kinds; wool; all importations for the use of her Majesty's army and navy serving in Canada.

Table of Prohibitions.—The following articles are prohibited to be imported under a penalty of fifty pounds, together with the forfeiture of the parcel or package of goods in which the same may be found: books and drawings of an immoral or indecent character; coin, base or counterfeit.

Goods paying 5 per cent.—The following goods shall be charged with a duty of 5 per cent. on the value thereof: Bolting cloth; brass in bars, rods and sheets; brass and copper wire, and wire cloth; chain, iron, and other cables, and not being horse chain, dog chain, jack chain, or other small chain not exceeding three-quarters of an inch; Canada plates, tinned plates, galvanized iron and sheet iron; copper in bars, rods, bolts, or sheets; cotton candle wick, yarn, and warp; emery; emery, glass, and sand paper; fishing nets and seines; fish hooks, lines, and fish twines; gold beaters' brim moulds and skins; silk-twist for hats, boots, and shoes; *hat plush*; hair, Angora, goat, Thibet, horse, or mohair, unmanufactured; iron, bar, rod, or hoop; iron, nail and spike rod; iron, hoop or tire, for driving wheels of locomotives, bent or welded; iron, boiler plates; iron, plate and angle, and other iron, shaped or unshaped, when forming part of an iron ship imported in pieces; iron rivets for iron ships; iron wire; lead in sheets; sails, ready made; steel, wrought or cast; tin, granulated or bar; tubes and piping, of copper, brass, or iron, when drawn; varnish, *bright* and black, for ship-builders, other than copal, carriage, shellac, mastic, or Japan; zinc or spelter in sheet; locomotive and engine frames, cranks, crank axles, railway car and locomotive axles, *piston rods*, guide and slide bars, crank pins, connecting rods, steamboat and mill shafts, and cranks forged in the rough.

Goods paying 20 per cent.—The following goods shall be chargeable with a duty of 20 per cent. on the value thereof:—Anchovies, sardines, and all other fish preserved in oil; Argentine, Alabetta, or Albetta, and German silver manufactures; articles embroidered with gold, silver, or other metals; baskets, and all other *articles* made of grass, osier, palm leaf, straw, whalebone, or willow, not elsewhere specified; beads of every description; billiard tables and furnishings; bagatelle boards and furnishings; blacking; bracelets, braids, chains, curls, ringlets, or head-dresses of anything composed of hair or of which hair is a component part; brooms and brushes, not elsewhere specified; cameos or mosaics, real or imitation, when set in gold, silver, or other metals; capers, pickles, olives, and sauces of all kinds not specified; candles and tapers of wax, sperm, belmont, stearine, adamantine and composition; chandeliers, girondoles, gas fittings; carriages or parts of carriages not otherwise specified; cabinet ware or furniture; cashmere, cocks, taps, and coupling joints; *carpets* and hearth rugs, velvet, Brussels, tapestry, Turkish, Persian, and other kinds; confectionery not elsewhere specified; China ware of all kinds; cutlery, polished, of all sorts; coach and harness furniture of all kinds; composition tops for tables or for other articles of furniture; essences, balsams, cosmetics, extracts, pastes, perfumes, tinctures, and perfumery of all kinds; feathers and flowers, artificial or ornamental, or parts thereof, of whatever material composed; fans and fire screens; fireworks; glass, plate; glass, silvered; glassware, cut, ground, or coloured; glass, stained, painted, or coloured; glass bottles and vials, not being wine or beer bottles; gold and silver *leaf*; *gilt frames*; guns, rifles, and fire-arms of all kinds; hats, *caps*, and bonnets; inks of all kinds, except printing ink; jewellery, real or imitation; japanned, planished tin, and britannia metal ware of all kinds; leather, sole, harness, dressed, kip, calf, and upper leather, and all imitations of leather; marble or imitation of marble mantel-pieces, or parts thereof; mattresses of hair, moss, or other material; millinery of all kinds; musical instruments of all kinds, including musical boxes and clocks; mowing, reaping, and thrashing machines; manufactures of fur, of which fur is the principal part; manufactures of cashmere; manufactures *of silk, satin*, and velvet, and of all other fabrics of which silk *forms the* principal part; manufactures of bone, shell, horn, pearl, ivory, or vegetable ivory; manufactures of gold, silver, or electro-plate; manufactures of brass or copper; manufactures of leather or imitation of leather, or of which leather or imitation of leather is the principal part, not otherwise specified; manufactures of marble, or marble more advanced in manufacture than slabs or blocks in the rough; manufacture of papier maché; manufactures of caoutchouc or India rubber, or of gutta percha, or of which any of these articles form the principal part; manufactures of straw; patent medicines and medical preparations not elsewhere specified; oil cloths of whatever material composed; salad oils, table oils, and linseed oils; opium; ornaments of bronze, alabaster, terracotta, or composition; plated and gilded wares of all kinds; playing cards; preserved meats, poultry, fish, and game; railing or fencing of iron; riddles and sieves; scales and *weights*; shawls, Thibet, wool, or *filled*; silks, satins, or velvets, and all fabrics of which silk forms the principal part; spades, shovels, axes, hoes, rakes, forks, and edge-tools, scythes and snaiths, bolts, nuts, and washers; spikes, nails, tacks, brads, and sprigs; silk, woollen, worsted, and cotton embroideries, and tambour-work; silk twist and twist composed of silk and mohair; silver and gold cloth, thread, and other articles embroidered with gold or for embroidering; skins, sheep, calf, goat, and chamois, dressed; soap, perfumed or fancy; stoves and all other iron castings; toys; thread lace and *insertions*; writing desks, fancy and ornamental cases and boxes of whatsoever material; woollen goods.

Goods paying 25 per cent.—The following goods shall be chargeable with a duty of 25 per cent. on the value thereof:—Manufactures of leather, viz., manufacture of boots and shoes; manufacture of harness and saddlery; clothing or wearing apparel, made by hand or sewing machine.

Goods paying 15 per cent.—All articles not hereinbefore enumerated as charged with a specific or *ad valorem* duty, and not exempted from the payment of duty, shall be chargeable with a duty of 15 per cent. as the duty thereof.

MONTREAL, the second town of Canada, is situated on the south side of an island of the same name, in the St. Lawrence, about 180 miles above Quebec, in lat. 45° 31′ N., lon. 73° 35′ W. Population, in 1852, 57,715, being very considerably greater than that of Quebec, or of any other town in British America. The harbour is not large, but it is safe and commodious; the facilities for navigation afforded by the noble river on which it is situated being such, that vessels of 600 tons burden may ascend thus far without difficulty. The North American fur trade principally centres in Montreal; which also enjoys the principal share of the commerce between Canada and the U. States. It is increasing faster than Quebec, or than any city in British America. Imports and exports included in those of Quebec.

QUERCITRON BARK, the bark of a species of oak growing in many parts of North America. It is used in dyeing yellow colours.—(See BARK.)

QUILLS (Fr. *Plumes à écrire*; Ger. *Posen, Feder kiel*; It. *Penne de scrivere*; Rus. *Stivoli*; Sp. *Canones para escribir*), the hard and strong feather of the wings of geese,

ostriches, swans, turkeys, crows, &c. used in writing. They are classified according to the order in which they are fixed in the wing; the second and third quills being the best. Crow quills are chiefly used for drawing. The goodness of quills is judged partly by the size of the barrels, but more by the weight; hence the denomination of quills of 14, 15, &c. loths per *mille*, each mille consisting of 1,200 quills. The old duty on goose quills of 2*s.* 6*d.* per 1000, after being reduced to 6*d.* in 1842, was wholly repealed in 1848. In 1852, 10,285,811 goose quills, and 61,200 swan do. were imported. Of the former only 20,700 were re-exported. Quills are principally imported from Riga and other ports on the Baltic; but those imported by the Hudson's Bay Company and sold at their sales are superior to all others. We subjoin an

Account of the Prices of the various Descriptions of Quills in the London Markets in January, 1844.

	£	s.	d.	£	s.	d.	
Undressed goose quills, imported from the Baltic and assorted into loths	0	6	0	to 3	10	0	per mille.
Swan quills, imported from the Baltic and assorted in loths	0	5	0	— 1	0	0	per 100.
Goose quills, mixed, imported by the Hudson's Bay Company and sold at their annual sale	0	10	0	to 5	0	0	per mille.
Mixed swan quills, by the same	3	0	0	— 8	0	0	—
Irish goose quills, mixed	0	0	6	— 0	1	0	per lb.

R.

RAGS (Du. *Lompen, Vodden;* Fr. *Chiffes, Chiffons, Drapeaux, Drilles;* Ger. *Lumpen;* It. *Strasci, Strazze;* Rus. *Trepje;* Sp. *Tropos, Harapos*), shreds or fragments of worn linen, woollen, or cotton cloth. Though commonly held in little estimation, rags are of great importance in the arts, being used for various purposes, but especially in the manufacture of paper, most of which is entirely prepared from them. As the mode in which British rags are collected must be well known to every one, the following statements apply only to the trade in foreign rags.

Woollen Rags. — Woollen and linen rags are imported in considerable quantities from the continent of Europe, and from Sicily. The woollen rags are chiefly used for manure, especially in the culture of hops; but rags of loose texture, and not too much worn or decayed, are unravelled and mixed up with fresh wool in the making of yarn; a practice more favourable to the cheapness than to the strength and durability of the fabrics into which this old wool is introduced. Woollen rags are also used for making flocks or stuffing for beds, &c.: this process is performed chiefly by the aid of the same kind of engines that prepare pulp for paper; these wash the rags thoroughly, at the same time that they grind and tear them out into separate threads and fibres. The chief importation of woollen rags is from Hamburg and Bremen; and there are some got from Rostock, but the quantity is trifling. The imports in 1852 amounted to 1,395 tons, of which none were re-exported. The price ranges from 5*l.* to 6*l.* per ton, on such as are used for manure; and from 10*l.* to 13*l.* for coloured woollens of loose texture, and 15*l.* to 20*l.* for white of the same description.

Linen Rags are principally imported from Rostock, Bremen, Hamburg, Leghorn, Ancona, Messina, Palermo, and Trieste. Their export from Holland, Belgium, France, Spain, and Portugal, is strictly prohibited. The imports amounted in 1852 to 7,711 tons (including 15 tons pulp), of which 155 tons were re-exported, being worth, at an average, from 20*l.* to 30*l.* per ton, freight included. Exclusive of the very large quantity collected at home, all the rags imported were, until very recently, employed in the manufacture of paper; but the Americans, who have for some years been large importers from the Mediterranean and Hamburg, occasionally come into the London market, and purchase large quantities. The duty on rags was suppressed in 1845.

The imported rags are coarser and inferior in appearance to the English; but, being almost exclusively linen, they are stronger, and bear a price disproportioned to the apparent difference in quality: this disproportion has been materially augmented since the introduction of the process of boiling the rags in ley, and afterwards bleaching them with chlorine, has rendered foreign rags fit for making fine paper, and indeed, in some respects, preferable for that purpose, by their affording greater strength of texture combined with equal whiteness of colour.

There is considerable variety in the appearance of rags from different ports; but, in general, those from the north of Europe are darker and stronger than those from the Mediterranean ports. The latter are chiefly the remains of outer garments, and have become whitened by exposure to the sun and air; but since the improvements in bleaching, this does not enhance their value in the British market. The rags shipped from Trieste are chiefly collected in Hungary. It is only within these few years that we have brought rags from this port, which now furnishes us with considerable supplies. Most part of the rags collected in the Tuscan states, to the extent of 10,000 or 12,000 bags a year, goes to America.

Freights are, at an average, about — Hamburg and Bremen, linen 15*s.* per ton, woollen, 20*s.*; Rostock, 30*s.*; Ancona and Leghorn, 25*s.* to 35*s.*; Trieste and Sicily, 25*s.* to 35*s.* Linen rags are almost all selected and assorted previously to their shipment from the foreign port. Their distinguishing marks and prices per cwt. in the London market, January, 1844, were as follows: viz.

Rostock.	Bremen.	Hamburg.	Trieste.	Leghorn.

RAIL-ROAD, TRAM OR WAGGON ROAD, a species of road having tracks or ways formed of iron, stone, or other solid material, on which the wheels of the carriages passing along it run. The object in constructing such roads is, by diminishing the friction, to make a less amount of power adequate either to impel a carriage with a greater velocity, or to urge forward a greater load.

Construction of Rail-roads.—The friction on a perfectly level rail-road, properly constructed, is estimated to amount to from $\frac{1}{10}$th to $\frac{1}{7}$th only of the friction on an ordinary level road; so that, supposing the same force to be applied in both cases, it would move a weight from 10 to 7 times as great on the former as on the latter. But if there be a very moderate ascent, such as 1 foot in 50, which in an ordinary road would hardly be perceived, a great increase of power on the rail-road is required to overcome the resistance that is thus occasioned. The reason is, that the ordinary load on a *level* rail-road is about *seven times as great* as on a common turnpike road; so that when the force of gravity is brought into operation by an ascending plane, its opposing power, being *proportioned to the load*, is 7 times as great as on a common road. Hence the vast importance of having rail-roads either level or as nearly so as possible.

It is also of great importance that rail-roads should be straight, or, at least, free from any abrupt curves. Carriages being kept on the road by *flanges* on the wheels, it is obvious, that where the curves are quick, the friction on the sides of the rails, and consequent retardation, must be very great. In the Manchester and Liverpool rail-road, the curves form segments of a circle which, if extended, would embrace a circumference of 15 miles.

Iron rail-roads, the kind now generally used, are of 2 descriptions. The *flat rail*, or *tram road*, consists of cast-iron plates about 3 feet long, 4 inches broad, and $\frac{1}{2}$ inch or 1 inch thick, with a flaunch, or turned up edge, on the inside, to guide the wheels of the carriage. The plates rest at each end on *sleepers* of stone or wood, sunk into the earth, and they are joined to each other so as to form a continuous horizontal pathway. They are, of course, double; and the distance between the opposite rails is from 3 to $4\frac{1}{2}$ feet, according to the breadth of the carriage or waggon to be employed. The *edge rail*, which is found to be superior to the tram rail, is made either of wrought or cast iron; if the latter be used, the rails are about 3 feet long, 3 or 4 inches broad, and from 1 to 2 inches thick, being joined at the ends by cast metal sockets attached to the sleepers. The upper edge of the rail is generally made with a convex surface, to which the wheel of the carriage is attached by a groove made somewhat wider. When wrought iron is used, which is in many respects preferable, the bars are made of a smaller size, of a wedge shape, and from 12 to 18 feet long; but they are supported by sleepers, at the distance of every 3 feet. In the Liverpool railroad the bars are 15 feet long, and weigh 35 lbs. per lineal yard. The waggons in common use run upon 4 wheels of from 2 to 3 feet in diameter. Rail-roads are either made double, 1 for going and 1 for returning; or they are made with *slidings*, where the carriages may pass each other.—(See the able and original *Essays on Rail-roads, by Charles Maclaren, Esq*, in the *Scotsman* for 1824; see also *Mr. Booth's Pamphlet on the Liverpool and Manchester Rail-road*; the articles on *Railways*, in the *Encyc. Britannica*, the *Penny Cyclopædia, &c.*)

Speed of Carriages on Rail-roads, &c.—The effect of rail-roads in diminishing friction is familiar to every one; and they have long been used in various places of this and other countries, particularly in the vicinity of mines, for facilitating the transport of heavy loads. But it is only since the application of locomotive engines as a moving power, that they began powerfully to attract the public attention, and that their value has been fully appreciated. These engines were first brought into use on the Darlington and Stockton rail-road, opened on the 27th of December, 1825; but it was not till the opening of the rail-way between Manchester and Liverpool that the vast importance of this novel means of intercourse was fully perceived. This splendid work, though now far surpassed in magnitude by other rail-roads, cost nearly a million sterling. It has the advantage of being nearly level; for, with the exception of a short distance at Rainhill, where it is inclined at the rate of 1 foot in 96, there is no greater inclination than in the ratio of 1 foot in 880. The length of the railway is about 31 miles; and it was usual

from its opening to perform this journey in handsome carriages attached to the locomotive engines, in 1½ hours, or less! So far, indeed, as respects the facility of passing from the one to the other, this railway has brought Manchester and Liverpool as near to each other as the western part of London is to the eastern part!

The opening of this railway having more than verified the most sanguine anticipations as to the success of such undertakings, and gone far, in fact, to strike time and space out of the calculations of the traveller, gave an unprecedented stimulus to similar undertakings in all parts of the country; and, in no long period, there were hardly any two considerable places in Great Britain, how distant soever, which it was not proposed to connect by railways. An immense number of companies were formed, and a very large amount of capital subscribed, for carrying on these undertakings; and though, as was to be anticipated, not a few of them appear to have been commenced without due consideration, and hold out very indifferent prospects to the subscribers, there can be no doubt that the country has profited very greatly by the extraordinary facilities of intercourse which has been afforded by the railway system.

Among the greater lines of railway now (1853) existing, may be specified that from London to Manchester, Liverpool, and Glasgow; which, taking it as it at present stands, is one of the greatest public works ever executed in any country, and is a striking result of the wealth, science, and civilisation of modern times. The railway from London to Bath, Bristol, and Exeter, is also a magnificent work; and is, in some respects superior to any other in the kingdom. Among the other leading railways may be specified the Direct Northern line from London to Edinburgh; the lines from London to Southampton, Brighton, and Dover; the line from Chester to Holyhead, with the tubular bridge over the Menai Straits; the Eastern Counties, and Oxford railways; and those from Edinburgh to Glasgow and Ayr, from Edinburgh to Aberdeen, and a host of others.

Railway Legislation. — But, notwithstanding the vast advantages which the opening of so many new and improved lines of communication have conferred on the country, we cannot help thinking that these advantages might have been much greater, and that, in the instance of railway legislation, the public interests have been overlooked to a degree that is not very excusable. It is, we admit, no easy matter to decide how far the interference of government should be carried in matters of this sort. But, at all events, this much is obvious, that when parliament is called upon to pass an act authorising private parties to execute a railway or other public work, it is bound to provide, in as far as practicable, that the public interests shall not be prejudiced by such act, and that it should be framed so that it should not, either when passed, or at any future period, stand in the way of the public advantage. We believe, however, that a little consideration will serve to satisfy most persons that this important principle has, in the case of railways, and indeed of most descriptions of public works, been, in this country, all but wholly neglected.

The practice is for a railway act to authorise the company in whose favour it is granted, to appropriate a certain line of road, and to charge certain specified rates of toll on the passengers and goods to be conveyed by such road, not for 15, 20, or even 50 years, but *in all time to come!* Now, as it appears to us, this is a singularly injudicious arrangement on the part of the public. There is, between any two or more places that may be named, a certain railway line that is preferable to any other which can be pointed out. The probability is that this line will in all cases be the first to be selected; and the act that gives it up to a company confers on the latter a virtual and substantial monopoly. The rates of charge imposed by the act are calculated to remunerate the projectors, supposing every thing to remain on its present footing. But the probability is that manufactures and population, in the places communicating by most lines of railway, will continue to increase in time to come, as they have done in time past; and it is all but certain that great improvements will be effected in the construction of roads and engines. Whatever, therefore, may be the chances of success at the outset, the fair presumption is, that most great lines of road will in the end be exceedingly productive. But, if we continue to abide by the present system, the public will be effectually excluded from all participation in these prospective advantages; and a few private associations will be able to make enormous profits, by monopolising improvements, and keeping up the expense of transit at an exorbitantly high level. It is idle to trust to competition to remedy a grievance of this sort. There may only be one practicable line of railway between two places; and if so, no other can, of course, come into competition with it. But though this were not the case, a company in possession of the best line might, if an opposition were threatened, reduce its rates till the opposition was defeated, and then raise them to the old level. Supposing, however, that a second road is made, its managers would most likely come to an understanding with the first, so that the tolls, instead of being reduced by the instrumentality of the new road, may

be raised; and were it otherwise, the question is, was the second road really necessary? Could not the first road have sufficed for the whole traffic to be carried on by both lines? If this be the case, it is clear the second road has been merely resorted to as a device for reducing the tolls charged on the first; as a means, in fact, for doing that, by an outlay of some hundreds of thousands, or, it may be, millions of pounds, which might have been quite as effectually done by limiting the duration of the act authorising the first road, or by inserting a clause in it providing for the periodical revision of the tolls.

We are clear, indeed, that no act, authorising a private association to construct a railway or canal, to lay down gas pipes, to convey water into a town, or for any such purpose, should ever be passed without reserving to parliament power periodically to revise the tolls granted under it. Such revision would secure to the public a participation in future improvements, not in the contemplation of the parties when the project was entered upon; and it would do this without in any degree clogging the spirit of enterprise. Undertakings of this sort are not engaged in because there is a vague expectation, or even a considerable probability, of their yielding 20 or 30 per cent. profit some 30 or 40 years hence; but because it is believed that they will immediately, or in the course of a few years, yield a reasonable profit; that is, a return of 8, 10, or 12 per cent. The chances of realising more than this at the distance of 20 or 25 years are rarely taken into account, and are worth very little indeed. This, however, is *all* that would be taken away by the revision in question; and while a reservation of this sort would not stand in the way of any legitimate enterprise, the history of several of our existing companies shows that it may come to be of essential service to the public. Had this principle been formerly acted upon in the formation of companies for the execution of public works, the charges on some of the principal lines of canal might, long since, have been reduced to less than half their present amount; and the water brought into the city of London by the New River Company might have been sold for less than one fourth part what it now costs; and so in a vast number of cases.

It has been objected to the proposal now made, that the reserving to the public of power to revise the charges on railways, and other public works, would be of no use, inasmuch as the parties would contrive so to swell their charges as to make their revenue appear not more than a fair return on their outlay. And such, most probably, would be the case, were the statements of the parties to be taken without examination. But who ever proposed that this should be done? If charges are to be revised, government must be authorised to appoint parties to inquire carefully into the management of all concerns with which it is proposed to interfere: and it would be the duty of such parties to proscribe every useless expense; and to ascertain how the railway could be carried on, supposing it were wrought under a system of open competition, and at the least expense, and to frame their report accordingly.

And this principle, we are glad to say, was sanctioned in 1844, by the 7 & 8 Vict. c. 85., which gives to government the option of purchasing, on certain conditions, at the expiration of 21 years from their construction, all railways formed subsequently to the passing of the act. This statute, also, provides for the publication of railway accounts, for the running of cheap trains, &c.

Regulations for the Prevention of Accidents. — Considering the immense extent of railways in this country, and the vast number of passengers conveyed by them, the fewness of accidents is most remarkable. Indeed their greater security appears to be nowise inferior to their greater speed. Still, however, this is a matter in which as little as possible should be left to accident or individual discretion; and considering the number of persons frequently conveyed by a single train, and the tremendous consequences that might ensue from a collision or other accident, all that it is possible to do should be done with a view to secure the safety of travellers by railways. And, should an accident occur, either through the neglect of regulations for their guidance, or from not complying with their provisions, the offending parties should be subjected to penalties of a severe and stringent description. A government which neglects enforcing precautions of this sort, neglects one of its most important functions; and allows the lives of those whom it is bound to protect to be endangered or sacrificed by the cupidity, ignorance, or carelessness of the managers and servants (how incompetent soever they may be) of every railway association in the kingdom.

Railway Mania of 1845. — The summer and autumn of 1845 and the earlier portion of 1846 witnessed the rise and development of a most gigantic railway speculation or mania. Various circumstances conspired to bring this about. The advantages which railways conferred on the country generally, and especially on the districts through which they passed, recommended them to the public patronage and support. Most branches of industry were also, in 1845, in a more than ordinarily prosperous condition; and large dividends (whether really derived from profits is questionable) being paid by some of the principal lines, their stock rapidly rose to a high price. These circumstances inflamed the cupidity of the public, who began to imagine that speculation in railway shares afforded the shortest and easiest means of acquiring wealth. Hence an extraordinary stimulus was given to all sorts of projects, which were multiplied with an almost inconceivable rapidity. Of these a few were well devised and judicious; and were patronised by gentlemen of wealth, respectability, and experience. But the great majority were of a totally opposite description, being got up by parties anxious only to profit by the credulity of the public, and founded on plans which could not be executed, or which, if executed, would be ruinous. And yet such was the disposition of the public to take *omne ignotum pro magnifico*, that shares in these swindling devices, for such was their real character, were greedily bought up at high premiums, which, of course, went into the pockets of the members of parliament, attorneys, and engineers, by whom the traps had been set and the hooks baited. It is difficult, indeed, to imagine

any more disgraceful exhibition of fraud and quackery on the one part, and of folly and voracity on the other, than was displayed during the autumn of 1845 and the spring of 1846, by the manufacturers and buyers of railway shares. Some 700 or 800 new projects, requiring, it was stated, a capital of about as many hundred millions, were spawned during this gambling saturnalia; and of these it would be a high estimate to say there were 100 which held out any legitimate prospect of remunerating their projectors. The great majority of the others were never, indeed, intended to do more than to transfer the money of the unwary dupes who bought shares into the pockets of the crafty directors by whom they were issued; and thus far, some of them answered the views of their projectors. Luckily, however, this was not the case with others; not a few of those who dug the pit-falls having themselves fallen into them.

But despite the number of schemes that were abandoned, it is nevertheless true that in 1845 and 1846, no fewer than 347 acts were carried through parliament, authorising the construction of 7,654 miles of railway, at an estimated cost of 190,344,087*l.* sterling.

Under any circumstances, such gigantic, and generally ill-advised, undertakings must have involved the parties in vast loss. In this case the depressing influence of the heavy railway calls on the money market, having been increased by the failure of the potato crop of 1846, occasioned the greatest difficulty in obtaining pecuniary accommodations, and led to the crisis of 1847. In consequence many of the projects for which acts had been obtained sunk into oblivion, while others have been very imperfectly carried out. An extraordinary fall has, also, taken place in the value of the stock even of the best lines. And this is not to be wondered at. The vast expenses which many companies have incurred in overcoming the opposition to their undertakings, and in the construction of their lines, occasioned an outlay which, if it were to be met at all, could only be met by enforcing the severest economy in the management of the lines. This, however, even when there is a desire to enforce it, is carried out with difficulty. And in the case of railways, the interests of the engineers and others concerned in their management are usually opposed to those of the companies; so that it would be idle to expect that the affairs of the latter should generally exhibit any considerable portion of the care, vigilance, and economy manifested in private undertakings.

The recklessness, too, with which the directors of the great or leading railways have engaged in subsidiary undertakings, or in the construction or purchase of branch lines many of which have been attended with heavy losses, has had a powerful influence in depressing the value of their property. For a while, too, all railway companies suffered more or less from the discredit and suspicion which, however undeservedly, have attached to railway boards. It was found that some leading directors, in whose sagacity and honesty the public reposed all but unlimited confidence, had been, in fact, nothing but gigantic swindlers; their sole object (in which it is to be hoped they have been disappointed) having been to enrich themselves by defrauding and robbing their constituents and the public. And these disclosures also showed that, if the boards of directors associated with the parties now referred to did not actively assist them in their fraudulent schemes, they, at all events, opposed no effectual obstacle to their development. Hence the just discredit that has attached to most railway companies. Some of them put forward detailed statements of their affairs; but these, how accurate soever, obtained but little confidence. This ignorance was, however, alike prejudicial to the public interests, and to those of all really well managed companies, and was at once an incentive to and a cloak for all sorts of nefarious practices. This state of things is now, however, considerably improved. But a vast deal still remains to be done before the constitution of railway companies and the management of railways be placed on a satisfactory footing.

At present (August, 1859) the shares of by far the greater number of railways are at a heavy discount; and at an average the dividends derived from them are not supposed to amount to 3 per cent.

Traffic on Railways. — Comparative Statement of the Traffic on all the Railways in the U. Kingdom for the 8 Years ending with 1857.

Miscellaneous	13	7	10	
Total	281	394	256	738
Total number of passengers conveyed	129,547,592		139,008,888	

Number of miles of railway open on the 31st December, 1851, amounted to - - 6,889
Number open on the 31st December, 1857 - - - - - - - - 9,116

The total length of railway authorised by parliament up to the 31st December, 1857, amounted to 13,827 miles, of which there were open at that period 9,116 miles.

The total capital (in shares and loans) raised and paid up to the 31st December, 1857, amounted to 314,986,826*l.*

The number of persons employed on all the railways open for traffic on the 30th June, 1857, amounted to 109,660; and the number employed on those in course of construction to 44,037; making a total of 153,697.

A duty is paid to government, by railway companies, of 5 per cent. on all sums received by them for the conveyance of passengers at fares above 1*d.* per mile; the receipts derived from passengers by cheap trains, or from fares not exceeding 1*d.* per mile, being exempted from the duty. In 1858–59 the railway tax produced 339,569*l.* This, however, is insufficient to indemnify the companies for the expense of conveying the mails; the charge for this service having amounted, in 1857, to no less than 422,943*l.* When the post-office and a railway company differ as to the sum to be paid to the latter for conveying the mail, the matter is referred to arbitration.

Continental Railways. — The railway system has made great progress on the Continent and in the U. States. Paris, Rouen, and Havre, have been united by railway. Lines have also been constructed from Paris to Orleans, Tours, and Bordeaux, and from Paris to Lyons, and thence to Marseilles. This last is of peculiar importance to this country, from its influence in facilitating the correspondence with the

East. A large amount of English capital has been invested in the French railways; and some of them have been constructed by English engineers.

Belgium, as everybody knows, has numerous railways; and they have been extended in Germany, Italy, and even Spain, to a degree that one could hardly have anticipated. At present some very extensive railways are being constructed in Russia.

The railways of the U. States are exceedingly numerous, and some of them are of great length. But, speaking generally, they are not so substantially executed, and have not been nearly so expensive, as those of this country. Many of them consist only of a single pair of rails, with double pairs at certain intervals to admit of the trains passing. — (See *Supplement.*)

RAISINS (Fr. *Raisins secs, ou passés;* Ger. *Rosinen;* It. *Uve passe;* Por. *Passas;* Rus. *Issum;* Sp. *Pasas*), the dried fruit of the vine. They are produced from various species of vines; deriving their names partly from the place where they grow, as Smyrnas, Valencias, &c.; and partly from the species of grape of which they are made, as muscatels, blooms, sultanas, &c. Their quality appears, however, to depend more on the method of their cure than on anything else. The finest raisins are cured in two methods; — either by cutting the stalk of the bunches half through, when the grapes are nearly ripe, and leaving them suspended on the vine till the watery part be evaporated, and the sun dries and candies them; or by gathering the grapes when they are fully ripe, and dipping them in a ley made of the ashes of the burnt tendrils; after which they are exposed to the sun to dry. Those cured in the first way are most esteemed, and are denominated raisins of the sun. The inferior sorts are very often dried in ovens. — (*Thomson's Dispensatory.*)

Raisins are imported in casks, barrels, boxes, and jars. The finest come in jars and ½ boxes weighing about 25 lbs. Some of the inferior sorts are brought to us in mats.

Malaga raisins are in the highest estimation. The muscatels from Malaga fetch fully a third more than any other description of raisins. The Smyrna black is the cheapest variety, and may average from 30*s.* to 40*s.* a cwt., duty included; muscatels vary from 70*s.* to 75*s.*, duty included. But the price depends much on the season, and the period of the year. — (See MALAGA.)

The duty on raisins, which formerly amounted to 20*s.* a cwt. on the inferior sorts, and to 42*s.* 6*d.* on the finest, was reduced in 1834 to 15*s.* a cwt. on all classes. We took occasion in a former edition of this work to remark on this measure as follows: "This reduction has occasioned a very considerable increase of consumption; but the truth is, that the duty is still quite exorbitant, being no less than 100 per cent. *ad valorem* (and sometimes more) on the price of most descriptions. Raisins are a luxury that can at present be enjoyed only by the richer classes. But were the duty reduced, as it should be, to 10*s.* a cwt., we are well assured that they would be very largely consumed by the middle and even lower classes. Nothing but the magnitude of the duties prevents them from becoming of very considerable importance as an article of food: and it is really quite monstrous, that the public should be debarred from the use of a desirable article, on the pretence of its being necessary, in order to keep up the revenue, that it should be loaded with an oppressive duty. We admit the importance of keeping up the revenue; but so far from exorbitant duties having such an effect, they contribute more than anything else to its reduction. They invariably limit the consumption of the articles on which they are laid to the richest classes, or cause them to be clandestinely supplied, or force recourse to other articles; reducing the revenue as well as the consumption far below the level to which it would attain were the duties moderate. But it is needless to reason speculatively on such a point. Have we not seen the revenue derived from spirits increased, by reducing the duty from 5*s.* 6*d.* a gallon to 2*s.* 6*d.*? and the revenue derived from coffee quadrupled by reducing the duty from 1*s.* 7*d.* per lb. to 6*d.*? And, as most qualities of raisins are but little less overtaxed, have we not every reason to expect that a like effect would be produced by an adequate reduction of the duties by which they are burdened?"

We are glad to be able to state that this view of the matter was taken by Mr. Gladstone, who, in 1853, reduced the duty on raisins from 15*s.* 9*d.* (15*s.* + 5 per cent.) to 10*s.* a cwt.

Exclusive of raisins, a considerable quantity of undried grapes is annually imported from Spain and Portugal, in jars packed in sawdust. The duty on these grapes, which produced in 1857, 78*l.* is 2*d.* per bushel.

Since 1853 the imports of raisins have been as follows, viz:—

	1853.	1854.	1855.	1856.	1857.	1858.
Imports	446,997	286,857	301,284	266,593	326,852	357,485 cwts.

Of the imports in 1857, no fewer than 231,854 cwt. were brought from Spain, 66,305 cwt. from Turkey, and 10,883 from Austrian Italy. Computed value of the imports 739,607*l.*, varying from 2*l.* to 2*l.* 9*s.* per cwt. Entries for consumption 185,136 cwt.

RANGOON, a commercial port and town of the Burmese dominions, about 26 miles from the sea, on the left bank of the eastern branch of the river Irawaddy, in lat. 16° 42′ N., lon. 96° 20′ E. The town and suburbs extend lengthwise about 1 mile along the bank of the river, being about ¾ of a mile in depth: but the houses are very unequally scattered over this area. The fort, or rather wooden stockade, which contains the town, properly so called, is a regular square about 14 feet high, composed of heavy beams of teak timber. It appears from a census, taken a short time previously to the commencement of the war in 1824, that the population was 18,000, which, probably, is not far from its present amount, though it has been stated considerably higher.

Rangoon is the chief, and, indeed, almost the only port of foreign trade in the Burmese dominions, which extend from between the 15th and 16th, up to the 26th and 27th degrees of N. lat., and from the 93rd to the 98th degree of E. lon., containing an area of about 184,000 square miles, with a population of about 4,000,000. Its situation is extremely convenient for commercial purposes, being situated so near the sea, and commanding the navigation of the Irawaddy, which extends to Ava, the capital, a distance of nearly 500 miles. Rangoon is accessible to ships of even 1,200 tons burden; the navigation, although somewhat intricate, being safe and practicable with the assistance of the ordinary native pilots.

The town has many advantages for ship building. At neaps the tide rises and falls about 18 feet; and at springs from 25 to 30 feet. The principal teak forests are, at the same time, at a comparatively short distance, and there is a water conveyance for the timber nearly the whole way. Ship building has, in fact, been carried on at Rangoon since 1786, and in the 38 years which preceded our capture of it, there had been built 111 square rigged vessels of European construction, the total burden of which amounted to above 35,000 tons. Several of these were of from 800 to 1,000 tons. Under the direction of European masters, the Burmese were found to make dexterous and laborious artisans; in this respect, greatly surpassing the natives of our Indian provinces.

There are 2 considerable markets, where the ordinary necessaries of life, according to Burmese usage, are cheap and abundant: these are rice, excellent fish, and poultry.

Money.—The Burmese currency consists, for small payments, of lead; for larger ones, of gold and silver, but chiefly of the latter. There are no coins. At every payment, the metal must be weighed, and very generally assayed,—a rude and very inconvenient state of things. The weights used in the weighing of money are the same as those used on ordinary occasions; the kyat or tical, and the paiktha or vis, being by far the most frequent. Silver may be considered as the standard. Gold is generally held to be about 17 times more valuable than silver. The weighing and assaying of the metals used as currency, gives employment to a class of persons as brokers, money changers, and assayers. Every new assay costs the owner, if the metal be silver, 2½ per cent.; 1½ per cent. being the established commission of the assayers, while 1 per cent. is lost, or supposed to be lost, in the operation. If it be repeated 40 times, it follows that the original amount is wholly absorbed,—a fact which shows the enormous waste of metal arising out of this rude substitute for coin.

Weights. — The weights in use at Rangoon, and throughout the Burman dominions, are as follow: —

2 Small Rwés (red beans) = 1 Large Rwé.	2 Mus = 1 Mat'h.
4 Large do. = 1 Bai.	4 Mat'hs = 1 Kyat, *vulgo* Tical
2 Bais = 1 Mu.	100 Kyats = 1 Paiktha, *vulgo* Vis, = 3·65 lbs., avoir.

Measures of capacity are as follow. —

2 Lamyets	= 1 Lamé.	4 Salés	= 1 Pyi.	2 Sarots	= 1 Sait.
2 Lamés	= 1 Salé.	2 Pyis	= 1 Sarot.	4 Saits	= 1 Ten.

This last measure is what is usually called by us "a basket," and ought to weigh 16 vis of clean rice or 58·4 lbs. avoirdupois: it has commonly been reckoned at ¼ a cwt. All grains, pulses, certain fruits, natron, salt, and lime are bought and sold by measure: other commodities by weight.

Commercial Regulations. — The following commercial treaty, entered into between the government of England and the Court of Ava, in 1826, regulates the intercourse between the two countries: —

Art. 1.—Peace being made, &c. &c. — when merchants with an English certified pass from the country of the English ruler, and merchants from the kingdom of Burma pass from one country to the other, selling and buying merchandise, the sentinels at the passes and entrances, the established gate-keepers of the country, shall make inquiry as usual, but without demanding any money; and all merchants coming truly for the purpose of trade, with merchandise, shall be suffered to pass without hindrance or molestation. The governments of both countries, also, shall permit ships with cargoes to enter ports and carry on trade, giving them the utmost protection and security. And in regard to duties, there shall none be taken beside the customary duties at the landing places of trade.

Art. 2.—Ships whose breadth of beam on the inside (opening of the hold) is 8 royal Burman cubits, of 19·1 English inches each, and all ships of smaller size, whether merchants from the Burmese country entering an English port under the Burmese flag, or merchants from the English country, with an English stamped pass, entering a Burmese port under the English flag, shall be subject to no other demands beside the payment of duties and 10 ticals, 25 per cent. (10 sicca rupees), for a passport on leaving. Nor shall pilotage be demanded, unless the captain voluntarily requires a pilot. However, when ships arrive, information shall be given to the officer stationed at the entrance of the sea. In regard to vessels whose breadth of beam exceeds 8 royal cubits, they shall remain, according to the 9th article of the treaty of Yandabo, without unshipping their rudders or landing their guns, and be free from trouble and molestation as Burmese vessels in British ports. Besides the royal duties, no more duties shall be given or taken than such as are customary.

Art. 3. — Merchants belonging to one country, who go to the other country and remain there, shall, when they desire to return, go to whatever country and by whatever vessel they may desire, without hindrance. Property owned by merchants they shall be allowed to sell. And property not sold, and household furniture, they shall be allowed to take away, without hindrance, or incurring any expense.

Art. 4. — English and Burmese vessels meeting with contrary winds, or sustaining damage in masts, rigging, &c., or suffering shipwrecks on the shore, shall, according to the laws of charity, receive assistance from the inhabitants of the towns and villages that may be near, the master of the wrecked ship paying to those that assist suitable salvage, according to the circumstances of the case; and whatever property may remain, in case of shipwreck, shall be restored to the owner.

Commerce. — A considerable intercourse is carried on between the Burmese and Chinese dominions by an annual caravan, of which the merchants are all Chinese. The imports from China consist of manufactured articles, the chief export from Burma being cotton wool. The trade with foreign countries seaward is carried on with the ports of Chittagong, Dacca, and Calcutta, in Bengal; Madras and Masulipatam, on the Coromandel coast; the Nicobar Islands, in the Bay of Bengal; Penang, in the Straits of Malacca; and occasionally with the Persian and Arabian Gulphs. The largest trade is with Calcutta, owing to the great consumption of teak timber in the latter, and the facility with which she supplies the demand of the Burmese for Indian and British cotton goods. The articles exported to foreign countries from Rangoon are the following: — Teak wood, terra Japonica, or catechu, stick lac, bees' wax, elephants' teeth, raw cotton, orpiment, commonly called in India hurtal, gold, silver, rubies, sapphires, and horses, or rather the small, hardy pony of the country, which is much esteemed, particularly at Madras. By far the most important of these commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7,500 full-sized trees, which, for the most part, consist of what Indian ship builders call *shinbin*, which are planks hewn out of the log with the adze at an immense waste. The teak forests of Pegu are by far the most abundant in India. The teak is nowhere to be found in the low alluvial lands to which the tide reaches, but abounds in the high lands beyond its influence. It seems to be very generally disseminated throughout the Burmese dominions. In the territory ceded to the British in Martaban, there are some fine forests, the timber of which is cut down for exportation, and where it is believed that saw-mills have very recently been established by some European settlers. The most accessible and extensive forests of teak in the Burmese dominions are in the province of Sarawadi, about 150 miles to the north of Rangoon, with which there is a water communication. The principal imports into Burma are cotton piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, borax, sulphur, gunpowder, saltpetre, fire-arms, coarse porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these, by far the most important is cotton piece goods. The Burmese have few cotton manufactures of their own, and appear, from very early times, to have been furnished with the principal part of their supply from the Coromandel coast. To these were afterwards added the cheaper fabrics of Bengal; and both are now, in a great measure, superseded by British manufactures, the use of which has spread very rapidly since the opening of the trade in 1814. In 1826-27, the exports and imports of the port of Rangoon were estimated each at the rate of 300,000*l.*

It is a curious fact that our friend Mr. John Crawfurd, who supplied us with materials for the foregoing account of Rangoon, which he gathered on the spot, does not even allude to rice as an article of export. But, such has been the change in the interval, that it is now the principal article shipped from the town. And while about a dozen years ago the exports of rice were little or nothing, they amounted to 58,563 tons in 1856, and to 112,561 in 1858. See art. RICE in this work.

RAPE, a biennial plant of the turnip kind (*Brassica napus* Lin.), but with a woody fusiform root scarcely fit to be eaten. It is indigenous, flowers in May, and ripens its seeds in July. It is cultivated in many parts of England, particularly in Lincoln and Cambridge; partly on account of its seed, which is crushed for oil, and partly for its leaves as food for sheep. The culture of rape for seed has been much objected to by some, on account of its supposed great exhaustion of the land; but Mr. Loudon says that, where the soil and preparation are suitable, the after-culture properly attended to, and the straw and offal, instead of being burnt, as is the common practice, converted to the purposes of feeding and littering cattle, it may, in many instances, be the most proper and advantageous crop that can be employed by the farmer. The produce, when the plant succeeds well, and the season is favourable for securing the seed, amounts to from 40 to 50 bushels an acre. The seed is sold by the last of 10 quarters; and is crushed in mills constructed for that purpose. — (*Loudon's Ency. of Agriculture.*)

In 1857 we imported 220,495 qrs. rapeseed, of the estimated value of 653,305*l.* The imports from India were 144,894 qrs., being more than half the whole. The residue was principally supplied by Denmark, Russia, and Wallachia. The exports during the same year amounted to 48,392 qrs.

The duties on rapeseed and rapeseed oil were repealed in 1845.

RAPE CAKE is the adhering masses of the husks of rapeseed, after the oil has been expressed. They are reduced to powder by a malt-mill or other machine; and are used either as a top-dressing for crops of different kinds, or are drilled along with turnip seed.

RATTANS, OR CANES, the long slender shoots of a prickly bush (*Calamus rotang* Lin.), one of the most useful plants of the Malay peninsula and the Eastern islands. They are exported to Bengal, to Europe, and above all to China, where they are consumed in immense quantities. For cane work they should be chosen long, of a bright pale yellow colour, well glazed, and of a small size, not brittle, or subject to break. They are purchased by the bundle, which ought to contain 100 rattans, having their ends bent together, and tied in the middle. In China they are sold by the picul, which contains from 9 to 12 bundles. Such as are black or dark coloured, snap short, or from which the glazing flies off on their being bent, should be rejected. When stowed as dunnage, they are generally allowed to pass free of freight. — (*Milburn's Orient. Com. &c.*)

In 1857, we imported 10,363,758 canes, whereof 4,082,019 were from British India, and 4,246,425 from Holland, that is, from her possessions in the East. The exports are inconsiderable.

"The rattan," says Mr. Crawfurd, "is the spontaneous product of all the forests of the Archipelago; but exists in great perfection in those of the islands of Borneo, Sumatra and of the Malayan peninsula. The finest are produced in the country of the *Bataks* of Sumatra. The wood-cutter, who is inclined to deal in this article, proceeds into the forest without any other instrument than his *parang* or cleaver, and cuts as much as he is able to carry away. The mode of performing the operation is this:—he makes a notch in the tree at the root of which the rattan is growing, and cutting the latter, strips off a small portion of the outer bark, and inserts the part that is peeled into the notch. The rattan now being pulled through, as long as it continues of an equal size, is by this operation neatly and readily freed from its *epidermis*. When the wood-cutter has obtained by this means from 300 to 400 rattans,—being as many as an individual can conveniently carry in their moist and undried state,—he sits down, and ties them up in bundles of 100, each rattan being doubled before being thus tied up. After drying, they are fit for the market without further preparation. From this account of the small labour expended in bringing them to market, they can be sold at a very cheap rate. The Chinese junks obtain them in Borneo at the low rate of 5 Spanish dollars per 100 bundles, or 5 cents for each 100 rattans, or 27 for 1*d.* The natives always vend them by tale; but the European residents and the Chinese sell them by weight, counting by piculs. According to their quantity, and the relative state of supply and demand, the European merchants dispose of them at from 1½ to 2½ dollars the picul. In China, the price is usually about 3½ dollars per picul, or 75 per cent. above the average prime cost. In Bengal they are sold by tale, each bundle of about 100 rattans bringing about 20½*d.*" — (*Indian Archipelago*, vol. iii. p. 423.)

REAL, in the Spanish monetary system, is of two sorts; viz. a *real of plate*, and a *real vellon*. The former is a silver coin, varying in value from about 6½*d.* to 5*d.*—(See COINS.) A real vellon is a money of account, worth about 2½*d.*

REAM, a quantity of paper. The ream of writing paper consists of 20 quires, each of 24 sheets: but the ream of printing paper, or, as it is sometimes called, the *printer's ream*, extends to 21½ quires, or 516 sheets. Two reams of paper make a *bundle*.

RECEIPT, is an acknowledgment in writing of having received a sum of money, or other valuable consideration. It is a voucher either of an obligation or debt discharged, or of one incurred.

In 1795 duties were imposed on all notes, memorandums, or writings, given in acknowledgment of the receipt of money in payment of debt. And parties writing receipts on unstamped paper, or giving receipts for smaller sums than those actually received, were subjected to penalties. These duties have undergone various mutations. They usually varied according to the amounts received; but they were not fair *ad valorem* duties, the sums charged on receipts for small amounts being proportionally much greater than those charged on receipts for larger amounts. Thus, while a receipt for 10*l.* was charged with a duty of 3*d.*, a receipt for 1000*l.* was charged with a duty of 10*s.*, whereas had the fair *ad valorem* principle been properly carried out, it should have been charged with a duty of 25*s.*

In 1852, the receipt duty produced 180,491*l.*, inc. 143,457*l.* for England, 16,103*l.* for Scotland, and 20,921*l.* for Ireland.

A good deal of dissatisfaction having been long prevalent with the receipt duty, and being also very extensively evaded, it was changed in 1853 to a duty of 1*d.* on all receipts for sums of 2*l.* and upwards. A new duty of 1*d.* was at the same time, and by the same act, the 16 & 17 Vict. c. 59. imposed on all drafts or orders payable to order on demand. Such duty does not, however, apply to drafts or orders payable *at sight;* nor does it apply to checks or drafts payable to bearer, drawn within the legal distance (15 miles) of the bank at which they are to be paid. In the year ending the 31st March, 1859, these duties produced 418,619*l.* nett, being 390,615*l.* for G. Britain, and 28,004*l.* for Ireland.

The act lays down that "the following instruments shall be deemed and taken to be drafts or orders for the payment of money within the intent and meaning of this act, and of any act or acts relating to the stamp duties on bills of exchange, drafts, or orders, and shall be chargeable accordingly with the stamp duties imposed by this act or any such act or acts; viz:—

"All documents or writings usually termed letters of credit, or whereby any person to whom any such document or writing is or is intended to be delivered or sent shall be entitled, or be intended to be entitled to have credit with, or in account with, or to draw upon any other person for, or to receive from such other person any sum of money therein mentioned."

The act also grants the following exemptions from the duty on receipts, viz:—"Receipts given for money deposited in any bank, or in the hands of any banker, to be accounted for, whether with interest or not; provided the same be not expressed to be received of or by the hands of any other than the person to whom the same is to be accounted for: Provided always, that this exemption shall not extend to receipts or acknowledgments for sums paid or deposited for or upon letters of allotment of shares, or in respect of calls upon any scrip or shares of or in any Joint Stock or other Company or proposed or intended Company, which said last-mentioned receipts or acknowledgments, by whomsoever given, shall be liable to the duty by this act charged on receipts."

Stamps denoting the Duty of 1*d. on Receipts and Drafts may be impressed or affixed.*—The duties of 1*d.* by this act granted on receipts and on drafts or orders for the payment of money respectively may be denoted either by a stamp impressed upon the paper whereon any such instrument is written, or by an adhesive stamp affixed thereto, and the Commissioners of Inland Revenue shall provide stamps of both descriptions for the purpose of denoting the said duties.—16 & 17 Vict. c. 59. § 3.

Where adhesive Stamps are used to denote the Duties on Receipts, &c.—In any case where an adhesive stamp shall be used for the purpose aforesaid on any receipt or upon any draft or order respectively chargeable with the duty of 1*d.* by this act, the person by whom such receipt shall be given or such draft or order signed or made shall, before the instrument shall be delivered out of his hands, custody, or power, cancel or obliterate the stamp so used, by writing thereon his name or the initial letters of his name so and in such a manner as to show clearly and distinctly that such stamp has been made use of, and so that the same may not be again used; and if any person who shall write or give any such receipt or discharge or make or sign any such draft or order with any adhesive stamp thereon, shall not *bonâ fide* in manner aforesaid effectually cancel or obliterate such stamp, he shall forfeit the sum of 10*l.*—§ 4.

Penalty for committing Frauds in the Use of Stamps.—If any person shall fraudulently get off or remove, or cause or procure to be gotten off or removed, from any paper whereon any receipt or any draft or order shall be written, any adhesive stamp, or if any person shall affix or use any such stamp which shall have been gotten off or removed from any paper whereon any receipt or any draft or order shall have been written, to or for any receipt, draft, or order, or any paper whereon any such receipt, draft, or order shall be or be intended to be written; or if any person shall do or practise or be concerned in any fraudulent act, contrivance, or device whatever, not specially provided for by this or some other act of parliament, with intent or design to defraud H. Majesty of any duty by this act granted upon receipts or upon drafts or orders, every person so offending in any of the said several cases shall forfeit the sum of 20*l.*—§ 5.

REGISTRY, in commercial navigation, the registration or enrolment of ships at the Custom-house, so as to entitle them to be classed among, and to enjoy the privileges of, British-built ships.

The registry of ships appears to have been first introduced into this country by the Navigation Act (12 Car. 2. c. 18. anno 1660). Several provisions were made with respect to it by the 7 & 8 Will. 3. c. 22.; and the whole was reduced into a system by the 27 Geo. 3. c. 19., but this has since been materially altered. To be admitted to registry, and consequently to enjoy the privileges and advantages that exclusively belong to a British ship, all that is now required is, that such ship be *bonâ fide* the property of one or more of her Majesty's subjects in the U. Kingdom or some of its dependencies.

The great, and, perhaps, the only original object of the registration of ships was to facilitate the exclusion of foreign ships from those departments in which they were prohibited from engaging by the navigation laws, by affording a ready means of distinguishing such as were really British. It has also been considered advantageous to individuals by preventing the fraudulent assignment of property in ships. Lord Tenterden, however, has observed, in reference to this supposed advantage, that "the instances in which fair and honest transactions are rendered unavailable through a negligent want of compliance with the forms directed by these and other statutes requiring a public register of conveyances, make the expediency of all such regulations, considered with reference to private benefit only, a matter of question and controversy."—(*Law of*

Shipping, part i. c. 2.) But these results are ascribable rather to the mode of registration than to the registry itself. The latter appears to be necessary to give certainty of title; a national and distinctive character to shipping; and for the establishment of a uniform system of admeasurement, the charges on shipping being almost always dependent on the registered tonnage.

The existing regulations as to the registry of ships are embodied in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104., as follows, viz.: —

Registrars of British Ships.—The following persons are required to register British ships, and shall be deemed registrars for the purposes of this act, viz.—

(1.) At any port or other place in the U. K. or Isle of Man approved by the commissioners of customs for the registry of ships, the collector, comptroller, or other principal officer of customs for the time being.
(2.) In the islands of Guernsey and Jersey, the principal officers of H. M.'s customs, together with the governor, lieutenant-governor, or other person administering the government of such islands respectively.
(3.) In Malta, Gibraltar, and Heligoland, the governor, lieutenant-governor, or other person administering the government of such places respectively.
(4.) At any port or place so approved, as aforesaid, within the limits of the charter but not under the government of the E. I. Company, and at which no custom house is established, the collector of duties, together with the governor, lieutenant-governor, or other person administering the government.
(5.) At the ports of Calcutta, Madras, and Bombay, the master attendants, and at any other port or place so approved as aforesaid within the limits of the charter and under the government of the E. I. Company, the collector of duties, or any other person of six years' standing in the civil service of the said company who is appointed by any of the governments of the said company to act for this purpose.
(6.) At every other port or place so approved as aforesaid within H. M.'s dominions abroad, the collector, comptroller, or other principal officer of customs or of navigation laws, or if there is no such officer resident at such port or place, the governor, lieutenant-governor, or other person administering the government of the possession in which such port or place is situate.—§ 30.

Substitution of Governor abroad for Commissioners of Customs, &c.—The governor, lieutenant-governor, or other person administering the government in any British possession where any ship is registered under the authority of this act shall, with regard to the performance of any act or thing relating to the registry of a ship or of any interest therein, be considered in all respects as occupying the place of the commissioners of customs; and any British consular officer shall, in any place where there is no justice of the peace, be authorised to take any declaration hereby required or permitted to be made in the presence of a justice of the peace.—§ 31.

Registrar to keep Register Books.—Every registrar shall keep a book, to be called "the register book," and enter therein the particulars herein-after required to be registered.—§ 32.

Port of Registry of Ship.—The port or place at which any British ship is registered for the time being shall be considered her port of registry or the port to which she belongs.—§ 33.

Name of Ship.—The following rules shall be observed with respect to the names of British registered ships; (that is to say,)

(1.) Before registry, the name of each ship, and of the port to which she belongs, shall be painted on a conspicuous part of her stern, on a dark ground, in white or yellow letters of a length not less than 4 inches.
(2.) No change shall be made in the name of any registered ship.
(3.) No concealment, absence, or avoidable obliteration of the above names shall be permitted, except for the purpose of escaping capture by an enemy.
(4.) The ship shall not be described, by or with the knowledge of the owner or master, by any name other than the one by which she is registered.

And for every breach of the above rules or any of them the owner and master shall each incur a penalty not exceeding 100*l.*—§ 34.

Application for Registry, by whom to be made.—Every application for the registry of a ship shall in the case of individuals be made by the person requiring to be registered as owner, or by some one or more of such persons if more than one, or by his or their duly authorised agent, and in the case of bodies corporate by their duly authorised agent; the authority of such agent, if appointed by individuals, to be testified by some writing under the hands of the appointors, and if appointed by a body corporate, by some instrument under the common seal of such body corporate.—§ 35.

Survey of Ship.—Before registry, the ship shall be surveyed by a person duly appointed under this act; and such surveyor shall grant a certificate specifying her tonnage, build, and such other particulars descriptive of the identity of the ship as may from time to time be required by the Board of Trade; and such certificate shall be delivered to the registrar before registry.—§ 36.

Rules as to Entries in Register Book.—The following rules shall be observed with respect to entries in the register book; (that is to say,)

(1.) The property in a ship shall be divided into 64 shares.
(2.) Subject to the provisions with respect to joint owners or owners by transmission herein-after contained, not more than 32 individuals shall be entitled to be registered at the same time as owners of any one ship; but this rule shall not affect the beneficial title of any number of persons or of any company represented by or claiming under or through any registered owner or joint owner.
(3.) No person shall be entitled to be registered as owner of any fractional part of a share in a ship; but any number of persons not exceeding 5 may be registered as joint owners of a ship, or of a share or shares therein.
(4.) Joint owners shall be considered as constituting one person only as regards the foregoing rule relating to the number of persons entitled to be registered as owners, and shall not be entitled to dispose in severalty of any interest in any ship or in any share or shares therein in respect of which they are registered.
(5.) A body corporate may be registered as owner by its corporate name.—§ 37.

Declaration of Ownership by individual Owner.—No person shall be entitled to be registered as owner of a ship or any share therein until he has made and subscribed a declaration in the form marked B. in the schedule annexed to this act, referring to the ship as described in the certificate of the surveyor, and containing the following particulars; (that is to say,)

(1.) A statement of his qualification to be an owner of a share in a British ship.
(2.) A statement of the time when and the place where such ship was built, or (if the ship is foreign-built, and the time and place of building not known,) a statement that she is foreign-built, and that he does not know the time or place of her building; and in addition thereto, in the case of a foreign ship, a statement of her foreign name, or (in the case of a ship condemned) a statement of the time, place, and court at and by which she was condemned.
(3.) A statement of the name of the master.
(4.) A statement of the number of shares in such ship of which he is entitled to be registered as owner.
(5.) A denial that, to the best of his knowledge and belief, any unqualified person or body of persons is entitled as owner to any legal or beneficial interest in such ship or any share therein.

The above declaration of ownership shall be made and subscribed in the presence of the registrar if the declarant reside within 5 miles of the custom house of the port of registry, but if beyond that distance in the presence of any registrar or of any justice of the peace.—§ 38.

Declaration of Ownership by Body Corporate.— No body corporate shall be entitled to be registered as owner of a ship or of any share therein until the secretary or other duly appointed public officer of such body corporate has made and subscribed in the presence of the registrar of the port of registry a declaration in the form marked C. in the schedule annexed to this act, referring to the ship as described in the certificate of the surveyor, and containing the following particulars; viz.: —

(1.) A statement of such circumstances of the constitution and business of such body corporate as prove it to be qualified to own a British ship.
(2.) A statement of the time when and the place where such ship was built, or (if the ship is foreign-built and the time and place of building unknown,) a statement that she is foreign-built, and that he does not know the time or place of her building; and in addition thereto in the case of a foreign

ship, a statement of her foreign name, or (in the case of a ship condemned) a statement of the time, place, and court at and by which she was condemned.
(3.) A statement of the name of the master.
(4.) A statement of the number of shares in such ship of which such body corporate is owner.
(5.) A denial that, to the best of his knowledge and belief, any unqualified person or body of persons is entitled as owner to any legal or beneficial interest in such ship or any share therein.—§ 39.

Evidence to be produced on Registry.—Upon the first registry of a ship there shall, in addition to the declaration of ownership, be produced the following evidence; viz.:—

(1.) In the case of a British-built ship, a certificate (which the builder is hereby required to grant under his hand) containing a true account of the proper denomination and of the tonnage of such ship, as estimated by him, and of the time when and of the place where such ship was built, together with the name of the party (if any) on whose account he has built the same, and, if any sale or sales have taken place, the bill or bills of sale under which the ship or share therein has become vested in the party requiring to be registered as owner.
(2.) In the case of a foreign-built ship, the same evidence as in the case of a British-built ship, unless the person requiring to be registered as owner, or, in the case of a body corporate, the duly-appointed officer, declares that the time or place of her building is unknown, or that the builder's certificate cannot be procured, in which case there shall be required only the bill or bills of sale under which the ship or share therein became vested in the party requiring to be registered as owner thereof.
(3.) In the case of a ship condemned by any competent court, an official copy of the condemnation of such ship.—§ 40.

Penalty on Builder for false Certificate.—If any builder wilfully makes a false statement in any certificate hereby required to be granted by him he shall for every such offence incur a penalty not exceeding 100*l.*—§ 41.

Particulars of Entry in Register Book.—As soon as the foregoing requisites to the due registry of a ship have been complied with, the registrar shall enter in the register book the following particulars relating to such ship; viz.

(1.) The name of the ship, and of the port to which she belongs.
(2.) The details as to her tonnage, build, and description comprised in the certificate herein-before directed to be given by the surveyor.
(3.) The several particulars as to her origin stated in the declaration or declarations of ownership.
(4.) The names and descriptions of her registered owner or owners, and if there is more than one such owner, the proportions in which they are interested in such ship.—§ 42.

No Notice taken of Trusts.—No notice of any trust, express, implied, or constructive, shall be entered in the register book, or receivable by the registrar; and, subject to any rights and powers appearing by the register book to be vested in any other party, the registered owner of any ship or share therein shall have power absolutely to dispose in manner herein-after mentioned of such ship or share, and to give effectual receipts for any money paid or advanced by way of consideration.—§ 43.

Certificate of Registry to be granted.—Upon the completion of the registry of any ship the registrar shall grant a certificate of registry in the form marked D. in the schedule to the act (annexed to this article), comprising the following particulars, viz.

(1.) The name of the ship and of the port to which she belongs.
(2.) The details as to her tonnage, build, and description comprised in the certificate herein-before directed to be given by the surveyor.
(3.) The name of her master.
(4.) The several particulars as to her origin stated in the declaration or declarations of ownership.
(5.) The names and descriptions of her registered owner or owners, and if there is more than one such owner, the proportions in which they are respectively interested, indorsed upon such certificate.—§ 44.

Change of Owners to be indorsed on Certificate of Registry.—Whenever any change takes place in the registered ownership of any ship, then, if such change occurs at a time when the ship is at her port of registry, the master shall forthwith deliver the certificate of registry to the registrar, and he shall indorse thereon a memorandum of such change; but if such change occurs during the absence of the ship from her port of registry, then upon her first return to such port the master shall deliver the certificate of registry to the registrar, and he shall indorse thereon a like memorandum of the change; or if she previously arrives at any port where there is a British registrar, such registrar shall, upon being advised by the registrar of her port of registry of the change having taken place, indorse a like memorandum thereof on the certificate of registry, and may for that purpose require the certificate to be delivered to him, so that the ship be not thereby detained; and any master who fails to deliver to the registrar the certificate of registry as herein before required shall incur a penalty not exceeding 100*l.*—§ 45.

Change of Master to be indorsed on Certificate of Registry.—Whenever the master of any British registered ship is changed, the following persons, viz., if such change is made in consequence of the sentence of any naval court, the presiding officer of such court, but if the change takes place from any other cause, the registrar, or if there is no registrar the British consular officer resident at the port where such change takes place, shall indorse on the certificate of registry a memorandum of such change, and subscribe his name to such indorsement, and forthwith report the change of master to the com. of customs in London; and the officers of customs at any port situate within H. M.'s dominions may refuse to admit any person to do any act at such port as master of any British ship, unless his name is inserted in or indorsed upon the certificate of registry of such ship as the last appointed master thereof.—§ 46.

Power to grant new Certificate.—The registrar may, with the sanction of the com. of customs, upon the delivery up to him of the former certificate of registry, grant a new certificate in the place of the one so delivered up.—§ 47.

Provision in case of Loss of Certificate.—In the event of the certificate of registry of any ship being mislaid, lost, or destroyed, if such event occurs at any port in the U. K., the ship being registered in the U. K. or at any port in any British possession, the ship being registered in the same British possession, then the registrar of he rport of registry shall grant a new certificate of registry in lieu of and as a substitute for her original certificate of registry; but if such event occurs elsewhere, the master or some other person having knowledge of the circumstances shall make a declaration before the registrar of any port having a British registrar at which such ship is at the time or first arrives after such mislaying, loss, or destruction; and such declaration shall state the facts of the case, and the names and descriptions of the registered owners of such ship, to the best of the declarant's knowledge and belief; and the registrar shall thereupon grant a provisional certificate as near to the form appointed by this act as circumstances permit, and shall insert therein a statement of the circumstances under which such provisional certificate is granted.—§ 48.

Provisional Certificate to be delivered up.—Every such provisional certificate shall, within 10 days after the first subsequent arrival of the ship at her port of discharge in the U. K., if registered therein, or if registered elsewhere, at her port of discharge in the British possession within which her port of registry is situate, be delivered up to the registrar thereof, who shall thereupon grant a new one, as near to the form appointed by this act as circumstances permit; and if the master neglects to deliver up such certificate within such time he shall incur a penalty not exceeding 50*l.*—§ 49.

Custody of Certificate.—The certificate of registry shall be used only for the lawful navigation of the ship, and shall not be subject to detention by reason of any title, lien, charge, or interest whatsoever which any owner, mortgagee, or other person may have or claim to have on or in the ship described in such certificate; and if any person whatever, whether interested or not in the ship, refuses on request to deliver up such certificate when in his possession or under his control to the person for the time being entitled to the custody thereof for the purposes of such lawful navigation as aforesaid, or to any registrar, officer of the customs, or other person legally entitled to require such delivery, it shall be lawful for any justice, by warrant under his hand and seal, or for any court capable of taking cognizance of such matter, to cause the person so refusing to appear before him and to be examined touching such

refusal; and unless it is proved to the satisfaction of such justice or court that there was reasonable cause for such refusal the offender shall incur a penalty not exceeding 100*l.*; but if it is made to appear to such justice or court that the certificate is lost, the party complained of shall be discharged, and such justice or court shall thereupon certify that the certificate of registry is lost.—§ 50.

Mode of proceeding if detaining Party abscond.—If the person charged with such detainer or refusal is proved to have absconded, so that the warrant of the justice or process of the court cannot be served upon him, or if he persists in his refusal to deliver the certificate, such justice or court shall certify the fact, and the same proceedings may then be taken as in the case of a certificate of registry mislaid, lost, or destroyed, or as near thereto as circumstances permit.—§ 51.

Penalty for using improper Certificate.—If the master or owner of any ship uses or attempts to use for the navigation of such ship a certificate of registry not legally granted in respect of such ship, he shall be guilty of a misdemeanor, and it shall be lawful for any commissioned officer on full pay in the military or naval service of H. M., or any British officer of customs, or any British consular officer, to seize and detain such ship, and to bring her for adjudication before the high court of admiralty in England or Ireland or any court having admiralty jurisdiction in H. M.'s dominions; and if such court is of opinion that such use or attempt at use has taken place, it shall pronounce such ship, with her tackle, apparel, and furniture, to be forfeited to H. M., and may award such portion of the proceeds arising from the sale of such ship as it may think just to the officer so bringing in the same for adjudication.—§ 52.

Certificate of Ship lost or ceasing to be British to be delivered up.—If any registered ship is either actually or constructively lost, taken by the enemy, burnt, or broken up, or if by reason of a transfer to any persons not qualified to be owners of British ships, or of any other matter or thing, any such ship as aforesaid ceases to be a British ship, every person who at the time of the occurrence of any of the aforesaid events owns such ship or any share therein shall, immediately upon obtaining knowledge of any such occurrence, if no notice thereof has already been given to the registrar at the port of registry of such ship, give such notice to him, and he shall make an entry thereof in his register book; and, except in cases where the certificate of registry is lost or destroyed, the master of every ship so circumstanced as aforesaid shall immediately, if such event occurs in port, but if the same occurs elsewhere, then within 10 days after his arrival in port, deliver the certificate of registry of such ship to the registrar, or, if there be no registrar, to the British consular officer at such port, and such registrar, if he is not himself the registrar of her port of registry, or such British consular officer, shall forthwith forward the certificate so delivered to him to the registrar of the port of registry of the ship; and every owner and master who, without reasonable cause, makes default in obeying the provisions of this section shall for each offence incur a penalty not exceeding 100*l.*—§ 53.

Provisional Certificate for Ship becoming vested in British Owners at Foreign Port.—If any ship becomes the property of persons qualified to be owners of British ships at any foreign port, the British consular officer resident at such port may grant the master of such ship, upon his application, a provisional certificate, stating—

The name of the ship;	The name of her master;
The time and place of her purchase, and the names of her purchasers;	The best particulars as to her tonnage, build, and description that he is able to obtain;

And he shall forward a copy of such certificate, at the first convenient opportunity, to the commissioners of customs in London: the certificate so granted shall possess the same force as a certificate of registry until the expiration of 6 months, or until such earlier time as the ship arrives at some port where there is a British registrar; but upon the expiration of such period, or upon arrival at such port, shall be void to all intents.—§ 54.

Transfers and Transmissions.

Transfer of Ships or Shares therein.—A registered ship or any share therein, when disposed of to persons qualified to be owners of British ships, shall be transferred by bill of sale; and such bill of sale shall contain such description of the ship as is contained in the certificate of the surveyor, or such other description as may be sufficient to identify the ship to the satisfaction of the registrar, and shall be according to the form marked E., subjoined to this act, or as near thereto as circumstances permit, and shall be executed by the transferree in the presence of and be attested by one or more witnesses.—§ 55.

Declaration to be made by Transferree.—No individual shall be entitled to be registered as transferree of a ship or any share therein until he has made a declaration stating his qualification to be registered as owner of a share in a British ship, and containing a denial similar to the denial before required to be contained in a declaration of ownership by an original owner; and no body corporate shall be entitled to be registered as transferree of a ship or any share therein until the secretary or other duly appointed public officer of such body corporate has made a declaration, stating the name of such body corporate, and such circumstances of its constitution and business as may prove it to be qualified to own a British ship, and containing a denial similar to the denial herein-before required to be contained in a declaration of ownership made on behalf of a body corporate: in the case of an individual, the above declaration shall be made, if he reside within 5 miles of the custom house of the port of registry in the presence of the registrar, but if beyond that distance in the presence of any registrar or of any justice of the peace; in the case of a body corporate the declaration shall be made in the presence of the registrar of the port of registry.—§ 56.

Registration of Transfer.—Every bill of sale for the transfer of any registered ship, or of any share therein, when duly executed, shall be produced to the registrar of the port at which the ship is registered, together with the declaration before required to be made by a transferree; and the registrar shall thereupon enter in the register book the name of the transferree as owner of the ship or share comprised in such bill of sale, and shall indorse on the bill of sale the fact of such entry having been made, with the date and hour thereof; and all bills of sale of any ship or shares in a ship shall be entered in the register book in the order of their production to the registrar.—§ 57.

Transmission of Shares by Death, Bankruptcy, or Marriage.—If the property in any ship or in any share therein becomes transmitted in consequence of the death or bankruptcy or insolvency of any registered owner, or in consequence of the marriage of any female registered owner, or by any lawful means other than by a transfer according to the provisions of this act, such transmission shall be authenticated by a declaration of the person to whom such property has been transmitted, and containing the several statements before required to be contained in the declaration of a transferree, or as near thereto as circumstances permit, and, in addition, a statement describing the manner in which and the party to whom such property has been transmitted; and such declaration shall be made and subscribed if the declarant resides at or within 5 miles of the custom house of the port of registry in the presence of the registrar, but if beyond that distance in the presence of any registrar or of any justice of the peace.—§ 58.

Mortgages.

Mortgage of Ships and Shares therein.—A registered ship or any share therein may be made a security for a loan or other valuable consideration; and the instrument creating such security, herein-after termed a "mortgage," shall be in the form marked I., subjoined to this act, or as near thereto as circumstances permit; and on the production of such instrument the registrar of the port at which the ship is registered shall record the same in the register book.—§ 66.

Mortgages to be registered.—Every such mortgage shall be recorded by the registrar in the order of

time in which the same is produced to him for that purpose; and the registrar shall, by memorandum under his hand, notify on the instrument of mortgage that the same has been recorded by him, stating the date and hour of such record.—§ 67.

Entry of Discharge of Mortgage.—Whenever any registered mortgage has been discharged, the registrar shall, on the production of the mortgage deed, with a receipt for the mortgage money indorsed thereon, duly signed and attested, make an entry in the register book to the effect that such mortgage has been discharged; and upon such entry being made the estate, if any, which passed to the mortgagee shall vest in the same person or persons in whom the same would, having regard to intervening acts and circumstances, if any, have vested if no such mortgage had ever been made.—§ 68.

Priority of Mortgages.—If there is more than one mortgage registered of the same ship or share therein, the mortgagees shall, notwithstanding any express, implied, or constructive notice, be entitled in priority one over the other according to the date at which each instrument is recorded in the register books, and not according to the date of each instrument itself.—§ 69.

Mortgagee not to be deemed Owner.—A mortgagee shall not by reason of his mortgage be deemed to be the owner of a ship or any share therein, nor shall the mortgagor be deemed to have ceased to be owner of such mortgaged ship or share, except in so far as may be necessary for making such ship or share available as a security for the mortgage debt.—§ 70.

Mortgagee to have Power of Sale.—Every registered mortgagee shall have power absolutely to dispose of the ship or share in respect of which he is registered, and to give effectual receipts for the purchase money; but if there are more persons than one registered as mortgagees of the same ship or share, no subsequent mortgagee shall, except under the order of some court capable of taking cognizance of such matters, sell such ship or share without the concurrence of every prior mortgagee.—§ 71.

Rights of Mortgagee not affected by Bankruptcy of Mortgagor.—No registered mortgagee of any ship or of any share therein shall be affected by any act of bankruptcy committed by the mortgagor after the date of the record of such mortgage, notwithstanding such mortgagor at the time of his becoming bankrupt may have in his possession and disposition and be reputed owner of such ship or share thereof; and such mortgage shall be preferred to any right, claim, or interest in such ship or any share thereof which may belong to the assignees of such bankrupt.—§ 72.

Transfer of Mortgages.—A registered mortgage of any ship or share in a ship may be transferred to any person, and the instrument creating such transfer shall be in the form marked K., subjoined to the act, and on the production of such instrument the registrar shall enter in the register book the name of the transferree as mortgagee of the ship or shares therein mentioned, and shall by memorandum under his hand record on the instrument of transfer that the same has been recorded by him, stating the date and hour of such record.—§ 73.

Transmission of Interest of Mortgagee by Death, Bankruptcy, or Marriage.—If the interest of any mortgagee in any ship or in any share therein becomes transmitted in consequence of death, bankruptcy, or insolvency, or in consequence of the marriage of any female mortgagee, or by any lawful means other than by a transfer according to the provisions of this act, such transmission shall be authenticated by a declaration of the person to whom such interest has been transmitted, and containing a statement describing the manner in which and the party to whom such property has been transmitted; and such declaration shall be made and subscribed, if the declarant resides at or within 5 miles of the custom house of the port of registry, in the presence of the registrar, but if beyond that distance in the presence of any registrar or of any justice of the peace, and shall be accompanied by such evidence as is herein-before required to authenticate a corresponding transmission of property from one registered owner to another.—§ 74.

Entry of transmitted Mortgage.—The registrar, upon the receipt of such declaration and the production of such evidence as aforesaid, shall enter the name of the person or persons entitled under such transmission in the register book as mortgagee or mortgagees of the ship or share in respect of which such transmission has taken place.—§ 75.

Certificates of Mortgage and Sale.

Powers of Mortgage and Sale conferred by Certificate.—Any registered owner, if desirous of disposing by way of mortgage or sale of the ship or share in respect of which he is registered at any place out of the country or possession in which the port of registry of such ship is situate, may apply to the registrar, who shall thereupon enable him to do so by granting such certificates as are after mentioned, to be called respectively certificates of mortgage or certificates of sale, according as they purport to give a power to mortgage or a power to sell.—§ 76.

Requisites for Certificates of Mortgage and Sale.—Previously to any certificate of mortgage or sale being granted, the applicant shall state to the registrar, to be by him entered in the register book, the following particulars; viz.

(1.) The names of the persons by whom the power mentioned in such certificate is to be exercised, and in the case of a mortgage the maximum amount of charge to be created, if it is intended to fix any such maximum, and in the case of a sale the minimum price at which a sale is to be made, if it is intended to fix any such minimum.

(2.) The specific place or places where such power is to be exercised, or if no place be specified, then that it may be exercised anywhere, subject to the provisions herein-after contained.

(3.) The limit of time within which such power may be exercised.—§ 77.

Restrictions on Certificates of Mortgage and Sale.—No certificate of mortgage or sale shall be granted so as to authorise any mortgage or sale to be made—

At any place within the U.K., if the port of registry of the ship be situate in the U.K.; or at any place within the same British possession if the port of registry is situate within a British possession; or

By any person not named in the certificate.—§ 78.

Forms of Certificates of Mortgage and Sale.—Certificates of mortgage and sale shall contain a statement of the several particulars herein-before directed to be entered in the register book, and in addition thereto an enumeration of any registered mortgages or certificates of mortgage or sale affecting the ships or shares in respect of which such certificates are given.—§ 79.

Rules as to Certificates of Mortgage.—The following rules shall be observed as to certificates of mortgage; viz.

(1.) The power shall be exercised in conformity with the directions contained in the certificate.

(2.) A record of every mortgage made thereunder shall be indorsed thereon by a registrar or British consular officer.

(3.) No mortgage *bonâ fide* made thereunder shall be impeached by reason of the person by whom the power was given dying before the making of such mortgage.

(4.) Whenever the certificate contains a specification of the place or places at which, and a limit of time not exceeding twelve months within which, the power is to be exercised, no mortgage *bonâ fide* made to a mortgagee without notice shall be impeached by reason of the bankruptcy or insolvency of the person by whom the power was given.

(5.) Every mortgage which is so registered as aforesaid on the certificate shall have priority over all mortgages of the same ship or share created subsequently to the date of the entry of the certificate in the register book; and if there be more mortgages than one so indorsed the respective mortgagees claiming thereunder shall, notwithstanding any express, implied, or constructive notice, be entitled one before the other according to the date at which a record of each instrument is indorsed on the certificate, and not according to the date of the instrument creating the mortgage.

(6.) Subject to the foregoing rules every mortgagee whose mortgage is registered on the certificate shall have the same rights and powers and be subject to the same liabilities as he would have had and been subject to if his mortgage had been registered in the register book instead of on the certificate.

(7.) The discharge of any mortgage so registered on the certificate may be indorsed thereon by any registrar or British consular officer, upon the production of such evidence as is hereby required to be produced to the registrar on the entry of the discharge of a mortgage in the register book; and upon such indorsement being made, the estate, if any, which passed to the mortgagee shall vest in the same person or persons in whom the same would, having regard to intervening acts and circumstances, if any, have vested if no such mortgage had been made.

(8.) Upon the delivery of any certificate of mortgage to the registrar by whom it was granted he shall, after recording in the register book in such manner as to preserve its priority any unsatisfied mortgage registered thereon, cancel such certificate, and enter the fact of such cancellation in the register book; and every certificate so cancelled shall be void to all intents.—§ 80.

Rules as to Certificates of Sale.—The following rules shall be observed as to certificates of sale, viz.—

(1.) No such certificate shall be granted except for the sale of an entire ship.

(2.) The power shall be exercised in conformity with the directions contained in the certificate.

(3.) No sale *bonâ fide* made to a purchaser for valuable consideration shall be impeached by reason of the person by whom the power was given dying before the making of such sale.

(4.) Whenever the certificate contains a specification of the place or places at which, and a limit of time not exceeding twelve months within which, the power is to be exercised, no sale *bonâ fide* made to a purchaser for valuable consideration without notice shall be impeached by reason of the bankruptcy or insolvency of the person by whom the power was given.

(5.) Any transfer made to a person qualified to be the owner of British ships shall be by bill of sale in the form herein-before mentioned, or as near thereto as circumstances permit.

(6.) If the ship is sold to a party qualified to hold British ships, the ship shall be registered anew; but notice of all mortgages enumerated on the certificate of sale shall be entered in the register book.

(7.) Previously to such registry anew there shall be produced to the registrar required to make the same the bill of sale by which the ship is transferred, the certificate of sale, and the certificate of registry of such ship.

(8.) Such last-mentioned registrar shall retain the certificates of sale and registry, and after having indorsed on both of such instruments an entry of the fact of a sale having taken place, shall forward the said certificates to the registrar of the port appearing on such certificates to be the former port of registry of the ship, and such last-mentioned registrar shall thereupon make a memorandum of the sale in his register book, and the registry of the ship in such book shall be considered as closed, except as far as relates to any unsatisfied mortgages or existing certificates of mortgage entered therein.

(9.) On such registry anew the description of the ship contained in her original certificate of registry may be transferred to the new register book, without her being re-surveyed, and the declaration to be made by the purchaser shall be the same as would be required to be made by an ordinary transferree.

(10.) If the ship is sold to a party not qualified to be the owner of a British ship, the bill of sale by which the ship is transferred, the certificate of sale, and the certificate of registry shall be produced to some registrar or consular officer, who shall retain the certificates of sale and registry, and, having indorsed thereon the fact of such ship having been sold to persons not qualified to be owners of British ships, shall forward such certificates to the registrar of the port appearing on the certificate of registry to be the port of registry of such ship; and such last-mentioned registrar shall thereupon make a memorandum of the sale in his register book, and the registry of the ship in such book shall be considered as closed, except so far as relates to any unsatisfied mortgages or existing certificates of mortgage entered therein.

(11.) If upon a sale being made to an unqualified person default is made in the production of such certificates as are mentioned in the last rule, such unqualified person shall be considered by British law as having acquired no title to or interest in the ship; and further, the party upon whose application such certificate was granted, and the persons exercising the power, shall each incur a penalty not exceeding 100*l.*

(12.) If no sale is made in conformity with the certificate of sale, such certificate shall be delivered to the registrar by whom the same was granted; and such registrar shall thereupon cancel it, and enter the fact of such cancellation in the register book; and every certificate so cancelled shall be void to all intents.—§ 81.

Power of Commissioners of Customs in case of Loss of Certificate of Mortgage or Sale.—Upon proof at any time to the satisfaction of the commissioners of customs that any certificate of mortgage or sale is lost or so obliterated as to be useless, and that the powers thereby given have never been exercised, or if they have been exercised then upon proof of the several matters and things that have been done thereunder, it shall be lawful for the registrar, with the sanction of the said commissioners, as circumstances may require, either to issue a new certificate, or to direct such entries to be made in the register book, or such other matter or thing to be done as might have been made or done if no such loss or obliteration had taken place.—§ 82.

Revocation of Certificates of Mortgage and Sale.—The registered owner for the time being of any ship or share therein in respect of which a certificate of mortgage or sale has been granted, specifying the place or places where the power thereby given is to be exercised, may, by an instrument under his hand authorize the registrar by whom such certificate was granted to give notice to the registrar or consular officer, registrars or consular officers, at such place or places, that such certificate is revoked; and notice shall be given accordingly; and all registrars or consular officers receiving such notice shall record the same, and shall exhibit the same to all persons who may apply to them for the purpose of effecting or obtaining a mortgage or transfer under the said certificate of mortgage or sale; and after such notice has been so recorded the said certificate shall, so far as concerns any mortgage or sale to be thereafter made at such place, be deemed to be revoked and of no effect; and every registrar or consular officer recording any such notice shall thereupon state to the registrar by whom the certificate was granted, whether any previous exercise of the power to which such certificate refers has taken place.—§ 83.

Registry anew, and Transfer or Registry.

Alteration in Ship to be registered.—Whenever any registered ship is so altered as not to correspond with the particulars relating to her tonnage or description contained in the register book, then, if such alteration is made at a port where there is a registrar, the registrar of such port, but if made elsewhere, the registrar of the first port having a registrar at which the ship arrives after her alteration, shall, on application made to him, and on the receipt of a certificate from the proper surveyor specifying the nature of such alteration, either retain the old certificate of registry and grant a new certificate of registry containing a description of the ship as altered, or indorse on the existing certificate a memorandum of such alteration, and subscribe his name to such indorsement; and the registrar to whom such application as aforesaid is made, if he is the registrar of the port of registry of the ship, shall himself enter in his register book the particulars of the alteration so made, and the fact of such new certificate having been granted or indorsement having been made on the existing certificate; but if he is not such last-mentioned registrar, he shall forthwith report such particulars and facts as aforesaid, accompanied by the old certificate of registry in cases where a new one has been granted, to the registrar of the port of registry of the ship, who shall retain such old certificate (if any), and enter such particulars and facts in his register book accordingly.—§ 84.

On Alteration Registry anew may be required.—When the registrar to whom application is made in respect of any such alteration as aforesaid is the registrar of the port of registry, he may, if he think fit, instead of registering such alteration, require such ship to be registered anew in manner herein-before directed on the first registry of a ship, and if he is not such registrar as lastly herein-before mentioned he may nevertheless require such ship to be registered anew, but he shall in such last-mentioned case grant a provisional certificate or make a provisional indorsement of the alteration made in manner herein-before directed in cases where no registry anew is required, taking care to add to such certificate or indorsement a statement that the same is made provisionally, and to insert in his report to the registrar of the port of registry of the ship a like statement.—§ 85.

Grant of Provisional Certificate in respect of Alteration.—Every such provisional certificate, or certificate provisionally indorsed, shall, within 10 days after the first subsequent arrival of the ship at her port of discharge in the U. K., if registered in the U. K., or, if registered elsewhere, at her port of discharge in the British possession within which her port of registry is situate, be delivered up to the registrar thereof, who shall thereupon cause such ship to be registered anew in the same manner in all respects as herein-before required on the first registry of any ship.—§ 86.

Consequence of Omission to register anew.—On failure of such registry anew of any ship or registry of alteration of any ship so altered as aforesaid, such ship shall be deemed not duly registered, and shall no longer be recognized as a British ship.—§ 87.

On Change of Owners, Registry anew may be granted.—If upon any change of ownership in any ship the owner or owners desire to have such ship registered anew, although such registry anew is not required by this act, it shall be lawful for the registrar of the port at which such ship is already registered, on the delivery up to him of the existing certificate of registry, and on the other requisites to registry, or such of them as the registrar thinks material, being duly complied with, to make such registry anew, and grant a certificate thereof.—§ 88.

Registry may be transferred from Port to Port.—The registry of any ship may be transferred from one port to another upon the application of all parties appearing on the register to be interested in such

ship, whether as owners or mortgagees, such application to be expressed by a declaration in writing made and subscribed, if the party so required to make and subscribe the same resides at or within 5 miles of the custom house of the port from which such ship is to be transferred, in the presence of the registrar of such port, but if beyond that distance in the presence of any registrar or of any justice of the peace.—§ 89.

Manner of Transfer of Registry.—Upon such application being made as is herein-before mentioned, and upon the delivery to him of the certificate of registry, the registrar of the port at which such ship is already registered shall transmit to the registrar of the port at which such ship is intended to be registered notice of such application having been made to him, together with a true copy of all particulars relating to such ship, and the names of all the parties appearing by his book to be interested as owners or mortgagees in such ship; and such last-mentioned registrar shall, upon the receipt of such notice, enter all such particulars and names in his book of registry, and grant a fresh certificate of registry, and thenceforth such ship shall be considered as registered at and belonging to such last-mentioned port, and the name of such last-mentioned port shall be substituted on the stern of such ship in lieu of the name of the port previously appearing thereon.—§ 90.

Transfer of Registry not to affect Rights of Owners.—The transfer of the registry of any ship in manner aforesaid shall not in any way affect the rights of the several persons interested either as owners or mortgagees in such ship, but such rights shall in all respects be maintained and continue in the same manner as if no such transfer had been effected.—§ 91.

Registry, Miscellaneous.

Inspection of Register Books.—Every person may, upon payment of a fee to be fixed by the commissioners of customs not exceeding 1s., have access to the register book for the purpose of inspection at any reasonable time during the hours of official attendance of the registrar.—§ 92.

Indemnity to Registrar.—No registrar shall be liable to damages or otherwise for any loss accruing to any person by reason of any act done or default made by him in his character of registrar, unless the same has happened through his neglect or wilful act.—§ 93.

Return to be made by Registrars to Commissioners of Customs.—Every registrar in the U. K. shall at the expiration of every month, and every other registrar shall without delay, or at such stated times as may be fixed by the commissioners of customs, transmit to the custom house in London a full return in such form as they may direct of all registries, transfers, transmissions, mortgages, and other dealings with ships which have been registered by or communicated to them in their character of registrars, and the names of the persons who have been concerned in the same, and such other particulars as may be directed by the said commissioners.—§ 94.

Clause 95. directs the mode in which registration fees are to be applied; and clauses 96. to 99. inclusive, give power to commissioners of customs, registrars, &c., to act in certain specified circumstances.

Liabilities of Owners.—Whenever any person is beneficially interested, otherwise than by way of mortgage, in any ship or share therein registered in the name of some other person as owner, the person so interested shall, as well as the registered owner, be subject to all pecuniary penalties imposed by this or by any other act on owners of ships or shares therein, so nevertheless that proceedings may be taken for the enforcement of any such pecuniary penalties against both or either of the aforesaid parties, with or without joining the other of them.—§ 100.

Forgery.

Punishment for Forgery.—Any person who forges, assists in forging, or procures to be forged, fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any register book, certificate of surveyor, certificate of registry, declaration of ownership, bill of sale, instrument of mortgage, certificate of mortgage or sale, or any entry or indorsement required by this act to be made in or on any of the above documents, shall for every such offence be deemed to be guilty of felony.—§ 101.

National Character.

National Character of Ship to be declared before Clearance.—No officer of customs shall grant a clearance or transire for any ship until the master of such ship has declared to such officer the name of the nation to which he claims that she belongs, and such officer shall thereupon inscribe such name on the clearance or transire; and if any ship attempts to proceed to sea without such clearance or transire, any such officer may detain her until such declaration is made.—§ 102.

Penalties.—The offences herein-after mentioned shall be punishable as follows; (that is to say,)

(1.) If any person uses the British flag and assumes the British national character on board any ship owned in whole or in part by any persons not entitled by law to own British ships, for the purpose of making such ship appear to be a British ship, such ship shall be forfeited to Her Majesty, unless such assumption has been made for the purpose of escaping capture by an enemy or by a foreign ship of war in exercise of some belligerent right; and in any proceeding for enforcing any such forfeiture the burden of proving a title to use the British flag and assume the British national character shall lie upon the person using and assuming the same.

(2.) If the master or owner of any British ship does or permits to be done any matter or thing, or carries or permits to be carried any papers or documents, with intent to conceal the British character of such ship from any person entitled by British law to inquire into the same, or to assume a foreign character, or with intent to deceive any such person as lastly herein before mentioned, such ship shall be forfeited to H. Majesty; and the master, if he commits or is privy to the commission of the offence, shall be guilty of a misdemeanor.

(3.) If any unqualified person, except in the case of such transmitted interests as are herein-before mentioned, acquires as owner any interest, either legal or beneficial, in a ship using a British flag and assuming the British character, such interest shall be forfeited to H. Majesty.

(4.) If any person, on behalf of himself or any other person or body of persons, wilfully makes a false declaration touching the qualification of himself or such other person or body of persons to own British ships or any shares therein, the declarant shall be guilty of a misdemeanor; and the ship or share in respect of which such declaration is made, if the same has not been forfeited under the foregoing provision, shall, to the extent of the interest therein of the person making the declaration, and, unless it is shown that he had no authority to make the same, of the parties on behalf of whom such declaration is made, be forfeited to H. Majesty.

And in order that the above provisions as to forfeitures may be carried into effect it shall be lawful for any commissioned officer on full pay in the military or naval service of H. Majesty, or any British officer of customs, or any British consular officer, to seize and detain any ship which has, either wholly or as to any share therein, become subject to forfeiture as aforesaid, and to bring her for adjudication before the H. C. of Admiralty in England or Ireland, or any court having admiralty jurisdiction in H. M.'s dominions; and such court may thereupon make such order in the case as it may think fit, and may award to the officer bringing in the same for adjudication such portion of the proceeds of the sale of any forfeited ship or share as it may think right.—§ 103.

Officer not liable for any Seizure made on reasonable Grounds.—No such officer as aforesaid shall be responsible, either civilly or criminally, to any person whomsoever, in respect of the seizure or detention of any ship that has been seized or detained by him in pursuance of the provisions herein contained, notwithstanding that such ship is not brought in for adjudication, or, if so brought in, is declared not to be liable to forfeiture, if it be shown to the satisfaction of the judge or court before whom any trial relating to such ship or such seizure or detention is held that there were reasonable grounds for such seizure or detention; but if no such grounds are shown, such judge or court may award payment of costs and damages to any party aggrieved, and make such other order in the premises as it thinks just.—§ 104.

Penalty for carrying improper Colours.—If any colours usually worn by H. M's. ships, or any colours resembling those of H. Majesty, or any distinctive national colours, except the red ensign usually worn by merchant ships, or except the union jack with a white border, or if the pendant usually carried by H. M.'s ships or any pendant in anywise resembling such pendant, are or is hoisted on board any ship or boat belonging to any subject of H. Majesty without warrant for so doing from H. Majesty or from the

admiralty, the master of such ship or boat, or the owner thereof, if on board the same, and every other person hoisting or joining or assisting in hoisting the same, shall for every such offence incur a penalty not exceeding 500*l.*; and it shall be lawful for any officer on full pay in the military or naval service of H. Majesty, or any British officer of the customs, or any British consular officer, to board any such ship or boat, and to take away any such jack, colours, or pendant; and such jack, colours, or pendant shall be forfeited to H. Majesty.—§ 105.

Effect of Declaration that a Ship shall not be recognised as a British Ship.—Whenever it is declared by this act that a ship belonging to any person or body corporate qualified according to this act to be owners of British ships shall not be recognised as a British ship, such ship shall not be entitled to any benefits, privileges, advantages, or protection usually enjoyed by British ships, and shall not be entitled to use the British flag or assume the British national character; but, so far as regards the payment of dues, the liability to pains and penalties, and the punishment of offences committed on board such ship or by any persons belonging to her, such ship shall be dealt with in the same manner in all respects as if she were a recognized British ship.—§ 106.

CERTIFICATE OF REGISTRY, *ante*, § 44.

No. _____ *Date of Registry.*

Name of Ship.	British or Foreign-built.	Port of Registry.	How propelled.
			By Steam or Sails, and if by Steam, whether by Paddle or Screw.

Notice.—A certificate of registry granted under the Merchant Shipping Act, 1854, is not a document of title. It does not necessarily contain notice of *all* changes of ownership; and in no case does it contain an official record of any mortgages affecting the ship.

REPORT. In commercial navigation, a paper delivered by the masters of all ships arriving from parts beyond seas to the Custom-house, containing an account of the cargo on board, &c. (16 & 17 Vict. c. 107. §§ 50—54, *antè*, p. 696.)

REPRISALS. Where the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised, by the law of nations, to indemnify themselves, by seizing the property of the subjects of the state aggressing. This is termed making reprisals; and commissions to this effect are issued from the Admiralty.—(See PRIVATEERS.)

RESPONDENTIA. See BOTTOMRY AND RESPONDENTIA.

REVENUE AND EXPENDITURE. Though not properly belonging to a work of this sort, we believe we shall do an acceptable service to our readers by laying before them the following comprehensive Table of the revenue and expenditure of the United Kingdom in 1856 and 1857.—(See pp. 1106, 1107.) It contains more information in a brief space than most parliamentary papers. It was originally framed according to the suggestion, and printed upon the motion, of Mr. Pusey; and there are not very many members who can refer to so useful a memorial of their parliamentary career.

RHUBARB (Du. *Rhubarber*; Fr. *Rhubarbe, Rubarbe*; It. *Rabarbaro, Reo-barbaro*; Sp. *Ruibarbo*; Rus. *Rewen*; Arab. *Rawend*; Chin. *Ta-hwang*), the root of a plant, a native of China and Tartary. Three varieties of rhubarb are known in the shops; viz. Russian, Turkey, and East Indian or Chinese rhubarb. The first two resemble each other in every respect. They are, in fact, the same article, being both derived from Tartary. The portion destined for the Petersburg market being selected and sorted at Kiachta, acquires the name of Russian rhubarb; while the portion that is sent from Tartary to Smyrna and other places in Turkey is called Turkey rhubarb. The best pieces only are sent to Petersburg; and according to the contract with the government, on whose account it is bought, all that is rejected must be burnt; and that which is approved undergoes a second cleaning before being finally packed up for Petersburg. The best pieces of Russian and Turkey rhubarb are roundish, and perforated with a large hole, of a reddish or yellow colour on the outside, and when cut or broken exhibit a mottled texture, and alternate streaks of red and gray. Its odour is peculiar, and its taste nauseous, bitter, and astringent. It should not be porous, but rather compact and heavy. East Indian or Chinese rhubarb is in oblong flat pieces, seldom perforated; has a stronger odour, and is more nauseous to the taste than the other; it is heavier, more compact, breaks smoother, and affords a powder of a redder shade.—(*Thomson's Dispensatory*; *Ainslie's Mat. Indica*, *&c.*)

In 1857 the imports of rhubarb amounted to 255,510 lbs. The consumption is but trifling, not probably exceeding 40,000 or 50,000 lbs. It was formerly charged with a duty, which, after being reduced in 1842, was repealed in 1845.

RICE (Fr. *Riz*; It. *Riso*; Arab. *Aruz*; Hind. *Chawl*), one of the most valuable of the cereal grasses, the *Oryza sativa* of botanists. It is raised in immense quantities in India, China, and most Eastern countries; in the West Indies, Central America, and the U. States; and in some of the southern countries of Europe. It, in fact, occupies the same place in most intertropical regions as wheat in the warmer parts of Europe, and oats and rye in those more to the north. Forming, as it does, the principal part of the food of the most civilised and populous Eastern nations, it is more extensively consumed than any other species of grain. It is light and wholesome, but is said to contain less of the nutritive principle than wheat. When rough, or in its natural state in the husk, it is called *paddy*. There is an immense variety in the qualities of rice. That which is principally exported from Bengal has received the name of *cargo* rice. It is of a coarse reddish cast, but is sweet and large grained, and is preferred by the natives to every other sort. It is not kiln-dried, but is parboiled in earthen pots or caldrons, partly to destroy the vegetative principle, so that it may keep better, and partly to facilitate the process of husking. Patna rice is more esteemed in Europe than any other sort of rice imported from the East. It is small grained, rather long and wiry, and remarkably white. But the rice raised on the low marshy grounds of South Carolina is unquestionably very superior to any brought from any part of India. It may, perhaps, be worth mentioning, that rice, like wheat, oats, and barley, is not indigenous to America. It was first raised in South Carolina from seeds brought from Madagascar, near the end of the 17th century. Its culture increased so rapidly that in 1724 no fewer than 18,000 tierces, or barrels, were exported.—(*Pitkin's American Statistics*, 1835, p. 100.) According to the returns under the census of 1840, the total annual produce of rice in the U. States was estimated at 80,841,422 lbs., whereas under the census of 1850 it was estimated at 215,312,710 lbs., or above 96,000 tons, of which 159,930,613 lbs. were raised in S. Carolina. The value of the exports of rice from the U. States amounted, in 1858, to 1,870,578 dollars.

An Account of the Public Income and Expenditure of the U. Kingdom, in the Years ended 31st of March, 1855-56 and 1856-57, exhibiting the various Items embraced in the one and the other.

The amount of terminable annuities at the end of each year, was		3,996,066		4,001,425
In corresponding perpetuities, as estimated by Mr. Finlaison		898,313		827,026
Difference		3,097,753		3,174,399

* No part of this income is at present paid for the use of King Leopold. The trustees, after discharging certain annuities and pensions to the establishment of the late Princess Charlotte, repay the balance of the annuity to the exchequer; the sum so repaid in the last year was 34,000*l.*

The produce of lands naturally or artificially irrigated is, as far as rice is concerned, from 5 to 10 times greater than that of dry land having no command of water: and hence the vast importance of irrigation in all countries where this grain is cultivated. But it is worthy of remark, that, owing to the not unfrequent occurrence of severe droughts, there is a greater variation in the crops of rice than in those of any other species of grain. Those who, like the Hindoos, depend almost entirely on it for subsistence, are, consequently, placed in a very precarious situation. There can be no doubt that famines are at once more frequent and severe in Hindostan than in any other country, Ireland excepted.

There has been of late years a very great increase in the exports of rice from the East, or rather from the ports of Akyab, Rangoon, Bassein, Moulmein, &c., on the east side of the Bay of Bengal. We borrow from the valuable and instructive circular of Messrs. Gladstone, Wyllie and Co., Calcutta, 23. December 1858, the following statements in regard to the shipment of rice from the ports referred to, and Calcutta.

Akyab. Account of the Shipments, and their Destination of Rice and Paddy from Akyab, in each of the last 5 Years, terminating 30th November (no shipments of rice in December):—

Years.	Europe.		Eastward.		Other Quarters.		To all Quarters.	
	Rice.	Paddy.	Rice.	Paddy.	Rice.	Paddy.	Rice.	Paddy.

1858 - -	103,404	2,720	23,224	- -	4,464	3,742	131,092	6.462

It is roughly estimated that of the exports of the past season at least 20,000 tons were from the crop of the previous season, which had been held over; and, assuming such to be correct, we may reckon the crop of 1856-57 to have been about 125,000 tons, and that of 1857-58, 117,000 tons available for export.

Rangoon. Account of the Shipments, &c., of Rice from this Port in each of the last 3 Years: —

Years.	Europe.	China Straits.	Elsewhere.	Total.
	tons.	*tons.*	*tons.*	*tons.*

Bassein. Account of the Shipments,&c., of Rice from this Port in each of the last 3 Years: —

Years.	Europe.	China Straits.	Elsewhere.	Total.
	tons.	*tons.*	*tons.*	*tons.*
1856 - -	12,507	2,493	1,218	16,218
1857 - -	17,499	7,711	1,613	26,823
1858 - -	16,126	25,736	2,014	43,876

The very remarkable and sudden rise of the rice trade from Rangoon and Bassein, springing up as it has done from nil in 1853 to the enormous extent of 154,148 tons from the two ports in the short space of five years, cannot fail to attract marked attention, especially as it does no more than afford a partial indication of the almost boundless resources of the rich province of Pegu, of which they are outlets. The grain known as *Natsang* stands well in Europe and compares favourably with the best Akyab *Necrausee*, and we doubt not that, as the Burmese become sensible of the advantage of bestowing more care in its preparation, it will, in point of quality, be second to none.

Moulmein. Our statement of 7th July showed an export up to 30th June of 13,191 tons, which has since been increased to 17,059 tons, of which about 1-8th has gone to China and the remainder to Europe. Hence the

Total export from	Akyab	in 1858 (ex. paddy amounted to)	131,092 tons.
,,	Rangoon	,,	,,	112,561 ,,
,,	Bassein	,,	,,	43,876 ,,
,,	Moulmein	,,	,,	17,057 ,,
				304,586 tons.

And this in respect of tonnage, and the employment which the trade gives to shipping, is equivalent to about 1-3rd of the entire export trade of Calcutta.

Calcutta. The exports of rice to Europe have been very limited during the present year. Only 618.693 mds , equal to about 22,910 tons, have been exported from 1st January to this date, whilst during the preceding year the export was 2,190,096 mds. or 81,000 tons, and during 1856 it was 2,550,047 mds. or 94,500 tons.

Account stated in Mds. of the exports of Rice from Calcutta in each of the 7 Years ending with 1858.

Years.	Great Britain.	Continent, Europe.	West Indies.	China Straits.	Mauritius, Bourbon.	Cape of Good Hope.	Australia.	Total.

For a considerable number of years our supplies of cleaned rice were principally derived from Bengal; but it is plain from the preceding statements that this is no longer the case; and while in 1858 our imports of rice from the East amounted to about 184,000 tons, the entire exports from Calcutta

to Europe in the course of that year amounted, as already seen, to only 22,910 tons. Besides our imports from Hindostan and the Burmese provinces we import considerable quantities from Java, the U. States, &c. We subjoin

An Account of the Imports of Rice in 1857, specifying the Quantities brought from each Country, and the Quantities entered for Consumption.

During the same year 20,900 qrs. of rough rice were imported, of which 2-3rds came from India. We make these imports from being in possession of a method of detaching the husk, which throws out the grain clean and unbroken. The cwt. of Carolina rice sells in London at from 16*s.* to 30*s.* per cwt. when Bengal rice sells at from 6*s.* to 13*s.* per do.

The duty on foreign rice was formerly quite excessive, having amounted previously to 1842 to 15*s.* a cwt. while that charged on rice from a British possession was only 1*s.* In 1842 Sir Robert Peel reduced the former to 6*s.* 3*d.* and the latter to 6$\frac{3}{10}$*d.*; and in 1846, he further reduced the duty on foreign rice to 1*s.*, and that on colonial do. to 6*d.* a cwt. In 1853, Mr. Gladstone equalised the duties, which are now only 4$\frac{1}{2}$*d.* a cwt. A like course has been followed with the duty on rough rice, which, in 1842, amounted to 20*s.* a qr. on that from a foreign country, and to only 1*d.* per do. on that from a colony! Sir Robert Peel reduced the former in 1842 to 7*s.* 4$\frac{1}{2}$*d.*, and in 1846 to 1*s.*: and it is now fixed at 9*d.* per qr. without reference to its origin. No abatement is made from the duty on account of damage.

In consequence of the reduction of the duties, the consumption of rice has been greatly increased of late years; formerly it rarely exceeded (except in 1847 when it was largely imported into Ireland) 550,000 cwts., whereas it amounted at an average of 1856 and 1857 to 1,465,925 cwts. a year, notwithstanding the low prices of wheat.

RIGA, a city of European Russia, the capital of Livonia, on the Duna, about 9 miles from the sea, lat. 56° 56′ 5″ N., lon. 24° 0′ 4″ E. Population in 1851, excluding garrison, 57,906.

Harbour. — A lighthouse has been erected on Fort Comet, on the western side of the mouth of the river. It has 2 lights: the first, elevated about 104 feet (English) above the level of the sea, may be seen, under favourable circumstances, at the distance of 4 leagues; and the second, elevated about 24$\frac{1}{2}$ feet, may be seen at the distance of 2$\frac{1}{2}$ leagues. The bar at the mouth of the river has usually from 12 to 13 feet water; and vessels drawing more than this frequently load and unload part of their cargoes by means of lighters at Bolderaa, a small town on the west side of the river, near its mouth. There is a fairway beacon without the bar, in 5 fathoms water; and within, the channel is buoyed with black and white buoys; the black being left on the right or starboard side when entering, and the white on the larboard. Vessels bound for Riga take pilots at Bolderaa, who carry them to their anchorage. No ballast is allowed to be discharged, except at Poderague. Regulations as to clearing, &c., similar to those at Petersburg. — (*Coulier sur les Phares*, 2d ed.; and *Regulations published by the Russian Authorities.*)

Trade. — Owing to its advantageous situation near the mouth of a great navigable river, the trade of Riga is very extensive; being, of the Russian towns on the Baltic, in this respect second only to Petersburg. The trade is chiefly carried on by foreign merchants, particularly by the English. The principal exports are flax and hemp, linseed and hemp seed, timber, corn, tobacco, hides, wool, tallow, &c.; the imports are salt, sugar, coffee, and groceries of all sorts, herrings, indigo, dye woods, cotton and cotton twist, silks, hardware, iron, coal, wines, &c.

The mast trade is extensive. The burghers of Riga send persons who are called mast brokers into the provinces to mark the trees, which are purchased standing. They grow mostly in the districts which border on the Dnieper, are sent up that river to a landing place, transported 30 versts to the Duna, when, being formed into rafts of from 50 to 200 pieces, they descend the stream to Riga. The tree which produces the largest masts is the Scotch fir. Those pieces which are from 18 to 25 inches in diameter are called masts; under those dimensions, spars, or, in England, Norway masts, because Norway exports no trees more than 18 inches in diameter. Great skill is required in distinguishing those masts that are sound from those which are in the least internally decayed. They are usually from 70 to 80 feet in length.

The best kind of flax shipped from Riga is grown in White Russia, and is called Druana rakitzer; its colour is very white, and the threads long, fine, and loose, but it has sometimes black spots; the next quality, coming from the province of Trockic in Lithuania, is called Lithuanian rakitzer, and is very little inferior to Druana, but its colour is a little brown; of this kind the best sort is Thiesenhausen. The best kind of Courland flax shipped from Riga is Marienburg; that grown in Livonia is inferior. There are two kinds of linseed; that of the last crop, which is used for sowing; and that of former years, for crushing. To prevent deception, the year of its growth is stamped on the barrel by sworn inspectors (*brackers*). Hemp-seed is mostly shipped for Holland. Riga wheat is inferior to that of Dantzic. Two descriptions are shipped — one the growth of Russia, the other of Courland; the last is the best, being larger bodied and of a brighter colour than the Russian; still, however, it makes but indifferent flour. Oats are of a good quality, and are largely exported; peas are also occasionally exported.

In shipping masts, the rest of the cargo generally consists of deals and wainscot logs; the latter are much exported to England, and are very superior.

Money. — For the monies of Riga, see PETERSBURG.

Weights and Measures. — The commercial pound is divided into 2 marcs, or 32 loths; and also into halves, quarters, &c. It contains 6,452 English grains. Hence 100 lbs. of Riga = 92·17 lbs. avoirdupois = 41·8 kilog. = 86·32 lbs. of Hamburg = 84·64 lbs. of Amsterdam. The lispound = 20 lbs.; the shippound = 20 lispounds.

The loof is the measure for grain: 48 loofs = 1 last of wheat, barley, or linseed; 45 loofs = 1 last of rye; and 60 loofs = 1 last of oats, malt, and beans. According to Kelly, the loof = 1·9375 Winchester.

bushels; and, consequently, the last of wheat = 11·625 quarters. Nelkenbrecher does not value the loof quite so high as Kelly.

The fuder, the measure for liquids, is divided into 6 ahms, 24 ankers, 120 quarts, or 720 stoofs. The anker = 10 English wine gallons.

The foot of Riga = 10·79 English inches. The ell = 2 feet; the clafter = 6 feet.

Account of the Quantities of the Principal Articles exported from Riga in 1858, distinguishing those sent to different Countries.

The quality of timber denominated "crown fir timber" has latterly become very scarce, so that the greater part of the Riga exports consist of the second quality, or what is called "Verschiffungs brack timber." There is no essential difference in the quality of crown timber, and timber of the second quality, except that the latter is knottier than the former.

RIO DE JANEIRO, the capital of Brazil, on the Atlantic, in lat. 22° 54′ 15″ S., lon. 43° 15′ 50″ W. Population, in 1855, 296,136. The harbour of Rio is one of the finest in the world, both as respects capaciousness and security for all sorts of vessels. In coming from the N.E. it is usual to make Cape Frio, in lat. 23° 1′ 18″ S., lon. 42° 3′ 19″ W., being about 4 leagues nearly E. of Rio. The entrance to the harbour is marked by a remarkable hill in the form of a sugarloaf, 900 feet high, close to its west side; while on the east, or opposite side of the bay, at the distance of about 1½ mile, is the fort of Santa Cruz. But the woodcut in the next page, taken from a chart published by order of the Brazilian authorities, gives a much better idea of this noble harbour than could be obtained from any description.

Entrance to the Harbour.— Vessels bound for Rio, coming from the N., should, after rounding Cape Frio, steer due W., keeping about 3 leagues from the coast, until they come within 5 or 6 miles of the *Ilha Raza*, or Flat island, lying almost due S. from the mouth of the harbour, at the distance of about 3 leagues. A lighthouse, the lantern of which is said to be elevated nearly 300 feet above the level of the sea, was erected on this island in 1829. The light is a revolving one, finishing its revolution in 3 minutes, and exhibiting alternately a white and a red light. There is also a lighthouse in the fort of Santa Cruz, the light of which is fixed, and elevated about 50 feet above the level of the sea.—(*Coulier sur les Phares*, 3d ed.) Having got within 5 or 6 miles of the Ilha Raza, ships may enter by day or by night, the dotted line in the cut marking the fair-way into the harbour. There are no pilots to be met with; and as there are no hidden dangers of any kind, their services are not wanted. On entering, vessels must pass within hail of Fort Santa Cruz, to be ready to answer any questions that may be put to them. They then proceed to Fort Vilganhon, below or opposite to which they must bring to, or come to anchor, allowing no boats to come alongside, but those of the government, until they have received *pratique*, when they will be permitted to proceed to the usual place of anchorage for the merchant shipping.

The sea breeze generally sets in about 11 A.M., and lasts till about sunset. It is strong enough to enable ships to overcome the ebb. High water at full and change at 2 in the afternoon.

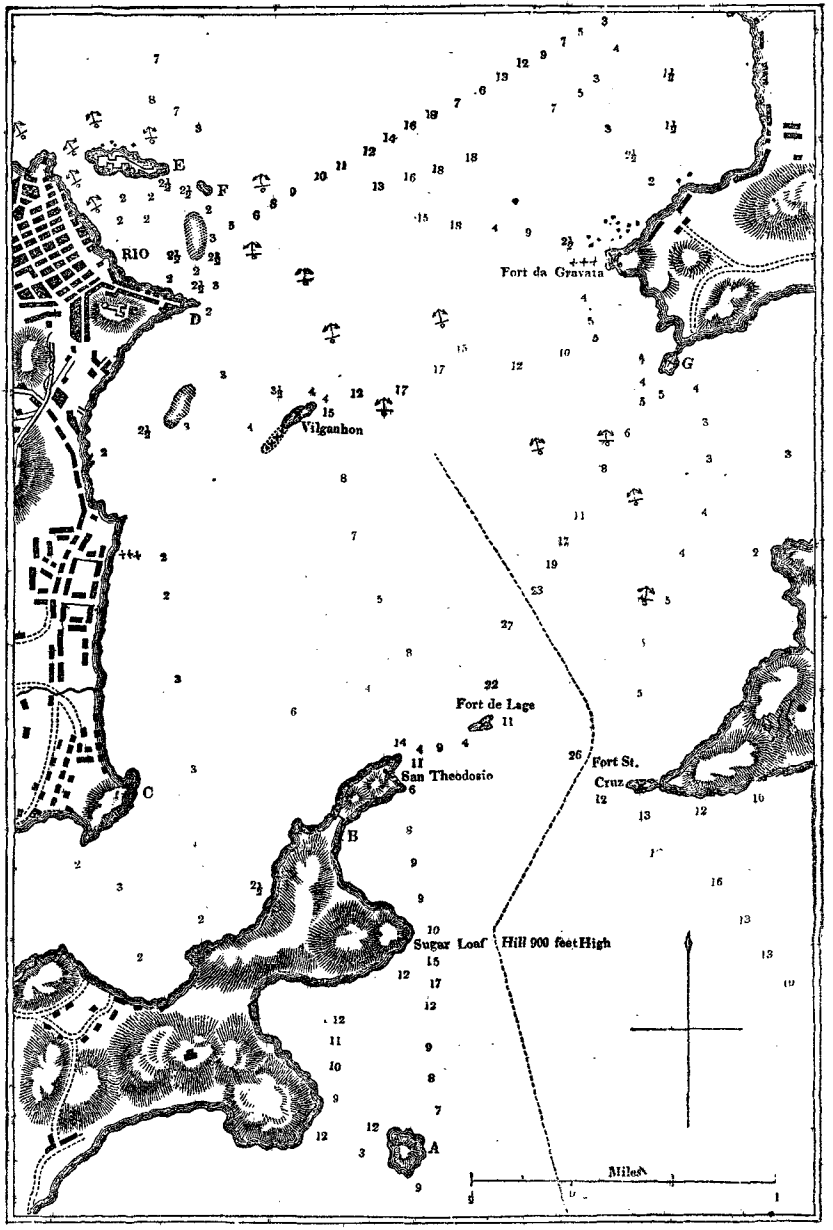
Anchorage Dues.—1. From and after 1st July, 1852, the anchorage duty upon vessels trading between foreign ports and the ports of Brazil will be reduced to 300 reis the ton; and the same class of duty now levied upon coasting vessels shall be abolished.

2. That part of the provisions of April 26, July 20, and November 15, 1844, which has not been altered by this decree will continue in force.

Money, Weights, and Measures.—All payments are made in paper money, which has been over-issued, and is excessively depreciated. But in ordinary cases the par of exchange may now be assumed at about 31*d.* sterling per patriotic dollar, of 1620 reis paper. Weights and long measures are the same as those

of Lisbon, the arroba being 32½ lbs. avoirdupois; but measures of capacity are different, a medida being equal to ·5954 Imperial galls., and an alquiére to 1·11 ditto.

Trade.—The trade of Rio is extensive, and has increased rapidly of late years. It is now by far the greatest mart for the export of coffee. The shipments of this important article, which in 1830 amounted to 396,785 bags, have increased with such unexampled rapidity, that at an average of 1856 and 1857, they amounted to 2,098,238 bags a-year;



References to Plan.—A, Ilha do Catunduba. B, Fort de St. Joao. C, Morro do Flamengo. D, Ponta do Calhabouco. E, Fort da Ilha das Cobras. F, Ilha dos Rattos. G, Fort da Boa Viagem.

and though the export in 1858 was only 1,830,438, it may be estimated, speaking generally, at 2,000,000 bags a-year, that is (taking the bag at 160 lbs.), at 320,000,000 lbs., or 133,000 tons; being but little below all the exports of coffee from all the other ports in the world. Sugar was formerly an important article of export from Rio, but latterly it has rapidly decreased, having amounted to only 7,677 cases (13 cwt. each) in 1857, whereas in 1852 it amounted to 13,960 cases. The other great articles of export from Rio are hides, rice, tobacco, rum, tapioca, ipecacuanha, manioc or manihot, flour and other inferior articles. The export of cotton has entirely ceased; and that of gold, diamonds, &c., though very considerable, is mostly clandestine. Diamonds are principally exported from Bahia. We subjoin

An Account of the Vessels cleared out, and of the Quantities of the Principal Articles of Native Produce exported from Rio during each of the following Years.

The Brazilians are great eaters of sugar, and a great deal is wasted in the interior. And hence the magnitude of the exports is not influenced merely by the state of the crops, but, also, by the prices in Europe and the U. States. When they are high a larger proportion of the produce is exported.

The Bank of Brazil, which has its head quarters in Rio, is in a flourishing condition. It has power to issue notes; and all disputed property belonging to dead or absent parties is entrusted to its keeping. It charges 2 per cent. for its trouble. We subjoin one of the latest statements that we have seen of the affairs of the bank.

Condition of the Bank of Brazil, January, 1856.

The principal article of import consists of cotton goods, the value of which amounts to about a third part of the total value of the imports. Next to cottons are woollen, linen, and silk manufactures, wines, jewellery, and ironmongery; flour, meat, fish, butter, and other articles of provision; spirits, salt, earthenware, paper, and a host of other articles.

The exports have increased materially within the last few years; notwithstanding labour has become scarcer and dearer, in consequence of the greatly increased difficulties thrown in the way of the importation of slaves. The exports of cotton have, for a lengthened period, been nearly stationary. They are still, however, pretty extensive, and supplied us in 1858 with 166,231 cwt. Hides are an important article of export.

Account of the Value of the Imports, for Home Consumption, into Brazil, specifying those from each Country, in the Years (ended 30th June) 1853-54 to 1856-57, in Milreis.

Port Regulations.—The captain of every ship entering Rio, or any other port of Brazil, is ordered by a law enacted in 1856 —

1. To go directly with his vessel from the entrance of the harbour to the anchorage ground in *Franquia;* and if, on account of the tide, contrary wind, or any other just cause, he should be compelled to come to anchor, and shall remain anchored for twelve hours after said hindrances are removed (except in case of being quarantined), he shall pay a fine of 100,000 reis, and shall be compelled, by the fort, or by a government vessel of war, whichever may be nearest, to proceed immediately to the Franquia anchoring ground.

2. He shall not suffer any kind of vessel to board him, nor any person to come on board or to leave his vessel, before he has been visited from the custom-house, excepting only the pilot, health officer, the head officer at the entrance, when there is one, and in the case of shipwreck, or for the saving of lives.

3. Even after the custom-house visit on arrival, and until the vessel is discharged, he shall allow no person to come on board without a written permission from the inspector of the customs; and this permission shall be given in the following cases, viz. —

A. To allow the buyers of goods to go on board to examine the cargo they wish to purchase, when sufficient specimens cannot be seen on shore.

B. To workmen or labourers necessary to put the cargo in order, taking care to have them examined when they go on board and return. In case of the infraction of the above regulations, a fine shall be imposed on him from 100,000 to 200,000 reis for every vessel he allows to board him, and of 500,000 for each person who shall enter or leave his vessel without licence, unless he be a passenger or belonging to the crew; and every other person who goes on board or leaves the vessel shall pay 100,000 reis fine, and be kept in custody until payment is made. The one-third part of these fines shall be divided amongst the watchmen or military who shall have taken up the offender.

4. He shall deliver to the *guarda-mor* (chief customs officer), when he makes his visit on arrival, his passport and cargo-book.

5. He shall deliver to the commander of the guard boat without the port, if he be there, or at the Franquia, if he be there, the manifest as described below.

6. He shall enter at the custom-house within 24 hours after the *guarda-mor* has been on board, not counting the days on which the custom-house is shut, and present himself to the inspector, and swear, or affirm, that he has not on board of his vessel any merchandise other than what is described in the manifest he has delivered, and that he has no further declaration to make; and if he do not enter within the 24 hours, he shall pay 100,000 reis for each day's delay additional.

7. If he shall detain his vessel at either of the anchorages more than 24 hours, when he shall be directed by the *guarda-mor*, or his representative, to remove thence, he shall pay 100,000 reis for every day he delays.

8. He shall discharge no part of his cargo but by an order in writing from the inspector; and if he land any without such order, he shall pay 100,000 reis for each package so landed.

9. He shall give notice to the officer attending the discharge of the vessel, as soon as his cargo is discharged, that he has

nothing remaining on board. If he omit to do this on the same day, so that the vessel may be immediately examined, he shall be fined 100,000 reis.

10. The master of every vessel going with a cargo to any part of the empire, must have two manifests of the cargo, exact copies of each other, exhibiting the name, class, and tonnage of the vessel; the name of the captain, whose signature must follow the date; the name of the port where the articles stated in the manifest were taken on board; the name of the port or ports for which the vessel is destined; the marks or counter marks and numbers of the packages, and their description, as bales, cases, pipes, half-pipes, barrels, &c.; a declaration of the quantity and quality of the merchandise of each package, or several similar ones of the same mark, and also of what is on board in bulk; the names of the consignees, or to order; all to be written in length, except the numbers of the packages.

11. When the vessel has taken in her cargo at more than one port, there must be two manifests from each port.

12. At the end of the manifest, the captain shall declare the number of passengers, whether cabin or steerage, and the baggage for the use of each, and in addition any declaration necessary for his security; and in good faith he shall declare whether he has any package to add to the manifest, or whether any are deficient, with the cause of it, as no after declaration will relieve him from responsibility, for he will not be exempted upon the vague declarations frequently made, which do not account for deficiencies or differences.

13. The captain of any vessel bound to Brazil, when he has completed his cargo in the port or ports from which he is to sail, and made the manifests, as required in the 9th article, shall present his documents to the Brazilian consul residing in the port, who shall examine them, and if agreeable to these regulations, certify them.

14. In those ports where there is no Brazilian consul or substitute, the manifest shall be certified by two Brazilian resident merchants; or, if there be none, by two merchants of the place: in either case, the signatures to be authenticated by legal authority.

15. Should any greater quantity of goods be found on board than are stated in the manifest or the declaration of the captain, the overplus shall be seized and divided amongst those who seize them, after paying the duties, and the captain shall pay a fine of half the value of the goods.

16. If there are any goods missing of those stated in the manifest or declaration of the captain, they shall be reputed to be concealed or smuggled, and he shall pay the value thereof to those who have discovered the deficiency, and half the value to the national treasury. These condemnations shall take place on the simple fact of there being an overplus or deficiency of goods, without further proof being required.

17. For each difference in the quality or mark of the package, the captain shall pay 2,000 reis, although in every other respect the goods discharged may agree with the manifest.

18. The captain whose manifests are not conformable to these regulations, shall be fined from 100,000 reis to one *conto de reis*, at the will of the collector, according to the degree of culpability that shall appear, and he cannot discharge until the fine is paid.

19. In case the captain brings no manifest, he may still be allowed to discharge, by paying 5 per cent. on the value of the cargo, in addition to the usual duties.

Franquia.—Vessels proceeding to Brazil, and when it is wished to dispose of their cargoes at different ports, must clear out for "Brazil and other ports," or for "Pernambuco, Bahia, Rio de Janeiro, and other ports." They are then entitled to the privilege of Franquia, and may land a part of their cargoes at one port, paying duties only on the goods so landed, and proceed with the remainder to other ports. But if they clear out for one port only, they are compelled to make a complete entry, and discharge the whole of the cargo.

In proceeding from one Brazilian port to another, it is necessary that a bill of health should be taken from the local authorities of each port; and where any part of the cargo is landed, the same must be noted on the original manifest by the customs officer of the port.

Anchorage.—Foreign vessels pay, in all parts of the empire, 10 reis per ton per day, from the 5th day after their entry.

Lighthouse.—The lighthouse duty, 100 reis per ton, for all vessels over 40 tons departing from ports where there is a lighthouse. Vessels under 40 tons are exempted from this duty.

Port-duty.—On all vessels not crossing the bar of the harbour of Rio de Janeiro, the following charges are levied, viz., of three masts, 12,800 reis; of two masts, 9,600 reis; and of one mast, 6,400 reis.

Seal.—The duty is 40 reis for every written half-sheet.

Health.—Visit of the physician is fixed at 8,200 reis; but in case the vessels is made to perform quarantine, then another sum of 8,200 reis is payable on the admission of the vessel to free pratique.

Hospitals.—A vessel of three masts pays 6,000 reis; brigs, corvettes, and yachts, 4,000; pinnaces, 2,560; barks, 1,280.

Each one of the ship's company of vessels sailing for a foreign port pays 400 reis.

Usages of Merchants.—It is customary that the expense of landing and shipping a cargo on freight shall be paid by the vessel, unless the contrary be stipulated in the bills of lading.

When hard Spanish dollars are bargained for, in contracts of freight, they should be so expressed in the instrument of contract, to prevent dispute.

Purchases of produce are paid for in cash, and sales are made on stipulated credits, but nominally for cash.

If bills on London are sent out for the purchase of produce in Brazil, the credit must have the confirmation of the London house.

Anchorage Dues in Brazil Ports.—The anchorage dues fixed by law of 22d October, 1836, are now superseded by a tax of 3 rix-dollars per ton, payable, one-half on entering, and one half on sailing, by all merchant vessels on foreign trading, with the following restrictions:—

Ships arriving in ballast, and going away the same, will pay the old anchorage; if taking cargoes, they will pay half the present dues.

Ships entering to get fresh provisions, or in "*Franquia*," to try the market, but do not discharge, pay only the old anchorage. If they merely discharge part of cargo, pay only half of present dues.

Ships entering under average or in distress, pay nothing if they do not discharge, or only discharge the necessary for repairing.

Ships carrying colonists subject to some modifications.

Ships entering three times in one year, only pay anchorage dues the first two voyages.

The government is authorised to modify the impost, as soon as the treaty with Great Britain expires, as may seem most suitable for the encouragement of the national shipping trade to foreign ports, or to the whale fisheries. The anchorage dues on foreign shipping may not be increased.

Rio, June 26, 1843.

Rates of Commission charged at Rio.

5 per cent. on sales of merchandise.
2½ per cent. on purchase of merchandise, with funds in hand, on amount of cost and charges.
2½ per cent. guaranty on amount of sales on credit.
2½ per cent. for drawing or endorsing, and negotiating bills.
2½ per cent. on purchase or sale of vessels by private contract.
5 per cent on amount of vessels condemned by surveyors.
2½ per cent. on procuring or collecting freights.
2½ per cent. on disbursements of vessels in common cases, with funds in hand.
5 per cent. on disbursements of vessels when funds are advanced, or in case of condemnation, or in vessels entering for repairs only.
1 per. cent. on receiving and forwarding goods; and
2½ per cent. on amount of responsibilities incurred thereon.
1 per cent. on receiving and paying money on which no other commission is derived.
½ per cent. on purchase or sale of specie.
2½ per cent. for effecting marine insurance on the amount insured; and when the premium exceeds 10 per cent., 5 per cent. on the amount of premium.
½ per cent. on remittances on bills not endorsed.
On consignments of merchandise withdrawn or reshipped, full commission to be charged to the extent of advances or responsibilities incurred, and half commission on the residue of the value.
1 per cent. per month on all cash advanced.
No interest allowed on money on deposit.
1 per cent. storage on all dry goods.
In the case of discharging and reshipping the cargoes of vessels in distress, on the invoice amount, 2½ per cent.
2½ per cent., or half the commission charged on sales of merchandise, will be returned to supercargoes, but nothing on investments or other business.

Remarks on the Trade, Finances, &c., of Brazil.—The imports into Brazil, which, excepting flour from the U. States, are chiefly from Great Britain, consist principally of our cottons, woollens, linens, iron and steel, hardware, machinery, butter, gunpowder, coal, and other articles, amounting in all, in 1857, as seen above, to 5,541,710*l.*, but in 1858 to only 3,986,264*l.* There can, however, be little doubt that they will continue progressively to increase with the increase of population and the diffusion of civilisation.

The commercial policy of Brazil is, on the whole, decidedly liberal. The duties on imports and exports have been mostly moderate, and have been imposed more for the sake of revenue than of protection. Within the last few years she has made a large reduction in the tonnage duties on the foreign shipping frequenting her ports, has repealed a duty of 15 per cent. imposed in some provinces on the exportation of hides, and has evinced a desire to adopt generally a free commercial system. The repeal of the discriminating duty formerly imposed in this country on slave-grown sugar, and the equalisation of the duties on foreign and colonial sugar and coffee, while it was advantageous to ourselves, has been a great boon to Brazil, and has considerably extended her trade with the U. Kingdom.

The trade of Brazil was formerly much injured by the wretched state of her currency and her finances; and though the former be still in a very unsatisfactory condition, it has latterly been a good deal improved, while her finances have become comparatively flourishing.

Financial Condition of Brazil.—The finances as well as the trade of the empire have been for some years past in an improving condition, and contrast most favourably with those of the other S. American states. Thus it appears from the speech of the Finance minister to the Chambers in the course of last year (1858) that there has been for several years an almost continuous increase in the revenue, which has risen from 1,495,282*l.* in 1837, to 5,486,211*l.* in 1856–57. And this is the more encouraging as it has resulted, not from any increase of taxation, but from the growing civilisation of the country, and the progressive development of its resources under a free commercial system. In 1856–57 there was an excess of revenue over expenditure of more than 1,000,000*l.*

It is, also, highly creditable to the Brazilian government that they have regularly paid the interest due on the public debt of the empire, and made, besides, effectual provision for its redemption. It appears from the speech already referred to that the entire debt of the empire amounts to about 12,000,000*l.* sterling, divided into two portions, one being denominated the Home and the other the Foreign debt. The former portion amounted in December, 1857, to 6,496,560*l.*, of which sum 5,647,837*l.* was held by natives (inc. 1,213,312*l.* held by corporations and companies), 868,612*l.* by Englishmen, and 160,110*l.* by other foreigners. The 6 per cent. stock of the Home debt was worth nearly 105*l.* The Foreign debt is a little under 5,500,000*l.*

ROADS, pathways formed through the country with more or less art and care, for facilitating the transit of individuals, carriages, &c. between different places. They are

of every variety of form — from rude, narrow, rugged, and unformed paths, carried over mountains, interrupted by every petty rivulet, and almost impracticable to any but foot passengers, to smooth, broad, and level ways, formed of solid materials, winding round or cut through mountains, and carried over swamps and rivers at an immense expense, and admitting of the easy passage of carriages and of all sorts of goods.

The laying out of improved roads, and their construction, forms an important part of what is denominated the science of civil engineering. But as it would be quite foreign to our purpose to enter into any details as to the formation of roads, we shall satisfy ourselves with laying before the reader the following statements as to their importance in a commercial point of view.

Importance and Utility of improved Roads. — Next to the introduction of money, and weights and measures, the formation of good roads and bridges gives the greatest facility to commerce, and contributes more powerfully, perhaps, than any thing else to the progress of improvement. They have been denominated national veins and arteries; and the latter are not more indispensable to the existence of individuals, than improved communications are to a healthy state of the public economy. It were vain to attempt to point out in detail the various advantages derived from the easy means of communication that exist in Great Britain. There is not a single district that is not indebted to others for a large part of its supplies, even of some of the bulkiest commodities. Besides the coals, metals, minerals, timber, corn, &c. conveyed from one part of the empire to another by sea, immense quantities are conveyed from place to place in the interior, by roads and canals; and every improvement effected in the means of conveyance has obviously the same effect upon the cost of commodities that have to be conveyed, as an improvement in the methods by which they are raised or manufactured.

Wherever the means of internal communication are deficient in a country, the inhabitants must unavoidably disperse themselves over the surface. Cities were originally founded by individuals congregating more, perhaps, for the sake of mutual defence and protection, than for any other cause. But in countries where good government is established, and property is secure, men resort to cities only from a sense of the advantages they afford. The scale on which business is conducted in them presents facilities that cannot be elsewhere afforded for making a fortune; and the extent to which the subdivision of employments is carried opens a field for the exercise of all sorts of talent: at the same time that it improves and perfects all sorts of arts, whether subservient to industrious or scientific pursuits, or to those of pleasure and dissipation. It is this that attracts the aspiring, the industrious, the gay, and the profligate, to cities, — that fills them with the best and the worst part of the species. The competition that takes place in a great town, the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments, develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention. There are, however, considerable clogs upon the continued increase of cities. The food and fuel made use of by the inhabitants, and the raw products on which their industry is to be exerted, must all come from the country; and according as the size of a city increases, the distances from which its supplies have to be brought become so much the greater, that ultimately the cost of their conveyance may be so great as to balance or exceed the peculiar advantages resulting from a residence in town. Hence the impossibility of a large or even a considerable city existing any where without possessing extensive means of communication either with the surrounding country, or with other countries; and hence, too, the explanation of the apparently singular fact, of almost all large cities having been founded on or near the sea, or a navigable river. Had London been an inland town, 50 miles from the shore, it is abundantly certain that she could not have attained to one third part her present size; but the facilities afforded, by her admirable situation on the Thames, for the importation of all sorts of produce from abroad, as well as from other parts of England, will enable her, should her commerce continue to prosper, to add to her colossal magnitude for centuries to come.

But all towns cannot be founded on the sea coast, or the banks of navigable rivers: and the growth of those in inland situations must, in all cases, depend on their means of communicating with the surrounding country. Without our improved roads, the great inland manufacturing towns with which England is studded, such as Manchester, Leeds, Birmingham, Sheffield, Bolton, Preston, &c., could not exist. They enable the inhabitants to obtain the rude products of the soil and the mines almost as cheap as if they lived in country villages. There is thus nothing, or next to nothing, to detract from the advantages which the inventive and enterprising artisan may expect to realise from resorting to those great hives of industry. And, owing to the gigantic scale on which all sorts of industry are conducted in them, the scope afforded for the employment of the most powerful machines, and the appropriation of particular sets of workmen to

every separate process, however minute, manufacturing industry is carried to a degree of perfection that almost exceeds belief.

The influence that the growth of a large town has upon agriculture is great and striking. "In the neighbourhood," says Paley, "of trading towns, and in those districts which carry on a communication with the markets of trading towns, the husbandmen are busy and skilful, the peasantry laborious; the land is managed to the best advantage, and double the quantity of corn or herbage (articles which are ultimately converted into human provision) raised from it, of what the same soil yields in remoter and more neglected parts of the country. Wherever a thriving manufactory finds means to establish itself, a new vegetation springs up around it. I believe it is true, that agriculture never arrives at any considerable, much less at its highest, degree of perfection, when it is not connected with trade; that is, when the demand for the produce is not increased by the consumption of trading cities."—(*Moral Philosophy*, book vi. c. 11.)

But the fact of their being mainly conducive to the growth of cities, is not the only advantage which improved roads confer upon agriculture. Without their aid it would be impossible to carry to distant places sufficient supplies of such bulky and heavy articles as lime, marl, shells, and other manures necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Not only, too, would inferior roads lessen the market for farm produce, and consequently the quantity raised, but a larger proportional number of horses or other cattle would be required to convey the diminished produce to market. It is plain, therefore, that good roads are both directly and indirectly a prime source of agricultural improvement; directly, by increasing the quantity and reducing the cost of manure, and by increasing the quantity and reducing the cost of conveying farm produce to market; and indirectly, by providing for the growth and indefinite extension of cities and towns, that is, of the markets for agricultural produce.

Increased speed of conveyance is one of the principal advantages that have resulted from the formation of good roads, the invention of steam packets, &c. Suppose that it takes 2 days to travel by an uneven, ill-made road between any 2 places; and that, by improving the road, the journey may be accomplished in 1 day; the effect is the same as if the distance were reduced $\frac{1}{2}$; and there is not only a great saving of time to travellers, but also a great saving of cost from the more speedy conveyance of commodities. This latter is a point of much more importance than is commonly supposed. It is not possible to form any correct estimate of the value of the products that are constantly in the act of being carried from place to place in Great Britain and Ireland. It is certain, however, that it is very great; and every additional facility of conveyance, by bringing such products more rapidly to their destination, and enabling them to be sooner applied to the purposes for which they are intended, renders large quantities of capital available for industrious purposes, that would otherwise be locked up.

Mode of defraying Costs of Roads.— Roads of one sort or other must, of course, exist in every country emerged from barbarism,—but in England, the statute of the 28th of Philip and Mary, which is still in force, is the first legislative enactment in which a regular provision was made for the repair of the roads. The preamble to this statute declares, that the roads were tedious and noisome to travel on, and dangerous to passengers and carriages: and therefore it enacts, that in every parish 2 surveyors of the high ways shall be annually chosen, and the inhabitants of all parishes obliged, according to their respective ability, to provide labourers, carriages, tools, &c. for *four* days each year, to work upon the roads, under the direction of the surveyors. This system, though in many respects exceedingly defective, was at the time justly considered a great improvement, and answered pretty well till the reign of Charles II., when, owing to the increase of carriages, particularly about London, it became necessary to adopt more efficient measures for the formation and repair of roads; and the plan of imposing tolls upon those who made use of them began then to be adopted. But this system was not carried into full effect, and placed upon a solid footing, till about 1767, when it was extended to the great roads to all parts of the country; the contributions of labour under the act of Philip and Mary being then appropriated entirely to the cross or country roads. A money payment is now, however, very frequently made, in the case of the latter, instead of a contribution in labour.

When the plan for extending turnpike roads from the metropolis to distant parts of the country was in agitation, the counties in the neighbourhood of London petitioned parliament against it, alleging that the remoter counties would be able, from the comparative cheapness of labour in them, to sell their produce in London at a lower rate than they could do; and that their rents would be reduced, and cultivation ruined, by the measure! Luckily this interested opposition proved ineffectual; and instead of being injurious to the counties adjoining the metropolis, the improvement of the roads has been quite as beneficial to them as to those at a distance, inasmuch as, by providing for the indefinite extension of the city, it has rendered it a far better market for their pecu-

liar productions, than it would have been had its growth been checked; which must have been the case long ago, had the improvements in question not been made.

The plan of making and repairing roads by contributions of labour is not peculiar to England, but was at one period general all over Europe. By an act of the Scotch parliament, passed in 1669, all persons engaged in husbandry were obliged to labour 6 days each year, before or after harvest, upon the public roads: the farmers and landlords being, at the same time, obliged to furnish horses, carts, &c. according to the extent of land occupied by them. The inconveniences of such a system are many and obvious. Those who get no pay for their work, and who perform it against their will, waste their time and industry; and there is, besides, a great loss incurred by the interruption of the regular pursuits of the labourer. A sense of these disadvantages led, in the early part of the reign of George III., to a commutation of the labour contribution for a money tax on land, rated according to its valuation in the cess books. This measure has been productive of the best effects. Previously to its taking place, the roads, even in the best cultivated districts of Scotland, were in the worst possible state, whereas they are now about the very best in Europe.

A similar system has been followed on the Continent. When Turgot entered on his administration, he sent a circular letter to the road surveyors and engineers of the different provinces of France, desiring them to transmit estimates, framed on the most liberal scale, of the sums of money for which the usual repairs might be made on the old roads, and the ordinary extent of new ones constructed. The average of the estimates showed that a money contribution of about 10,000,000 livres a year would suffice for these objects; whereas Turgot showed, that the execution of these repairs and constructions, by contributions of forced labour, or *corvées*, cost not less than 40,000,000 livres! — (Art. *Taxation, Ency. Brit.*)

There is still, however, a great deal of labour performed on the cross and country roads of England under the system established by the act of Philip and Mary. Its continuance is most probably to be ascribed to the want of any ready means for its commutation.

It is the duty of government to furnish assistance towards the formation of roads and bridges in parts of the country where they are necessary, and where the funds required for their formation cannot otherwise be obtained. But it is in such cases extremely desirable, in order to prevent government from being deceived by interested representations, that those more immediately concerned in the undertaking should be bound to contribute a considerable portion of its expense. This has been done in the case of the Highland roads. Down to a very recent period, large tracts in the Highlands were quite inaccessible, and were, consequently, in a great measure shut out from all improvement; while the rugged nature of the country and the poverty of the inhabitants rendered any attempt to construct improved roads an undertaking beyond their means. Under these circumstances, government came forward and engaged to advance $\frac{1}{3}$ the expense of making roads and bridges in certain districts, on condition that the landlords and others interested should advance the other $\frac{2}{3}$, and that the work should be executed under the direction of parliamentary commissioners and engineers. This arrangement has been highly beneficial. Through its means above 600 miles of excellent roads have been constructed; and, in consequence of the easy means of communication they afford, a spirit of improvement has been excited even in the wildest and least frequented districts.

Dr. Smith seems to have inclined to the opinion, that the roads of a country would be better attended to, and more economically managed, were they placed under the control of government, than when they are left to be planned and superintended by private individuals. But this opinion does not seem to rest on any good foundation. It is, perhaps, true that a few of the great roads between the principal towns of a country might be better laid out by government surveyors, than by surveyors appointed by the gentlemen of the different counties through which they pass. But these great roads bear but a very small proportion to the total extent of cross and other roads with which every country either is, or should be, intersected; and, besides, it is abundantly certain, that when the formation of the great roads is left, as in Great Britain, to the care of those who, either by themselves or their tenants, have to defray the greater part of the expense of their construction and repair, they will be managed, if not with greater skill, at least with far more economy, than if they were intrusted to the agents of government. M. Dupin has set this matter in the clearest point of view, in his remarks on the administration of the roads in France and England. In the former they are entirely under the control of government; and the consequence is, that while there is a useless expenditure upon a few great roads, the cross roads are almost entirely neglected, and the facilities of internal intercourse are incomparably inferior to ours.

Sir Henry Parnell, who published the best treatise on road-making in the English language, while he approves of the system of local trusts, proposes that measures should

be taken for increasing the responsibility of the trustees, and that every trust should be obliged to submit its accounts to the inspection of some public board. We have no doubt that this plan would be in several respects advantageous. Perhaps, however, the object in view, in making accounts be submitted to a public board, might be attained by the erection of local tribunals for their inspection. We should be extremely jealous of any plan, how advantageous soever in other respects, that might lead to the employment of government surveyors generally in the laying out of roads, or to any material abridgment of the powers of the private trusts.

Length of Roads, Cost, &c. — The total length of the different paved streets and turnpike roads in England and Wales amounts to about 20,000 miles. The expenditure by the trustees, on account of these roads, in 1841, amounted to 1,551,336*l.*; the revenue for the same year being 1,574,518*l.*: of the total expenditure, 302,182*l.* went to defray interest of debt. — (*Parl. Paper* No. 580. Sess. 1843.) The length of the various cross roads and other highways, exclusive of turnpikes, is estimated at about 95,000 miles.

Tolls. — In fixing the rate of tolls, great care should be taken to keep them as low as possible. When they are either too much multiplied, or too high, they have a very pernicious influence. They then operate as a most oppressive and unequal tax on commerce; and obstruct that intercourse they are intended to promote. The same remark is applicable to all sorts of dock and harbour dues, light-house dues, &c. When confined within due bounds, they cannot justly be objected to; for nothing can be fairer than that those who benefit by such increased facilities and security in the prosecution of their business should pay for them. But whenever they exceed the proper limits, they tempt the navigator to resort to ports where the charges are lower, and to direct his course through more insecure but less costly channels.

Improvement of Roads. — It is not easy for those accustomed to travel along the smooth and level roads by which every part of this country is now intersected, to form any accurate idea of the difficulties the traveller had to encounter a century ago. Roads were then hardly formed; and, in summer, not unfrequently consisted of the bottoms of rivulets. Down to the middle of last century, most part of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay, were conveyed in this way! At that period, and for long previously, single-horse traffickers (cadgers) regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware, &c.: these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time that the *carriers* (for such was the name given to those that used carts) usually required to perform their journeys seems now almost incredible. The common carrier from Selkirk to Edinburgh, *thirty-eight* miles distant, required a *fortnight* for his journey between the two places, going and returning! The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Gala-water, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in!

Even between the largest cities, the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow, a distance of 44 miles, which was to be drawn by *six* horses, and to perform the journey from Glasgow to Edinburgh and back again in *six* days. Even so late as the middle of last century, it took 1½ day for the stage coach to travel from Edinburgh to Glasgow, — a journey which is now accomplished in 4½ or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. Previously to the late opening of the railway, by which they have been in a great measure superseded, there were, exclusive of steam packets, smacks, &c., 3 or 4 coaches which set out each day from Edinburgh for London, and conversely, performing the journey in from 45 to 48 hours. — (*Robertson's Rural Recol.* pp. 39—44.)

The effects of this extraordinary improvement in the means of travelling, especially since the introduction of railways, have been as striking on the manners as on the industry of all classes. The remark of Smith, that "man is the least transportable species of luggage," is no longer true as applied to Great Britain. During spring, the metropolis is crowded with visiters of all ranks and orders from the remotest provinces; and during summer and autumn vast numbers of the citizens are spread over the country. Hence it is, that manners, as well as prices, are reduced nearly to the same standard. A respectable family in Penzance or Inverness live very much in the same way as a respectable family in London. Peculiarities of all sorts have disappeared; every thing

is, as it were, brought to a level; the fashions and opinions of the metropolis are immediately diffused over every part of the country, while those that originate in the latter powerfully influence the former.

ROPE consists of hemp, hair, &c., spun into thick yarn, of which several strings are twisted together by means of a wheel. When made very small, it is called a cord; and when very thick, a cable. All the different kinds of this manufacture, from a fishing-line, or whip-cord, to the cable of a first-rate ship of war, go by the general name of cordage.—(See CABLE.)

ROSEWOOD (Ger. *Rosenholz*; Fr. *Bois du rose, de Rhode*; It. *Legno rodie*; Sp. *Leño de rosa*; Port. *Páo de Rosado*) is produced in Brazil, the Canary Islands; in Siam, whence it is pretty largely exported by the Chinese; and in other places. It is in the highest esteem as a fancy wood. The width of the log imported into this country averages about 22 inches, so that it must be the produce of a large tree. Rosewood has a slightly bitterish, somewhat pungent, balsamic taste, and fragrant smell, whence its name. It should be chosen sound, heavy, of the deepest colour, in the largest pieces that can be procured, and of the most irregular knotty grain. The small, light-coloured and large shivered pieces should be rejected. The more distinct the darker parts are from the purple red, which forms the ground, the more is the wood esteemed. It is usually cut into veneers of nine to an inch.—(*Milburn's Orient. Com., &c.*)

Rosewood, which is one of the dearest as well as most beautiful of the fancy woods, is principally used in veneering. Its consumption has increased from about 277 tons a year in 1822, to about 2,000 tons in 1857; the imports and exports in the latter year being respectively 2,171 and 261 tons. This increase is principally owing to the decrease of the duties. These, after being reduced in 1826 from 10*l.* to 6*l.* a ton, and in 1842 to 1*l.*, were finally repealed in 1846. The price varies from 9*l.* to 14*l.* a ton.

ROSIN. "This substance is obtained from different species of fur; as the *Pinus abies, sylvestris, larix, balsamea.* It is well known that a resinous juice exudes from the *Pinus sylvestris*, or common Scotch fir, which hardens into tears. The same exudation appears in the *Pinus abies*, or spruce fir. These tears constitute the substance called *thus*, or frankincense. When a portion of the bark is stripped off these trees, a liquid juice flows out, which gradually hardens. The juice has obtained different names, according to the plant from which it comes. The *Pinus sylvestris* yields common turpentine; the *larix*, Venice turpentine—(see TURPENTINE); the *balsamea*, balsam of Canada—(see BALSAM), &c. All these juices, which are commonly distinguished by the name of turpentine, are considered as composed of two ingredients; namely, oil of turpentine, and rosin. When the turpentine is distilled, the oil comes over, and the rosin remains behind. When the distillation is continued to dryness, the residuum is known by the name of common rosin, or *colophonium*; but when water is mixed with it while yet fluid, and incorporated by violent agitation, the mass is called *yellow rosin.* During winter, the wounds made in the fir trees become incrusted with a white brittle substance, called *barras* or *galipot*, consisting of rosin united to a small portion of oil. The yellow rosin, made by melting and agitating this substance in water, is preferred for most purposes, because it is more ductile, owing, probably, to its still containing some oil. The uses of rosin are numerous and well known"—(*Thomson's Chemistry.*)

ROSTOCK, the principal city of the Grand Duchy of Mecklenburg Schwerin, on the Warnow, about 9 miles above where it falls into the Baltic, lat. 54° N., long. 12° 12′ E. Population, in 1845, 20,266. A large fair for merchandise is annually held at Whitsuntide; and there are wool fairs at other seasons of the year.

The outport of Rostock is at Warnemunde, at the mouth of the Warnow. The depth of water at the latter varies from 10½ to 12 feet; but at the end of the west pier the depth of water varies from 12 to 14 feet. In the river from Warnemunde up to Rostock there is usually from 8 to 9 feet; so that vessels drawing more than this must be lightened to get up the latter. Rostock has a good harbour and commodious quays.

Money.—Rostock and all Mecklenburg reckon by rix-dollars new, two thirds of 48 schillings. The rix dollar contains 199·1 grains pure silver, and is worth nearly 2*s.* 4*d.* (2*s.* 3·8*d.*) sterling.

Weights.—The commercial weights are the same as those of Hamburg, which see. There are, however, other weights, introduced in 1757, which are 5 per cent. heavier than the above. They are principally used in the trade with Russia.

Measures.—The Rostock foot=11·38 Eng. inches. The ell =2 feet. The last contains 96 scheffels: the last used in the measuring of oats=14½ imp. quarters=42 hectolitres: the last used in the measuring of other grain=14 imp. quarters or 37·3 hectolitres.—(*Kelly's Cambist.*)

We subjoin an Account of the Quantities and Values of the Principal Articles imported from Mecklenburg Schwerin into the U. K. during each of the 4 Years ending with 1857.

Principal Articles.	Quantities.				Computed Values.			
	1854.	1855.	1856.	1857.	1854.	1855.	1856.	1857.

Total - -	- -	- -	- -	- -	535,419	730,281	253,248	437,780

The direct exports from this country to Mecklenburg are much less considerable, not generally exceeding 60,000*l.* or 70,000*l.*

Imports.—The principal articles of import are sugar, coffee, and other colonial products; cottons, woollens; with iron and hardware, coal, earthenware, salt, horses, &c., from England; hemp, flax, tallow, oil, sail-cloth, &c., from Russia; alum, deals, timber, lime, tar, &c., from Sweden; herrings and fish oil from Norway; wine, brandy, molasses, drugs, &c., from France; with rice, rum, groceries, &c., from Copenhagen and Hamburg. The total value of the imports by sea may be estimated at about 300,000*l.*

Exports.—These consist chiefly of very good red wheat, with smaller quantities of barley, peas, rape-seed, and oats; wool, rags of a superior quality, oil cake, rape oil, bones, &c. At an average the value of the exports may be estimated at 600,000*l.*

Shipping.—The port of Rostock had, in 1856, 367 ships of the burden of 34,772 lasts of 6,000 lbs. each, which trade with most European nations, the U. States, and Brazil.

During the same year Wismar had 50 ships of the agg. burden of 4,367 lasts.

Port Charges.—These on a vessel of 100 tons burden are as follows, viz.:—

	Privileged.		Not privileged.	
	Rix-d. 10	*Sch.* 2	*Rix-d.* 10	*Sch.* 2
Inward with cargo	23	44	32	6
Outward ditto	12	6	12	6
Inward in ballast	19	36	31	10
Outward ditto	17	32	25	42
Ditto without either				

Duties.—These are extremely moderate. On most imported articles they amount to only 3 per cent. *ad valorem*. An export duty of about 5*d.* per quarter is charged on corn, and of about 4*s.* 8*d.* per hhd. on wine. Wool is not subject to any duty on export. Goods imported in vessels not privileged pay 50 per cent. additional on the above duties; that is, they pay 4½ instead of 3 per cent. *ad valorem*.

Wismar, the second sea-port town of Mecklenburg, at the confluence of the river Stor with the sea, in lat. 53° 49′ 25″ N. long. 11° 36′ 15″ E. Population 12,000. The harbour of Wismar is commodious and safe, being nearly land-locked by the islands of Poel and Walfisch. Close to the town there is from 8 to 8½ feet water; in the inner roads there is from 12 to 13 feet; and in the outer from 16 to 20 feet water. The port charges on a native or privileged vessel of 100 tons amounts to about 30 rix-dollars. The articles of import and export are the same at Wismar as at Rostock; but owing to the proximity of Lubeck, from which Wismar is not more than 27 miles distant, her foreign trade is comparatively limited.

General Remarks on the Trade of the Duchies.—Mecklenburg is essentially an agricultural, wool-growing, grazing, and breeding country. In some places it is sandy and barren; but it is for the most part fertile, and the crops and pastures are both luxuriant. Having few manufactures, her imports necessarily consist principally, as already stated, of manufactured goods, and her exports of raw produce. Owing, however, to the circumstance of the south-western part of the province being bounded by the Elbe, and approaching to within about 30 miles of Hamburg, most part of the manufactured goods, as well as a large proportion of the colonial products used by the population (540,000), are imported by way of Hamburg. Hence, in Mecklenburg, as in Prussia, the direct foreign trade carried on by the sea frontier forms but a limited part of the entire trade of the country. It is impossible, however, to form any precise estimate of what the latter may amount to. Probably there is no European country so little fettered by customs regulations as Mecklenburg. The duties on articles imported by sea amount only, as already stated, to about 3 per cent. *ad valorem*; and those entering by the land frontier are subject merely to a trifling charge, on account of toll, of which we have not seen any account. It is impossible, indeed, that any commercial system can be bottomed on more liberal principles; and this enlightened policy, and her situation near the mouth of the Elbe, and on the western frontier of the Prussian league, give to Mecklenburg far greater importance, as a commercial state, than is indicated by the amount of her population, or her internal consumption.

ROTTERDAM, on the north bank of the Maese, in lat. 51° 55′ 19″ N., lon. 4° 29′ 14″ E. Population, 1856, 102,322. Rotterdam is the second commercial city of Holland. It is more advantageously situated than Amsterdam; being nearer the sea, and the canals which intersect it are so deep as to admit of the largest vessels coming up to the quays and warehouses of the merchants. Its commerce, during the last 15 years, has increased more rapidly than that of any town in Holland. The exports and imports are similar to those of Amsterdam. The white Zealand wheat shipped here is of a peculiarly fine quality; and it is the best market for madder and geneva. Our imports of madder from Holland in 1857 amounted to 29,955 cwt., most part of which came from Rotterdam.—(See MADDER.) Geneva is sold by the aam; but it used, for the convenience of smuggling to England, to be divided into ankers and ½ ankers. The legitimate imports of geneva from Holland in 1857 amounted to 174,108 gallons. Rotterdam has a regular and frequent intercourse by means of steamers with London, Liverpool, Hull, Leith, Havre, Hamburg, &c.

N.B.—The channel from the sea to Rotterdam is exhibited in the chart of the Dutch coast in the map of Europe in this work.

Monies, Weights, and Measures.—See the article AMSTERDAM, for an account of the current monies, weights, and measures of Holland.

Two different commercial lbs. were formerly used at Rotterdam: one was the Amsterdam weight, 100 lbs. of which = 108·93 lbs. avoirdupois; the other, used by retailers, was 5 per cent. lighter, 100 lbs. of it being=103·48 lbs. avoirdupois.

The Rotterdam last of corn=10·642 Winchester bushels.

The aam=40 English wine gallons very nearly.

A hogshead of flax-seed contains from 7½ to 8 Winchester bushels. Rock salt is sold per great hundred of 404 maaten, containing from 21 to 22 tons. Coals per hoed=¼ a chaldron of Newcastle.

The liquid measures were divided in the same manner as at Amsterdam, but were larger; thus, 100 stoops of Rotterdam were = 67½ English wine gallons. Brandies were sold per 50 viertels; whale oil, per 90 stoops; vegetable oils per 300 stoops.

The ell is the same as at Amsterdam. 100 feet of Rotterdam=109½ feet of Amsterdam, or 102 English feet.

Statement of Imports of some of the most important Articles of Produce at Rotterdam and Amsterdam, in each of the 8 Years ending with 1858.

With the exception of the shipping interest, the trade of Rotterdam, and of Holland generally, is now in a comparatively flourishing state. The judicious management of the Netherland's bank, the only establishment in the country authorised to issue notes, and the prudent conduct of the merchants, made her be but little affected by the crisis of 1857. The depressed state of the shipping interest is a consequence partly of the extremely injudicious encouragement given by government to the trading company, but far more to that mania for ship-building that prevailed for some years in Holland, as it did here, and in the U. States. Hence, there is everywhere a glut of shipping; and it is idle to seek in the want of reciprocity, or anything else than this, for the low rate of freight, and the inadequate demand for shipping so universal during the last two or three years. Here, however, as in other places, the evil is beginning to work its own cure; the number of vessels launched at Rotterdam having declined from 227 in 1856, to 135 in 1858. It may be worth while to mention that the iron steamers built here and at Amsterdam are said to be quite equal to the best of those built on the Clyde and the Thames.—(*Consular Report on Rotterdam for* 1858.) For an account of the trade of the U. K. with Holland, see AMSTERDAM.

RUBY, a precious stone, very highly esteemed; but under this name a variety of minerals have not unfrequently been sold, which differ essentially in their characters.

The *Oriental Ruby* is, in fact, a red variety of the sapphire. When perfect, its colour is a cochineal red, presenting a richness of hue the most exquisite and unrivalled: it is, however, in general, more or less pale, and often mixed with blue; hence it occurs rose red, peach blossom red, and lilac blue, passing into the amethyst. It is harder than any other mineral, except the diamond. Easily frangible. Specific gravity from 3·916 to 4·283. Infusible before the blowpipe. Oriental rubies of 10 carats are extremely rare and valuable. One of 22 grains was sold for 160*l*. Rubies in lots, Indian cut, or small sizes, and of different qualities, are at all times to be had, and sell at from 15*s*. to 65*s*. a carat: but a perfect stone of a carat, or 6 grains, may be deemed rare, and falls little short of the value of the diamond: nay, in some cases, rubies of 2, 3, or 4 carats, if *very fine*, are much scarcer, and even more valuable than diamonds of equal weight. The finest ruby in England, or perhaps, in Europe, is in the collection of the late Mr. Hope, the author of "Anastasius."

There are two other species of ruby, the *Spinelle* and *Balais*. When perfect, the Spinelle is a gem of great value and scarcity. Its colour is a fine full carmine or rose red, but it never presents that rich mellow tinge that attends the Oriental ruby. It is also inferior to the latter in hardness and specific gravity. Stones of 3 carats and upwards are very rare and valuable.

The *Balais Ruby* is a pale variety of the spinelle. It varies in colour from light red to yellowish red. Though not so rare as the spinelle, it is by no means common. It is much admired for its agreeable tinge of colour; and, when pure and perfect, fetches a very high price; though considerably less than the other varieties.

Rubies are not found in any considerable quantity except in Ava. — (See SAPPHIRE.) — (*Mawe on Diamonds*, 2d ed. pp. 90. 101.; *Thomson's Chemistry.*)

RUM, a well known and highly esteemed spirituous liquor imported from the West Indies, of which it forms one of the staple products. It is obtained by means of fermentation and distillation, from molasses, the refuse of the cane juice, and portions of the cane, after the sugar has been extracted. The flavour and taste peculiar to rum are derived from the essential oils carried over in distillation. When the distillation has been carelessly performed, the spirit contains so large a quantity of the grosser and less volatile part of the oil as to be unfit for use till it has attained a considerable age. When it is well rectified, it mellows much sooner. Rum of a brownish transparent colour, smooth oily taste, strong body and consistence, good age, and well kept, is the best. That which is clear and limpid, and has a hot pungent taste, is either too new, or mixed with other spirits. Jamaica rum is the first in point of quality; the Leeward Island rum, as it is called, being always inferior to it, both in flavour, strength, and value. The price of the latter is usually 20 per cent. below that of the former. We import all our rum in puncheons, containing from 84 to 90 gallons each. It is customary, in some of the West India islands, to put sliced pine-apples in puncheons of rum: this gives the spirit the flavour of the fruit; and hence the designation, *pine-apple rum.*

Rum is also produced in and imported from the Mauritius and the E. Indies. But that of the latter is more nearly allied to arrack than to genuine rum.

Rum is said to be much adulterated by the retail dealers in England, sometimes with corn spirit; but if done with molasses spirit, the tastes of both are so nearly allied, that the cheat is not easily discovered.

Consumption of, and Duties upon, Rum, &c.—The following tables show the quantities of rum consumed in the U. Kingdom since 1824, the rates of duty charged upon it, and the produce of the duties.

Account stated in *Imperial Proof Gallons*, of the Rum annually entered for Home Consumption in the U. Kingdom, from 1824 to 1842, both inclusive, with the Rates of Duty payable thereon, and the Produce of the Duties.

Though rum has not been so much over-taxed as brandy, geneva, and wine, still it is pretty obvious that, even in its case, taxation was carried beyond its proper limits. During the 3 years ending with 1802, when the duty in Great Britain was about 9*s*. a gallon, and in Ireland 6*s*. 8¾*d*., the consumption of the U. Kingdom amounted to 3,150,000 gallons a year; while, notwithstanding the great increase of population, during the 3 years ending with 1823, when the duty in Great Britain was 13*s*. 11½*d*. a gallon, and in Ireland 12*s*. 8¾*d*., the annual consumption amounted to only 2,307,000 gallons. The reduction of the duty in 1826 to 8*s*. 6*d*. increased the consumption from about 2,500,000 to about 3,500,000 gallons.

The falling off in the consumption in 1839 and the immediately subsequent years,

was not owing to the trifling addition of 4*d.* per gall. then made to the duty, but to the scarcity and high price of rum itself.

From 1800 down to 1813, the duties on rum in Ireland were much lower than in Britain, and the consumption in the former appears then to have been much greater than afterwards, when the duties were raised in Ireland to the same level as here. But though there can be no manner of doubt that the increase of duty in Ireland tended to reduce its consumption, we have no idea that it did that to anything like the extent which appears on the face of the account. The truth is, that while the duty was lower in Ireland than in Britain, rum was extensively smuggled from the former into the latter; and this smuggling having ceased when the duties were equalised, the apparent, though not the real, consumption of rum in Ireland, was proportionally diminished.

In 1847 government was induced, in compliance with the representations of the West Indians, to assimilate the duties on colonial rum to the duties on home-made spirits, which varied in the different divisions of the U. K. But the facility with which clandestine distillation may be carried on in Scotland and Ireland, was the only excuse (and its validity was very doubtful) for the duty on spirits having been less in them than in England. No such pretence could be put forward for varying the duties on rum; and it would be in all respects quite as reasonable to reduce the duties on the brandy, tea, and sugar used in Scotland and Ireland below the English level as the duty on rum. The scheme, in fact, was neither more nor less than a clumsy underhand device to compensate the West Indians, without appearing to do so, for some small portion of the injustice of which they have been the victims. We are glad, therefore, to have to add that from the 21st April, 1855, the duty on rum in Scotland was raised to the level of that in England, or to 8*s.* 2*d.* a gallon; and in 1858 (from the 19th April) the duty on rum in Ireland was, also, raised to the same level; so that, both in respect of home and of colonial and foreign spirits, the duties are now the same in all parts of the U. K. We subjoin

An Account of the Quantities of Rum imported into the U. Kingdom, exported as Merchandise, delivered from Ships' Stores, and for the use of the Navy, with the Quantities retained for Home Consumption, the Rates of Duty chargeable thereon, and Nett Amount of Duty received, in each Year from 1843 to 1858, both inclusive.

Rum may not be imported unless in ships of 50 tons burden at least, and in casks or other vessels capable of containing liquids, each of such casks or other vessels being of the size or content of 20 gallons at the least, and duly reported, or in glass bottles or stone bottles not exceeding the size of three-pint bottles, and being really part of the cargo of the importing ship, and duly reported.—(16 & 17 Vict. c. 107. § 44.)

No spirits imported from parts beyond the sea into the U. K. upon which a higher duty is payable on their importation into England than on their importation into Scotland or Ireland, shall be brought from Scotland or Ireland into England; nor shall any such spirits upon which a higher duty is payable in Scotland than in Ireland be brought from Ireland into Scotland, except such as shall have been duly warehoused upon the first importation thereof, according to the laws in force for the warehousing of goods, and which shall be in the warehouse at the time of such intended removal, and which shall be removed from one warehousing port to another warehousing port, according to the regulations required by law; and all such spirits, when so removed, shall be liable to the duty payable thereon in that part of the U. K. into which they shall be so removed, if they be entered for home consumption therein; and all spirits removed contrary hereto shall be forfeited, and all persons concerned in such removal, or knowingly receiving or harbouring any spirits so removed, shall forfeit the penalty of 100*l.*, or treble the value of such spirits at the election of the Commissioners of Customs or Inland Revenue.—(16 & 17 Vict. c. 107. § 102.)

Before any rum shall be entered as being the produce of any British possession abroad, the master of the ship importing the same must deliver a certificate of origin to the collector or comptroller, that the goods are the produce of such place.—(16 & 17 Vict. c. 107. § 77, &c.)

RUSSIA COMPANY, a regulated company for conducting the trade with Russia. It was first incorporated by charter of Philip and Mary, sanctioned by act of parliament in 1566. The statute 10 & 11 Will. 3. c. 6. enacts, that every British subject desiring admission into the Russia Company shall be admitted on paying 5*l.*; and every individual admitted into the Company conducts his business entirely as a private adventurer, or as he would do were the Company abolished.

Table of Duties payable to the Russia Company.

RUSSIA LEATHER (Fr. *Cuir de Russie*; Ger. *Juften*; It. *Cuojo di Russia*; Pol. *Jachta*; Rus. *Juft, Youft*; Sp. *Moscovia*) the tanned hides of oxen and other kine, denominated by the Russians *youfts*, or *juffs*,—a designation said to be derived from their being generally manufactured in pairs. The business of tanning is carried on in most towns of the empire, but principally at Moscow and Petersburg. Russia leather is soft, has a strongly prominent grain, a great deal of lustre, and a powerful and peculiar odour. It is principally either red or black: *the former* is the best, and is largely used in this and other countries in bookbinding; for which purpose it is superior to every other material. The black is, however, in very extensive demand in Russia; large quantities being made up into boots and shoes. The process followed by the Russians in the preparation of this valuable commodity has been frequently described; but notwithstanding this circumstance, and the fact that foreigners have repeatedly engaged in the business in Russia, with the intention of making themselves masters of its details, and undertaking it at home, the efforts made to introduce the manufacture into other countries have hitherto entirely failed. One of the best tests of

genuine Russia leather is its throwing out a strong odour of burnt hide upon being rubbed a little. — (*Ricard, Traité Général du Commerce*, tome i. p. 275. ed. 1781.)

We borrow from Mr. Borrisow's work on the *Commerce of Petersburg* the following details with respect to this article: — Russia leather forms one of the principal export commodities of Petersburg. But since the ports of the Black Sea have been opened, the exports of leather from this port have considerably decreased; Italy, the principal consumer, supplying its wants from Odessa and Taganrog, more easily, cheaply, and expeditiously than from Petersburg. The chief exportation from the latter is to Prussia, Germany, and England. Frankfort on the Maine and Leipzic are of great importance as respects the trade in Russia leather, on account of the fairs held in them.

Juffs are never bought on contract, but always on the spot at cash prices. It nevertheless often happens that agents, in order to secure a lot of juffs, pay a certain sum in advance, and settle for the amount at the first market prices; no prices being fixed in the months of January, February, March, and sometimes even April.

Juffs are assorted or *bracked* when received, according to their different qualities, into *Gave, Rosval, Malja*, and *Domashna*. The three first sorts are again divided into *heavy* and *light Gave, heavy* and *light Rosval*, &c. Domashna is the worst, and consequently the cheapest sort. It often happens that juffs are bought unassorted, and then the prices are regulated according as the quantity of Domashna contained in the lot is greater or less. Persons well acquainted with the nature of Russia leather prefer purchasing it in this state.

Juffs are sold by the pood, which consists, as it is commonly expressed, of 4, 4¼, 4½, 5, 5¼, and 5½ hides. By this is understood, that so many hides make a pood, calculated upon the whole lot; and it is to be observed that the lightest juffs are esteemed the best in quality. Heavy juffs, or those of 4 and 4¼ hides, are shipped for Italy: the Germans, on the contrary, prefer the lighter sort.

Juffs are packed in rolls, each containing 10 hides; and from 10 to 15 of these rolls are packed together in a bundle, which is well secured by thick matting. There are red, white, and black juffs; but the red are most in demand. Their goodness is determined by their being of a high red colour, of equal size, and unmixed with small hides: they must also be free from holes, well stretched, and equally thin. In a well finished lot, no thick head or feet parts should be found. If spots resembling flowers are seen on the red hides, it is an additional sign of their good quality; and they are then called *bloomed juffs*. The inside should be clean, soft, and white, and, when taken in the hand, should feel elastic. The best connoisseurs of Russia leather can nearly determine the quality by the smell alone.

Great attention must be paid, in shipping juffs, to secure them from being wetted, as damp air alone is sufficient to injure them.

Sixty rolls of juffs make a last; 88 poods nett weight, when shipped for Italy, make a last; and 44 poods a ton in England.

The exports of juffs from Russia, in 1841, amounted to 177,838 poods, and 150,951 pieces, worth together 1,538,191 silver roubles. — (*Official Returns*, p. 13.)

RYE (Ger. *Roghen, Rocken*; Du. *Rog, Rogge*; Fr. *Seigle*; It. *Segale, Segala*; Sp. *Centeno*; Rus. *Rosch, Sel, Jar*; Lat. *Secale*), according to some, is a native of Crete; but it is very doubtful if it be found wild in any country. It has been cultivated from time immemorial, and is considered as coming nearer in its properties to wheat than any other grain. It is more common than wheat in many parts of the Continent; being a more certain crop, and requiring less culture and manure. It is the bread corn of Germany and Russia. In Britain it is now very little grown; being no longer a bread corn; and, therefore, of less value to the farmer than barley, oats, or peas. — (*Loudon's Ency. of Agriculture.*)

For the regulations as to the importation and exportation of rye, see CORN LAWS AND CORN TRADE.

S.

SABLE (Ger. *Zobel*; Fr. *Zibelline*; It. *Zibellino*; Rus. *Sohol*), an animal of the weasel tribe, found in the northern parts of Asiatic Russia and America, hunted for the sake of its fur. Its colour is generally of a deep glossy brown, and sometimes of a fine glossy black, which is mostesteemed. Sable skins have sometimes, though very rarely, been found yellow, and white. The finer sorts of the fur of sables are very scarce and dear. — (See FUR TRADE.)

SADDLES (Fr. *Selles*; Ger. *Sattel*; It. *Selle*; Rus. *Sädla*; Sp. *Selles*), seats adapted to the horse's back, for the convenience of the rider. Those made in England are reckoned the best. Sherborne and Lynn used to be remarkable for this manufacture; but it is now principally carried on in London.

SAFFLOWER, OR BASTARD SAFFRON (Ger. *Safflor*; Du. *Saffloer, Basterd Saffran*; Fr. *Cartame, Saffran batard*; It. *Zaffrone*; Sp. *Alazor, Azafran bastardo*; Rus. *Polerroi, Prostoi schafran*), the flower of an annual plant (*Curthamus tinctorius* Lin.) growing in India, Egypt, America, and some of the warmer parts of Europe. It is not easily distinguished from saffron by the eye, but it has nothing of its smell or taste.

The flowers, which are sometimes sold under the name of *saffranon*, are the only parts employed in dyeing. They yield two sorts of colouring matter: one soluble in water, and producing a yellow of but little beauty; the other is *resinous*, and best dissolved by the fixed alkalies: it is this last which alone renders safflower valuable in dyeing; as it affords a red colour exceeding in delicacy and beauty, as it does in costliness, and which can be obtained even from cochineal, though much inferior to the latter in durability. The colour of safflower will not bear the action of soap, nor even that of the sun and air for a long time; and being very costly, it is principally employed for imitating upon silk the fine scarlet (*ponceau* of the French) and rose colours dyed with cochineal upon woollen cloth.

The fine rose colour of safflower, extracted by crystallised soda, precipitated by citric acid, then slowly dried, and ground with the purest talc, produces the beautiful *rouge* known by the name of *rouge végétale*.

Safflower should be chosen in flakes of a bright pink colour, and of a smell somewhat resembling tobacco. That which is in powder, dark coloured, or oily, ought to be rejected.—(*Hasselquist's Voyages*, Eng. ed. p. 352.; *Bancroft's Permanent Colours*, vol. i. pp. 286—289.; *Milburn's Orient. Com.*)

The consumption of safflower may be estimated, deducting the exports from the imports, at an average of the last 4 years, at about 7,500 cwts. a year. The duty of 1*s.* a cwt. formerly charged on its importation was repealed in 1845.

SAFFRON (Ger. *Saffran*; Du. *Safran*; It. *Zafferano*; Sp. *Saffron*; Fr. *Azafran*; Rus. *Schafran*), a sort of cake prepared from the stigmas, with a proportion of the style, of a perennial bulbous plant (*Crocus sativus* Lin.) cultivated to a small extent in Cambridgeshire.

It is also imported from Sicily, France, and Spain; but the English, as being fresher, more genuine, and better cured, is always preferred. When good, saffron has a sweetish, penetrating, diffusive odour; a warm, pungent, bitterish taste; and a rich, deep orange red colour. It should be chosen fresh, in close, tough, compact cakes, moderately moist, and possessing in an obvious degree all the above mentioned qualities. The not staining the fingers, the making them oily, and its being of a whitish yellow or blackish colour, indicate that it is bad, or too old. Saffron is used in medicine, and in the arts; but in this country the consumption seems to be diminishing. It is employed to colour butter and cheese, and also by painters and dyers. — (*Thomson's Dispensatory*; *Loudon's Ency. of Agriculture.*)

SAGAPENUM (Arab. *Sugbenuj*), a concrete gum-resin, the produce of an unknown Persian plant. It is imported from Alexandria, Smyrna, &c. It has an odour of garlic; and a hot, acrid, bitterish taste. It is in agglutinated drops or masses, of an olive or brownish yellow colour, slightly translucent, and breaking with a horny fracture. It softens and is tenacious between the fingers, melts at a low heat, and burns with a crackling noise and white flame, giving out abundance of smoke, and leaving behind a light spongy charcoal. It is used only in medicine. — (*Thomson's Dispensatory.*)

SAGO (Malay, *Sagu*; Jav. *Sagu*), a species of meal, the produce of a palm (*Metroxylon Sagu*) indigenous to and abundant in such of the Eastern islands as produce spices, where it supplies a principal part of the farinaceous food of the inhabitants.

The tree, when at maturity, is about 30 feet high, and from 18 to 22 inches in diameter. Before the formation of the fruit, the stem consists of an external wall about 2 inches thick, the whole interior being filled up with a sort of spongy medullary matter. When the tree attains to maturity, and the fruit is formed, the stem is quite hollow. Being cut down at a proper period, the medullary part is extracted from the trunk, and reduced to a powder like sawdust. The filaments are next separated by washing. The meal is then laid to dry; and being made into cakes and baked, is eaten by the islanders. For exportation, the finest sago meal is mixed with water, and the paste rubbed into small grains of the size and form of coriander seeds. This is the species principally brought to England, for which market it should be chosen of a reddish hue and readily dissolving in hot water into a fine jelly. Within these few years, however, a process has been invented by the Chinese for refining sago, so as to give it a fine pearly lustre; and the sago so cured is in the highest estimation in all the European markets. It is a light, wholesome, nutritious food. It is sent from the islands where it is grown to Singapore, where it is granulated and bleached by the Chinese. The export trade to Europe and India is now principally confined to that settlement.—(*Ainslie's Mat. Indica*; *Crawfurd's East. Archip.* vol. ii. pp. 383—393., vol. iii. p. 348.; *Bell's Review of the Commerce of Bengal, &c.*)

Account of the Quantities of Sago imported into and re-exported from the U. Kingdom, during each of the 8 Years ending with 1852; specifying the Imports from Places within the Limits of the E. I. Company's Charter. — (*Parl. Paper*, No. 928. Sess. 1853.)

Years.	Imports from within E. I. Company's Charter.	Total Imports.	Re-exports from U. Kingdom.	Quantities retained for Consumption.
	Cwts.	*Cwts.*	*Cwts.*	*Cwts.*
1845	43,189	43,213	1,238	43,208
1846	38,343	38,595	651	45,988
1847	55,158	55,165	2,703	41,429
1848	65,501	65,504	2,442	67,226
1849	83,705	85,711	5,317	72,979
1850	88,556	89,884	3,862	84,624
1851	93,351	95,253	6,056	80,918
1852	85,115	85,258	5,468	93,140

Previously to 19th March, 1845, the duty was 1*s.* a cwt., plus 5 per cent.; since that date to the present year (1853) it was 6*d.* a cwt.; repealed, 1845.

It is seen from this table that the consumption of sago has increased rapidly of late years; and the increase will appear still greater if we go a little farther back; for, at an average of 1820 and 1821, the consumption amounted to only about 1,300 cwts. a year. This extraordinary increase is in part to be ascribed to the effectual reduction of the heavy duties with which sago was formerly burdened; but more, perhaps, to its being found to be a desirable article of food. It is said to be employed to some extent in the adulteration of sugar. The price of common sago varies from 8*s.* to 15*s.*, while pearl sago fetches from 20*s.* to 25*s.* a cwt.; but the price is liable to great fluctuation.

SAILS, coarse linen or canvass sheets attached to the masts and yards of ships, the blades of windmills, &c., to intercept the wind and occasion their movement.

Sails, when formerly imported, were charged with an *ad valorem* duty of 10 per cent. But this duty was repealed in 1853, and their importation is now free. The duty on cordage was then, also, repealed

SALEP, a species of powder prepared from the dried roots of a plant of the orchis kind (*Orchis mascula* Lin.) That which is imported from India is in white oval pieces, hard, clear, and pellucid, without smell, and tasting like tragacanth. As an article of diet, it is said to be light, bland, and nutritious. The plant thrives in England, but it is not cultivated to any extent; and very little is imported. —(*Ainslie's Mat. Indica*; *Milburn's Orient. Com.*)

SALMON (Ger. *Lachs, Salm*; Fr. *Saumon*; It. *Sermone, Salamone*; Sp. *Salmon*; Rus. *Lemga*). This excellent fish is too well known to require any description. It is found only in northern seas, being unknown in the Mediterranean and other warm regions. In this country it is an article of much value and importance. It is said to be exceedingly abundant in Japan and Kamtschatka.

"Salmon fisheries," Marshall observes, "are copious and constant sources of human food; they rank next to agriculture. They have, indeed, one advantage over every other internal produce,—their increase does not lessen other articles of human subsistence. The salmon does not prey on the produce of the soil, nor does it owe its size and nutritive qualities to the destruction of its compatriot tribes. It leaves its native river at an early state of growth; and going, even naturalists know not where, returns of ample size, and rich in human nourishment; exposing itself in the narrowest streams, as if nature intended it as a special boon to man. In every stage of savageness and civilisation, the salmon must have been considered as a valuable benefaction to this country."

Such salmon as are taken in æstuaries or rivers are, of course, the property of those to whom the æstuaries or rivers belong, the fisheries in them frequently letting for very large sums; but of late very considerable quantities of salmon have been taken in bays and in the open sea, where the fishing is free to any one who chooses to engage in it. The London market, where the consumption is immense, has been, since 1790, principally supplied from the Scotch rivers. The Tweed fishery is the first in point of magnitude of any in the kingdom; the take is sometimes quite astonishing, several hundreds having been frequently taken by a single sweep of the net! Salmon are despatched in steamers or fast sailing vessels from the Spey, the Tay, the Tweed, and other Scotch rivers, for London, packed in ice, by which means they are preserved quite fresh. When the season is at its height, and the catch greater than can be taken off fresh, it is salted, pickled, or dried for winter consumption at home, and for foreign markets. Formerly, such part of the Scotch salmon as was not consumed at home, was pickled and kitted after being boiled, and was in this state sent up to London under the name of Newcastle salmon; but the present method of disposing of the fish has so raised its value, as to have nearly deprived all but the richer inhabitants in the environs of the fishery of the use of salmon. Within the memory of many, now living, salted salmon formed a material article of household economy in all the farm-houses in the vale of the Tweed; insomuch, that in-door servants used to stipulate that they should not be obliged to take more than two weekly meals of salmon. Its ordinary price was then 2*s*. a stone of 19 lbs.; but it is now never below 12*s*., often 36*s*., and sometimes 42*s*. a stone. This rise in the price of the fish has produced a corresponding rise in the value of the salmon fisheries, some of which are very valuable. There are considerable fisheries in some of the Irish and English rivers; but inferior to those of Scotland.—(*General Report of Scotland*, vol. iii. p. 327.) The Scotch salmon fisheries seem to have attained their maximum value towards the end of the last war, when the fisheries in the Tweed were let for from 15,000*l*. to 18,000*l*. a year! and those of the Tay, Dee, Spey, &c. were proportionally valuable. But the value of the Scotch salmon fisheries has, speaking generally, declined greatly of late years; in consequence, partly and principally, of a diminished supply of fish in the rivers, but in some degree, also, from the greater facility of the communication between London and Liverpool, and the consequent importation of Irish salmon into the London markets. We were fortunate enough to obtain from a source on which every reliance may be placed, the following

Account of the Quantity of Salmon packed in Ice imported into London, from Scotland, during each of the 8 Years ending with the 14th of October, 1841, and of the Wholesale Price of the same.

Years ending Oct. 14.	Weight of Fish.	Average Price, about	Total Value.	Years ending Oct. 14.	Weight of Fish.	Average Price, about	Total Value.
	Lbs.	*d.*	£		*Lbs.*	*d.*	£
1834	3,432,800	9½ per lb.	135,900	1838	2,596,800	10½ per lb.	104,160
1835	4,740,960	9	177,800	1839	1,850,080	11	85,880
1836	2,751,810	10½	120,400	1840	1,697,920	11	77,850
1837	3,612,660	10	150,750	1841	3,192,672	8¾	116,400

This, it will be observed, is independent of the pickled salmon brought from Scotland, the quantity and value of which varies as much as that of the fresh salmon. But we are well assured that, at an average of the last eight years, its value has not exceeded 12,000*l*. a year. At an average, the retail price of salmon in London may be taken at from 50 to 75 per cent. above the wholesale price.

We may remark, by the way, that as by far the largest portion of the salmon made use of in London comes from Scotland, the above statement shows that its consumption in the metropolis is not nearly so great as is generally supposed. In fact, it is little used, except by the more opulent classes; and nothing that is not generally used by the middle classes, or by them and the lower, is ever of much importance. The little influence over prices caused by a large increase of supply is also a striking feature in this return.

Decrease of the Supply of Salmon, Poaching, &c.—The decrease of salmon in the English and Scotch rivers, particularly of late years, is a fact as to which there can be no manner of doubt.—(*Report of Committee of House of Commons on Scotch Salmon Fishery, in* 1843.) Much unsatisfactory discussion has taken place as to its causes, which are, probably, of a very diversified character. A good deal has been ascribed to the increase of water machinery on the banks of the different rivers; but we hardly think that this could have much influence, except, perhaps, in the case of the smaller class of rivers. *Weirs*, or salmon traps, have also been much objected to; though, as we have been assured, with still less reason. On the whole, we are inclined to think that the falling off in the supply of this valuable fish is principally to be ascribed to the temptation to over-fish the rivers, caused by the high price of salmon; to the prevalence of poaching; and more than all, to the too limited duration of the *close time*. In 1828, after a great deal of discussion and inquiry, an act was passed (9 Geo. 4. c. 39.), which has done a good deal to remedy these defects—in so far, at least, as respects the Scotch fisheries. The rivers are shut up from the 14th September to the 1st of February; and every person catching or attempting to catch fish during that period forfeits not less than 1*l*. and not more than 10*l*. for every offence, besides the fish, if he have caught any, and such boats, nets, or other implements, as he may have made use of. Pecuniary penalties are also inflicted upon poachers and trespassers; and provision is made for the watching of the rivers. We understand that this act had a very good effect; though it is believed that it would be better were the *close time* extended from the 1st of September to the middle of February.

Previously to 1842 the importation of foreign salmon was prohibited; but among the important and beneficial changes effected by the tariff act of that year, the repeal of this prohibition, and the admission of foreign salmon to our markets on payment of a duty of 10*s*. 6*d* (inc. the 5 per cent.) a cwt., was one of the foremost. The importation has not, however, been nearly so great as was anticipated.

In 1852 the imports of salmon of foreign taking amounted to only 326 cwt. The imports during the same year of salmon of British taking were 2,298 cwt. In 1853 the duty on the former was repealed; and salmon, however taken, may now, like any other fish, be imported duty free. Foreign salmon is principally brought from Holland and Denmark; the anticipated supplies from Norway and Sweden have proved to be quite trifling.

SALONICA, a large city and sea-port of European Turkey, at the north-east extremity of the gulph of the same name, lat. 40° 38′ 47″ N., lon. 22° 57′ 13″ E. Population estimated at 60,000.

This city, originally called Therma and afterwards Thessalonica, is celebrated both in sacred and profane history. It was visited by St. Paul, who has addressed two of his epistles to the Thessalonians. In the days of its prosperity it had an amphitheatre, an extensive hippodrome, numerous temples and triumphal arches, the ruins of which sufficiently attest its ancient splendour.—(*Clarke's Travels*, vii. 441—478. 8vo. ed.)

Being the principal emporium of Macedonia Salonica has always had a considerable trade; and to this circumstance may be ascribed its continued and comparatively prosperous existence notwithstanding the many vicissitudes it has undergone.

There is no port at Salonica, but there is excellent anchorage in the roads opposite to the town. The access to them is by no means difficult, and pilots are seldom employed. The exports principally consist of wheat, of which large quantities are sometimes shipped, barley, and Indian corn, timber, raw cotton, wool, raw silk, wax, tobacco, sesamum, olives and olive oil, &c. The imports are sugar, coffee, dyewoods, indigo, muslins, calicoes, cotton twist, iron, lead, tin, watches, &c.

Account of the Number, Tonnage, Crews, and Values of the Cargoes of the Vessels of different Nations entered and cleared at Salonica in 1851.

According to this statement, which is that of the English Consul, the aggregate value of the imports and exports by sea amounts to 612,989*l.*, or 15,324,725 fr. But according to the statement of Ubicini, in his valuable work on Turkey, (*Lettres sur la Turquie*, i. 425.), the imports and exports amounted jointly to 18,950,000 fr. The trade of the subordinate ports of La Cavale and Volo amounted during the same year to 7,509,768 fr. (*Ubicini*, p. 420.)

Money, Weights, and Measures. — Accounts are kept in piastres of 40 paras, or 120 aspers. The coins are those of Constantinople; which see.

The weights and measures are the same as those of Smyrna, except that the kisloz, killow, or corn measure of Salonica = 3·78 kisloz of Smyrna.

Quarantine Regulations. — On the arrival of a vessel at the port she is visited by the boat of the health office, with the Turkish flag in the stern and the yellow flag in the bow. The captain of the entering ship may, however, put a yellow flag in the bow of his boat, and go with his papers to the quarantine station (if he is much pressed for time), where he will obtain *pratique*, if with a clean bill, after he has answered the usual interrogations. The masters of vessels, on their arrival, must deliver up their bills of health to the quarantine officer, and it will be returned to them, upon application, before sailing. It is required that masters of vessels going from one Turkish port to another furnish themselves with Turkish bills of health, otherwise they will subject themselves to the same quarantine as vessels with foul bills.

Turkish bills of health cost,	*Piast.*	*s.*	*d.*
Vessels of 25 tons	2 = 0	4½	ex. 100s.
25 *to* 75 -	6 = 1	0½	
75 - 125 -	10 = 1	9½	
125 - 175 -	12 = 2	5½	
175 - 250 -	16 = 3	2½	
250 - 300 -	20 = 3	10½	
300 & upwards	24 = 4	7	

Harbour, Depth of Water, Tides. — Vessels anchor very near the walls of the town, though it is prudent not to come too close in, owing to the number of small craft at anchor. The depth of water a cable's length from the shore varies from 3½ to 4, and at two cables' length from 7 to 8 fathoms, whence to Cape Carabourum it varies from 12 to 17 fathoms. There is very little rise. Owing to the rivers which empty themselves into the Gulph, the currents setting out are at times strong, and in light winds sufficient to impede the way of the vessel.

Ballast, consisting of wet sand, may be had at 15 piastres (2*s.* 8½*d.*) per boat of from 2½ to 3 tons; engagements may be made for a lump sum, to put the vessel down to a certain mark. If a master require much ballast the latter plan is the best, for the ballast-men are all Jews, and it is the only means of having any check upon them.

Ship Bread. — Masters wanting ship bread must apply for a permit, which is obtained through the consul, for which the Turkish authorities charge 10 piastres.

Freights are payable either at the last rate of exchange received from Constantinople prior to the arrival of the vessel, or if the post come in after the ship's arrival, at the latter rate.

Bills. — Bills on London are at 3 months' date.

Commission. — Commission on freights 3 per cent.

The gates of the town are opened at sunrise and closed at sunset.

Water is excellent; there is a fountain at or near the wharf, and two others a short distance from it.

SALT (Ger. *Salz*; Du. *Zout*; Fr. *Sel*; It. *Sale*; Sp. *Sal*; Rus. *Sol*; Lat. *Sal*; Arab. *Melh*; Chin. *Yen*; Hind. *Nimmuck*; Per. *Nun*), the *chloride of sodium* of modern chemists, has been known and in common use as a seasoner and preserver of food from the earliest ages. Immense masses of it are found in this and many other countries, which require only to be dug out and reduced to powder. In that state it is called rock salt. The water of the ocean also contains a great deal of salt; to which, indeed, it owes its taste, and the power which it possesses of resisting freezing till cooled down to 28·5°. When this water is sufficiently evaporated, the salt precipitates in crystals. This is the common process by which it is obtained in many countries. There are various processes by which it may be obtained quite pure. Common salt usually crystallises in cubes. Its taste is universally known, and is what is

strictly denominated *salt*. Its specific gravity is 2·125. It is soluble in 8·82 times its weight of cold water, and in 2·76 times its weight of boiling water. — (*Thomson's Chemistry.*)

Besides its vast utility in seasoning food, and preserving meat both for domestic consumption and during the longest voyages, and in furnishing muriatic acid and soda, salt forms a glaze for coarse pottery, by being thrown into the oven where it is baked; it improves the whiteness and clearness of glass; it gives hardness to soap; in melting metals, it preserves their surface from calcination, by defending them from the air, and is employed with advantage in some assays; it is used as a mordant, and for improving certain colours; and enters more or less into many other processes of the arts. Many contradictory statements have been made as to the use of salt as a manure. Probably it may be advantageous in some situations, and not in others.

Salt Mines, Springs, &c. — The principal salt mines are at Wielitska in Poland, Catalonia in Spain, Altemonte in Calabria, Loowur in Hungary, in many places in Asia and Africa, and in Cheshire in this country. The mines at Wielitska are upon a very large scale; but the statements that have frequently been published, of their containing villages inhabited by colonies of miners who never saw the light, are altogether without foundation. These mines have been wrought for more than 600 years. — (*Coxe's Travels in the North of Europe*, vol. i. 149. 8vo. ed.)

The salt mines in the neighbourhood of Northwich in Cheshire are very extensive. They have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt mines in the world. In its solid form, when dug from the mine, Cheshire salt is not sufficiently pure for use. To purify it, it is dissolved in sea water, from which it is afterwards separated by evaporation and crystallisation. The greater part of this salt is exported.

Salt springs are met with in several countries. Those in Cheshire and Worcestershire furnish a large proportion of the salt made use of in Great Britain. The brine, being pumped up from very deep wells, is evaporated in wrought iron pans from 20 to 30 feet square and 10 or 12 inches deep, placed over a furnace.

Most of the salt used in Scotland, previous to the repeal of the duty, was obtained by the evaporation of sea water nearly in the way now mentioned; but most part of the Scotch salt works have since been relinquished.

In warm countries, salt is obtained by the evaporation of sea water by the heat of the sun; and the crystals of salt made in this way are more perfect, and purer, from the greater slowness of the process. French salt is manufactured in this mode, and it has always been in considerable demand in this and other countries; but the principal imports of foreign salt into Great Britain at present are from Portugal. They amount, at an average, to from 250,000 to 350,000 bushels a year.

Consumption of Salt. — The consumption of salt in this country is immense. Necker estimated the consumption in those provinces of France which had purchased an exemption from the *gabelle* (*Pays francs rédimées*) at about 19½ lbs. (Eng.) for each individual. — (*Administration des Finances*, tome ii. p. 42.) From all that we have been able to learn on the subject, we believe that the consumption of the people of this country may be estimated a little higher, or at 22 lbs.; the difference in our food and habits, as compared with the French, fully accounting for this increased allowance. On this supposition, and taking the population at 28,000,000, the entire consumption will amount to 616,000,000 lbs., or 275,000 tons.

Exclusive of this immense home consumption, we annually export very large quantities.

Account of the Quantities and Value of the Salt exported from the U. K., during each of the 4 Years ending with 1851, specifying the Countries to which it was exported, and the Quantity and Value of that sent to each.

The cheapness of this important necessary of life is not less remarkable than its diffusion. Its present cost may be estimated, at a medium, at from 14*s.* to 16*s.* a ton.

Duties on Salt. — In ancient Rome, salt was subjected to a duty (*vectigal salinarum*; see *Burman, Dissertatio de Vectigalibus Pop. Rom.* c. 6.); and it has been heavily taxed in most modern states. The *gabelle*, or code of salt laws, formerly established in France, was most oppressive. From 4,000 to 5,000 persons are calculated to have been sent annually to prison and the galleys for offences connected with these laws, the severity of which had no inconsiderable share in bringing about the Revolution

—(*Young's Travels in France*, vol. i. p. 598.) In this country, duties upon salt were imposed in the reign of William III. In 1798 they amounted to 5*s.* a bushel; but were subsequently increased to 15*s.* a bushel, or about *thirty times* the cost of the salt! So exorbitant a duty was productive of the worst effects; and occasioned, by its magnitude, and the regulations for allowing salt duty free, to the fisheries, a vast deal of smuggling. The opinion of the public and of the House of Commons having been strongly pronounced against the tax, it was finally repealed in 1823.

That the repeal of so exorbitant a duty has been productive of great advantage, no one can doubt; but seeing that a large revenue must be raised, we question whether government acted wisely in totally relinquishing the tax. Had the duty been reduced to 2*s.* or 2*s.* 6*d.* a bushel, and no duty-free salt allowed for the fisheries, but a drawback given on the fish exported, a revenue of 1,000,000*l.* a year might have been derived from this source with but little injury. It was not the nature of the salt tax, but the absurd extent to which it had been carried, that rendered it justly odious. When at the highest, it produced about 1,500,000*l.* a year.

SALTPETRE, OR NITRATE OF POTASH (Ger. *Salpeter*; Fr. *Nitre, Salpetre*; It. *Nitro, Salnitro*; Sp. *Nitro, Salitre*; Rus. *Senitra*; Lat. *Nitrum*; Arab. *Ubkir*; Hind. *Shorah*), a salt well known in commerce, and of very great importance. It may be regarded both as a natural and an artificial production; being found on the surface of the soil in many parts of India, Egypt, Italy, &c.; but in these and other places all that is known in commerce is obtained by an artificial process, or by lixiviating earth that has been formed into *nitre* beds. The saltpetre consumed in England is brought from Bengal in an impure state, but crystallised, in bags, each containing 164 lbs. Saltpetre forms the principal ingredient in the manufacture of gunpowder; and is used in various arts. It is also of great utility in the commerce of India, from its furnishing a large amount of dead weight for the shipping engaged in it. Saltpetre possesses considerable antiseptic power. That which is of the best quality and well refined, is in long transparent crystals; its taste is sharp, bitterish, and cooling; it flames much when thrown upon burning coals; is very brittle; specific gravity 1·933. It is not altered by exposure to the air.

Beckmann contends, in a long and elaborate dissertation (*Hist. of Invent.* vol. iv. pp. 525–586. Eng. ed.), that the ancients were unacquainted with saltpetre, and that their *nitrum* was really an alkaline salt. But, as saltpetre is produced naturally in considerable quantities in Egypt, it is difficult to suppose that they could be entirely ignorant of it; though it would appear that they had confounded it with other things. It has been known in the East from a very early period. Beckmann concurs in opinion with those who believe that gunpowder was invented in India, and brought by the Saracens from Africa to the Europeans; who improved its manufacture, and made it available for warlike purposes. — (Vol. iv. p. 571.)

The consumption of saltpetre during periods of war is very great. Its price is consequently liable to extreme fluctuation. In remarking on the varieties in the price of saltpetre, Mr. Tooke observes, "It reached its greatest height in 1795, viz. 170*s.* a cwt.; in 1796, it fell at one time to 45*s.* and rose again to 96*s.* It seems to have been affected considerably by the scale of hostilities on the Continent. But in consequence of the discoveries in chemistry, by which the French were enabled to dispense with a foreign supply, and by the increased importation from India to this country, by which we were enabled to supply the rest of the Continent at a reduced cost, the price declined permanently after 1798-9, when it had reached 145*s.*; and never after was so high as 100*s.*, except during the short interval of speculation in export, during the peace of 1814, and again upon the breaking out of the war terminated by the battle of Waterloo." The price of rough saltpetre in the London market varies at this moment (September, 1853) from 25*s.* to 29*s.* a cwt.

During 1852 we imported 297,505 cwts. saltpetre, of which 250,334 were from India. The exports from the U. K. during the same year amounted to 45,711 cwts. At an average the consumption amounts of late years to about 250,000 cwts. a year.

Exclusive of saltpetre we import considerable quantities of nitre, or nitrate of soda, consisting of nitric acid and soda, whereas saltpetre consists of nitric acid and potash. Like saltpetre, it is found native in various countries, but especially in the deserts of Tarapaca and Atacama, along the coast of Southern Peru. The deserts in question consist of a vast sandy plain extending between the shore and the foot of the Andes for between 400 and 500 miles. This plain is more than 3,000 feet above the level of the sea; no rain ever falls upon it; and except along the banks of a few streams by which it is intersected, it is quite sterile. In most parts, however, it abounds with nitrate of soda, which sometimes appears on the surface, but is more commonly covered with a stratum of clay and sand, with which the salt is frequently mixed. The principal mines are within about 24 miles of the Peruvian port of Iquique, in 21° 50′ S. lat. and 71° 42′ W. long. After being dug up, the salt is pulverised, dissolved in boiling water, and allowed to crystallise in shallow wooden troughs. Its price, free on board, including an export duty of about 4 per cent., varies from 2 to 2½ or 3 doll. the quintal of 100 lbs. Having a tendency to attract moisture, it is not so suitable as saltpetre for the manufacture of gunpowder; but it is extremely serviceable in various departments of the arts, and is particularly valuable in a commercial point of view, from its affording a return cargo for ships which might otherwise have had to come home in ballast.

During 1852, the imports and exports of nitre (nitrate of soda) amounted respectively to 268,084 cwts. and 13,639 ditto. The price during the same year was about 17*s.* a cwt. The duty formerly charged on saltpetre and nitre was suppressed in 1845.

SALVAGE, as the term is now understood, is an allowance or compensation made to those by whose exertions ships or goods have been saved from the dangers of the seas, fire, pirates, or enemies.

The propriety and justice of making such an allowance must be obvious to every one. It was allowed by the laws of Rhodes, Oleron, and Wisby; and in this respect they have been followed by all modern maritime states. At common law, the party who has saved the goods of another from loss or any imminent peril has a *lien* upon them, and may retain them in his possession till payment of a reasonable salvage.

1. *Salvage upon Losses by Perils of the Sea.*—In fixing the rate of salvage, regard is usually had, not only to the labour and peril incurred by the salvors, but also to the situation in which they may happen to stand in respect of the property saved, to the promptitude and alacrity manifested by them, and to the value of the ship and cargo, as well as the degree of danger from which they were rescued. In some cases as much as *a half* of the property saved has been allowed as salvage; and in others not more than *a tenth* part.

The crew of a ship are not entitled to salvage, or any unusual remuneration for the extraordinary efforts they may have made in saving her; it being their duty as well as interest to contribute their utmost upon such occasion, the whole of their possible services being pledged to the master and owners. Neither are passengers entitled to claim any thing for the *ordinary assistance* they may be able to afford to a vessel in distress. But a passenger is not bound to remain on board a ship in the hour of danger, provided he can leave her; and if he perform any *extraordinary services*, he is entitled to a proportional recompence.

All cases with respect to proceedings for salvage may be brought either in the first instance, or by appeal, before the Court of Admiralty, provided, in the last case, the sum in dispute exceeds 50*l*. But the delays and expenses attending the proceedings of this court are such, that they have occasioned much dissatisfaction among commercial men. To obviate them, efforts which had been previously made were renewed and extended in 1846 by the 9 & 10 Vict. c. 99. This statute authorised salvage claims, for sums under 200*l*., to be decided by the award of 2 justices or their nominee, on the spot; and it also gave power to the Admiralty to appoint salvage commissioners in different ports to decide upon such claims. These attempts to expedite and cheapen salvage proceedings have not, however, had all the success that was anticipated. And a strong conviction seems to be growing up of the desirableness either of shortening and reducing the cost of Admiralty proceedings, or of bringing salvage cases before some less dilatory and less expensive tribunal. The existing rules and regulations as to salvage are embodied in the Mercantile Shipping Act, the 17 & 18 Vict. c. 104, part VIII., and are given below.

It appears from the preamble of the earliest act in regard to salvage, the 12 Ann. stat. 2. c. 18., that the infamous practices, once so common, of plundering ships driven on shore, and seizing whatever could be laid hold of as lawful property — (see WRECK), had not been then wholly abandoned; or that, if the property was restored to the owner, the demand for salvage was so exorbitant, that the inevitable ruin of the trader was the immediate consequence. To remedy those mischiefs in future it was enacted, that if a ship was in danger of being stranded, or being run ashore, the sheriffs, justices, mayors, constables, or officers of the customs, nearest the place of danger, should, upon application made to them, summon and call together as many men as should be thought neeessary to the assistance and for the preservation of such ship in distress, and cargo; and that if any ship, man-of-war, or merchantman, should be riding at anchor near the place of danger, the constables and officers of the customs might demand of the superior officers of such ship the assistance of her boats, and such hands as could be spared; and that, if the superior officer should refuse to grant such assistance, he should forfeit 100*l*.

And a clause to the same effect has been embodied in the Mercantile Shipping Act. We subjoin the clauses in this latter statute which have reference to salvage.

Salvage for Services rendered in U. K.—In the following cases, viz.,

Whenever any ship or boat is stranded or otherwise in distress on the shore of any sea or tidal water situate within the limits of the U. K., and services are rendered by any person,

(1.) In assisting such ship or boat:
(2.) In saving the lives of the persons belonging to such ship or boat:
(3.) In saving the cargo or apparel of such ship or boat, or any portion thereof:

And whenever any wreck is saved by any person other than a receiver within the U. K.:

There shall be payable by the owners of such ship or boat, cargo, apparel, or wreck, to the person by whom such services or any of them are rendered or by whom such wreck is saved, a reasonable amount of salvage, together with all expenses properly incurred by him in the performance of such services or the saving of such wreck, the amount of such salvage and expenses to be determined in case of dispute in manner herein mentioned. — § 458.

Salvage for Life may be paid by Board of Trade.—Salvage for the preservation of the life or lives of any person or persons belonging to any ship or boat, shall be payable by the owners of the ship or boat in priority to all other claims for salvage; and in cases where such ship or boat is destroyed, or where the value thereof is insufficient, after payment of the actual expenses incurred, to pay the amount of salvage due in respect of any life or lives, the B. of Trade may in its discretion award to the salvors of such life or lives out of the Mercantile Marine Fund such sum or sums as it deems fit, in whole or part satisfaction of any amount of salvage so left unpaid in respect of such life or lives. — § 459.

Disputes as to Salvage how to be settled.—Disputes with respect to salvage arising within the boundaries of the Cinque Ports shall be determined in the manner in which the same have hitherto been determined; but whenever any dispute arises elsewhere in the U. K. between the owners of any such ship, boat, cargo, apparel, or wreck as aforesaid, and the salvors, as to the amount of salvage, and the parties to the dispute cannot agree as to the settlement thereof by arbitration or otherwise,

Then, if the sum claimed does not exceed 200*l*., such dispute shall be referred to the arbitration of any 2 justices of the peace resident as follows; viz.

In case of wreck, resident at or near the place where such wreck is found.
In case of services rendered to any ship or boat, or to the persons, cargo, or apparel belonging thereto, resident at or near the place where such ship or boat is lying, or at or near the first port or place in the U. K. into which such ship or boat is brought after the occurrence of the accident by reason whereof the claim to salvage arises.
But if the sum claimed exceeds £200.,
Such dispute may, with the consent of the parties, be referred to the arbitration of such justices as aforesaid, but if they do not consent, shall in England be decided by the H. C. of Admiralty of England, in Ireland by the H. C. of Admiralty of Ireland, and in Scotland by the Court of Session; subject to this proviso, that if the claimants in such dispute do not recover in such Court of Admiralty or Court of Session a greater sum than 200*l.*, they shall not, unless the court certifies that the case is a fit one to be tried in a superior court, recover any costs, charges, or expenses incurred by them in the prosecution of their claim.

And every dispute with respect to salvage may be heard and adjudicated upon on the application either of the salvor or of the owner of the property salved, or of their respective agents. — § 460.

Manner in which Justices may decide Disputes.—Whenever in pursuance of this act any dispute as to salvage is referred to the arbitration of 2 justices, they may either themselves determine the same, with the power to call to their assistance any person conversant with maritime affairs as assessor, or they may, if a difference of opinion arise between them, or without such difference, if they think fit, appoint some person conversant with maritime affairs as umpire to decide the point in dispute; and such justices or their umpire shall make an award as to the amount of salvage payable, within the following times, that is to say, the said justices within 48 hours after such dispute has been referred to them, and the said umpire within 48 hours after his appointment, with power nevertheless for such justices or umpire by writing under their or his hands or hand to extend the time within which they and he are hereby respectively directed to make their or his award. — § 461.

Costs of Arbitration.—There shall be paid to every assessor and umpire who may be so appointed as aforesaid in respect of his services such sum not exceeding 5*l.* as the B. of Trade may from time to time direct; and all the costs of such arbitration, including any such payments as aforesaid, shall be paid by the parties to the dispute, in such manner and in such proportions as the said justices or umpire may direct by their or his award. — § 462.

Clause 463 authorises justices or their umpire to call for documents, and administer oaths.

Appeal to Courts of Admiralty.—If any person is aggrieved by the award made by such justices or umpire, he may in England appeal to the H. C. of Admiralty of England, in Ireland to the H. C. of Admiralty of Ireland, and in Scotland to the Court of Session; but no such appeal shall be allowed unless the sum in dispute exceed 50*l.*, nor unless within 10 days after the date of the award the appellant gives notice to the justices of his intention to appeal, nor unless the appellant proceeds to take out a monition, or to take such other proceeding as according to the practice of the court of appeal is necessary for the institution of an appeal, within 20 days from the date of the award. — § 464.

Clause 465 directs the justices to transmit copy of proceedings and certificate of value to court of appeal.

Payment of Salvage, to whom made in case of Dispute.—Whenever the aggregate amount of salvage payable for salvage services rendered in the U. K. has been finally ascertained either by agreement or by the award of such justices or their umpire, but a dispute arises as to the apportionment thereof amongst several claimants, then, if the amount does not exceed 200*l.*, it shall be lawful for the party liable to pay the amount to apply to the receiver of the district for liberty to pay the amount to him; and he shall, if he think fit, receive the same accordingly, and grant a certificate under his hand, stating the fact of such payment and the services for which it is made; and such certificate shall be a full discharge and indemnity to the person or persons to whom it is given, and to their ship, boats, cargo, apparel, and effects, against the claims of all persons whomsoever in respect of the services therein mentioned; but if the amount exceeds 200*l.*, it shall be apportioned in manner after mentioned. — § 466.

Apportionment of Salvage.—Upon the receipt of any such amount as aforesaid, the receiver shall with all convenient speed proceed to distribute the same among the several persons entitled thereto, upon such evidence and in such shares and proportions as he thinks fit, with power to retain any monies that may appear to him to be payable to any absent parties; but any distribution made in pursuance of this section shall be final and conclusive against the rights of all persons claiming to be entitled to any portion of the monies so distributed. — § 467.

Manner of enforcing Payment of Salvage.—Whenever any salvage is due to any person under this act, the receiver shall act as follows, viz.,

(1.) If the same is due in respect of services rendered in assisting any ship or boat, or in saving the lives of persons belonging to the same, or the cargo or apparel thereof,
He shall detain such ship or boat and the cargo and apparel belonging thereto until payment is made, or process has been issued by some competent court for the detention of such ship, boat, cargo, or apparel.

(2.) If the same is due in respect of the saving of any wreck and such wreck is not sold as unclaimed in pursuance of the provisions herein-after contained,
He shall detain such wreck until payment is made, or process has been issued in manner aforesaid.

But it shall be lawful for the receiver, if at any time previously to the issue of such process security is given to his satisfaction for the amount of salvage due, to release from his custody any ship, boat, cargo, apparel, or wreck detained by him; and in cases where the claim for salvage exceeds 200*l.* it shall be lawful in England for the H. C. of Admiralty of England, in Ireland for the H. C. of Admiralty of Ireland, and in Scotland for the Court of Session, to determine any question that may arise concerning the amount of the security to be given or the sufficiency of the sureties; and in all cases where bond or other security is given to the receiver for an amount exceeding 200*l.* it shall be lawful for the salvor or for the owner of the property salved, or their respective agents, to institute proceedings in such last-mentioned courts for the purpose of having the questions arising between them adjudicated upon, and the said courts may enforce payment of the said bond or other security, in the same manner as if bail had been given in the said courts. — § 468.

Power of Receiver to sell Property salved.— Whenever any ship, boat, cargo, apparel, or wreck is detained by any receiver for nonpayment of any sums so due as aforesaid, and the parties liable to pay the same are aware of such detention, then, in the following cases, viz.,

(1.) In cases where the amount is not disputed, and payment thereof is not made within 20 days after the same has become due:
(2.) In cases where the amount is disputed, but no appeal lies from the first tribunal to which the dispute is referred, and payment thereof is not made within 20 days after the decision of such first tribunal:
(3.) In cases where the amount is disputed, and an appeal lies from the decision of the first tribunal to some other tribunal, and payment thereof is not made within such 20 days as last aforesaid, or such monition as herein-before mentioned is not taken out within such 20 days, or such other proceedings as are according to the practice of such other tribunal necessary for the prosecution of an appeal are not instituted within such 20 days,

The receiver may forthwith sell such ship, boat, cargo, apparel, or wreck, or a sufficient part thereof, and out of the proceeds of the sale, after payment of all expenses thereof, defray all sums of money due in respect of expenses, fees, and salvage, paying the surplus, if any, to the owners of the property sold, or other the parties entitled to receive the same. — § 469.

Subject of Payment of Expenses, &c., Owner entitled to Wreck. — Subject to the payment of such expenses, fees, and salvage as aforesaid, the owner of any wreck who establishes his claim thereto to the satisfaction of the receiver within 1 year from the date at which such wreck has come into the possession of the receiver, shall be entitled to have the same delivered up to him. — § 470.

None of the previously mentioned clauses have any force within the Cinque Ports; but the Lord Warden is directed by stat. 1 & 2 Geo. 4. c. 76. to appoint 3 or more substantial persons in each of these towns, who are authorised to decide upon all claims for services of any sort or description rendered to any vessel, or for saving or preserving, within the jurisdiction, any goods or merchandise wrecked,

stranded, or cast away, or bringing anchors or cables ashore, &c. No commissioner can act for any other place than that in which, or within a mile of which, he is resident. Either party may, within 8 days of the award, declare his intention of bringing the matter before some competent Court of Admiralty; selecting, as he may judge best, the Admiralty of England, or that of the Cinque Ports. The provisions in this statute have been eulogised by Lord Tenterden for the cheap and easy means they afford for settling such questions.

Salvage by Ships of War.—A good deal of discussion has taken place in regard to the claims preferred by ships of war for salvage. In periods of war, when British merchantmen that have been captured by enemy's ships are recaptured by British ships of war, the latter are allowed a salvage of $\frac{1}{8}$th part of the recaptured ships and cargoes—(Stat. 43 Geo. 3. c. 160.) The same statute allows a salvage of one-sixth part of their value on ships recaptured by privateers. We subjoin the clause of the act:—

"If any ship or vessel taken as prize, or any goods therein, shall appear, in the Court of Admiralty, to have belonged to any of his Majesty's subjects, which were before taken by any of his Majesty's enemies, and at any time afterwards retaken by any of his Majesty's ships, or any privateer, or other ship or vessel under his Majesty's protection, such ships, vessels, and goods shall, in all cases (save as hereafter excepted), be adjudged to be restored, and shall be accordingly restored, to such former owner or owners, he or they paying for salvage, if retaken by any of *his Majesty's ships*, *one eighth* part of the true value thereof, to the flag officers, captains, &c., to be divided as the same act directs; and if retaken by any *privateer*, or other ship or vessel, *one sixth* part of the true value of such ships and goods, to be paid to the owners, officers, and seamen of such privateer or other vessel, without any deduction; and if retaken by the joint operation of one or more of his Majesty's ships, and one or more private ships of war, the judge of the Court of Admiralty, or other court having cognisance thereof, shall order such salvage, and in such proportions, to be paid to the captors by the owners, as he shall, under the circumstances of the case, deem fit and reasonable; but if such recaptured ship or vessel shall appear to have been set forth by the enemy as a ship or vessel of war, the said ship or vessel shall not be restored to the former owners, but shall in all cases, whether retaken by any of his Majesty's ships or any privateer, be adjudged lawful prize for the benefit of the captors."

Now, it is contended that if salvage from perils of the sea be allowed to Queen's ships it should not in any case exceed this amount. But it is argued by others that salvage to Queen's ships, even to this extent, is objectionable; that they are employed by the public for their security and protection; and that when they are assisting in saving lives or property from shipwreck or other casualty, they are merely doing their duty and are not entitled to any peculiar gratuity or reward. And on general principles we are inclined to think that this is the correct view of the matter; and that it is the bounden duty of Queen's ships to render gratuitously every assistance in their power to merchantmen in distress.

This, however, is a practical rather than a theoretical question. And the zeal of sailors in the discharge of a perilous duty may, perhaps, be sharpened by their being aware that by its successful performance they will entitle themselves, not merely to the public thanks, but to a considerable pecuniary reward. But it could not surely be meant that officers and men belonging to the royal navy were to be allowed equal claims for salvage as private parties, or that they were to be enriched at the expense of those whose property they had done their duty in helping to save. And yet cases have occurred which it is very difficult to explain on any other principle than this. It is not, therefore, surprising that the claims for salvage put forward by Queen's ships should, of late years, have been much canvassed and objected to. We subjoin the regulations which the Merchant Shipping Act of 1854 has laid down in regard to the making up and prosecution of such claims. But though it has amended some of the abuses complained of, it will not suffice for their eradication. Nothing would be so effectual for this purpose as to limit the *maximum* claim for salvage put forward by Queen's ships to $\frac{1}{8}$th part of the value of the property saved, as in cases of recapture. It is difficult to see what greater merit can attach to saving property from shipwreck than to recovering it from an enemy.

Salvage by H. M.'s Ships.—In cases where salvage services are rendered by any ship belonging to H. M. or by the commander or crew thereof, no claim shall be made or allowed for any loss, damage, or risk thereby caused to such ship, or to the stores, tackle, or furniture thereof, or for the use of any stores or other articles belonging to H. M. supplied in order to effect such services, or for any other expense or loss sustained by H. M. by reason of such services.—§ 484.

Claims for Salvage by H. M.'s Officers not to be determined without Consent of Admiralty.—No claim on account of any salvage services rendered to any ship or cargo or to any appurtenances of any ship by the commander or crew or part of the crew of any of H. M.'s ships shall be finally adjudicated upon unless the consent of the Admiralty has first been obtained, such consent to be signified by writing under the hand of the secretary to the Admiralty; and if any person who has originated proceedings in respect of any such claim fails to prove such consent to the satisfaction of the court, his suit shall stand dismissed, and he shall pay all the costs of such proceedings; provided that any document purporting to give such consent and to be signed by the secretary to the Admiralty shall be *primâ facie* evidence of such consent having been given.—§ 485.

Steps to be taken when Salvage Services have been rendered, &c.—Whenever services for which salvage is claimed are rendered to any ship or cargo, or to any part of them, or to any appurtenances of any ship, at any place out of the U. K. and the four seas adjoining thereto, by the commander or crew or part of the crew of any of H. M.'s ships, the property alleged to be salved shall, if the salvor is justified by the circumstances of the case in detaining it at all, be taken to some port where there is either a consular officer or a vice-admiralty court; and within 24 hours after arriving at such port the said salvor and the master or other person in charge of the property alleged to be salved shall each deliver to the consular officer or vice-admiralty judge there a statement verified on oath, specifying, so far as they respectively can, and so far as the particulars required apply to the case,

(1.) The place, condition, and circumstances in which the said ship, cargo, or property was at the time when the services were rendered for which salvage is claimed.
(2.) The nature and duration of the services rendered. And the salvor shall add to his statement.
(3.) The proportion of the value of the said ship, cargo, and property, and of the freight which he claims for salvage, of the values at which he estimates the said ship, freight, cargo, and property respectively, and the several amounts that he claims for salvage in respect of the same.
(4.) Any other circumstances he thinks relevant to the said claim.

And the said master or other person in charge of the said ship, cargo, or property shall add to his statement,

(3.) A copy of the certificate of registry of the said ship, and of the indorsements thereon, stating any change which (to his knowledge or belief) has occurred in the particulars contained in such certificate; and stating also, to the best of his knowledge and belief, the state of the title to the ship for the time being, and of the incumbrances and certificates of mortgage or sale, if any, affecting the same, and the names and places of business of the owners and incumbrancers.

(4.) The name and place of business or residence of the freighter (if any) of the said ship, and the freight to be paid for the voyage she is then on.

(5.) A general account of the quantity and nature of the cargo at the time the salvage services were rendered.

(6.) The name and place of business or residence of the owner of such cargo and of the consignee thereof.

(7.) The values at which the said master estimates the said ship, cargo, and property, and the freight respectively, or, if he thinks fit, in lieu of such estimated value of the cargo, a copy of the ship's manifest.

(8.) The amounts which the master thinks should be paid as salvage for the services rendered.

(9.) An accurate list of the property saved, in cases where the ship is not saved.

(10.) An account of the proceeds of the sale of the said ship, cargo, or property, in cases where the same or any of them are sold at such port as aforesaid.

(11.) The number, capacities, and condition of the crew of the said ship at the time the said services were rendered.

(12.) Any other circumstances he thinks relevant to the matters in question.

(13.) A statement of his willingness to execute a bond, in the form in the table marked W. in the schedule to this act, in such amount as the said consular officer or vice-admiralty judge may fix.—§ 486.

Consular Officer or Judge to fix Amount for which a Bond is to be given.—The said consular officer or judge, as the case may be, shall within 4 days after receiving the aforesaid statements fix the amount to be inserted in the said bond at such sum as he thinks sufficient to answer the demand for the salvage, services rendered; but such sum shall not exceed 1 half of the value which in his estimation the said ship freight, and cargo, or any parts thereof in respect of which salvage is claimed, are worth; and the said officer or judge may, if either of the aforesaid statements is not delivered to him within the time hereby required, proceed *ex parte*, but he shall in no case under this act require the cargo to be unladen; and the said consular officer may in any proceeding under this act relating to salvage take affidavits and receive affirmations. — § 487.

On Master executing Bond, the Right of Detention to cease.—The said consular officer or judge shall send notice of the sum which he has fixed as aforesaid to the said salvor and the said master; and upon such master executing a bond in form as aforesaid, with the said sum inserted therein, in the presence of the said officer or judge (who shall attest the same), and delivering the same to the said salvor, the right of the said salvor to detain or retain possession of the said ship, cargo, or property, or any of them, in respect of the said salvage claim, shall cease. — § 488.

Provision for additional Security in Case of Ships owned by Persons out of H. M.'s Dominions.—If the ship, cargo, or property in respect of which the claim for salvage is made is not owned by persons domiciled in H. M.'s dominions, the right of the salvor to detain or retain possession thereof shall not cease unless the master procures, in addition to the said bond, such security for the due performance of its conditions as the said officer or judge considers sufficient for the purpose, and places the same in the possession or custody of the said officer or judge, or, if the salvor so desires, in the possession or custody of the said officer or judge jointly with any other person whom he appoints for the purpose. — § 489.

Documents to be sent to England.—The said consular officer or judge shall at the earliest opportunity transmit the said statements and documents so sent to him, and a notice of the sum he has fixed as aforesaid, to the H. C. of Admiralty of England, or if the said salvor and the said master or other person in charge as aforesaid agree that the said bond shall be adjudicated upon by any vice-admiralty court, to such court. — § 490.

Whom the Bond shall bind.—The said bond shall bind the respective owners of the said ship, freight and cargo, and their respective heirs, executors, and administrators, for the salvage adjudged to be pay able in respect of the said ship, freight and cargo. — § 491.

Clause 492 specifies the court in which such bonds are to be adjudicated on.

Clause 493 gives power to the H. C. of Admiralty to enforce bonds.

Saving Clause.—Any salvor of any ship, cargo, or property who elects not to proceed under this act shall have no power to detain the said ship, cargo, or property, but may proceed otherwise for the enforcement of his salvage claim as if this act had not been passed; and nothing in this act contained shall abridge or affect the rights of salvors, except in the cases by it provided for. — § 494.

Documents free from Duty.—All bonds, statements, agreements, and other documents made or executed in pursuance of the eighth part of this act (WRECK AND SALVAGE), shall, if so made or executed out of the U. K., be exempt from stamp duty. — § 495.

Punishment for Forgery and false Representations.—Every person who, in any proceeding under the provisions contained in this act relating to salvage by H. M.'s ships, forges, assists in forging, or procures to be forged, or fraudulently altered, any document, and every person who in any such proceeding puts off or makes use of any such forged or altered document, knowing the same to be so forged or altered, or who gives or makes, or assists in giving or making, or procures to be given or made, any false evidence or representation, knowing the same to be false, shall be punishable with imprisonment, with or without hard labour, for any period not exceeding 2 years, or, if summarily prosecuted and convicted, by imprisonment, with or without hard labour, for any period not exceeding 6 months. — § 496.

Voluntary Agreement may be made which shall have the same Effect as the Bond above mentioned.—Whenever services for which salvage is claimed are rendered either by the commander or crew or part of the crew of any of H. M.'s ships, or of any other ship, and the salvor voluntarily agrees to abandon his lien upon the ship, cargo, and property alleged to be salved, upon the master of other person in charge thereof entering into a written agreement attested by two witnesses to abide the decision of the said H. C. of Admiralty or of any vice-admiralty court, and thereby giving security in that behalf to such amount as may be agreed on by the parties to the said agreement, such agreement shall bind the said ship and the said cargo and the freight payable therefor respectively, and the respective owners of the said ship, freight, and cargo for the time being, and their respective heirs, executors, and administrators, for the salvage which may be adjudged to be payable in respect of the said ship, cargo, and freight respectively to the extent of the security so given as aforesaid, and may be adjudicated upon and enforced in the same manner as the bonds previously provided for in the case of detention for salvage services rendered by H. M.'s ships; and upon such agreement being made the salvor and the master or other person in charge as aforesaid, shall respectively make such statements as before required to be made by them in case of a bond being given, except that such statements need not be made upon oath; and the salvor shall, as soon as practicable, transmit the said agreement and the said statements to the court in which the said agreement is to be adjudicated upon. — § 497.

Powers for Courts to apportion Salvage.—Whenever the aggregate amount of salvage payable in respect of salvage services rendered in the U. K. has been finally ascertained, and exceeds 200*l.*, and whenever the aggregate amount of salvage payable in respect of salvage services rendered elsewhere has been finally ascertained, whatever such amount may be, then if any delay or dispute arises as to the apportionment thereof, any court having admiralty jurisdiction may cause the same to be apportioned amongst the persons entitled thereto in such manner as it thinks just; and may for that purpose, if it think fit, appoint any person to carry such apportionment into effect, and may compel any person in whose hands or under whose control such amount may be to distribute the same, or to bring the same into court, to be there dealt with as the court may direct, and may for the purposes aforesaid issue such monitions or other processes as it thinks fit. — § 498.

In the case of neutral ships captured by an enemy, and retaken by British men-of-war

or privateers, the Courts of Admiralty have a discretionary power of allowing such salvage, and in such proportions, as, under the circumstances of each particular case, may appear just; but there is no positive law or binding regulation to which parties may appeal, for ascertaining the rate of such salvage. "The maritime law of England," says Lord Stowell, "having adopted a most liberal rule of restitution on salvage, with respect to the recaptured property of its own subjects, gives the benefit of that rule to its allies, till it appears that they act towards British property on a less liberal principle; *in such case it adopts their rule*, and treats them according to their own measure of justice."—(*Rob. Adm. Rep.* 54.)

Salvage is one of those charges which is usually provided against by insurance. When, however, the salvage is very high, and the object of the voyage so far defeated, the insured is, by the laws of this and all other maritime nations, allowed to abandon, and to call upon the insurer as for a total loss.—(See ABANDONMENT.)

For further information with respect to salvage, see *Abbot on the Law of Shipping*, part iii. c. 10., and *Maude and Pollock on do.*, c. 10.

SAMPLE, a small quantity of a commodity exhibited at public or private sales, as a specimen. Sugars, wool, spirits, wine, coffee, and, indeed, most species of merchandise, are sold by sample. If an article be not, at an average, equal to the sample by which it is sold, the buyer may cancel the contract, and return the article to the seller.

Subjoined is a list of most articles that may be warehoused, and of the quantities that may be taken out as samples.—(*Customs Min.* Oct. 11. 1825.)

Alkali or barilla,	5 lbs. per pile 5 tons.
Aloes	2 oz. per package.
Argol	½ lb. do.
Arrow root	2 lb. do.
Balsam capivi	2 oz. do.
Bark, Jesuits'	½ lb. do.
in general, except Jesuits'	½ lb. do.
Brimstone, rough,	2 lbs. per pile.
in rolls,	1 lb. per package.
Cassia	½ lb. do.
Cantharides	2 oz. do.
Capers	½ lb. do.
Cochineal	2 oz. do.
dust	2 oz. do.
Cocoa nut oil	½ pint each cask.
Coffee	2 oz. per bag.
Coloquintida	2 oz. per package.
Cocculus Indicus,	1 oz. do.
Cotton	4 oz. do.
Cream of tartar,	1 lb. do.
Currants	½ lb. do.
Essence of bergamot or lemon	1 oz. do.
Euphorbium	1 oz. do.
Feathers, bed	½ lb. per lot 6 bags.
Galls	1 lb. do.
Gentian	½ lb. do.
Ginger	8 oz. do.
Granilla, *see* Cochineal	
Gum Arabic	1 lb. per package.
Senegal	½ lb. do.
tragacanth	2 oz. do.
other gum	4 oz. do.
Honey	½ oz. do.
Jalap	1 oz. do.
Indigo	¼ lb. do.
Any further quantity (not exceeding 1½ lb.) to be charged with duty on delivery of the packages	
Isinglass	½ lb. per package.
Juice of lemons,	½ pint do.
Lac dye	1 oz. do.
Lead, black	1 lb. do.
Lemon peel	½ lb. each entry.
Liquorice juice	½ lb. per package.
root	½ lb. do.
Madder, manufactured	½ lb. do.
root	½ lb. do.
Oil of almonds	1 oz. do.
aniseed	1 oz. do.
bay	1 oz. do.
juniper	1 oz. do.
olive	½ pint per cask.
palm	½ pint do.
rosemary	1 oz. per package.
spike	1 oz. do
thyme	1 oz. do.
Orange peel	½ lb. do.
Orchella	2 oz. do.
Orrice root	½ lb. do.
Pepper	1 oz. per bag.
Pimento	2 oz. do.
Radix contrayervæ	1 oz. per package.
galanga	2 lb. per pile.
ipecacuanhæ	1 oz. per package.
senekæ	1 oz. do.
Raisins	½ lb. each mark.
Rhubarb	1 oz per package.
Rice	½ lb.
Saffron	½ oz. do.
Sago	2 lbs per pile.
Salep	1 oz. per package.
Sarsaparilla	1 oz. do.
Saltpetre	½ lb. do.
Seed, aniseed	1 oz. per package.
clover	2 oz. do.
caraway	2 oz. do.
lac	1 oz. do.
mustard	1 oz. do.
Senna	1 oz. do.
Shumac	1 lb. per lot 10 bags.
Silk, raw	2 oz. per package.
thrown	1 oz. do.
waste	2 oz. do.
Smalts	1 oz. do.
Spirits	½ pint per cask.
Sugar, foreign	2 oz. per bag.
	4 oz. per box not exceeding 5 cwt.
	8 oz. per box or chest exceeding 5 cwt.
	1½ lb. per hogshead.
	1½ lb. per tierce.
British plantation	½ lb. per chest.
	12 oz. per barrel.
	½ lb. molasses per hhd. or cask.
Tallow	4 lbs. per lot 10 pcks.
Tapioca	1 oz. per package.
Tea	3 oz. of each description and quality.
Turmeric	2 lbs. per pile.
Valonia	2 lbs. per lot.
Wax, bees'	½ lb. per package.
Wine	½ pint.
Wool, cotton	4 oz. per package.
sheep or lambs'	1 lb. do.
Spanish	1 lb. do.
Yarn, mohair	½ lb. do.
cotton	½ lb. do.
Mother of pearl shells	7 lbs. per lot of 10 packages.
Vermicelli	1 oz. per package.

SANDAL WOOD, the wood of a tree (*Santulum album* Lin.) having somewhat of the appearance of a large myrtle. It is of a deep yellow colour, and yields an agreeable perfume. The tree, when cut down, is usually about 9 inches in diameter at the root, but sometimes considerably more. After being felled, it is barked, cut into billets, and buried in a dry place for about a couple of months, during which time the white ants eat off the outer wood, without touching the heart, which is the sandal. It is then taken up and sorted, according to the size of the billets. The deeper the colour, and the nearer the root, the higher is the perfume. Reject such pieces as are of a pale colour, small, decayed, or have white wood about them; and take especial care that it be not mixed with wood resembling sandal, but without its perfume.—(*Milburn's Orient. Com.*)

Sandal wood is extensively employed by the Hindoos as a perfume, in their funeral ceremonies. But the Chinese are its principal consumers. They manufacture it into fans, and small articles of furniture, and use it, when ground into powder, as a cosmetic. During the year ended the 31st of Dec. 1818, there were imported by British vessels into Canton, 20,732 piculs of sandal wood, valued at 207,400 dollars (see *ante*, p. 251.); and the imports in some years are more than twice this amount. The average importation into Calcutta is about 200 tons a year. It grows principally in Malabar, in the mountainous country at a little distance from the low sea coast; in Timor; and in the Fejee Islands in the South Sea. Calcutta is principally supplied from Malabar, while China derives the larger portion of her supplies from Timor and the other islands. It is seldom brought to Europe, except by individuals for their own use, or as presents for their friends.—(*Bell's External Com. of Bengal*, pp. 49. and 85.; *Crawfurd's Indian Archipelago*, vol. iii. p. 421. &c.)

SANDARACH, a resinous substance, commonly met with in loose granules a little larger than a pea, of a whitish yellow colour, brittle, inflammable, of a resinous smell,

and acrid aromatic taste. It exudes, it is said, in warm climates, from cracks and incisions in the common juniper bush. It is used as a varnish, dissolved in spirits of wine.—(*Ainslie's Mat. Indica.*)

SANDWICH ISLANDS. This remote, but interesting group, is situated in the midst of the Pacific Ocean, in about the 21st degree of N. lat., and the 157th of W. long. It comprises 8 inhabited and 4 uninhabited islands, Owhyhee, where Captain Cook was killed, being the most considerable. They are of volcanic formation, and mountainous, some of the peaks rising in Owhyhee to between 13,000 and 14,000 feet in height! The population in 1847 is said to have amounted to above 112,000, of which nearly 40,000 belonged to Owhyhee. But it is a curious fact that the native population has been rapidly decreasing for some years past, and does not now probably exceed a third part of its amount at the epoch of their discovery. The islanders are honourably distinguished among the Polynesian nations, by the advances they have made in civilisation; and particularly by their progress in manufactures, navigation, and commerce. Christianity was introduced by the American missionaries in 1820, and is now the religion of the state; schools have been established, churches have been built, and the forms of religion are pretty well observed. European usages have become fashionable; and the costume of the better classes, women as well as men, closely resembles that of the Americans.

The principal port is Honolulu or Honororu, on the S. side of the island of Woahoo, in lat. 21° 18′ 3″ N., long. 157° 55′ W. Population about 8,500, of whom about 1,200 are Englishmen, Americans, and other foreigners. The harbour, to which the place owes all its importance, has a narrow entrance, but it is easy of access at all times of the tide to vessels not drawing more than 18 ft. water. The bar at its mouth being narrow and composed of soft coral, it might easily be made accessible even for line-of-battle ships.

The Sandwich Islands have been visited for a considerable number of years past by the whaling ships and traders in the Pacific. Latterly, however, or since the settlement of Oregon and California, and the discovery of the gold fields in the latter, they have acquired great additional importance from their peculiar aptitude to serve as a station for the ships and steamers engaged in the trade between these countries, Australia and China. In consequence, the town of Honolulu has increased so that the ground round the harbour is entirely occupied with houses and warehouses. The produce of the islands has also risen rapidly in value from its being in great demand for the provisioning of ships. And in the view of increasing its supply and of making up for the deficiency of the native population, it has been proposed to introduce Chinese labourers into the islands. The frequency of desertion among their crews has recently been the principal obstacle in the way of ships touching at Honolulu. But this, no doubt, will only be a temporary evil, and will cease with the cessation of the peculiar circumstances to which it owes its origin. A considerable number of ships belong to the port, belonging partly to natives, but principally to foreigners.

A newspaper in the English language is published in the town, in which we have noticed advertisements of ladies' shoes from Paris, *Eau-de-Cologne*, ices, &c.! The sovereignty of these islands was ceded, in February, 1843, to the British; but the cession was declined by the admiral commanding in chief in the Pacific.—(*Geog. Dict.* art. *Polynesia; Simpson's Sandwich Islands.*)

SAN FRANCISCO, the emporium of California, see SUPPLEMENT.

SAPAN WOOD is obtained from a species of the same tree that yields the Brazil wood (*Cæsalpinia Sapan* Lin.). It is a middle-sized forest tree, indigenous to Siam, Pegu, the Philippine Islands, &c. It has been employed for dyeing in the greater part of Asia for many centuries. It found its way into Europe some time before the discovery of America; and the imports are now very considerable. Its colouring matter differs but little from that of Brazil wood, but the best sapan wood does not yield more than half the quantity that may be obtained from an equal weight of Brazil wood, and the colour is not quite so bright.—(*Bancroft on Colours*, vol. ii. p. 329.) In 1852 the imports and exports of sapan wood amounted respectively to 979 and 395 tons.

SAPPHIRE (Ger. *Sapphir*; Du. *Saffiersteen*; Fr. *Saphir*; It. *Zaffiro*; Sp. *Safiro*, *Safir*; Rus. *Jachant*; Lat. *Sapphirus*), a precious stone in very high estimation. Colours blue and red; also gray, white, green, and yellow. It occurs in blunt-edged pieces, in roundish pebbles, and crystallised. Varies from transparent to translucent. Refracts double. After diamond, it is the hardest substance in nature. The blue variety, or sapphire, is harder than the ruby, or red variety. Brittle, specific gravity 4 to 4·2.

It is found in Bohemia, Saxony, France, &c.; but the red sapphire, or Oriental ruby, is not found in any considerable quantity anywhere except in Ava. Next to diamond, sapphire is the most valuable of the gems. The white and pale blue varieties, by exposure to heat, become snow white, and, when cut, exhibit so high a degree of lustre, that they are used in place of diamonds. The most highly prized varieties are the crimson and carmine red; these are the Oriental *ruby* of the jeweller; the next is *sapphire*; and last, the yellow or Oriental *topaz*. The *asterias*, or star-stone, is a very beautiful variety, in which the colour is generally of a reddish violet, and the form a rhomboid, with truncated apices, which exhibit an opalescent lustre.*—(See RUBY.)

Mr. Crawford gives the following details with respect to the sapphire and ruby mines of Ava:—"The precious stones ascertained to exist in the Burmese territory are chiefly those of the sapphire family,

* Professor Jameson says, in his *Mineralogy*, that some peculiarly beautiful sapphires are found in the Capelan mountains, in Pegu. But we are not aware that there are any such mountains in any part of the world; and, in point of fact, there are no mountains in Pegu, nor have any precious stones been ever found in it.

and the spinelle ruby. They are found at 2 places, not very distant from each other, called Mogaut and Kyatpëan, about 5 days' journey from the capital, in an E. S.E. direction. From what I could learn, the gems are not obtained by any regular mining operations, but by digging and washing the gravel in the beds of rivulets or small brooks. All the varieties of the sapphire, as well as the spinelle, are found together, and along with them large quantities of corundum. The varieties ascertained to exist, are the Oriental sapphire; the Oriental ruby, or red stone; the opalescent ruby, or cat's eye ruby; the star ruby; the green; the yellow and the white sapphires; and the Oriental amethyst. The common sapphire is by far the most frequent, but, in comparison with the ruby, is very little prized by the Burmese, in which they agree with other nations. I brought home with me several of great size, the largest weighing no less than 3,630 grains, or above 907 carats. The spinelle ruby (zebu-gaong) is not unfrequent in Ava, but is not much valued by the natives. I brought with me to England a perfect specimen, both as to colour and freedom from flaws, weighing 22 carats. The sapphire and ruby mines are considered the property of the king; at least he lays claim to all stones that exceed in value a viss of silver, or 100 ticals. The miners, it appears, endeavour to evade this law by breaking the large stones into fragments. In the royal treasury there are, notwithstanding, many fine stones of both descriptions. The year before our visit, the king received from the mines a ruby weighing 124 grains; and the year preceding that, 8 good ones, but of smaller size. No stranger is permitted to visit the mines; even the Chinese and Mohammedans residing at Ava are carefully excluded."—(*Journal of an Embassy to the Court of Ava*, p. 442.)

SARCOCOLLA, a subviscid, sweetish, and somewhat nauseous gum resin. It is brought from Arabia and Persia in small grains of a pale yellow colour; the whitest, as being the freshest, is preferred. It is but seldom imported. — (*Milburn's Orient. Com.*)

SARDINES, OR SARDINIAS (Ger. *Sardellen;* Fr. *Sardines;* It. *Sardine;* Sp. *Sardinas*), a species of fish of the herring tribe, but smaller. They are taken in considerable quantities on our coasts, and are exceedingly plentiful on the coasts of Algarve in Portugal, Andalusia and Granada in Spain, and along the shores of Italy. The small sardines, caught on the coast of Provence, in France, are esteemed the best. From 1,000 to 1,200 fishing smacks are engaged in catching these fish on the coast of Britany, from June to the middle of October. The French frequently cure them in red brine; and when thus prepared, designate them *anchoisées*, or *anchovied sardines*. These are packed in vessels previously employed for holding wine, and exported to the Levant. When perfectly fresh, sardines are accounted excellent fish; but if kept for any time, they entirely lose their flavour, and become quite insipid.

SARDONYX, a precious stone, a variety of chalcedony.

The ancients selected this substance to engrave upon, no doubt, from its possessing two peculiar and necessary qualities, viz. hardness and tenacity, by which it is capable of receiving the finest touch or stroke of the tool without chipping, and showing the art of the engraver to the highest perfection.—(*Mawe on Diamonds*, 2d ed. p. 121.)

SARSAPARILLA (Ger. *Sarsaparille;* Fr. *Salsepareille;* It. *Salsapariglia;* Sp. *Zarzaparilla*), the root of the *Smilax Sarsaparilla*, a plant growing in South America and the West Indies. It is imported in bales. It is known in the London market by the names of Lisbon, Honduras, and Vera Cruz, but it is also brought from Jamaica. The Lisbon root, which is the produce of Brazil, has a reddish or dark brown cuticle, is internally farinaceous, and more free from fibre than the other kinds: the Honduras has a dirty brown, and sometimes whitish, cuticle; it is more fibrous, and has more ligneous matter, than the Lisbon and Vera Cruz. It is in long slender twigs, covered with a wrinkled brown cuticle, and has a small woody heart. The Jamaica differs from the others, in having a deep red cuticle of a close texture; and the red colour partially diffused through the ligneous part. The root is inodorous, and has a mucilaginous, very slightly bitter taste: the bark is the only useful part of the plant; the ligneous part being tasteless, inert, woody fibre.—(*Thomson's Dispensatory.*) A duty of 6*d.* per lb. on its importation, after being reduced in 1842 to 1*d.*, was repealed in 1845. The imports and exports in 1852 were respectively 280,945 and 72,774 lbs.

SASSAFRAS (Ger. and Fr. *Sassafras;* It. *Sassafrasso;* Sp. *Sassafras,*) a species of laurel (*Laurus Sassafras* Lin.), a native of the southern parts of North America, Cochin-China, and several of the Indian Islands. Sassafras wood, root, and bark have a fragrant odour, and a sweetish aromatic taste. The wood is of a brownish white colour; and the bark ferruginous within, spongy, and divisible into layers. Their sensible qualities and virtues depend on an essential oil, which may be obtained separate by distilling the chips or the bark with water. It is very fragrant, hot, and penetrating to the taste, of a pale yellow colour, and heavier than water. It is used only in the materia medica.—(*Thomson's Dispensatory.*) Imports and exports in 1852 respectively 720 and 254 cwt.

SAUNDERS (RED) (Arab. *Sundal-ahmer;* Hind. *Ruckut-chundum*), the wood of a lofty tree (*Pterocarpus santalinus*) indigenous to various parts of India, Ceylon, Timor, &c. The wood is brought to Europe in billets, which are very heavy, and sink in water. It is extremely hard, of a fine grain, and a bright garnet red colour, which brightens on exposure to the air. It is employed to dye lasting reddish brown colours on wool. It yields its colouring matter to ether and alcohol, but not to water.—(*Thomson's Dispensatory; Bancroft on Colours*, vol. ii. p. 236.) The quantity imported, which used to be inconsiderable, am unted in 1852 to 849 tons, of which 552 were re-exported.

SCAMMONY (Ger. *Skammonien*; Fr. *Scammonée*; It. *Scammonea*; Sp. *Escamonea*), a gum-resin, the produce of a species of convolvulus, or creeper plant, which grows abundantly in Syria. When an incision is made into the roots, they yield a milky juice, which being kept, grows hard, and is the scammony of the shops. It is imported from Aleppo in what are called drums, weighing from 75 to 125 lbs. each; and from Smyrna in cakes like wax, packed in chests. The former is light and friable, and is considered the best; that from Smyrna is more compact and ponderous, less friable, and fuller of impurities. It has a peculiar heavy odour, not unlike that of old cheese; and a bitterish, slightly acrid taste. The colour is blackish or bluish grey, changing to dirty white, or lathering when the surface is rubbed with a wet finger. Its specific gravity is 1·235. It is very liable to be adulterated; and when of a dark colour, heavy, and splintery, it ought to be rejected. It is used only in medicine.— (*Thomson's Dispensatory.*) The duty on scammony, after being reduced in 1832 and 1842, was abolished in 1845. Imports, in 1852, 11,638 lbs.

SCULPTURES, figures cut in stone, metal, or other solid substance, representing or describing some real or imaginary object. The art of the sculptor, or statuary, was carried to the highest pitch of excellence in ancient Greece. Fortunately, several of the works of the Grecian sculptors have been preserved; and serve at once to stimulate and direct the genius of modern artists.

Models, are casts or representations of sculptures.

The act 54 Geo. 3. c. 56. vests the property of sculptures, models, copies, and casts in the proprietor for 14 years; provided he cause his name, with the date, to be put on them before they are published; with the same term in addition, if he should be living at the end of the first period. In actions for piracy, double costs to be given. The act 6 Geo. 4. c. 107. prohibits the importation, on pain of forfeiture, of any sculptures, models, casts, &c. first made in the U. Kingdom.

SEAL (Lat. *Sigillum*), a stone, piece of metal, or other solid substance, generally round or elliptical, on which is engraved the arms, crest, name, device, &c. of some state, prince, public body, or private individual. It is employed as a stamp to make an impression on sealing wax, thereby authenticating public acts, deeds, &c., or to close letters or packets. Seals were very early invented, and much learning has been employed in tracing their history, and explaining the figures upon them. — See particularly the work of *Hopkinck, De Sigillorum Prisco et Novo Jure*, 4to, 1642.) They are now very generally used.

The best are usually formed of precious stones, on which the crest or the initials of the person's name are engraved, set in gold. But immense numbers are formed of stained glass, and set in gilt copper. They are manufactured at London, Birmingham, &c., and are extensively exported.

SEAL FISHERY. The seal, an amphibious animal, of which there are many varieties, is found in vast numbers in the seas round Spitzbergen, and on the coasts of Labrador and Newfoundland. As it frequents the British shores, it is well known, and has been repeatedly described. Seals are principally hunted for their oil and skins. When taken in the spring of the year, when they are fattest, a full grown seal will yield from 8 to 12 gallons of oil, and a small one from 4 to 5 gallons. The oil, when extracted before putrefaction has commenced, is beautifully transparent, free from smell, and not unpleasant in its taste. The skin, when tanned, is extensively employed in the making of shoes; and when dressed with the hair on, serves for the covering of trunks, &c. For an account of the imports of seal-skins, see art. SKINS.

"To the Esquimaux the seal is of as much importance as bread to a European. Its flesh forms their most usual food; the fat is partly dressed for eating, and partly consumed in their lamps; the liver, when fried, is esteemed, even among sailors, as an agreeable dish. The skin, which the Esquimaux dress by processes peculiar to themselves, is made waterproof. With the hair off, it is used as coverings, instead of planks, for their boats, and as outer garments for themselves; shielded with which, they can invert themselves and canoes in the water, without getting their bodies wet. It serves also for coverings for their tents, and for various other purposes. The jackets and trowsers made of seal-skin by the Esquimaux are in great request among the whale fishers for preserving them from oil and wet."— (*Scoresby's Arctic Regions*, vol. i. p. 510.)

Seals in fine weather prefer the ice to the water, and vast herds of them are frequently found lying on the field ice; the places where they are met with being thence called "seal meadows." The seal hunters endeavour to surprise them while sleeping, and to intercept their retreat to the water. They attack them with muskets and bludgeons, but principally the latter, they being easily despatched by a blow on the nose.

The seal fishery has long been prosecuted to a considerable extent in the northern seas by ships from the Elbe and the Weser; but very few ships have been sent out for *sealing* only from England, though occasionally some of the whale ships have taken large quantities of seals. Latterly, however, the seal fishery has been prosecuted on a large scale, and with extraordinary success, by vessels of from 60 to 120 tons each, having crews of from 16 to 30 men, fitted out from the ports of Newfoundland, Nova Scotia, &c. The business is attended with a good deal of risk, and instances frequently occur of the vessels being crushed to pieces by the collision of the fields of ice. We borrow the following details from Mr. Bliss's tract on the *Trade, Statistics, &c. of Canada and our North American Possessions.*

"There is another department of the colonial fishery which has originated within no distant period, and is now of great extent and importance. The large fields of ice which, in the months of March and April, drift southward from the Polar seas, are accompanied by many herds of seals; these are found sleeping in what are called the seal meadows of the ice, and are there attacked and slaughtered in vast numbers. For this purpose the fishers of Newfoundland, from which island these voyages are principally made, without waiting till the return of spring shall have opened their harbours, saw channels through the ice for their vessels, and set sail in quest of those drifting fields, through the openings of which they work a passage, attended with great difficulties and dangers, till they encounter their prey on the seal

meadows. This bold and hazardous enterprise seems well compensated by its success. The number of seals thus taken is almost incredible, and is greatly on the increase."—(p. 70.) There were captured by the Newfoundland fishermen, in 1838, 275,361 seals; in 1839, 437,501. Large quantities are also taken by the Nova Scotia and Labrador fishermen.

See also *M'Gregor's British America*, 2d. edit. vol. i. p. 197. &c. There is a good account of the seal in *Laing's Voyage to Spitzbergen*. For the price of seal oil, see OIL.

SEALING WAX (Ger. *Siegellack*; Fr. *Cire d'Espagne, Cire à cacheter*; It. *Cera Lacca, Cera di Spagna*; Sp. *Lacre*; Rus. *Surgutsch*), the wax used for sealing letters, legal instruments, &c. It is a composition of gum lac, melted and incorporated with resin, and afterwards coloured with some pigment, as vermilion, verditer, ivory black, &c.

SEAMEN, the individuals engaged in navigating ships, barges, &c., upon the high seas. Those employed for this purpose upon rivers, lakes, or canals, are denominated watermen.

Formerly a *British Seaman* was a natural born subject of her Majesty; or was naturalised by act of parliament; or made a denizen by letters of denization; or had become a British subject by the conquest or cession of some newly acquired territory; or (being a foreigner) had served on board Her Majesty's ships of war, in time of war, for the space of 2 or 3 years. But these distinctions are now (1855) entirely done away. It is no longer necessary that British ships should be either wholly or in part manned by British subjects. In this respect the greatest possible licence has been given to our ship-owners, who are at full liberty to employ all descriptions of hands, whether native or foreign, in navigating their ships. Hence the term "seamen," now includes all persons (except masters, pilots, and apprentices duly indentured and registered), without regard to their origin, "employed or engaged in any capacity on board of any ship."—17 & 18 Vict. c. 104. Introd.

Various regulations have been enacted with respect to the hiring of seamen, their conduct while on board, and the payment of their wages. These regulations differ in different countries; but, in all, they have been intended to obviate the disputes that might otherwise arise between masters and seamen in regard to the terms of the contract between them, to secure due obedience to the orders of the former, and to interest the latter in the completion of the voyage.

The more important particulars in the law of England in regard to seamen are embodied in the 17 & 18 Vict. c. 104, and will be found, with some occasional remarks, in the following article. In the first place it is necessary to inquire by whom they may be hired.

1. *Who may hire Seamen.* — Seamen have long been subjected to imposition from the fraudulent practices of persons offering to find them employment, by falsely representing themselves as agents for, or as having an interest in certain ships, and engaging or pretending to engage seamen to serve therein. In the view of obviating such practices in future, it is laid down in the Merchant Shipping Act, the 17 & 18 Vict. c. 104., that the B. of Trade may grant licences to such individuals as it thinks fit, empowering them to engage or supply seamen or apprentices to merchant ships. But, with the exception, — 1st, of the parties so licensed; 2nd, of the owner, master, or mate, or persons in the *bonâ fide* and constant employment of the owner of a ship requiring men or apprentices; and 3rd, of a regularly appointed shipping master, all other parties are prohibited under a penalty of 20*l.* from engaging or supplying seamen. The following are the clauses having reference to this subject.

Board of Trade may license Persons to procure Seamen. — The B. of Trade may grant to such persons as it thinks fit licences to engage or supply seamen or apprentices for merchant ships in the U. K., to continue for such periods, to be upon such terms, and to be revocable upon such conditions, as such Board thinks proper. — 17 & 18 Vict. c. 104. s. 146.

Penalties for supplying Seamen without Licence, &c. — The following offences shall be punishable as herein mentioned; viz.

(1.) If any person not licensed as aforesaid, other than the owner or master or a mate of the ship, or some person who is *bonâ fide* the servant and in the constant employ of the owner, or a shipping master duly appointed as aforesaid, engages or supplies any seaman or apprentice to be entered on board any ship in the U. K., he shall for each seaman or apprentice so engaged or supplied incur a penalty not exceeding £20:

(2.) If any person employ any unlicensed person, other than persons excepted as above, for the purpose of engaging or supplying any seaman or apprentice to be entered on board any ship in the United Kingdom, he shall for each seaman or apprentice so engaged or supplied incur a penalty not exceeding £20, and if licensed shall in addition forfeit his licence:

(3.) If any person knowingly receives or accepts to be entered on board any ship any seaman or apprentice who has been engaged or supplied contrary to the provisions of this act, he shall for every seaman or apprentice so engaged or supplied incur a penalty not exceeding £20.—§147.

Penalty for receiving Remuneration from Seamen. — If any person demands or receives, either directly or indirectly, from any seaman or apprentice, or from any person seeking employment as a seaman or apprentice, or from any person on his behalf, any remuneration whatever, other than the fees hereby authorized, for providing him with employment, he shall for every such offence incur a penalty not exceeding 5*l.*—§ 148.

2. *Conditions under which Seamen are to be engaged.* — In 1835 an act was passed (5 & 6 W. 4. c. 19.) of much importance to seamen, and to persons connected with navigation. It laid down the various forms and regulations to be observed in hiring, paying, and discharging seamen; established an office for their registry; and prescribed

the mode in which lists of crews were to be transmitted to the registrar. It also regulated the conditions under which seamen might, in certain cases, be left in foreign parts, with a variety of other particulars; at the same time that it repealed sundry statutes, the provisions of which had become obsolete.

Further modifications were made in this system in 1844, by the 7 & 8 Vict. c. 112., and again by the Mercantile Marine Act of 1850, the 13 & 14 Vict. c. 93. The existing law regulating the conditions in the agreements to be made with seamen, is embodied in the Mercantile Shipping Act, as follows, viz.

Agreements to be made with Seamen.—The master of every ship, except ships of less than 80 tons registered tonnage, exclusively employed in trading between different ports on the coasts of the U. K., shall enter into an agreement with every seaman whom he carries to sea from any port in the U. K. as one of his crew in the manner after mentioned; and every such agreement shall be in a form sanctioned by the B. of Trade, and shall be dated at the time of the first signature thereof, and shall be signed by the master before any seaman signs the same, and shall contain the following particulars as terms thereof, viz.:—

(1.) The nature, and, as far as practicable, the duration of the intended voyage or engagement:
(2.) The number and description of the crew, specifying how many are engaged as sailors:
(3.) The time at which each seaman is to be on board or to begin work:
(4.) The capacity in which each seaman is to serve:
(5.) The amount of wages which each seaman is to receive:
(6.) A scale of the provisions which are to be furnished to each seaman:
(7.) Any regulations as to conduct on board, and as to fines, short allowance of provisions, or other lawful punishments for misconduct, which have been sanctioned by the Board of Trade as regulations proper to be adopted, and which the parties agree to adopt:

And every such agreement shall be so framed as to admit of stipulations, to be adopted at the will of the master and seaman in each case, as to advance and allotment of wages, and may contain any other stipulations which are not contrary to law; provided that if the master of any ship belonging to any British possession has an agreement with his crew made in due form according to the law of the possession to which such ship belongs or in which her crew were engaged, and engages single seamen in the U. K., such seamen may sign the agreement so made, and it shall not be necessary for them to sign an agreement in the form sanctioned by the B. of Trade.—§ 149.

Agreements for Foreign-going Ships to be made before and attested by a Shipping Master.—In the case of all foreign-going ships, in whatever part of H. Majesty's dominions the same are registered, the following rules shall be observed with respect to agreements, viz.:—

(1.) Every agreement made in the U. K. (except in the cases of agreements with substitutes herein-after provided for) shall be signed by each seaman in the presence of a shipping master:
(2.) Such shipping master shall cause the agreement to be read over and explained to each seaman, or otherwise ascertain that each seaman understands the same before he signs it, and shall attest each signature:
(3.) When the crew is first engaged the agreement shall be signed in duplicate, and one part shall be retained by the shipping master, and the other part shall contain a special place or form for the descriptions and signatures of substitutes or persons engaged subsequently to the first departure of the ship, and shall be delivered to the master:
(4.) In the case of substitutes engaged in the place of seamen who have duly signed the agreement, and whose services are lost within 24 hours of the ship's putting to sea by death, desertion, or other unforeseen cause, the engagement shall, when practicable, be made before some shipping master duly appointed in the manner herein-before specified; and whenever such last-mentioned engagement cannot be so made, the master shall, before the ship puts to sea, if practicable, and if not, as soon afterwards as possible, cause the agreement to be read over and explained to the seamen; and the seamen shall thereupon sign the same in the presence of a witness, who shall attest their signatures.—§ 150.

Foreign-going Ships making short Voyages may have running Agreements.—In the case of foreign-going ships making voyages averaging less than 6 months duration, running agreements with the crew may be made to extend over two or more voyages, so that no such agreement shall extend beyond the next following 30th of June or 31st day of December or the first arrival of the ship at her port of destination in the U. K. after such date, or the discharge of cargo consequent upon such arrival; and every person entering into such agreement, whether engaged upon the first commencement thereof or otherwise, shall enter into and sign the same in the manner hereby required for other foreign-going ships; and every person engaged thereunder, if discharged in the U. K., shall be discharged in the manner hereby required for the discharge of seamen belonging to other foreign-going ships.—§ 151.

Engagement and Discharge of Seamen in the meantime.—The master of every foreign-going ship for which such a running agreement as aforesaid is made shall, upon every return to any port in the U. K. before the final termination of the agreement, discharge or engage before the shipping master at such port any seaman whom he is required by law so to discharge or engage, and shall upon every such return indorse on the agreement a statement (as the case may be) either that no such discharges or engagements have been made, or are intended to be made, before the ship again leaves port, or that all such discharges or engagements have been duly made as herein-before required, and shall deliver the agreement so indorsed to the shipping master; and any master who wilfully makes a false statement in such indorsement shall incur a penalty not exceeding 20*l.*; and the shipping master shall also sign an indorsement on the agreement to the effect that the provisions of this act relating to such agreement have been complied with, and shall re-deliver the agreement so indorsed to the master.—§ 152.

Duplicates of running Agreements.—In cases in which such running agreements are made, the duplicate agreement retained by the shipping master upon the first engagement of the crew shall either be transmitted to the Registrar-General of Seamen immediately, or be kept by the shipping master until the expiration of the agreement, as the B. of Trade directs.—§ 153.

Fees to be paid on such running Agreements.—For the purpose of determining the fees to be paid upon the engagement and discharge of seamen belonging to foreign-going ships which have running agreements as aforesaid, the crew shall be considered to be engaged when the agreement is first signed, and to be discharged when the agreement finally terminates, and all intermediate engagements and discharges shall be considered to be engagements and discharges of single seamen.—§ 154.

In Home Trade Ships Agreement to be entered into before a Shipping Master, &c.—In the case of home trade ships, crews or single seamen may, if the master thinks fit, be engaged before a shipping master in the manner herein-before directed with respect to foreign-going ships; and in every case in which the engagement is not so made, the master shall, before the ships put to sea, if practicable, and if not, as soon afterwards as possible, cause the agreement to be read over and explained to each seaman, and the seaman shall thereupon sign the same in the presence of a witness, who shall attest his signature.—§ 155.

Special Agreements for Home Trade Ships belonging to same Owners.—In cases where several home trade ships belong to the same owner, the agreement with the seamen may, notwithstanding anything herein contained, be made by the owner instead of by the master, and the seamen may be engaged to serve in any two or more of such ships, provided that the names of the ships and the nature of the service are specified in the agreement; but with the foregoing exception all provisions herein contained which relate to ordinary agreements for home trade ships shall be applicable to agreements made in pursuance of this section.—§ 156.

Penalty for shipping Seamen without Agreement duly executed.—If in any case a master carries any seaman to sea without entering into an agreement with him in the form and manner, and at the place and time hereby in such case required, the master in the case of a foreign-going ship, and the master or owner in the case of a home trade ship, shall for each such offence incur a penalty not exceeding 5*l.*—§ 157.

Changes in Crew to be reported.—The master of every foreign-going ship of which the crew has been engaged before a shipping master shall before finally leaving the U. K. sign and send to the nearest shipping master a full and accurate statement in a form sanctioned by the Board of Trade of every change which takes place in his crew before finally leaving the U. K., and in default shall for each offence incur a penalty not exceeding 5*l.*; and such statement shall be admissible in evidence, subject to all just exceptions.—§ 158.

Seamen engaged in the Colonies to be shipped before some Shipping Master, &c.—Every master of a ship who, if such ship is registered in the U. K. engages any seaman in any British possession, or if such ship belongs to any British possession engages any seaman in any British possession other than that to which the ship belongs, shall, if there is at the place where such seaman is engaged any official shipping master or other officer duly appointed for the purpose of shipping seamen, engage such seaman before such shipping master, and if there is no such shipping master or officer, then before some officer of customs; and the same rules, qualifications, and penalties as are herein-before specified with respect to the engagement of seamen before shipping masters in the U. K. shall apply to such engagements in a British possession; and upon every such engagement such shipping master or officer as aforesaid shall indorse upon the agreement an attestation to the effect that the same has been signed in his presence, and otherwise made as hereby required; and if in any case such attestation is not made, the burden of proving that the seaman was duly engaged as hereby required shall lie upon the master.—§ 159.

Seamen engaged in Foreign Ports to be shipped with the Sanction and in the Presence of the Consul.—Every master of a British ship who engages any seaman at any place out of H. M.'s dominions in which there is a British consular officer shall, before carrying such seaman to sea, procure the sanction of such officer, and shall engage such seaman before such officer; and the same rules as are herein-before contained with respect to the engagement of seamen before shipping masters in the U. K. shall apply to such engagements made before consular officers; and upon every such engagement the consular officer shall indorse upon the agreement his sanction thereof, and an attestation to the effect that the same has been signed in his presence, and otherwise made as hereby required; and every master who engages any seaman in any place in which there is a consular officer, otherwise than as herein-before required, shall incur a penalty not exceeding 20*l.*; and if in any case the indorsement and attestation hereby required is not made upon the agreement, the burden of proving the engagement to have been made as herein-before required shall lie upon the master.—§ 160.

Rules as to Production of Agreements and Certificates.—The following rules shall be observed with respect to the production of agreements and certificates of competency or service for foreign-going ships; viz.

(1.) The master of every foreign-going ship shall, on signing the agreement with his crew, produce to the shipping master before whom the same is signed the certificates of competency or service which the said master and his first and second mate or only mate, as the case may be, are required to possess; and upon such production being duly made, and the agreement being duly executed as hereby required, the shipping master shall sign and give to the master a certificate to that effect.

(2.) In the case of running agreements for foreign-going ships, the shipping master shall, before the second and every subsequent voyage made after the first commencement of the agreement, sign and give to the master, on his complying with the provisions herein contained with respect to such agreements, and producing to the shipping master the certificate of competency or service of any first, second, or only mate then first engaged by him, a certificate to that effect.

(3.) The master of every foreign-going ship shall, before proceeding to sea, produce the certificate so to be given to him by the shipping master as aforesaid, to the Collector or Comptroller of Customs; and no officer of customs shall clear any such ship outwards without such production; and if any such ship attempts to go to sea without a clearance, any such officer may detain her until such certificate as aforesaid is produced.

(4.) The master of every foreign-going ship shall, within 48 hours after the ship's arrival at her final port of destination in the U. K., or upon the discharge of the crew, whichever first happens, deliver such agreement to a shipping master at the place; and such shipping master shall thereupon give to the master a certificate of such delivery; and no officer of customs shall clear any foreign-going ship inwards without the production of such certificate.

And if the master of any foreign-going ship fails to deliver the agreement to a shipping master at the time and in the manner hereby directed, he shall for every default incur a penalty not exceeding 5*l.*—§ 161.

Rules as to Production of Agreements and Certificates for Home Trade Ships.—The following rules shall be observed with respect to the production of agreements and certificates of competency or service for home trade ships, viz.

(1.) In the case of home trade ships of more than 80 tons burden, no agreement shall extend beyond the next following 30th of June or 31st of December, or the first arrival of the ship at her final port of destination in the U. K. after such date, or the discharge of cargo consequent upon such arrival.

(2.) The master or owner of every such ship shall, within 21 days after the 30th of June and the 31st of December in every year, transmit or deliver to some shipping master in the U. K. every agreement made within 6 calendar months next preceding such days respectively, and shall also, in the case of home-trade passenger ships, produce to the shipping master the certificates of competency or service which the said master and his first or only mate, as the case may be, are hereby required to possess.

(3.) The shipping master shall thereupon give to the master or owner a certificate of such delivery and production; and no officer of customs shall grant a clearance or transire for any ship as last aforesaid without the production of such certificate; and if any such ship attempts to ply or go to sea without such clearance or transire, any such officer may detain her until the said certificate is produced.

And if the agreement for any home trade ship is not delivered or transmitted by the master or owner to a shipping master at the time and in the manner hereby directed, such master or owner shall for every default incur a penalty not exceeding 5*l.*—§ 162.

Alterations to be void unless attested to have been made with the Consent of all Parties.—Every erasure, interlineation, or alteration in any such agreement with seamen as is required by the third part of this act (except additions so made as herein-before directed for shipping substitutes or persons engaged subsequently to the first departure of the ship) shall be wholly inoperative, unless proved to have been made with the consent of all the persons interested in such erasure, interlineation, or alteration by the written attestation (if made in H. M.'s dominions) of some shipping master, justice, officer of customs, or other public functionary, or (if made out of H. M.'s dominions) of a British consular officer, or, where there is no such officer, of two respectable British merchants.—§ 163.

Penalty for falsifying Agreement.—Every person who fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, or makes, or assists in making, or procures to be made, any false entry in, or delivers, assists in delivering, or procures to be delivered, a false copy of any agreement, shall for each such offence be deemed guilty of a misdemeanor.—§ 164.

Seamen not to be bound to produce Agreement.—Any seaman may bring forward evidence to prove the contents of any agreement or otherwise to support his case, without producing or giving notice to produce the agreement or any copy thereof.—§ 165.

Copy of Agreement to be made accessible to Crew.—The master shall at the commencement of every voyage or engagement cause a legible copy of the agreement (omitting the signatures) to be placed or posted up in such part of the ship as to be accessible to the crew, and in default shall for each offence incur a penalty not exceeding 5*l.*—§ 166.

Seamen discharged before Voyage to have Compensation.—Any seaman who has signed an agreement, and is afterwards discharged before the commencement of the voyage, or before one month's wages are earned, without fault on his part justifying such discharge and without his consent shall be entitled to receive from the master or owner, in addition to any wages he may have earned, due compensation for the damage thereby caused to him, not exceeding one month's wages, and may, on adducing such

evidence as the court hearing the case deems satisfactory of his having been so improperly discharged as aforesaid, recover such compensation as if it were wages duly earned.—§ 167.

The statute does not render a verbal agreement for wages absolutely void; but it imposes a penalty on the master if a written agreement be not made. And no written agreement contrary to the act, by which a seaman should renounce any just right, such as his claim to wages in the case of the loss of the ship, to salvage, &c. would be valid. When a written agreement is made conformably to the act, it becomes the only evidence of the contract between the parties; and a seaman cannot recover any thing agreed to be given in reward for his services, which is not specified in the articles.

A seaman who has engaged to serve on board a ship, is bound to exert himself to the utmost in the service of such ship; and, therefore, a promise made by the master of a ship in distress, to pay an extra sum to a seaman, as an inducement to extraordinary exertion on his part, is wholly void.

3. *Conduct of Seamen.* — It is essential to the business of navigation that the most prompt and ready obedience should be paid to the lawful commands of the master. To this effect it is covenanted in the articles of agreement previously referred to, that "the crew engage to conduct themselves in an orderly, faithful, honest, careful, and sober manner; and to be at all times diligent in their respective duties and stations, and to be obedient to the lawful commands of the master in every thing relating to the said ship, and the materials, stores, and cargo thereof, whether on board such ship, in boats, or on shore."

In case of disobedience or disorderly conduct, on the part of the seamen, the master may correct them in a reasonable manner. Such authority is absolutely necessary for the safety of the ship and of those on board. It, however, behoves the master to employ it with great deliberation, and not to pervert the powers with which he is intrusted for the good of the whole, to cruel or vindictive purposes. Masters abusing their authority must answer at law for the consequences; and, except under very grave and urgent circumstances, the infliction of chastisement without previous inquiry should be carefully avoided. But in cases of actual or open mutiny, or of gross misconduct by the crew or any part of them, it may be incumbent on the master to act at once with all the energy and decision of which he is capable. In such unfortunate cases his resistance becomes an act of self-defence, and is to be considered in all its consequences in that point of view. The Ordinances of Oleron and Wisby declare that a mariner who strikes the master shall either pay a fine or lose his right hand; a singular as well as barbarous alternative, unknown in modern jurisprudence.

But although the master may by force restrain the commission of crimes, he has no judicial authority over or right to punish the criminal, but is bound to secure his person and bring him before a proper tribunal. And all justices of the peace are empowered to receive informations touching any murder, piracy, felony, or robbery upon the sea, and to commit the offenders for trial.

Offences of Seamen and Apprentices and their Punishment. — Whenever any seaman who has been lawfully engaged or any apprentice to the sea service commits any of the following offences he shall be liable to be punished summarily as follows; viz.

(1.) For desertion he shall be liable to imprisonment for any period not exceeding 12 weeks, with or without hard labour, and also to forfeit all or any part of the clothes and effects he leaves on board, and all or any part of the wages or emoluments which he has then earned, and also, if such desertion takes place abroad, at the discretion of the court, to forfeit all or any part of the wages or emoluments he may earn in any other ship in which he may be employed until his next return to the U. K., and to satisfy any excess of wages paid by the master or owner of the ship from which he deserts to any substitute engaged in his place at a higher rate of wages than the rate stipulated to be paid to him.

(2.) For neglecting or refusing, without reasonable cause, to join his ship or to proceed to sea in his ship, or for absence without leave at any time within 24 hours of the ship's sailing from any port either at the commencement or during the progress of any voyage, or for absence at any time without leave and without sufficient reason from his ship or from his duty not amounting to desertion or not treated as such by the master, he shall be liable to imprisonment for any period not exceeding 10 weeks, with or without hard labour, and also, at the discretion of the court, to forfeit out of his wages a sum not exceeding the amount of 2 days' pay, and in addition, for every 24 hours of absence, either a sum not exceeding 6 days' pay, or any expenses which have been properly incurred in hiring a substitute.

(3.) For quitting the ship without leave after her arrival at her port of delivery and before she is placed in security, he shall be liable to forfeit out of his wages a sum not exceeding 1 month's pay.

(4.) For wilful disobedience to any lawful command he shall be liable to imprisonment for any period not exceeding 4 weeks, with or without hard labour, and also, at the discretion of the court, to forfeit out of his wages a sum not exceeding 2 days' pay.

(5.) For continued wilful disobedience to lawful commands, or continued wilful neglect of duty, he shall be liable to imprisonment for any period not exceeding 12 weeks, with or without hard labour, and also, at the discretion of the court, to forfeit for every 24 hours' continuance of such disobedience or neglect either a sum not exceeding 6 days' pay or any expenses which have been properly incurred in hiring a substitute.

(6.) For assaulting any master or mate he shall be liable to imprisonment for any period not exceeding 12 weeks, with or without hard labour.

(7.) For combining with any other or others of the crew to disobey lawful commands, or to neglect duty, or to impede the navigation of the ship or the progress of the voyage, he shall be liable to imprisonment for any period not exceeding 12 weeks, with or without hard labour.

(8.) For wilfully damaging the ship, or embezzling or wilfully damaging any of her stores or cargo, he shall be liable to forfeit out of his wages a sum equal in amount to the loss thereby sustained, and also, at the discretion of the court, to imprisonment for any period not exceeding 12 weeks, with or without hard labour.

(9.) For any act of smuggling of which he is convicted, and whereby loss or damage is occasioned to the master or owner, he shall be liable to pay to such master or owner such a sum as is sufficient to reimburse the master or owner for such loss or damage; and the whole or a proportionate part of his wages may be retained in satisfaction or on account of such liability without prejudice to any further remedy.—§ 243.

Entry of Offences to be made in official Log. — Upon the commission of any of the offences enumerated in the last preceding section an entry thereof shall be made in the official log book, (see art. LOG, OFFICIAL), and shall be signed by the master and also by the mate or one of the crew; and the offender, if still in the ship, shall before the next arrival of the ship at any port, or if she is at the time in port, before her departure, either be furnished with a copy of such entry or have the same read over

distinctly and audibly to him, and may thereupon make such reply thereto as he thinks fit; and a statement that a copy of the said entry has been so furnished, or that the same has been so read over as aforesaid, and the reply (if any) made by the offender, shall likewise be entered and signed in manner aforesaid; and in any subsequent legal proceeding the entries herein-before required shall, if practicable, be produced or proved, and in default of such production or proof the Court hearing the case may, at its discretion, refuse to receive evidence of the offence.—§ 244.

Seamen, &c. whom Masters of Ships are compelled to convey, to be subject to Penalties for Breach of Discipline.— Every seafaring person whom the master of any ship is, under the authority of this act or of any other act of parliament, compelled to take on board and convey, and every person who goes to sea in any ship without the consent of the master or owner or other person entitled to give such consent, shall, so long as he remains in such ship, be subject to the same laws and regulations for preserving discipline, and to the same penalties and punishments for offences constituting or tending to a breach of discipline, to which he would be subject if he were a member of the crew and had signed the agreement.— § 245.

Master or Owner may apprehend Deserters, without Warrant.— Whenever, either at the commencement or during the progress of any voyage, any seaman or apprentice neglects or refuses to join or deserts from or refuses to proceed to sea in any ship in which he is duly engaged to serve, or is found otherwise absenting himself therefrom without leave, the master or any mate, or the owner, ship's husband, or consignee, may, in any place in H. Majesty's dominions, with or without the assistance of the local police officers or constables, who are hereby directed to give the same, if required, and also at any place out of H. Majesty's dominions, if and so far as the laws in force at such place will permit, apprehend him without first procuring a warrant; and may thereupon in any case, and shall in case he so requires and it is practicable, convey him before some court capable of taking cognizance of the matter, to be dealt with according to law; and may, for the purpose of conveying him before such court, detain him in custody for a period not exceeding 24 hours or such shorter time as may be necessary, or may, if he does not so require, or if there is no such court at or near the place, at once convey him on board; and if any such apprehension appears to the court before which the case is brought to have been made on improper or on insufficient grounds, the master, mate, owner, ship's husband, or consignee who makes the same or causes the same to be made shall incur a penalty not exceeding 20*l.*; but such penalty, if inflicted, shall be a bar to any action for false imprisonment in respect of such apprehension. —§ 246.

Deserters may be sent on board in lieu of being imprisoned.— Whenever any seaman or apprentice is brought before any court on the ground of his having neglected or refused to join or to proceed to sea in any ship in which he is engaged to serve, or of having deserted or otherwise absented himself therefrom without leave, such court may, if the master or the owner or his agent so requires, instead of committing the offender to prison, cause him to be conveyed on board for the purpose of proceeding on the voyage, or deliver him to the master or any mate of the ship, or the owner or his agent, to be by them so conveyed, and may in such case order any costs and expenses properly incurred by or on behalf of the master or owner by reason of the offence to be paid by the offender, and, if necessary to be deducted from any wages which he has then earned, or which by virtue of his then existing engagement he may afterwards earn.— § 247.

Seamen imprisoned for Desertion or Breach of Discipline may be sent on board before Termination of Sentence.—If any seaman or apprentice is imprisoned on the ground of his having neglected or refused to join or to proceed to sea in any ship in which he is engaged to serve, or of having deserted or otherwise absented himself therefrom without leave, or of his having committed any other breach of discipline, and if during such imprisonment and before his engagement is at an end his services are required on board his ship, any justice may, at the request of the master or of the owner or his agent, cause such seaman or apprentice to be conveyed on board his said ship for the purpose of proceeding on the voyage, or to be delivered to the master or any mate of the ship or to the owner or his agent, to be by them so conveyed, notwithstanding that the termination of the period for which he was sentenced to imprisonment has not arrived.—§ 248.

Entries and Certificates of Desertion abroad to be copied, sent home, and admitted in Evidence.— In all cases of desertion from any ship in any place abroad the master shall produce the entry of such desertion in the official log book to the person or persons hereby required to indorse on the agreement a certificate of such desertion; and such person or persons shall thereupon make and certify a copy of such entry and also a copy of the said certificate of desertion; and if such person is a public functionary he shall, and in other cases the said master shall forthwith transmit such copies to the registrar general of seamen in England; and the said registrar shall, if required, cause the same to be produced in any legal proceeding; and such copies, if purporting to be so made and certified as aforesaid, and certified to have come from the custody of the said registrar, shall in any legal proceeding relating to such desertion be received as evidence of the entries therein appearing.— § 249.

Facilities for proving Desertion, so far as concerns Forfeiture of Wages.— Whenever a question arises whether the wages of any seaman or apprentice are forfeited for desertion, it shall be sufficient for the party insisting on the forfeiture to show that such seaman or apprentice was duly engaged in or that he belonged to the ship from which he is alleged to have deserted, and that he quitted such ship before the completion of the voyage or engagement, or if such voyage was to terminate in the U. K. and the ship has not returned, that he is absent from her, and that an entry of the desertion has been duly made in the official log book; and thereupon the desertion shall, so far as relates to any forfeiture of wages or emoluments under the provisions herein-before contained, be deemed to be proved, unless the seaman or apprentice can produce a proper certificate of discharge, or can otherwise show to the satisfaction of the court that he had sufficienf reason for leaving his ship.—§ 250.

Costs of procuring Imprisonment may to the Extent of 3l. be deducted from Wages.—Whenever in any proceeding relating to seamen's wages it is shown that any seaman or apprentice has in the course of the voyage been convicted of any offence by any competent tribunal and rightfully punished therefor by imprisonment or otherwise, the court hearing the case may direct a part of the wages due to such seaman, not exceeding 3*l.*, to be applied in reimbursing any costs properly incurred by the master in procuring such conviction and punishment.—§ 251.

Amount of Forfeiture how to be ascertained when Seamen contract for the Voyage.— Whenever any seaman contracts for wages by the voyage or by the run or by the share, and not by the month or other stated period of time, the amount of forfeiture to be incurred under this act shall be taken to be an amount bearing the same proportion to the whole wages or share as a calendar month or other period (as the case may be) bears to the whole time spent in the voyage; and if the whole time spent in the voyage does not exceed the period for which the pay is to be forfeited, the forfeiture shall extend to the whole wages or share.—§ 252.

Application of Forfeitures.— All clothes, effects, wages, and emoluments which under the provisions herein-before contained are forfeited for desertion shall be applied in the first instance in or towards the reimbursement of the expenses occasioned by such desertion to the master or owner of the ship from which the desertion has taken place; and may, if earned subsequently to the desertion, be recovered by such master, or by the owner or his agent, in the same manner as the deserter might have recovered the same if they had not been forfeited; and in any legal proceeding relating to such wages the court may order the same to be paid accordingly; and subject to such reimbursement the same shall be paid into the receipt of H. Majesty's exchequer in such manner as the Treasury may direct, and shall be carried to and form part of the consolidated fund of the U. K.; and in all other cases of forfeiture of wages under the provisions herein-before contained the forfeiture shall, in the absence of any specific

directions to the contrary, be for the benefit of the master or owner by whom the wages are payable.—§ 253.

Questions of Forfeitures may be decided in Suits for Wages.—Any question concerning the forfeiture of or deductions from the wages of any seaman or apprentice may be determined in any proceeding lawfully instituted with respect to such wages, notwithstanding that the offence in respect of which such question arises, though hereby made punishable by imprisonment as well as forfeiture, has not been made the subject of any criminal proceeding.—§ 254.

Penalty for false Statement as to last Ship or Name.— If any seaman on or before being engaged wilfully and fraudulently makes a false statement of the name of his last ship or last alleged ship, or wilfully and fraudulently makes a false statement of his own name, he shall incur a penalty not exceeding 5*l.*: and such penalty may be deducted from any wages he may earn by virtue of such engagement as aforesaid, and shall, subject to reimbursement of the loss and expenses (if any) occasioned by any previous desertion, be paid and applied in the same manner as other penalties payable under this act.—§ 255.

Fines to be deducted from Wages, and paid to Shipping Master.—Whenever any seaman commits an act of misconduct for which his agreement imposes a fine, and which it is intended to punish by enforcing such fine, an entry thereof shall be made in the official log book, and a copy of such entry shall be furnished or the same shall be read over to the offender, and an entry of such reading over, and of the reply (if any) made by the offender, shall be made, in the manner and subject to the conditions hereinbefore specified with respect to the offences against discipline specified in and punishable under this act; and such fine shall be deducted and paid over as follows; viz., if the offender is discharged in the U. K. and the offence and such entries in respect thereof as aforesaid are proved, in the case of a foreign-going ship to the satisfaction of the shipping master before whom the offender is discharged, and in the case of a home trade ship to the satisfaction of the shipping master at or nearest to the place at which the crew is discharged, the master or owner shall deduct such fine from the wages of the offender, and pay the same over to such shipping master; and if before the final discharge of the crew in the U. K. any such offender as aforesaid enters into any of H. M.'s ships, or is discharged abroad, and the offence and such entries as aforesaid are proved to the satisfaction of the officer in command of the ship into which he so enters, or of the consular officer, officer of customs, or other person by whose sanction he is so discharged, the fine shall thereupon be deducted, and the entry of such deduction shall then be made in the official log book (if any) and signed by such officer or other person; and on the return of the ship to the U. K. the master or owner shall pay over such fine, in the case of foreign-going ships, to the shipping master before whom the crew is discharged, and in the case of home trade ships to the shipping master at or nearest to the place at which the crew is discharged; and if any master or owner neglects or refuses to pay over any such fine in manner aforesaid, he shall for each such offence incur a penalty not exceeding 6 times the amount of the fine retained by him: provided that no act of misconduct for which any such fine as aforesaid has been inflicted and paid shall be otherwise punished under the provisions of this act.—§ 256.

Penalty for enticing to desert, and harbouring Deserters.—Every person who by any means whatever persuades or attempts to persuade any seaman or apprentice to neglect or refuse to join or to proceed to sea in or to desert from his ship, or otherwise to absent himself from his duty, shall for each such offence in respect of each such seaman or apprentice incur a penalty not exceeding 10*l.*; and every person who wilfully harbours or secretes any seaman or apprentice who has deserted from his ship, or who has wilfully neglected or refused to join or has deserted from his ship, knowing or having reason to believe such seaman or apprentice to have so done, shall for every such seaman or apprentice so harboured or secreted incur a penalty not exceeding 20*l.*— § 257.

Penalty for obtaining Passage surreptitiously.—Any person who secretes himself and goes to sea in any ship without the consent of either the owner, consignee, or master, or of a mate, or of any person in charge of such ship, or of any other person entitled to give such consent, shall incur a penalty not exceeding 20*l.*, or be liable to imprisonment with or without hard labour for any period not exceeding 4 weeks.—§ 258.

On Change of Masters, Documents hereby required to be handed over to Successor.—If during the progress of a voyage the master is superseded or for any other reason quits the ship and is succeeded in the command by some other person, he shall deliver to his successor the various documents relating to the navigation of the ship and to the crew thereof which are in his custody, and shall in default incur a penalty not exceeding 100*l.*; and such successor shall immediately on assuming the command of the ship enter in the official log a list of the documents so delivered to him.—§ 259.

Desertion has long been, and continues to be, very prevalent, and is, in truth, by far the greatest drawback on the shipping interest. Mr. Lindsay, whose knowledge of the subject is alike extensive and minute, remarks upon it as follows:—"Desertion is now so great an evil, and so detrimental to the best interests of our maritime commerce, that vigorous measures should be adopted to suppress it. It is a crime which is rarely committed alone, but is only the first step towards others of a much worse nature. Even the seamen almost invariably repent of it when too late. They feel that they have broken faith, lost that self-respect which is essential to the maintenance of order, drown their feelings in intoxication, and thus become demoralised and worthless. The country loses in various ways. In our trade with Australia particularly, by paying materially enhanced rates of freight and passage, for the desertion of the crew is the only fear which the shipowners have of sending their vessels to that colony. The moral standard of a class of men, alike valuable during periods of peace and war, is materially lowered, and we have to maintain, from our parish resources, the pauperised wives and children of deserters.

"This subject was much considered by government when framing the Mercantile Marine Act, and various clauses were introduced into that statute having reference to it. The one which comes most to the point is the 71st clause (see *antè*, § 246), which enacts, 'that whenever a seaman or apprentice neglects or refuses to join, or absents himself without leave, or deserts from any ship in which he is engaged to serve, the master or mate, or the owner, ship's husband, or consignee, may, for the purpose of carrying him before a justice, apprehend or require any police officer or constable to apprehend him without first procuring a warrant.' Masters may, also, without warrant, seize deserters and carry them either before a magistrate or on board their ships. But when seamen desert, they generally get out of the way of seizure till the vessels which they have deserted have left the port. They know full well that the extent of their

punishment, even if they be taken, cannot exceed 3 months in what to them are comfortable quarters, and that very likely, judging by precedent, it may not exceed 1 month — a trifling penalty for so serious an offence. Besides imprisonment, the deserter is also liable to forfeit such clothes or effects as he may have on board, and such wages or emoluments as he may have earned. If the desertion take place abroad, he forfeits whatever wages and emoluments he may earn in any other ship in which he may return to the U. Kingdom, and he farther becomes liable to satisfy any excess of wages paid by the master or owners of the ship from which he deserts to any substitute engaged in his place. Such is the full extent of the punishment. We should, however, have less to say against its insufficiency, were the means of convicting offenders less complex. While they remain in their present state, seamen will continue, as hitherto, to desert when it suits their purposes. No more convincing proof needs be given of the inefficacy of the laws bearing upon desertion, than the fact that one firm only, Messrs. Pollock, Gilmour, and Co., of Glasgow, engaged in the North American timber trade, have had, during 1 year, upwards of 400 seamen deserters abroad from their ships; that the consequent loss entailed on the firm exceeded 3000*l.*, merely in the higher wages they were compelled to pay to seamen to supply the place of the deserters; and that they only succeeded in arresting 11 out of the 400 deserters."—(*On Our Navigation Laws and Mercantile Marine*, 2d. ed. p. 85, &c.)

This is a very striking state. But in truth and reality, desertion is an evil with which it is very difficult, if not impossible, to deal. It may be palliated; but more needs hardly be expected; and we incline to think that the clauses previously quoted go quite as far as it is advisable to go in attempting its suppression by penal enactments. When seamen arrive in a port where their services are in great request, and wages double, perhaps, what they are serving for, how can it be supposed that they should be generally proof against such overpowering temptations? But as commerce becomes more extended, the difference of wages in different sea-ports will decline; and the more they approach to equality, the less temptation will there be to desert. Mr. Lindsay suggests as one mode of dealing with this difficult subject, that all seamen returning to this country previously to the arrival of the ships in which they had sailed, who cannot produce certificates of their discharge, or otherwise account satisfactorily for their return, should be held to be guilty of desertion, and punished accordingly.

A regulation of this sort would, probably, be some check on desertion, though we doubt whether it would amount to much. But we believe that nothing short of that equalisation of wages to which we have referred would do so much to lessen its frequency and to make it more an object of public reprobation, as an improvement in the character of the masters. The drunkenness and brutality that have been so often manifested by the latter, create a presumption that seamen guilty of desertion have been driven to it by ill-usage, and indisposes the public to increase the penalties on the offence. And hence it may, perhaps, be questioned whether anything will be more likely to render it, as it ought to be, a serious matter in the public estimation, than the measures that have been lately taken to raise the qualifications of the masters, and to make their conduct more in accordance with their position.

It is admitted, indeed, by all legislators and jurists that gross misconduct, or systematic and extreme ill-treatment on the part of the master, will justify the seamen in resisting his authority or deserting the ship. The duties and obligations of master and men are reciprocal; the latter are bound to give due obedience and respect to all the reasonable commands of the master, and even to those that may appear to be unreasonable; but they are not bound to obey orders that would obviously compromise their own security or that of the ship. "Desertion," said Lord Kenyon, "is a forfeiture of wages; but if the captain conduct himself in such a way as puts the sailor into that situation that he cannot without damage to his personal safety continue in his service, (human nature speaks the language,) a servant is justified in providing for that safety." The necessity of securing on all ordinary occasions the most prompt compliance with the orders of the master is, however, so very urgent, that no proceeding on the part of the latter, unless it be of the most unwarrantable description, will justify the seamen in deserting or resisting his commands. Disobedience to the latter is uniformly presumed to be an offence of the gravest kind: and nothing but the most overwhelming necessity will vindicate the seamen by whom it may be committed. "The court," to use the words of Lord Stowell, "will be particularly attentive to preserve that subordination and discipline on board ship which is so indispensably necessary for the preservation of the whole service, and of every person concerned in it. A peremptory or harsh tone or an overcharged manner, in the exercise of authority, will never be held by this court to justify resistance. It will not be sufficient that there has been a want of that personal attention and civility which usually takes place on other occasions, and might be wished generally to attend the exercise of authority. The nature of the service requires that those persons that engage in it should accommodate themselves to the cir-

cumstances attending it, and those circumstances are not unfrequently urgent, and create strong sensations which naturally find their way in strong expressions and violent demeanour. The persons subject to this species of authority are not to be captious, or to take exception to a neglect of formal or ceremonious observances."—(*Dodson's Admiralty Reports*, ii. 261.)

If the cargo be embezzled or injured by the fraud or negligence of the seamen, so that the merchant has a right to claim satisfaction from the master and owners, they may, by the custom of merchants, deduct the value thereof from the wages of the seamen by whose misconduct the injury has taken place. And a clause to this effect is inserted in the form of agreement issued by the B. of Trade, as follows: "It is hereby agreed that any embezzlement, or wilful or negligent destruction of any part of the ship's cargo or stores, shall be made good to the owner out of the wages of the person guilty of the same." Seamen are, therefore, responsible for themselves only. Nor can any innocent party be called upon to contribute a portion of his wages to make good the loss occasioned by the misconduct of others.

The offences of running away with the ship, or voluntarily yielding her up to an enemy, or making a revolt, have in all cases been visited with the severest punishment. The statute, 11 & 12 Will. 3. c. 7. enacted —

"That if any commander or master of any ship, or any seaman or mariner, shall in any place where the admiral hath jurisdiction, betray his trust and turn pirate, enemy, or rebel, and piratically and feloniously run away with his or their ship or ships, or any barge, boat, ordnance, ammunition, goods, or merchandizes, or yield them up voluntarily to any pirate, or shall bring any seducing messages from any pirate, enemy, or rebel, or consult, combine, or confederate with, or attempt or endeavour to corrupt any commander, master, officer, or mariner, to yield up or run away with any ship, goods, or merchandizes, or turn pirate, or go over to pirates: or if any person shall lay violent hands on his commander, whereby to hinder him from fighting in defence of his ship and goods committed to his trust, or that shall confine his master, or make or endeavour to make a revolt in the ship; shall be adjudged and deemed and taken to be a *pirate*, *felon*, and *robber*, and being convicted thereof according to the directions of this act, shall have and suffer pain of *death*, loss of lands, goods, and chattels, as *pirates*, *felons*, and *robbers* upon the seas ought to have and suffer."

But by the 7 W. 4. & 1 Vict. 3. 88., the penalty for this offence has been changed to transportation beyond seas for life, or for not less than 15 years, or to imprisonment for any term not exceeding 3 years.

The wilful destruction or loss of the ship has, in all countries, been punished by death. But doubts having been entertained whether the destruction of a ship that had been insured came within the scope of the previously existing statutes, they were repealed by the 43 Geo. 3. c. 113., and the following provision substituted in their stead: —

"That if any person or persons shall, from and after the 16th day of July, 1803, wilfully cast away, burn or otherwise destroy any ship or vessel, or in anywise counsel, direct, or procure the same to be done, and the same be accordingly done, with intent or design thereby wilfully and maliciously to prejudice any owner or owners of such ship or vessel, or any owner or owners of any goods laden on board the same, or any person or persons, body politic or corporate, that hath or have underwritten or shall underwrite any policy or policies of insurance upon such ship or vessel, or on the freight thereof, or upon any goods laden on board the same, the person or persons offending therein, being thereof lawfully convicted, shall be deemed and adjudged a principal felon or felons, and shall suffer death, as in cases of felony, without benefit of clergy."

The penalty for this offence is now, however, also changed to transportation for life, or not less than 15 years, or to imprisonment for not less than 3 years.—(1 *Vict.* c. 89.)

4. *Payment of Seamen's Wages, &c.*—In order to stimulate the zeal and enterprise of seamen, most maritime states have made the payment of their wages depend on the successful termination of the voyage; and for this reason, the insurance of their wages has been uniformly prohibited (*Arnould on Insurance*, i. 208). Hence the maxim that *freight is the only mother of wages.* "If freight go," said Lord Stowell, "everything goes. The mariner has no step father, if I may say so, in the character of insurer, to supply the loss." (2 *Dodson's Admiralty Reports*, 510.) And, therefore, it used to be laid down in general terms that when by any disaster happening in the course of a voyage, such as the loss or capture of the ship, the owners lost their freight, the seamen also lost their wages.

But this general rule was subject to numerous qualifications. Thus, if a voyage miscarried, and the freight were lost, through the incompetency or fault of the master; or if, after being entered upon, and in part completed, the voyage were abandoned by the owners; or if a vessel were sent from one port to another, to be freighted, where no freight was to be found; in these and other cases of the same sort the claim of seamen to payment of their wages was too obviously reasonable not to be generally admitted. Inasmuch, too, as owners may protect themselves, by insurance, against loss by shipwreck and other casualties, it would appear to be hardly fair or equitable that the wages of seamen, who cannot avail themselves of this resource, should be wholly sacrificed in the event of such catastrophes occurring. And this hardship appears the greater from the circumstance of the lives of the seamen being most commonly involved in the safety of the ship. It is, no doubt, contended by Valin, who has argued in favour of the old rule, that if seamen ceased *d'avoir intérêt à la conservation du navire et de ses*

marchandises, au moindre peril dont ils seroient menacés, ils ne songeroient qu'à sauver leur vie, sans se mettre en peine du reste; il étoit donc juste, et du bien public, d'attacher leur fortune à celle du vaisseau. (*Commentaire sur l' Ordonnance de* 1681, liv. iii. tit. iv.) But it may be safely affirmed that the desertion contemplated by Valin is not practicable in one case out of twenty. In storms and collisions at sea escape is very rarely possible; and it is not often possible even in cases of wreck by vessels being driven on shore. Hence, in the vast majority of cases, it may be fairly presumed that a regard to their own personal security, independent altogether of any consideration in relation to wages, will make seamen exert themselves to the utmost.

And none, it must be borne in mind, has ever proposed, as Valin would seem to assume, that the payment of wages in cases of loss should be irrespective of the conduct of the seamen. They are bound in all cases, and especially in cases of danger, to make every possible effort for the safety of the ship and cargo. If they fail in this most essential part of their duty, they plainly forfeit all claim to wages, whether freight be earned or not. But, in the event of their doing their duty, and making every possible exertion to save the ship and cargo, it does not appear that the loss of the latter should exempt the owners from the claim of the seamen for wages. On the contrary, it would seem that in such cases the payment of wages is consistent alike with the interests of navigation and of the public.

But, however brought about, the old doctrine of the absolute dependence of wages on freight has been gradually losing its authority. After various modifications it was enacted by the 7 & 8 Vict. c. 112., that in cases of shipwreck or loss of the ship, whether freight had or had not been previously earned, seamen should be entitled to their wages down to the occurrence of the casualty, on their producing a certificate from the principal surviving officer of the ship, that they had exerted themselves to the best of their ability to save the ship and cargo. But a condition of this sort having led to much difficulty and abuse, it has been laid down in the 17 & 18 Vict. c. 104. § 183. that the right of seamen to their wages shall not depend on the fact of freight being earned; and that in cases of wreck, and loss of the ship, they shall be entitled to their wages, unless proof be brought to show that they did not exert themselves to the utmost to save the ship and cargo. At present, therefore, it may be concluded, that nothing save their own misconduct can defeat the claim of seamen to the full payment of the wages stipulated in their agreements.

A seaman impressed from a merchant ship into the royal service, is entitled to receive the portion of his wages due to him at the time of impressment, provided the merchant ship *arrive in safety* at the port of her discharge.

The following clauses in the Mercantile Shipping Act relate to the allotment, payment, remittance, &c. of seamen's wages.

Regulations as to Allotment Notes.—All stipulations for the allotment of any part of the wages of a seaman during his absence which are made at the commencement of the voyage shall be inserted in the agreement, and shall state the amounts and times of the payments to be made; and all *Allotment Notes* shall be in forms sanctioned by the Board of Trade.—§ 168.

Allotment Notes may be sued on summarily.—The wife, or the father or mother, or the grandfather or grandmother, or any child or grandchild, or any brother or sister of any seaman in whose favour an allotment note of part of the wages of such seaman is made, may, unless the seaman is shown in manner after mentioned to have forfeited or ceased to be entitled to the wages out of which the allotment is to be paid, and subject, as to the wife, to the provision after contained, sue for and recover the sums allotted by the note when and as the same are made payable, with costs, from the owner or any agent who has authorized the drawing of the note, either in the County Court or in the summary manner in which seamen are enabled to sue for and recover wages not exceeding 50*l.*; and in any such proceeding it shall be sufficient for the claimant to prove that he or she is the person mentioned in the note, and that the note was given by the owner or by the master or some other authorized agent; and the seaman shall be presumed to be duly earning his wages, unless the contrary is shown to the satisfaction of the Court, either by the official statement of the change in the crew caused by his absence made and signed by the master, as by this act is required, or by a duly certified copy of some entry in the official log book to the effect that he has left the ship, or by a credible letter from the master of the ship to the same effect, or by such other evidence, of whatever description, as the Court in its absolute discretion considers sufficient to show satisfactorily that the seaman has ceased to be entitled to the wages out of which the allotment is to be paid: provided that the wife of any seaman who deserts her children, or so misconducts herself as to be undeserving of support from her husband, shall thereupon forfeit all right to further payments of any allotment of his wages which has been made in her favour.—§ 169.

Discharge from Foreign going Ships to be made before Shipping Master.—In the case of all British foreign-going ships, in whatever part of H. M.'s dominions the same are registered, all seamen discharged in the U. K. shall be discharged and receive their wages in the presence of a shipping master duly appointed under this act, except in cases where some competent court otherwise directs; and any master or owner of any such ship who discharges any seaman belonging thereto, or, except as aforesaid, pays his wages within the U. K. in any other manner, shall incur a penalty not exceeding 10*l.*; and in the case of home trade ships seamen may, if the owner or master so desires, be discharged and receive their wages in like manner.—§ 170.

Master to deliver Account of Wages.—Every master shall, not less than 24 hours before paying off or discharging any seaman, deliver to him, or, if he is to be discharged before a shipping master, to such shipping master, a full and true account in a form sanctioned by the B. of Trade of his wages and of all deductions to be made therefrom, on any account whatever, and in default shall for each offence incur a penalty not exceeding 5*l.*; and no deduction from the wages of any seaman (except in respect of any matter happening after such delivery) shall be allowed unless it is included in the account so delivered; and the master shall during the voyage enter the various matters in respect of which such deductions are made, with the amounts of the respective deductions, as they occur, in a book to be kept for that

purpose, and shall, if required, produce such book at the time of the payment of wages, and also upon the hearing before any competent authority of any complaint or question relating to such payments.—§ 171.

On Discharge, Masters to give Seamen Certificates of Discharge, &c.—Upon the discharge of any seaman, or upon payment of his wages, the master shall sign and give him a certificate of his discharge, in a form sanctioned by the B. of Trade, specifying the period of his service and the time and place of his discharge; and if any master fail to sign and give to any such seaman such certificate of discharge he shall for each such offence incur a penalty not exceeding 10*l.*; and the master shall also, upon the discharge of every certificated mate whose certificate of competency or service has been delivered to and retained by him, return such certificate, and shall in default incur a penalty not exceeding 20*l.*—§ 172.

Shipping Master may decide Questions which Parties refer to him.—Every shipping master shall hear and decide any question whatever between a master or owner and any of his crew which both parties agree in writing to submit to him; and every award so made by him shall be binding on both parties, and shall in any legal proceeding which may be taken in the matter before any court of justice be deemed to be conclusive as to the rights of the parties; and no such submission or award shall require a stamp; and any document purporting to be such submission or award shall be *primâ facie* evidence thereof.—§ 173.

Master and others to produce Ship's Papers to Shipping Masters, and give Evidence.—In any proceeding relating to the wages, claims, or discharge of any seaman carried on before any shipping master under the provisions of this act, such shipping master may call upon the owner or his agent, or upon the master or any mate or other member of the crew, to produce any log books, papers, or other documents in their respective possession or power relating to any matter in question in such proceeding, and may call before him and examine any of such persons being then at or near the place on any such matter; and every owner, agent, master, mate, or other member of the crew, who when called upon by the shipping master does not produce any such paper or document as aforesaid, if in his possession or power, or does not appear and give evidence, shall, unless he shows some reasonable excuse for such default, for each such offence incur a penalty not exceeding 5*l.*—§ 174.

Settlement of Wages.—The following rules shall be observed with respect to the settlement of wages; (that is to say,)

(1.) Upon the completion before a shipping master of any discharge and settlement, the master or owner and each seaman shall respectively in the presence of the shipping master, sign in a form sanctioned by the B. of Trade a mutual release of all claims in respect of the past voyage or engagement, and the shipping master shall also sign and attest it, and shall retain and transmit it as herein directed:

(2.) Such release so signed and attested shall operate as a mutual discharge and settlement of all demands between the parties thereto in respect of the past voyage or engagement:

(3.) A copy of such release certified under the hand of such shipping master to be a true copy shall be given by him to any party thereto requiring the same; and such copy shall be receivable in evidence upon any future question touching such claims as aforesaid, and shall have all the effect of the original of which it purports to be a copy:

(4.) In cases in which discharge and settlement before a shipping master are hereby required, no payment, receipt, settlement, or discharge otherwise made shall operate or be admitted as evidence of the release or satisfaction of any claim:

(5.) Upon any payment being made by a master before a shipping master, the shipping master shall, if required, sign and give to such master a statement of the whole amount so paid; and such statement shall as between the master and his employer be received as evidence that he has made the payments therein mentioned.—§ 175.

Master to make Reports of Character.—Upon every discharge effected before a shipping master the master shall make and sign, in a form sanctioned by the B. of Trade, a report of the conduct, character, and qualifications of the persons discharged, or may state in a column to be left for that purpose in the said form that he declines to give any opinion upon such particulars, or upon any of them; and the shipping master shall transmit the same to the Registrar General of Seamen, or to such other person as the B. of Trade directs, to be recorded, and shall, if desired so to do by any seaman, give to him or indorse on his certificate of discharge a copy of so much of such report as concerns him; and every person who makes, assists in making, or procures to be made any false certificate or report of the service, qualifications, conduct, or character of any seaman, knowing the same to be false, or who forges, assists in forging, or procures to be forged, or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any such certificate or report, or who fraudulently makes use of any certificate or report, or of any copy of any certificate or report, which is forged or altered or does not belong to him, shall for each such offence be deemed guilty of a misdemeanor.—§ 176.

Remittance of Wages and Savings Banks for Seamen.

Facilities may be given for remitting Seamen's Wages.—Facilities shall, if the B. of Trade so directs, be given for remitting the wages and other monies of seamen and apprentices to their relatives or other persons by means of money orders issued by shipping masters; and the B. of Trade may make regulations concerning such orders, and the persons by or to whom, and the mode and time in and at which the same are to be paid, and may from time to time repeal or alter any such regulations; and all such regulations, so long as they are in force, shall be binding upon all persons interested or claiming to be interested in such orders, as well as upon the officers employed in issuing or paying the same; and no legal proceeding shall be instituted against the B. of Trade, or against any shipping master or other public officer employed about such orders, on account of any such regulations, or on account of any act done or left undone in pursuance thereof, or on account of any refusal, neglect, or omission to pay any such money order, unless such refusal, neglect, or omission arise from fraud or wilful misbehaviour on the part of the person against whom proceedings are instituted.—§ 177.

Power to pay when Order is lost.—The B. of Trade may, in any case in which it thinks fit so to do, cause the amount of any such money order as aforesaid to be paid to the person to whom or in whose favour the same may have been granted, or to his personal representatives, legatees, or next of kin, notwithstanding that such order may not be in his or their possession; and in all such cases from and after such payment the B. of Trade and every shipping master or other officer of the B. of Trade shall be freed from all liability in respect of such order.—§ 178.

Penalty for issuing Money.—Every shipping master or other public officer who grants or issues any money order with a fraudulent intent shall in England or Ireland be deemed guilty of felony, and in Scotland of a high crime and offence, and shall be liable to be kept in penal servitude for a term not exceeding 4 years.—§ 179.

Savings Banks for Seamen may be established.—The Commissioners for the Reduction of the National Debt, or the Comptroller General acting under them, may on the application and recommendation of the B. of Trade, establish savings banks at such ports and places within the U. K., either in the shipping offices established in such ports or elsewhere, as may appear to be expedient, and may appoint treasurers to receive from or on account of seamen, or the wives and families of seamen, desirous to become depositors in such savings banks, deposits to an amount not exceeding 150*l* in the whole in respect of any one account, under such regulations as may be prescribed by the said commissioners or Comptroller General; and such regulations shall be binding on all such treasurers and depositors; and the said commissioners may remove such treasurers, and appoint others in their place; and all the provisions of the acts now in force relating to savings banks, except so far as relates to the annual amount of deposit, shall apply to all savings banks which may be established under the authority of this act, and to such treasurers and depositors as aforesaid.—§ 180.

Legal Right to Wages.

Right to Wages and Provisions, when to begin.—A seaman's right to wages and provisions shall be

taken to commence either at the time at which he commences work or at the time specified in the agreement for his commencement of work or presence on board, whichever first happens.—§ 181.

Seamen not to give up certain Rights.—No seaman shall by any agreement forfeit his lien upon the ship, or be deprived of any remedy for the recovery of his wages to which he would otherwise have been entitled; and every stipulation in any agreement inconsistent with any provision of this act, and every stipulation by which any seaman consents to abandon his right to wages in the case of the loss of the ship, or to abandon any right which he may have or obtain in the nature of salvage, shall be wholly inoperative.—§ 182.

Wages not to be dependent on the earning of Freight.—No right to wages shall be dependent on the earning of freight; and every seaman and apprentice who would be entitled to demand and recover any wages if the ship in which he has served had earned freight, shall, subject to all other rules of law and conditions applicable to the case, be entitled to claim and recover the same, notwithstanding that freight has not been earned; but in all cases of wreck or loss of the ship, proof that he has not exerted himself to the utmost to save the ship, cargo, and stores shall bar his claim.—§ 183.

In case of Death, Wages to be paid.—If any seaman or apprentice to whom wages are due under the last preceding enactment dies before the same are paid, they shall be paid and applied in the manner after specified with regard to the wages of seamen who die during a voyage.—§ 184.

Rights to Wages in case of Termination of Service by Wreck or Illness.—In cases where the service of any seaman terminates before the period contemplated in the agreement by reason of the wreck or loss of the ship, and also in cases where such service terminates before such period as aforesaid by reason of his being left on shore at any place abroad under a certificate of his unfitness or inability to proceed on the voyage granted as after mentioned, such seaman shall be entitled to wages for the time of service prior to such termination as aforesaid, but not for any further period.—§ 185.

Wages not to accrue during Refusal to work or Imprisonment.—No seaman or apprentice shall be entitled to wages for any period during which he unlawfully refuses or neglects to work when required, whether before or after the time fixed by the agreement for his beginning work, nor unless the court hearing the case otherwise directs, for any period during which he is lawfully imprisoned for any offence committed by him.—§ 186.

Period within which Wages are to be paid.—The master or owner of every ship shall pay to every seaman his wages within the respective periods following; (that is to say,) in the case of a home trade ship within 2 days after the termination of the agreement or at the time when such seaman is discharged, whichever first happens; and in the case of all other ships (except ships employed in the southern whale fishery or on other voyages for which seamen by the terms of their agreement are wholly compensated by shares in the profits of the adventure) within 3 days after the cargo has been delivered, or within 5 days after the seaman's discharge, whichever first happens; and in all cases the seaman shall at the time of his discharge be entitled to be paid on account a sum equal to ½th part of the balance due to him; and every master or owner who neglects or refuses to make payment in manner aforesaid, without sufficient cause, shall pay to the seaman a sum not exceeding the amount of 2 days' pay for each of the days, not exceeding 10 days, during which payment is delayed beyond the respective periods aforesaid, and such sum shall be recoverable as wages.—§ 187.

Mode of recovering Wages.

Seamen may sue for Wages in a summary Manner.—Any seaman or apprentice, or any person duly authorised on his behalf, may sue in a summary manner before any two justices of the peace acting in or near to the place at which the service has terminated, or at which the seaman or apprentice has been discharged, or at which any person upon whom the claim is made is or resides, or in Scotland either before any such justices or before the sheriff of the county within which any such place is situated, for any amount of wages due to such seaman or apprentice not exceeding 50*l.* over and above the costs of any proceeding for the recovery thereof, so soon as the same becomes payable; and every order made by such justices or sheriff in the matter shall be final.—§ 188.

Restrictions on Suits for Wages in Superior Courts.—No suit or proceeding for the recovery of wages under the sum of 50*l.* shall be instituted by or on behalf of any seaman or apprentice in any Court of Admiralty or Vice-Admiralty, or in the Court of Session in Scotland, or in any Superior Court of Record in H. M.'s dominions, unless the owner of the ship is adjudged bankrupt or declared insolvent, or unless the ship is under arrest or is sold by the authority of any such court as aforesaid, or unless any justices acting under the authority of this act refer the case to be adjudged by such court, or unless neither the owner nor master is or resides within 20 miles of the place where the seaman or apprentice is discharged or put a shore.—§ 189.

No Seaman to sue for Wages abroad, except in Cases of Discharge or of Danger to Life.—No seaman who is engaged for a voyage or engagement which is to terminate in the U. K. shall be entitled to sue in any court abroad for wages, unless he is discharged with such sanction as herein required and with the written consent of the master, or proves such ill-usage on the part of the master or by his authority as to warrant reasonable apprehension of danger to the life of such seaman if he were to remain on board; but if any seaman on his return to the U. K. proves that the master or owner has been guilty of any conduct or default which but for this enactment would have entitled the seaman to sue for wages before the termination of the voyage or engagement, he shall be entitled to recover in addition to his wages such compensation not exceeding 20*l.* as the court hearing the case thinks reasonable.—§ 190.

Master to have same Remedies for Wages as Seamen.—Every master of a ship shall, so far as the case permits, have the same rights, liens, and remedies for the recovery of his wages which by this act or by any law or custom any seaman, not being a master, has for the recovery of his wages; and if in any proceeding in any Court of Admiralty or Vice-Admiralty touching the claim of a master to wages any right of set-off or counter-claim is set up, it shall be lawful for such court to enter into and adjudicate upon all questions and to settle all accounts then arising or outstanding and unsettled between the parties to the proceeding, and to direct payment of any balance which is found to be due.—§ 191.

Relief to Seamen's Families out of Poor Rates.

Relief to Seamen's Families to be chargeable on Proportion of their Wages.—Whenever during the absence of any seaman on a voyage his wife, children, and step-children, or any of them, become or becomes chargeable to any union or parish in the U. K., such union or parish shall be entitled to be reimbursed out of the wages of such seaman earned during such voyage any sums properly expended during his absence in the maintenance of his said relations, or any of them, so that such sums do not exceed the following proportions of his said wages:

(1.) If only one of such relations is chargeable, ½ of such wages.

(2.) If two or more of such relations are chargeable ⅔rds of such wages:

But if during the absence of the seaman any sums have been paid by the owner to or on behalf of any such relation as aforesaid, under an allotment note given by the seaman in his, her, or their favour, any such claim for reimbursement as aforesaid shall be limited to the excess (if any) of the proportion of the wages herein-before mentioned over the sums so paid.—§ 192.

Clause 193 directs the mode to be pursued by the guardians of the poor, &c., to obtain reimbursement of advances to relations of seamen.

WAGES AND EFFECTS OF DECEASED SEAMEN.

Masters to take charge of or sell Effects of deceased Seamen which are on board.—Whenever any seaman or apprentice belonging to or sent home in any British ship, whether a foreign-going ship or a home trade ship, employed on a voyage which is to terminate in the U. K., dies during such voyage, the master shall take charge of all money, clothes, and effects which he leaves on board, and shall, if he think fit, cause all or any of the said clothes and effects to be sold by auction at the mast or other public auction, and shall thereupon sign an entry in the official log book containing the following particulars, viz.:

(1.) A statement of the amount of the money and a description of the effects so left by the deceased:
(2.) In case of a sale, a description of each article sold, and the sum received for each:
(3.) A statement of the sum due to the deceased as wages and the total amount of the deductions (if any) to be made therefrom:

And shall cause such entry to be attested by a mate and by one of the crew.—§ 194.

Such Effects and Wages to be paid either to Consul or to Shipping Master, with full Accounts.—In the cases provided for by the last preceding section, the following rules shall be observed; (that is to say,)

(1.) If the ship proceeds at once to any port in the U. K., without touching on the way at any foreign port, the master shall within 48 hours after his arrival deliver any such effects as aforesaid remaining unsold, and pay any money which he has taken charge of or received from such sale as aforesaid, and also the balance of wages due to the deceased, to the shipping master at the port of destination in the U. K.
(2.) If the ship touches and remains for 48 hours at some foreign port or at some port in H. Majesty's dominions abroad before coming to any port in the U. K., the master shall report the case to the British consular officer or officer of customs there, as the case may be, and shall give to such officer any information he requires as to the destination of the ship and probable length of the voyage; and such officer may thereupon, if he considers it expedient so to do, require the said effects, money, and wages to be delivered and paid to him, and shall upon such delivery and payment give to the master a receipt, and the master shall within 48 hours after his arrival at his port of destination in the U. K. produce the same to the shipping master there; and such consular officer or officer of customs shall in such case indorse and certify upon the agreement with the crew such particulars with respect to such delivery and payment as the B. of Trade requires:
(3.) If such officer as aforesaid does not require such payment and delivery to be made to him, the master shall take charge of the said effects, money, and wages, and shall within 48 hours after his arrival at his port of destination in the U. K. deliver and pay the same to the shipping master there:
(4.) The master shall in all cases in which any seaman or apprentice dies during the progress of a voyage or engagement give to the B. of Trade, or to such officer or shipping master as aforesaid, an account in such form as they respectively require of the effects, money and wages so to be delivered and paid; and no deductions claimed in such account shall be allowed unless verified, if there is any official log book, by such entry therein as herein-before required, and also by such other vouchers (if any) as may be reasonably required by the B. of Trade, or by the officer or shipping master to whom the account is rendered:
(5.) Upon due compliance with such of the provisions of this section as relate to acts to be done at the port of destination in the U. K., the shipping master shall grant to the master a certificate to that effect, and no officer of customs shall clear inwards any foreign-going ship without the production of such certificate.—§ 195.

Penalties for not taking charge of, remitting, or accounting for such Monies and Effects.—If any master fail to take such charge of the money or other effects of a seaman or apprentice dying during a voyage, or to make such entries in respect thereof, or to procure such attestation to such entries, or to make such payment or delivery of any money, wages, or effects of any seaman or apprentice dying during a voyage, or to give such account in respect thereof as herein-before respectively directed, he shall be accountable for the money, wages, and effects of the seaman or apprentice to the B. of Trade, and shall pay and deliver the same accordingly; and such master shall in addition for every such offence incur a penalty not exceeding treble the value of the money or effects not accounted for, or if such value is not ascertained, not exceeding 50*l.*; and if any such money, wages, or effects are not duly paid, delivered, or accounted for by the master, the owner of the ship shall pay, deliver, and account for the same, and such money and wages and the value of such effects shall be recoverable from him accordingly; and if he fail to account for and pay the same, he shall, in addition to his liability for the said money and value, incur the same penalty which is herein-before mentioned as incurred by the master for the like offence; and all money, wages, and effects of any seaman or apprentice dying during a voyage shall be recoverable in the same courts, and by the same modes of proceeding by which seamen are hereby enabled to recover wages due to them.—§ 196.

Officers of Customs and Consuls to take charge of Effects left by Seamen abroad.—If any such seaman or apprentice as last aforesaid die abroad, at any place either in or out of H. Majesty's dominions, leaving any money or effects not on board his ship, the chief officer of customs or the British consular officer at or nearest to the place, as the case may be, shall claim and take charge of such money and effects; and such officer shall, if he think fit, sell all or any of such effects, or any effects of any deceased seaman or apprentice delivered to him under the provisions before contained; and every such officer shall, quarterly, or at such other times as the B. of Trade directs, remit to H. M.'s Paymaster General all monies belonging to or arising from the sale of the effects of, or paid as the wages of, any deceased seamen or apprentices, which have come to his hands under the provisions herein-before contained, and shall render such accounts in respect thereof as the B. of Trade requires.—§ 197.

Wages and Effects of Seamen dying at home to be paid in certain Cases to Board of Trade.—Whenever any seaman or apprentice dies in the U. K., and is at the time of his death entitled to claim from the master or owner of any ship in which he has served any unpaid wages or effects, such master or owner shall pay and deliver or account for the same to the shipping master at the port where the seaman or apprentice was discharged or was to have been discharged, or to the B. of Trade, or as it directs.—§ 198.

If less than 50l. Wages and Property of deceased Seamen may be paid over without Probate or Administration to Persons entitled.—If the money and effects of any deceased seaman or apprentice paid, delivered, or remitted to the B. of Trade or its agents, including the monies received for any part of the said effects which have been sold either before delivery to the B. of Trade or by its direction, do not exceed in value the sum of 50*l.*, then, subject to the provisions after contained, and to all such deductions for expenses incurred in respect of the seaman or apprentice or of his said money and effects as the said board thinks proper to allow, the said board may, if it think fit, pay and deliver the said money and effects either to any claimants who can prove themselves to the satisfaction of the said board either to be his widow or children, or to be entitled to the effects of the deceased under his will (if any) or under the statutes for the distribution of the effects of intestates, or under any other statute, or at common law, or to be entitled to procure probate or take out letters of administration or confirmation, although no probate or letters of administration or confirmation have been taken out, and shall be thereby discharged from all further liability in respect of the money and effects so paid and delivered, or may, if it thinks fit, require probate or letters of administration or confirmation to be taken out, and thereupon pay and deliver the said money and effects to the legal personal representatives of the deceased; and all claimants to whom such money or effects are so paid or delivered shall apply the same in due course of administration, and if such money and effects exceed in value the sum of 50*l.*, then, subject to the provisions herein-after contained and to deduction for expenses, the B. of Trade shall pay and deliver the same to the legal personal representatives of the deceased.—§ 199.

Mode of Payment under Wills made by Seamen.—In cases where the deceased seaman or apprentice has left a will, the B. of Trade shall have the following powers; viz.:—

(1.) It may in its discretion refuse to pay or deliver any such wages or effects as aforesaid to any person claiming to be entitled thereto under a will made on board ship unless such will is in writing, and is signed or acknowledged by the testator in the presence of the master or first or only mate of the ship, and is attested by such master or mate.
(2.) It may in its discretion refuse to pay or deliver any such wages or effects as aforesaid to any person not being related to the testator by blood or marriage who claims to be entitled thereto under a will made elsewhere than on board ship, unless such will is in writing, and is signed or acknowledged by the testator in the presence of two witnesses, one of whom is

some shipping master appointed under this act, or some minister or officiating minister or curate of the place in which the same is made, or, in a place where there are no such persons, some justice of the peace, or some British consular officer, or some officer of customs, and is attested by such witnesses.

Whenever any claim made under a will is rejected by the B. of Trade on account of the said will not being made and attested as herein-before required, the wages and effects of the deceased shall be dealt with as if no will had been made.—§ 200.

Clause 201 directs the procedure to be followed in dealing with the claims of the creditors of deceased seamen.

Clause 202 lays down the mode of dealing with unclaimed wages of deceased seamen.

Punishment for Forgery and false Representations to obtain Wages and Property of deceased Seamen.—Every person who, for the purpose of obtaining, either for himself or for another, any money or effects of any deceased seaman or apprentice, forges, assists in forging, or procures to be forged, or fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any document purporting to show or assist in showing a right to such wages or effects, and every person who for the purpose aforesaid makes use of any such forged or altered document as aforesaid, or who for the purpose aforesaid gives or makes or procures to be given or made, or assists in giving or making or procuring to be given or made, any false evidence or representation, knowing the same to be false, shall be punishable with penal servitude for a term not exceeding 4 years, or with imprisonment with or without hard labour for any period not exceeding 2 years, or if summarily prosecuted and convicted, by imprisonment, with or without hard labour, for any period not exceeding 6 months.—§ 203.

Clause 204 enacts that the effects of seamen discharged from navy are to be disposed of by Accountant General of Navy.

*5. Leaving Seamen abroad.**—The desertion of their ships by seamen, when abroad, is an offence which, as we have seen, has been much and justly complained of. But the seamen may themselves be deserted; that is, they may be left when on shore with leave or for some necessary purpose, or they may be forced on shore by the master, and then left by him. These being offences of a very grave character, there can be no doubt that they should be visited with some suitable punishment. It is, also, highly expedient that such seamen as have the misfortune to be shipwrecked or left abroad, should be conveyed back to their mother country by the first opportunity. And hence all maritime codes concur in imposing penalties on masters, when abroad, forcing seamen ashore, or leaving them, without just cause; and they, also, make provision for the return home of such shipwrecked or deserted seamen. The following clauses of the Merchant Shipping Act have these objects in view:—

On Discharge of Seamen abroad, by Sale of Ship or otherwise, Seamen to be sent home at Expense of Owner.—Whenever any British ship is transferred or disposed of at any place out of H. M.'s dominions, and any seaman or apprentice belonging thereto does not in the presence of some British consular officer, or, if there is no such consular officer there, in the presence of one or more respectable British merchants residing at the place, and not interested in the said ship, signify his consent in writing to complete the voyage if continued, and whenever the service of any seaman or apprentice belonging to any British ship terminates at any place out of H. M.'s dominions, the master shall give to each such seaman or apprentice a certificate of discharge in the form sanctioned by the B. of Trade, and in the case of any certificated mate whose certificate he has retained shall return such certificate to him, and shall also, besides paying the wages to which such seaman or apprentice is entitled, either provide him with adequate employment on board some other British ship bound to the port in H. M.'s dominions at which he was originally shipped, or to such other port in the U. K. as is agreed upon by him, or furnish the means of sending him back to such port, or provide him with a passage home, or deposit with such consular officer or such merchant or merchants as aforesaid such a sum of money as is by such officer or merchants deemed sufficient to defray the expenses of his subsistence and passage home; and such consular officer or merchants shall indorse upon the agreement of the ship which the seaman or apprentice is leaving the particulars of such payment, provision, or deposit; and if the master refuses or neglects to comply with the requirements of this section, such expenses as last aforesaid, if defrayed by such consular officer or by any other person, shall, unless such seaman or apprentice has been guilty of barratry, be a charge upon the ship to which such seaman or apprentice belonged and upon the owner for the time being thereof, and may be recovered against such owners, with costs, at the suit of the consular officer or other person defraying such expenses, or, in case the same has been allowed to the consular officer out of the public monies, as a debt due to H. Majesty either by ordinary process of law, or in the manner in which seamen are hereby enabled to recover wages; and such expenses, if defrayed by the seaman or apprentice, shall be recoverable as wages due to him.—§ 205.

Forcing Seamen on Shore a Misdemeanor.—If the master or any other person belonging to any British ship wrongfully forces on shore and leaves behind, or otherwise wilfully and wrongfully leaves behind, in any place, on shore or at sea, in or out of H. M.'s dominions, any seaman or apprentice belonging to such ship before the completion of the voyage for which such person was engaged or the return of the ship to the U. K., he shall for each such offence be deemed guilty of a misdemeanor.—§ 206.

No Seamen to be discharged or left abroad without Certificate of some Functionary.—If the master of any British ship does any of the following things, viz.:

(1.) Discharges any seaman or apprentice in any place situate in any British possession abroad (except the possession in which he was shipped), without previously obtaining the sanction in writing indorsed on the agreement of some public shipping master or other officer duly appointed by the local government in that behalf, or (in the absence of any such functionary) of the chief officer of customs resident at or near the place where the discharge takes place.

(2.) Discharges any seaman or apprentice at any place out of H. M.'s dominions without previously obtaining the sanction so indorsed as aforesaid of the British consular officer there, or (in his absence) of two respectable merchants resident there.

(3.) Leaves behind any seaman or apprentice at any place situate in any British possession abroad on any ground whatever, without previously obtaining a certificate in writing so indorsed as aforesaid from such officer or person as aforesaid, stating the fact and the cause thereof, whether such cause be unfitness or inability to proceed to sea, or desertion or disappearance.

(4.) Leaves behind any seaman or apprentice at any place out of H. M.'s dominions, on shore or at sea, on any ground whatever, without previously obtaining the certificate indorsed in manner and to the effect last aforesaid of the British consular officer there, or (in his absence) of two respectable merchants, if there is any such at or near the place where the ship then is.

he shall for each such default be deemed guilty of a misdemeanor; and the said functionaries shall and the said merchants may examine into the grounds of such proposed discharge or into the allegation of such unfitness, inability, desertion, or disappearance as aforesaid, in a summary way, and may for that purpose, if they think fit, administer oaths, and may either grant or refuse such sanction or certificate as appears to them to be just.—§ 207.

* See art. MASTER.

Proof of such Certificate to be upon the Master.—Upon the trial of any information, indictment, or other proceeding against any person for discharging or leaving behind any seaman or apprentice, contrary to the provisions of this act, it shall be upon such person either to produce the sanction or certificate hereby required, or to prove that he had obtained the same previously to having discharged or left behind such seaman or apprentice, or that it was impracticable for him to obtain such sanction or certificate.—§ 208.

Wages to be paid when Seamen are left behind on Ground of Inability.—Every master of any British ship who leaves any seaman or apprentice on shore at any place abroad in or out of H. M.'s dominions, under a certificate of his unfitness or inability to proceed on the voyage, shall deliver to one of the functionaries aforesaid or (in the absence of such functionaries) to the merchants by whom such certificate is signed, or, if there be but one respectable merchant resident at such place, to him, a full and true account of the wages due to such seaman or apprentice, such account when delivered to a consular officer to be in duplicate, and shall pay the same either in money or by a bill drawn upon the owner; and in the case of every bill so drawn, such functionary, merchants or merchant as aforesaid, shall by indorsement certify thereon that the same is drawn for money due on account of a seaman's wages, and shall also indorse the amount for which such bill is drawn with such further particulars in respect of the case as the B. of Trade requires, upon the agreement of the ship; and every such master as aforesaid who refuses or neglects to deliver a full account of such wages, and pay the amount thereof in money or by bill, as herein-before required, shall for every such offence or default be liable, in addition to the payment of the wages, to a penalty not exceeding 10*l.*; and every such master who delivers a false account of such wages shall for every such offence, in addition to the payment of the wages, incur a penalty not exceeding 20*l.*—§ 209.

Clause 210 directs that such wages are to be treated as money due to the seamen, subject to payment of expense of their subsistence and passage home.

Distressed Seamen found Abroad may be relieved and sent Home at the Public Expense.—The governors, consular officers, and other officers of H. M. in foreign countries shall, and in places where there are no such governors or officers any two resident British merchants may provide for the subsistence of all seamen or apprentices, being subjects of H. M., who have been shipwrecked, discharged, or left behind at any place abroad, whether from any ship employed in the merchant service or from any of H. M.'s ships, or who have been engaged by any person acting either as principal or agent to serve in any ship belonging to any foreign power or to the subject of any foreign state, and who are in distress in any place abroad, until such time as they are able to provide them with a passage home, and for that purpose shall cause such seamen or apprentices to be put on board some ship belonging to any subject of H. M. bound to any port of the U. K., or to the British possession to which they belong, (as the case requires,) which is in want of men to make up its complement, and in default of any such ship shall provide them with a passage home as soon as possible in some ship belonging to a subject of H. M. bound as aforesaid, and shall indorse on the agreement of any ship on board of which any seaman or apprentice is so taken or sent the name of every person so sent on board thereof, with such particulars concerning the case as the B. of Trade requires, and shall be allowed for the subsistence of any such seaman or apprentice such sum *per diem* as the B. of Trade from time to time appoints; and the amount due in respect of such allowance shall be paid out of any monies applicable to the relief of distressed British seamen, and granted by parliament for the purpose, on the production of the bill of the disbursements, with the proper vouchers.—§ 211.

Masters of British Ships compelled to take them.—The master of every British ship so bound as aforesaid shall receive and afford a passage and subsistence to all seamen or apprentices whom he is required to take on board his ship under the provisions before contained, not exceeding one for every 50 tons burden, and shall during the passage provide every such seaman or apprentice with a proper berth or sleeping-place effectually protected against sea and weather; and on the production of a certificate signed by any governor, consular officer, or merchants by whose directions any such seaman or apprentice was received on board, specifying the number and names of such seamen or apprentices, and the time when each of them respectively was received on board, and on a declaration made by such person before a justice, and verified by the registrar-general of seamen, stating the number of days during which each seaman or apprentice received subsistence and was provided for as aforesaid on board his ship, and stating also the number of men and boys forming the complement of his crew, and the number of seamen and apprentices employed on board his ship during such time, and every variation (if any) of such number, such person shall be entitled to be paid out of the said monies applicable to the relief of distressed British seamen, in respect of the subsistence and passage of every seaman or apprentice so conveyed, subsisted, and provided for by him exceeding the number (if any) wanted to make up the complement of his crew, such sum *per diem* as the B. of Trade from time to time appoints; and if any person having charge of any such ship fails or refuses to receive on board his ship, or to give a passage home, or subsistence to, or to provide for any such seaman or apprentice as aforesaid, contrary to the provisions of this act, he shall incur a penalty not exceeding £100 for each seaman or apprentice with respect to whom he makes such default or refusal.—§ 212.

VOLUNTEERING INTO THE NAVY.

Seamen allowed to leave their Ships to enter the Navy.—Any seaman may leave his ship for the purpose of forthwith entering into the naval service of H. Majesty, and such leaving his ship shall not be deemed a desertion therefrom, and shall not render him liable to any punishment or forfeiture whatever; and all stipulations introduced into any agreement whereby any seaman is declared to incur any forfeiture or be exposed to any loss in case he enters into H. M. Naval Service shall be void, and every master or owner who causes any such stipulation to be so introduced shall incur a penalty not exceeding 20*l.*—§ 214.

Clause 215 directs that the clothes of seamen entering the navy, are to be delivered at once; and that wages are to be given to the Queen's officer on account of the seamen.

Clauses 217, 218, 219 and 220. relate to the proceedings to be taken by owners who claim extra expenses for having substitutes to replace the seamen who have entered the navy.

6. *Provisions, Health, and Accommodation on Board.*—These important objects are now provided for as follows; viz.

Survey of Provisions and Water on Complaint made.—Any three or more of the crew of any British ship may complain to any officer in command of any of H. M.'s ships, or any British consular officer, or any shipping master, or any chief officer of customs, that the provisions or water for the use of the crew are at any time of bad quality, unfit for use, or deficient in quantity; and such officer may thereupon examine the said provisions or water, or cause them to be examined; and if on examination such provisions or water are found to be of bad quality and unfit for use, or to be deficient in quantity, the person making such examination shall signify the same in writing to the master of the ship; and if such master does not thereupon provide other proper provisions or water in lieu of any so signified to be of a bad quality and unfit for use, or does not procure the requisite quantity of any so signified to be insufficient in quantity, or uses any provisions or water which have been so signified as aforesaid to be of a bad quality and unfit for use, he shall in every such case incur a penalty not exceeding 20*l.*; and upon every such examination as aforesaid the officers making or directing the same shall enter a statement of the result of the examination in the official log, and shall send a report thereof to the B. of Trade, and such report, if produced out of the custody of such Board or its officers, shall be received in evidence in any legal proceeding.—§ 221.

Forfeiture for frivolous Complaint. — If the officer to whom any such complaint as last aforesaid is made certifies in such statement as aforesaid that there was no reasonable ground for such complaint, each of the parties so complaining shall be liable to forfeit to the owner out of his wages a sum not exceeding one week's wages.—§ 222.

Allowance for short or bad Provisions. — In the following cases, viz.

(1.) If during a voyage the allowance of any of the provisions which any seaman has by his agreement stipulated for is reduced (except in accordance with any regulations for reduction by way of punishment contained in the agreement, and also except for any time during which such seaman wilfully and without sufficient cause refuses or neglects to perform his duty, or is lawfully under confinement for misconduct, either on board or on shore).

(2.) If it is shown that any of such provisions are or have during the voyage been bad in quality and unfit for use.

The seaman shall receive by way of compensation for such reduction or bad quality, according to the time of its continuance, the following sums, to be paid to him in addition to and to be recoverable as wages; (that is to say,)

(1.) If his allowance is reduced by any quantity not exceeding ⅓ of the quantity specified in the agreement, a sum not exceeding 4*d.* a day.

(2.) If his allowance is reduced by more than ⅓ of such quantity, 8*d.* a day.

(3.) In respect of such bad quality as aforesaid, a sum not exceeding 1*s.* a day.

But if it is shown to the satisfaction of the court before which the case is tried that any provisions the allowance of which has been reduced could not be procured or supplied in proper quantities, and that proper and equivalent substitutes were supplied in lieu thereof, the court shall take such circumstances into consideration, and shall modify or refuse compensation as the justice of the case may require.—§ 223.

Medicines, Lime, or Lemon Juice, Sugar and Vinegar, to be provided and kept on board certain Ships. —The following rules shall be observed with respect to medicines, medical stores, and anti-scorbutics; (that is to say,)

(1.) The B. of Trade shall from time to time issue and cause to be published a scale of medicines and medical stores suitable to accidents and diseases arising on sea voyages. (See Table below.)

(2.) The owner of every ship navigating between the U. K. and any place out of the same shall provide and cause to be constantly kept on board such ship a supply of such medicines and medical stores in accordance with the said scale.

(3.) The master or owner of every foreign-going ship (except those bound to European ports, or to ports in the Mediterranean Sea, and also except such ships or classes of ships bound to ports on the eastern coast of America, north of the 35th deg. of N. Lat., and to any islands or places in the Atlantic Ocean N. of the same limit, as the B. of Trade may from time to time exempt from this enactment), shall also provide and cause to be kept on board such ship a sufficient quantity of lime or lemon juice, or of such articles as the B. of Trade sanctions as substitutes for lime or lemon juice, and also of sugar and vinegar.

(4.) The master of every such ship as last aforesaid shall serve out the lime or lemon juice or other such articles as aforesaid, and sugar and vinegar to the crew, whenever they

Scale of Medicines and Medical Stores, issued by the Board of Trade under the 7 & 8 Vict. c. 112. and 13 & 14 Vict. c. 93.

	Quantities required, varying according to the Number of Persons on board, viz. for Vessels carrying		
	15 Men, and under.	Above 15, but under 40.	Above 40.
Castor oil	1 lb.	2 lb.	3 lb.
Epsom salts	4	8	12
Calomel	½ oz.	1 oz.	2 oz.
Powder of jalap	1	2	3
of rhubarb	1	2	3
Senna leaves	1	2	3
Cream of tartar	6 oz.	9	6
Sulphur	8	12	6
Alum	1	2	3
Powdered ginger	1	2	4
Sulphate of quinine	½	1	2
for vessels trading to the east or west coasts of Africa, to the coast of China and Borneo	3	4	4
Balsam of Copaiba	6	12	16
Calcined magnesia	4	6	12
Liquid ammonia	4	8	12
Olive oil	8	12	16
Spirit of turpentine	8	12	16
Laudanum	2	4	6
Bicarbonate of soda	8	16	24
Tartaric acid	6	12	16
Citric acid	4	6	8
Nitrate of silver	½	½	1
Opium pills, each to contain of opium 1 gr., Castile soap 4 grs.	2 doz.	3 doz.	3 doz.
Emetic powders, each to contain ipecacuanha 1 scruple, emetic tartar 2 grs.	2	3	3

	Quantities required, varying according to the Number of Persons on board, viz. for Vessels carrying		
	15 Men, and under.	Above 15, but under 40.	Above 40.
Purging pills, each to contain of the compound extract of colocynth 4 grs., calomel 1 gr.	4 doz.	6 doz.	8 doz.
Purging powders, each to contain of calomel 2 grs., compound powder of jalap 1 dr.	3	3	4
Compound chalk powder	2 oz.	3 oz.	4 oz.
Dover's powder	1	2	3
Essence of peppermint (each ounce to contain 1 drachm of the oil)	1	2	3
Simple ointment	8	16	24
Mercurial ointment	4	8	12
Basilicon ointment	4	8	12
Blistering plaister	4	8	12
Concentrated chloride of zinc (Burnett's solution) (Double the above quantities of chloride of zinc to be taken in steamers.)	14 pts.	28 pts.	56 pts.
Arrowroot in tin cases	2 lb.	4 lb.	6 lb.
Pearl barley do.	4	8	12
Rice do.	4	8	12
Mustard do.	1	2	3

In addition to the above, the following Medicines are to be supplied to Vessels carrying a Surgeon, and having upwards of 40 Persons on board.

Nitric ether			2 oz.	Hydriodate of potass			2 oz.
Acetate of lead			2	Ergot of rye			2
Croton oil			2 drs.	Tincture of digitalis			1
Camphor			1 oz.	Powder of ipecacuanha			1
Tartar emetic			1 dr.	Sulphate of zinc			1

Articles to accompany the Medicines.

Set of scales and weights	1 No.	1 No.	1 No.	Adhesive plaister	1 yd.	2 yds.	3 yds.

Tourniquet	1	1	1				
Oiled silk	1 yd.	1 yd.	1 yd.				

have consumed salt provisions for 10 days, and so long afterwards as such consumption continues, the lime or lemon juice and sugar daily at the rate of ½ oz. each per day, and the vinegar weekly at the rate of ½ pint per week, to each member of the crew.

And if in any such ship as aforesaid such medicines, medical stores, lime or lemon juice or other articles, sugar and vinegar, as are herein-before required, are not provided and kept on board as hereinbefore required the master or owner shall incur a penalty not exceeding 20*l.*; and if the master of any such ship as aforesaid neglects to serve out the lime or lemon juice or other articles, sugar or vinegar, in the case and manner herein-before directed, he shall for each such offence incur a penalty not exceeding 5*l.*; and if any master is convicted in either of the last-mentioned penalties, and it appears that the offence is owing to the act or default of the owner, such master may recover the amount of such penalty and the costs incurred by him from the owner.—§ 224.

Masters to keep Weights and Measures on board.—Every master shall keep on board proper weights and measures for the purpose of determining the quantities of the several provisions and articles served out, and shall allow the same to be used at the time of serving out such provisions and articles in the presence of a witness whenever any dispute arises about such quantities, and in default shall for every offence incur a penalty not exceeding 10*l.*—§ 225.

Board of Trade and Local Boards may appoint Inspectors of Medicines.—Any local marine board may upon being required by the B. of Trade, appoint and remove a medical inspector of ships for the port, and may fix his remuneration, such remuneration to be subject to the control of the B. of Trade; and at ports where there are no Local Marine Boards the B. of Trade may appoint and remove such inspectors, and fix their remuneration; and it shall be the duty of such inspectors to inspect the medicines, medical stores, lime or lemon juice, or other articles, sugar and vinegar, required to be kept on board any such ships as aforesaid; and such inspection, if made at places where there are local marine Boards, shall be made under the direction, and also in any special cases under the direction of the B. of Trade, and if made at places where there are no Local Marine Boards, shall be made under the direction of the B. of Trade; and such medical inspectors shall for the purposes of such inspection have the same powers as the inspectors appointed by the B. of Trade under the first part of this act; but every such inspector, if required by timely notice in writing from the master, owner, or consignee, shall make his inspection three days at least before the ship proceeds to sea, and if the result of the inspection is satisfactory shall not again make inspection before the commencement of the voyage, unless he has reason to suspect that some of the articles inspected have been subsequently removed, injured, or destroyed; and whenever any such medical inspector is of opinion that in any ship hereby required to carry such articles as aforesaid the same or any of them are deficient in quantity or quality, or are placed in improper vessels, he shall signify the same in writing to the chief officer of customs of the port where such ship is lying, and also to the master, owner, or consignee thereof, and thereupon the master of such ship, before proceeding to sea, shall produce to such chief officer of customs a certificate under the hand of such medical inspector or of some other medical inspector, to the effect that such deficiency has been supplied or remedied, or that such improper vessels have been replaced by proper vessels, as the case may require; and such chief officer of customs shall not grant a clearance for such ship without the production of such certificate, and if such ship attempts to go to sea without a clearance, may detain her until such certificate is produced; and if such ship proceeds to sea without the production of such certificate, the owner, master, or consignee thereof shall incur a penalty not exceeding 20*l.*—§ 226.

Penalty for selling bad Drugs for Ships.—Any person who sells or supplies any medicines, medical stores, lime or lemon juice, of bad quality, for the use of any ship, shall for each such offence incur a penalty not exceeding 20*l.*—§ 227.

Expense of medical attendance, &c., how to be defrayed.—The following rules shall be observed with respect to expenses attendant on illness and death; viz.:—

(1.) If the master or any seaman or apprentice receives any hurt or injury in the service of the ship to which he belongs, the expense of providing the necessary surgical and medical advice, with attendance and medicines, and of his subsistence until he is cured, or dies, or is brought back to some port in the U. K., if shipped in the U. K., or if shipped in some British possession to some port in such possession, and of his conveyance to such port, and the expense (if any) of his burial shall be defrayed by the owner of such ship, without any deduction on that account from the wages of such master, seaman, or apprentice.

(2.) If the master or any seaman or apprentice is on account of any illness temporarily removed from his ship for the purpose of preventing infection, or otherwise for the convenience of the ship, and subsequently returns to his duty, the expense of such removal, and of providing the necessary advice with attendance and medicines and of his subsistence whilst away from the ship, shall be defrayed in like manner.

(3.) The expense of all medicines and surgical or medical advice and attendance given to any master, seaman, or apprentice whilst on board his ship shall be defrayed in like manner.

(4.) In all other cases any reasonable expenses duly incurred by the owner for any seaman in respect of illness, and also any reasonable expenses duly incurred by the owner in respect of the burial of any seaman or apprentice who dies whilst on service, shall, if duly proved, be deducted from the wages of such seaman or apprentice.—§ 228.

Expenses, if paid by Consul, to be recoverable from Owner.—If any such expenses in respect of the illness, injury, or hurt of any seaman or apprentice, as are to be borne by the owner, are paid by any consular officer or other person on behalf of H. Majesty, or if any other expenses in respect of the illness, injury, or hurt of any seaman or apprentice whose wages are not accounted for to such officer under the provisions before contained are so paid, such expenses shall be repaid to such officer or other person by the master of the ship, and if not so repaid, the amount thereof, with costs, shall be a charge upon the ship, and be recoverable from the said master or from the owner of the ship for the time being as a debt due to H. Majesty, and shall be recoverable either by ordinary process of law or in the manner in which seamen are hereby enabled to recover wages; and in any proceeding for the recovery thereof the production of a certificate of the facts, signed by such officer or other person, together with such vouchers (if any) as the case requires, shall be sufficient proof that the said expenses were duly paid by such consular officer or other person as aforesaid.—§ 229.

Certain Ships to carry medical Practitioners.—Every foreign-going ship having 100 persons or upwards on board shall carry on board as part of her complement some person duly authorised by law to practise as physician, surgeon, or apothecary; and in default the owner shall for every voyage of any such ship made without such medical practitioner incur a penalty not exceeding 100*l.*: provided that nothing herein contained shall in anywise affect any provision contained in the "Passengers Act, 1852," concerning the carriage of medical practitioners by the class of ships therein named passenger ships, nor shall any such passenger ship, if not thereby required to carry a medical practitioner, be hereby required to do so.—§ 230.

Place appropriated to Seamen to have a certain Space for each Man, &c.—The following rules shall be observed with respect to accommodation on board; viz.:—

(1.) Every place in any ship occupied by seamen or apprentices, and appropriated to their use, shall have for every such seaman or apprentice; if they sleep in hammocks, a space of not less than 9 superficial feet, and if they do not sleep in hammocks, a space of not less than 12 superficial feet, measured on the deck or floor of such place.

(2.) Every such place shall either be 6 feet in height from deck to deck, or shall have for every seaman and apprentice, if they sleep in hammocks, a space of not less than 54 cubic feet, and if they do not sleep in hammocks, a space of not less than 72 cubic feet.

(3.) Every such place shall be kept free from stores or goods of any kind, not being the personal property of the crew in use during the voyage.

(4.) Every such place shall be properly caulked, and in all other respects securely and properly constructed and well ventilated

And if any such place in any ship is not in the whole sufficiently large to give such space for each seaman and apprentice as hereinbefore required, or is not properly caulked and in all other respects securely and properly constructed and well ventilated, the owner shall for every such failure to comply with the provisions of this section incur a penalty not exceeding 20*l.*; and if any such space as aforesaid is not kept free from goods and stores as aforesaid, the master shall for every such failure to comply with the provision of this section incur a penalty not exceeding 10*l.*—§ 231.

POWER OF MAKING COMPLAINT.

Seamen to be allowed to go ashore to make Complaint to a Justice.—If any seaman or apprentice whilst on board any ship states to the master that he desires to make complaint to a justice of the peace, or consular officer, or naval officer in command of any of H. M.'s ships, against the master or any of the crew, the said master shall, if the ship is then at a place where there is a justice or any such officer as aforesaid, so soon as the service of the ship will permit, and if the ship is not then at such a place, so soon after her first arrival at such a place as the service of the ship will permit, allow such seaman or apprentice to go ashore or send him ashore in proper custody so that he may be enabled to make such complaint, and shall, in default, incur a penalty not exceeding 10*l.*—§ 232.

PROTECTION OF SEAMEN FROM IMPOSITION.

Sale of and Charge upon Wages to be invalid.—No wages due or accruing to any seaman or apprentice shall be subject to attachment or arrestment from any court; and every payment of wages to a seaman or apprentice shall be valid in law, notwithstanding any previous sale or assignment of such wages, or of any attachment, incumbrance, or arrestment thereon; and no assignment or sale of such wages or of salvage made prior to the accruing thereof shall bind the party making the same; and no power of attorney or authority for the receipt of any such wages or salvage shall be irrevocable.—§ 233.

No Debt exceeding 5s. recoverable till End of Voyage.—No debt exceeding in amount five shillings, incurred by any seaman after he has engaged to serve, shall be recoverable until the service agreed for is concluded.—§ 234.

Penalty for Overcharges by Lodging-house Keepers.—If any person demands or receives from any seaman or apprentice to the sea service payment in respect of his board or lodging in the house of such person for a longer period than such seaman or apprentice has actually resided or boarded therein, he shall incur a penalty not exceeding 10*l.*—§ 235.

Penalty for detaining Seamen's Effects.—If any person receives or takes into his possession or under his control any monies, documents, or effects of any seaman or apprentice to the sea service, and does not return the same or pay the value thereof, when required by such seaman or apprentice, subject to such deduction as may be justly due to him from such seaman or apprentice in respect of board or lodging or otherwise, or absconds therewith, he shall incur a penalty not exceeding 10*l.*, and any two justices may, besides inflicting such penalty, by summary order direct the amount of value of such monies, documents, or effects, subject to such deduction as aforesaid, to be forthwith paid to such seaman or apprentice.—§ 236.

Persons not to go on board before the final Arrival of Ships without Permission.—Every person who, not being in H. M.'s service, and not being duly authorised by law for the purpose, goes on board any ship about to arrive at the place of her destination, before her actual arrival in dock or at the place of her discharge, without the permission of the master, shall for every such offence incur a penalty not exceeding 20*l.*; and the master or person in charge of such ship may take any such person so going on board as aforesaid into custody, and deliver him up forthwith to any constable or peace officer, to be by him taken before a justice or justices or the sheriff of the county in Scotland, and to be dealt with according to the provisions of this act.—§ 237.

Penalty for Solicitations by Lodging-House Keepers.—If, within 24 hours after the arrival of any ship at any port in the U. K., any person then being on board such ship solicits any seaman to become a lodger at the house of any person letting lodgings for hire, or takes out of such ship any effects of any seaman, except under his personal direction and with the permission of the master, he shall for every such offence incur a penalty not exceeding 5*l.*—§ 238.

For the next four clauses, see art. MASTER.

7. *Crimes Committed on the High Seas and Abroad.*—Clause 267. directs that all offences committed by seamen at sea or in foreign ports shall be within Admiralty jurisdiction.

Conveyance of Offenders and Witnesses to U. K., &c.—The following rules shall be observed with respect to offences committed on the high seas or abroad, viz.—

(1.) Whenever any complaint is made to any British consular officer of any offence on the high seas having been committed by any master, seaman, or apprentice belonging to any British ship, such consular officer may inquire into the case upon oath, and may if the case so requires, take any steps in his power for the purpose of placing the offender under necessary restraint, and of sending him as soon as practicable in safe custody to the U. K., or to any British possession in which there is a court capable of taking cognizance of the offence, in any ship belonging to H. M., or to any of her subjects, to be there proceeded against according to law:

(2.) For the purpose aforesaid such consular officer may order the master of any ship belonging to any subject of H. M., bound to the U. K., or to such British possession as aforesaid, to receive and afford a passage and subsistence during the voyage to any such offender as aforesaid, and to the witnesses, so that such master be not required to receive more than one offender for every one hundred tons of his ship's registered tonnage, or more than one witness for every 50 tons of such tonnage; and such consular officer shall indorse upon the agreement of the ship such particulars with respect to any offenders or witnesses sent in her as the B. of Trade requires.

(3.) Every such master shall on his ship's arrival in the U. K., or in such British possession as aforesaid, give every offender so committed to his charge into the custody of some police officer or constable, who shall take the offender before a justice of the peace or other magistrate by law empowered to deal with the matter, and such justice or magistrate shall deal with the matter as in cases of offences committed upon the high seas.

And any such master as aforesaid who, when required by any British consular officer to receive and afford a passage and subsistence to any offender or witness, does not receive him and afford such passage and subsistence to him, or who does not deliver any offender committed to his charge into the custody of some police officer or constable as herein-before directed, shall for each such offence incur a penalty not exceeding 50*l.*; and the expense of imprisoning any such offender and of conveying him and the witnesses to the U. K. or to such British possession as aforesaid in any manner other than in the ship to which they respectively belong, shall be part of the costs of the prosecution, or be paid as costs incurred on account of seafaring subjects of Her Majesty left in distress in foreign parts.—§ 268.

Inquiry into Cause of Death on board.—Whenever any case of death happens on board any foreign-going ship, the shipping master shall on the arrival of such ship at the port where the crew is discharged inquire into the cause of such death, and shall make on the list of the crew delivered to him as herein required an indorsement to the effect either that the statement of the cause of death therein contained is in his opinion true or otherwise, as the result of the inquiry requires; and every such shipping master shall for the purpose of such inquiry have the powers hereby given to inspectors appointed by the B. of Trade under the first part of this act; and if in the course of such inquiry it appears to him that any such death as aforesaid has been caused by violence or other improper means, he shall either report the matter to the B. of Trade, or, if the emergency of the case so requires, shall take immediate steps for bringing the offender or offenders to justice.—§ 269.

Depositions to be received in Evidence when Witness cannot be produced.—Whenever in the course of any legal proceedings instituted in any part of H. M.'s dominions before any judge or magistrate, or before any person authorised by law or by consent of parties to receive evidence, the testimony of any witness is required in relation to the subject matter of such proceeding, then upon due proof, if such proceeding is instituted in the U. K., that such witness cannot be found in that kingdom, or if in any British possession, that he cannot be found in the same possession, any deposition that such witness may have previously made on oath in relation to the same subject matter before any justice or magistrate in H. M.'s dominions, or any British consular officer elsewhere, shall be admissible in evidence subject to the following restrictions, viz.:

(1.) If such deposition was made in the U.K., it shall not be admissible in any proceeding instituted in the U.K.
(2.) If such a deposition was made in any British possession, it shall not be admissible in any proceeding instituted in the same British possession.
(3.) If the proceeding is criminal, it shall not be admissible unless it was made in the presence of the person accused.

Every deposition so made as aforesaid shall be authenticated by the signature of the judge, magistrate, or consular officer, before whom the same is made; and such judge, magistrate, or consular officer shall, when the same is taken in a criminal matter, certify, if the fact is so, and that the accused was present at the taking thereof, but it shall not be necessary in any case to prove the signature or official character of the person appearing to have signed any such deposition; and in any criminal proceeding such certificate as aforesaid shall, unless the contrary is proved, be sufficient evidence of the accused having been present in manner thereby certified; but nothing herein contained shall affect any case in which depositions taken in any proceeding are rendered admissible in evidence by any act of parliament, or by any act or ordinance of the legislature of any colony, so far as regards such colony, or to interfere with the power of any colonial legislature to make such depositions admissible in evidence, or to interfere with the practice of any court in which depositions not authenticated as herein-before mentioned are admissible.—§ 270.

8. *Registration of and Returns respecting Seamen.** — *Establishment of Register Office.*—There shall be in the port of London an office, to be called the "General Register and Record Office of Seamen," and the B. of Trade shall have control over the same, and may appoint and from time to time remove a registrar general, and such assistants, clerks, and servants as may be necessary, and may from time to time, with the consent of the Treasury, regulate their salaries and allowances; and such salaries and allowances, and all other necessary expenses, shall be paid by the Treasury out of any monies to be granted by Parliament for that purpose; and the B. of Trade may direct the business of the register office at any of the outports to be transacted at the shipping office, or, with the consent of the commissioners of customs, at the custom-house of the port, and may appoint the shipping master, or, with such consent as aforesaid, some officer of customs, to conduct the same; and such business shall thereupon be conducted accordingly, but shall in all cases be subject to the immediate control of the B. of Trade.—§ 271.

Register of Seamen to be kept. — The said registrar-general of seamen shall by means of the agreements, lists, and other papers to be transmitted to him as herein directed, or by such other means as are in his power, keep a register of all persons who serve in ships subject to the provisions of this act.—§ 272.

Lists to be made for all Ships, containing certain Particulars. — Every master of every foreign-going ship of which the crew is discharged in the U. K., in whatever part of H. M.'s dominions the same is registered, and of every home trade ship, shall make out and sign a list in a form sanctioned by the B. of Trade, containing the following particulars, viz.

(1.) The number and date of the ship's register and her registered tonnage.
(2.) The length and general nature of the voyage or employment.
(3.) The christian names, surnames, ages, and places of birth of all the crew, including the master and apprentices; their qualities on board, their last ships or other employments, and the dates and places of their joining the ship.
(4.) The names of any members of the crew who have died or otherwise ceased to belong to the ship, with the times, places, causes, and circumstances thereof.
(5.) The names of any members of the crew who have been maimed or hurt, with the times, places, causes, and circumstances thereof.
(6.) The wages due to any of the crew who have died, at the times of their respective deaths.
(7.) The clothes and other effects belonging to any of the crew who have died, with a statement of the manner in which they have been dealt with, and the money for which any of them have been sold.
(8.) The name, age, and sex of every person, not being one of the crew, who dies on board, with the date and the cause thereof.
(9.) Every birth which happens on board, with the date thereof, with the sex of the infant, and the names of the parents.
(10.) Every marriage which takes place on board, with the date thereof, and the names and ages of the parties.

Lists for foreign-going Ships to be delivered to Shipping Master. — In the case of foreign-going ships, the master shall, within 48 hours after the ship's arrival at her final port of destination in the U. K., or upon the discharge of the crew, whichever first happens, deliver to the shipping master before whom the crew is discharged such list as is herein required, and if he fail so to do shall for every default incur a penalty not exceeding 5*l.*; and such shipping master shall thereupon give to the master a certificate of such delivery; and no officer of customs shall clear inwards any foreign-going ship without the production of such certificate, and any such officer may detain any such ship until the same is produced.—§ 274.

Lists to be delivered by home trade Ships half-yearly. — The master or owner of every home trade ship shall, within 21 days after the 30th of June and the 31st of December in every year, transmit or deliver to some shipping master in the U. K. such list as herein-before required for the preceding half year, and shall in default incur a penalty not exceeding 5*l.*; and such shipping master shall give to the master or owner a certificate of such transmission or delivery; and no officer of customs shall grant a clearance or transire for any home trade ship without the production of such certificate, and any such officer may detain any such ship until the same is produced.—§ 275.

Lists to be sent Home in case of Transfer of Ship and in case of Loss.—If any ship cease by reason of transfer of ownership or change of employment to fall within the definition of a foreign-going or of a home trade ship, the master or owner thereof shall, if such ship is then in the U. K., within 1 month, and if she is elsewhere, within 6 months, deliver or transmit to the shipping master at the port to which the ship has belonged such list as before mentioned, duly made out to the time at which she ceased to be a foreign-going or home trade ship, and in default shall for each offence incur a penalty not exceeding 10*l.*; and if any ship is lost or abandoned, the master or owner thereof shall, if practicable, and as soon as possible, deliver or transmit to the shipping master at the port to which the ship belonged such list as herein-before mentioned duly made out to the time of such loss or abandonment, and in default shall for each offence incur a penalty not exceeding 10*l.*—§ 276.

Shipping Masters and other Officers to transmit Documents to Registrar.—All shipping masters and officers of customs shall take charge of all documents which are delivered or transmitted to or retained by them in pursuance of this act, and shall keep them for such time (if any) as may be necessary for the purpose of settling any business arising at the place where such documents come into their hands, or for any other proper purpose, and shall, if required, produce them for any of such purposes, and shall then transmit them to the registrar general of seamen, to be by him recorded and preserved; and the said registrar shall, on payment of a moderate fee to be fixed by the B. of Trade, or without payment of any fee if the B. of Trade so direct, allow any person to inspect the same; and in cases in which the production of the original of any such document in any court of justice or elsewhere is essential, shall produce the same, and in other cases shall make and deliver to any person requiring it a certified copy of any such document or of any part thereof; and every copy purporting to be so made and certified shall be received in evidence, and shall have all the effect of the original of which it purports to be a copy.—§ 277.

Officers of Customs to make Returns.—The collector or comptroller of customs at every port in the U. K. shall on or before the 1st of February and the 1st of August in every year transmit to the registrar general of seamen a list of all ships registered in such port, and also of all ships whose registers have been transferred or cancelled in such port since the last preceding return.—§ 278.

Agreements, Indentures, and Assignments, on Arrival at a foreign Port to be deposited with the Consul, at a Colony with the Officers of Customs.—The following rules shall be observed with respect to the delivery of documents to British consular officers; (that is to say,)

* See art. Log (Official).

(1.) Whenever any ship, in whatever part of H. M.'s dominions the same is registered, (except ships whose business for the time being is to carry passengers,) arrives at any foreign port where there is a British consular officer, or at any port in any British possession abroad, and remains thereat for 48 hours, the master shall, within 48 hours of the ship's arrival, deliver to such consular officer, or to the chief officer of customs, (as the case may be,) the agreement with the crew, and also all indentures and assignments of apprenticeships, or, in the case of a ship belonging to a British possession, such of the said documents as such ship is provided with.

(2.) Such officer shall keep such documents during the ship's stay in such port, and, in cases where any indorsements upon the agreement are hereby required, shall duly make the same, and shall return the said documents to the master a reasonable time before his departure, with a certificate indorsed on the agreement, stating when the same were respectively delivered and returned.

(3.) If it appears that the required forms have been neglected, or that the existing laws have been transgressed, such officer shall make an indorsement to that effect on the agreement, and forthwith transmit a copy of such indorsement, with the fullest information he can collect regarding such neglect or transgression, to the registrar-general of seamen.

And if any master fails to deliver any such document as aforesaid he shall for every such default incur a penalty not exceeding 20*l.*; and in any prosecution for such penalty it shall lie upon the master either to produce the certificate of the consular officer or officer of customs herein-before required, or to prove that he duly obtained the same, or that it was impracticable for him so to do.—§ 279.

9. *Regulations in regard to taking Apprentices on Board Ship.*—We have already noticed, under the article APPRENTICE, the important fact that it is no longer necessary that any ship, whether she be above or below 80 tons burden, should take on board any apprentice or apprentices. But though no longer compulsory, they may be, and continue to be, taken. The following clauses of the Merchant Shipping Act relate to the binding of such apprentices, more especially of those which are apprenticed by guardians or overseers of the poor.

Shipping Masters to assist in binding Apprentices. — All shipping masters appointed under this act, shall, if applied to for the purpose, give to any board of guardians, overseers, or other persons desirous of apprenticing boys to the sea service, and to masters and owners of ships requiring apprentices, such assistance as is in their power for facilitating the making of such apprenticeships, and may receive from persons availing themselves of such assistance such fees as may be determined by the B. of Trade, with the concurrence, so far as relates to pauper apprentices in England, of the poor law board in England, and so far as relates to pauper apprentices in Ireland, of the poor law commissioners in Ireland.—§ 141.

Indenture of Apprentices to Sea Service by Guardians, &c., to be witnessed by 2 Justices.— In the case of every boy bound apprentice to the sea service by any guardians or overseers of the poor, or other persons having the authority of guardians of the poor, the indentures shall be executed by the boy and the person to whom he is bound in the presence of and shall be attested by 2 justices of the peace, who shall ascertain that the boy has consented to be bound, and has attained the age of 12 years, and is of sufficient health and strength, and that the master to whom the boy is to be bound is a proper person for the purpose.—§ 142.

Indentures of Apprenticeship to be exempt from Stamp Duty.— All indentures of apprenticeship to the sea service shall be exempt from stamp duty; and all such indentures shall be in duplicate; and every person to whom any boy whatever is bound as an apprentice to the sea service in the U. K. shall within 7 days after the execution of the indentures take or transmit the same to the registrar general of seamen or to some shipping master; and the said registrar or shipping master shall retain and record one copy, and shall indorse on the other that the same has been recorded, and shall re-deliver the same to the master of the apprentice; and whenever any such indenture is assigned or cancelled, and whenever any such apprentice dies or deserts, the master of the apprentice shall, within 7 days after such assignment, cancellation, death or desertion, if the same happens within the U. K., or if the same happens elsewhere, so soon afterwards as circumstances permit, notify the same either to the said registrar of seamen, or to some shipping master, to be recorded; and every person who fails to comply with the provisions of this section shall incur a penalty not exceeding 10*l.*—§ 143.

Rules to govern Apprenticeship of Paupers in Britain and Ireland.—Subject to the provisions before contained, all apprenticeships to the sea service made by any guardians or overseers of the poor, or persons having the authority of guardians of the poor, shall, if made in G. Britain, be made in the same manner and be subject to the same laws and regulations as other apprenticeships made by the same persons, and if made in Ireland shall be subject to the following rules; viz.

(1.) In every union the guardians of the poor, or other persons duly appointed to carry into execution the acts for the relief of the destitute poor and having the authority of guardians of the poor, may put out and bind as an apprentice to the sea service any boy who or whose parent or parents is or are receiving relief in such union, and who has attained the age of 12 years, and is of sufficient health and strength, and who consents to be so bound:

(2.) If the cost of relieving any such boy is chargeable to an electoral division of a union, then (except in cases in which paid officers act in place of guardians) he shall not be bound unless the consent in writing of the guardians of such electoral division or of a majority of the guardians (if more than one) be first obtained, such consent to be, when possible, indorsed upon the indentures:

(3.) The expense incurred in the binding and outfit of an apprentice shall be charged to the union or electoral division (as the case may be) to which the boy or his parent or parents is or are chargeable at the time of his being apprenticed:

(4.) All indentures made in any union may be sued upon by the guardians of the union or persons having the authority of guardians therein for the time being, by their name of office, and actions brought by them upon such indentures shall not abate by reason of death or change in the persons holding the office; but no such action shall be commenced without the consent of the Irish poor law commissioners:

(5.) The amount of the costs incurred in any such action and not recovered from the defendant therein, may be charged upon the union or electoral division (as the case may be) to which the boy or his parent or parents was or were chargeable at the time of his being apprenticed.—§ 144.

Apprentices and their Indentures to be brought before Shipping Master before Voyage.—The master of every foreign-going ship shall, before carrying any apprentice to sea from any place in the U. K., cause such apprentice to appear before the shipping master before whom the crew is engaged, and shall produce to him the indenture by which such apprentice is bound and the assignment or assignments thereof (if any); and the name of such apprentice, with the date of the indenture and of the assignment or assignments thereof (if any), and the name of the port or ports at which the same have been registered, shall be entered on the agreement; and for any default in obeying the provisions of this section the master shall for each offence incur a penalty not exceeding 5*l.*—§ 145.

SEAMEN (CORPORATION FOR RELIEF OF). During the reign of George II. an establishment attached to Greenwich Hospital was erected by the 20 Geo. 2. c. 38, "*for the relief and support of disabled seamen, and the widows and children of such as shall be killed, slain, or drowned in the merchant service.*" To provide a fund for this charitable institution, every person serving in any merchant ship, or other private ship or vessel, belonging to any of his Majesty's subjects in England, (except apprentices under the age of 18, persons employed in boats upon the coasts in taking fish which are brought fresh on shore, or in boats within rivers, or upon boats on the coasts, and pilots (except persons employed in the service of the East India Company, and who were not entitled to the benefit of this institution, being provided for by a fund established by

the Company),) paid sixpence per month, which was deducted out of his wages by the master, and paid over to the persons appointed under the authority of the act at the port to which the ship belonged, before she was allowed to clear inwards. For the management and distribution of this fund, a corporation was created, composed chiefly of eminent merchants, with power to purchase lands and erect an hospital, and to provide for seamen rendered incapable of service by sickness, wounds, or other accidental misfortunes, and decrepit and worn out by age, either by receiving them into the hospital, or by pensions: and also to relieve the widows and children of seamen killed or drowned in the merchant service, provided the children are not of the age of 14 years; or if of that age and upwards are incapable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and to make reasonable allowances to those who shall lose an eye or a limb, or be otherwise hurt or maimed in fighting, defending, or working their ships, or doing any other dutyin their service, in proportion to their hurt; so far forth as the income and revenues of the charity will extend for these purposes. But no person is to be provided for as a worn-out seaman, who has not been employed in the merchant service five years and paid the contribution. And in providing for this class, a preference is given to such as have served longest and contributed most.

In order to ascertain the times of service and payment of the contribution, the master was obliged to keep a muster-roll of the persons employed in the ship, and had before her departure to deliver a duplicate to the collector or receiver of duties for the seamen's hospital at the port; and, during the voyage, to enter the time and place of discharge, quitting, and desertion, and of receiving other persons on board, and of any hurt, damage, death, or drowning; of which he had also to deliver a duplicate at his return, under the penalty of 20*l.*, to the truth whereof he might be examined upon oath by the collector. And in case any person employed on board any ship or vessel should, in doing his duty on shore or on board, break an arm or a leg, or be otherwise hurt or maimed, he was to be properly relieved until sufficiently recovered to be sent to the place to which the ship belonged.

But, notwithstanding the praiseworthy principle on which this establishment was founded, it was not found to be productive of the benefits, in a practical point of view, that had been anticipated. Perhaps this was to be in part explained by the circumstance of its being attached to Greenwich Hospital, which is peculiarly intended as a retreat for the worn-out and disabled seamen belonging to the Royal Navy. But, however this may be, it appears from accounts laid before parliament, that in 1829, when the merchant seamen paid an annual contribution of 26,137*l.* to the hospital, there was not one of them within its walls, except such as had also served on board line-of-battle ships! The system was, in consequence, much complained of by the seamen and others interested in the merchant service; and it is obvious that these complaints were not unfounded, and that the seamen reaped no advantage from the institution at all equivolent to the sacrifice they made for its support.

To obviate this state of things, a new system was introduced in 1835, when it was ordered, by the act 4 & 5 Will. 4. c. 34., that the contribution of 6*d.* per month by seamen in the merchant service to Greenwich Hospital should cease from the 1st January, 1835; and that 20,000*l.* a year should be advanced from the consolidated fund to the Hospital to make good the deficiency caused by the cessation of such contribution.

New Establishment for Support of Merchant Seamen, &c.—And to provide still more effectually for the relief and support of maimed and disabled merchant seamen, and of the widows, &c. of those killed or drowned in the merchant service, the act 4 & 5 Will. 4. c. 52. was passed. This act repealed the 20 Geo. 2. c. 38., except in so far as it related to the establishment of the corporation of the president and governors for the relief of maimed, &c. merchant seamen, and of the widows and children of seamen killed or drowned in the merchant service; and it also repealed as much of the act 37 Geo. 3. c. 73. as related to the wages of seamen dying while employed in ships trading to the West Indies. And having thus cleared the way it proceeded to introduce a new system, which was further extended and perfected by the 6 & 7 Will. 4. c. 15., and the 7 & 8 Vict. c. 112. Under this system, all masters of British ships, whether owners or not, and all British seamen employed in navigating the same, were obliged to contribute certain sums out of their wages, to the support of the Merchant Seamen's Fund. In the case of seamen this contribution, which, in the first instance, was only 6*d.* a month, was subsequently raised to 2*s.* per do. And in addition to these contributions, the wages and other effects of deceased seamen were, in the event of their not being claimed by their relations, paid over to the fund.

In a former edition of this work we stated,

" The contribution to this fund amounted, in 1842, in London and the ports immediately under the management of the president and governors of the society, to 16,936*l.* (of which, however, 2013*l.* were

interest of capital); and a large additional sum was also collected at the out-ports It may, therefore, be concluded, that, provided these sums be economically and discreetly managed, they will afford the means of suitably providing for the wants of a large number of disabled merchant seamen, as well as for the wives and children of those who have lost their lives in the service, and will consequently render it less hazardous and more respectable. But in this country, and, we presume, in most others, charitable institutions are usually quite as advantageous to others, as to those for whose behoof they are said to be established; and the institution for the relief of merchant seamen does not appear to form any exception to the ordinary rule. Speaking generally, the seamen are very much dissatisfied with the conduct of the establishment; and really this is not much to be wondered at. The expenses of collecting seem to be quite enormous, amounting to from 8 to 10, and sometimes even 15 per cent. and upwards, of the sums received! Probably, however, the reader may be disposed to think that there is no very good reason why this heavy expense, amounting to several thousand pounds a-year, should be incurred; and why the collectors and other customs officers should not be made to collect and remit the seamen's contributions in the same way that they collect and remit any portion of the public revenue. But if it be necessary to make an allowance to the officers in question for such duty, it would be better that it should be made by adding to the salaries paid them by government, than that they should be allowed to eke them out by encroaching deeply on a pittance saved from the hard-earned wages of sailors as a resource against old age and infirmity."

The abuses in question were not, however, rectified; and in consequence partly of their operation, and partly of too large a proportion of the available funds of the society having been distributed among the widows and children of the seamen, the system became very unpopular among the latter. And government being aware of the reasonableness of this feeling, an act was passed in 1851, the 14 & 15 Vict. c. 102., which provides for the winding-up of the fund, and its collection and distribution in the meantime.

Another institution for the benefit of merchant seamen is the *Seamen's Hospital Society*, established in 1821, and incorporated by the 3 & 4 Will. 4. c. 9. It is supported by voluntary contributions, and by a payment from the Treasury equal to the sums annually paid into the exchequer on account of fines or penalties inflicted under the Mercantile Shipping Act of 1854.

SEAWORTHY, a term applied to a ship, indicating that she is in every respect fit for her voyage.

It is provided in all charterparties, that the vessel chartered shall be "tight, staunch, and strong, well apparelled, furnished with an adequate number of men and mariners, tackle, provisions, &c." If the ship be insufficient in any of these particulars, the owners, though ignorant of the circumstance, will be liable for whatever damage may, in consequence, be done to the goods of the merchant; and if an insurance have been effected upon her, it will be void.

But whether the condition of seaworthiness be expressed in the charterparty or not, it is always implied. "In every contract," said Lord Ellenborough, "between a person holding himself forth as the owner of a lighter or vessel ready to carry goods for hire, and the person putting goods on board, or employing his vessel or lighter for that purpose, it is a term of the contract on the part of the lighterman or carrier *implied by law*, that his vessel is tight, and fit for the purpose for which he offers and holds it forth to the public; it is the immediate foundation and substratum of the contract that it is so: *the law presumes a promise to that effect on the part of the carrier, without any actual proof*; and every reason of sound policy and public convenience requires that it should be so."

Not only must the ship and furniture be sufficient for the voyage, but she must also be furnished with a sufficient number of persons of competent skill and ability to navigate her. And for sailing down rivers, out of harbours, or through roads, &c., where either by usage or the laws of the country a pilot is required, a pilot must be taken on board. But no owner or master of a ship shall be answerable for any loss or damage by reason of no pilot being on board, unless it shall be proved that the want of a pilot shall have arisen from any refusal to take a pilot on board; or from the negligence of the master in not heaving to, for the purpose of taking on board any pilot who shall be ready and offer to take charge of the ship.—(48 Geo. 3. c. 164.)

A ship is not seaworthy unless she be provided with all the documents or papers necessary for the manifestation of the ship and cargo. Neither is she seaworthy, if, during war, she be not supplied with the sails required to facilitate her escape from an enemy.

"It is not sufficient to defeat the liability of the owner, that he did not know that the ship was *not* seaworthy, for he ought to have known that she was so at the time he chartered her. The sufficiency of the ship is the foundation of the contract between the parties, and a ship not capable of conveying the goods in a proper state is a failure of the condition precedent to the whole contract. The seaworthiness of the ship is not a question of fraud or good intention, but it is a positive stipulation that the ship shall be so; and therefore, although the owner may himself have been deceived by the shipbuilder, repairer, &c., if the vessel be, in fact, un-seaworthy, have an insufficient bottom or unsound timbers, it is a breach of a preliminary condition, and is fatal, as such, to the contract."—(*Holt's Law of Shipping*, 2nd ed. p. 383.)

It is only necessary, to guarantee the owners from loss, that the ship should be sea-

worthy at the time of her departure. She may cease to be so in a few hours, and yet they may not be liable. The question to be decided in such cases always is, whether the ship's disability arose from any defect existing in her *before* her departure, or from a cause which occasioned it *afterwards*. But if a ship, within a day or two of her departure, become leaky or founder at sea, or be obliged to put back, without any visible or adequate cause to produce such an effect—such as the starting of a plank or other accident to which the best ships are liable, and which no human prudence can prevent—the fair presumption is that she was not seaworthy when she sailed; and it will be incumbent on the owners to show that she was seaworthy at that time. They are liable for damage occasioned by every injury arising from any *original defect* in the ship, or from bad stowage; but they are not liable for any injury arising from the act of God, the king's enemies, or the perils of the sea.

It is further to be observed, that how perfect soever a ship may be, yet if, from the nature of her construction, or any other cause, she be incapable of performing the proposed voyage, with the proposed cargo on board, she is not seaworthy. *She must be, in all respects, fit for the trade in which she is meant to be employed.* And it is a wholesome rule, that the owners should be held to a pretty strict proof of this.

It has been already observed, that any defect in point of seaworthiness invalidates an insurance upon a ship. There is not only an express but an implied warranty in every policy, that the ship shall be "tight, staunch, and strong, &c.;" and the reason of this is plain. The insurer undertakes to indemnify the insured against the *extraordinary and unforeseen perils of the sea;* and it would be absurd to suppose that any man would insure against those perils, but in confidence that the ship is in a condition to encounter the *ordinary perils* to which every ship must be exposed in the usual course of the proposed voyage.

By the old law of France it was directed that every merchant ship, before her departure from the place of her outfit, should be surveyed by certain sea officers appointed for that purpose, and reported to be seaworthy, "*en bon état de navigation*;" and that previous to her return, before she took her homeward cargo on board, she should be again surveyed. Valin has shown—(Tit. *Fret.* art. 12.), that very little confidence could be placed in these surveys, which, he tells us, were only made upon the external parts, for the ship was not unsheathed; and, therefore, her internal and hidden defects could not be disclosed. This practice seems now to be abandoned by the French; at least, there is no allusion to it in the *Code de Commerce*. It is, one should think, much better to leave the question as to the seaworthiness of the ship to be ascertained, as in England, after a loss has happened, by an investigation of the true cause of such loss, than to permit so important a question to be decided upon the report of officers without any motive to inquire carefully into her actual condition. A ship may, to all appearance, be perfectly capable of performing a voyage; and it is only after a loss has happened, that her latent defects can be discovered, and her true state at the time of her departure rendered manifest. Indeed, the survey made by the French was not deemed a conclusive proof that the ship was, at her departure, really seaworthy: it merely raised a *presumption* that such was the case; but it was still open to the freighter or the insurer to show the contrary.

For further information upon this point, the reader is referred to the able and excellent work of Chief Justice Abbot (Lord Tenterden) on the *Law of Shipping*, part. iii. c. 3.; *Holt on Shipping*, part. iii. c. 3.; and of Mr. Serjeant Marshall on *Insurance*, book i. c. 5. § 1.

SEEDS, in commerce, the grains of several species of gramina. Those of most importance are clover seed, flax or linseed, hemp seed, rape seed, tares, mustard seed, &c.; for which, see the respective articles. But it may be useful to subjoin the following

Account of the Imports and Exports of the Principal Seeds in 1852.

SEGARS, OR CIGARS. See TOBACCO.

SENNA (Fr. *Séné*; Ger. *Sennablater*; It. *Senna*; Sp. *Sen*; *Lat Cassia Senna*; Arab. *Suna*). The plant (*Cassia Senna*) which yields the leaves known in commerce

and the *materia medica* by the name of senna, is an annual, a native of Upper Egypt, and Bernou in Central Africa. The senna, after being collected in Upper Egypt, is packed up in bales, and sent to Boullac, where it is mixed with other leaves, some of which are nearly equally good, while others are very inferior. After being mixed, it is repacked in bales at Alexandria, and sent to Europe. A great deal of senna is imported from Calcutta and Bombay, under the name of East India senna; but it is originally brought to them from Arabia.—(*Thomson's Dispensatory.*) Senna is very extensively used in medicine. In 1857, the imports and exports of senna amounted respectively to 219,191 and 222,584 lbs., a portion of the latter being derived from the surplus imports of previous years. A duty of 1*s.* 3*d.* per lb. on its being imported, after being reduced in 1832 to 6*d*, and in 1842 to 1*d.* per lb., was wholly repealed in 1845.

SHAGREEN (Ger. *Schagrin*; It. *Chagrin*; Rus. *Schagrim Schagren*), a kind of grained leather, used for various purposes in the arts. It is extensively manufactured at Astrakhan in Russia.—(See *Tooke's Russia*, vol. iii. p. 403.)

SHAMMY OR CHAMOIS LEATHER (Ger. *Sämischleder*; Fr. *Chamois*; It. *Camoscio*; Rus. *Smschanüi, Koshi*), a kind of leather dressed in oil, or tanned, and much esteemed for its softness, pliancy, and capability of bearing soap without hurt. The real shammy is prepared of the skin of the chamois goat. But leather prepared from the skins of the common goat, kid, and sheep, is frequently substituted in its stead.

SHANG-HAE OR HAI, a city and river port of China, prov. Kiang-su, on the Woosung river, 40 m. by water from the sea, and 169 m. E. S. E. Nankin; lat 31° 12′ N., long. 120° 53′ E. Pop. estimated at from 115,000 to 135,000. It stands in a level and well-cultivated plain, producing good crops of cotton, rice, and wheat. Immediately outside the wall by which it is enclosed are several populous suburbs. Streets narrow and filthy. Foundling hospitals, tea-gardens, and vast ice-houses, are the objects most worthy of notice in the city. It has a mint, with manufactures of silk, vegetable oils and oil-cake (of which vast quantities are annually sent into the interior), iron ware, glass, paper, ivory ware, &c.

This is the most northerly of the five Chinese ports which were opened to foreigners by the treaty of 1842, and it is also the most important. The river, which may be navigated by ships of 450 or 500 tons for a considerable distance above the town, crosses the Grand Canal, so that Shanghae is an *entrepôt* for all the vast and fertile countries traversed by the canal, and by the great rivers, inc. the Yang-tse-Kiang, and the Hoang-Ho, with which it is connected. Hence the present importance of the emporium, and hence, also, the indefinite extension to which its foreign trade may probably attain. Its inland and coasting trades are both very extensive. It is said to be annually visited by from 5,000 to 6,000 canal and river boats, some from very great distances, and by 1,500 or 1,600 coasting junks. The prov. of Kiang-su, in which Shanghae is situated, produces great quantities of silk; and besides supplying most part of the N. provs. of the empire, the shipments of silk to the foreigner are much greater from this than from any other port. It is, also, well situated for the trade in green and black teas; and in their export, as well as in that of silk, it has shot far ahead of Canton and the other emporiums. Among the other exports are oil and oil-cake, cotton, drugs, porcelain, copper, and copper-ware, nankeens, gold thread, alum, fans, hams, dried fish, &c. Of the imports opium is by far the greatest. In 1855 and 1856, 28,860 and 34,550 chests were imported. In the latter year the deliveries for consumption amounted to 33,700 chests, worth 4,176,550*l.*! The value of the cottons imported during 1856 amounted to 1,226,328*l.*, and that of the woollens to 239,482*l.* But despite these and other articles, the excess of the value of the exports was so very great, that immense quantities of silver were imported. The following tables, which show the progress of the British trade with China during the 10 years ending 1858, show, also, the great comparative importance of Shanghae.

The inhabs. of Shanghae are much more hospitable and better disposed towards foreigners than those of Canton; and strangers may travel for miles into the interior all round the city, with perfect security. Within the last 4 or 5 years, some very fine brick houses have been built by the British and other foreign merchants in the suburbs.

We are indebted to the elaborate and excellent Reports of Mr. Consul Robertson for the preceding statements in regard to the trade of Shanghae in 1856.

SHARKS' FINS, form a regular article of trade to China; and are collected for this purpose in every country from the eastern shore of Africa to New Guinea. In the Canton Price Currents they are as regularly quoted as tea or opium; and the price of late years has been, according to quality, from 15 to 18 dollars per picul, equal to from 50*s.* to 60*s.* per cwt.

SHAWLS (Ger. *Schalen;* Fr, *Chals, Chales;* It. *Shavali;* Sp. *Schavalos*), articles of fine wool, silk, or wool and silk, manufactured after the fashion of a large handkerchief, used in female dress. The finest shawls are imported from India, where they are highly esteemed, and cost from 50 to 300 guineas. But the British shawls manufactured at Norwich, Paisley, and particularly Edinburgh, have recently been very much improved; and though still inferior in point of quality to the finest specimens brought from the East, they look well, and are much cheaper. The native shawl manufacture is of very considerable value and importance.

Cashmere Shawls.—The shawl manufacture is believed to have originated in the valley of Cashmere, the ancient Caspira, in the north-west of India, between the 34th and 35th degrees of N. latitude, and the 73d and 76th degrees of E. longitude. Though not so flourishing as it once was, the manufacture is still prosecuted in this province to a very considerable extent. The shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth. They are formed of the inner hair of a variety of the common goat (*Capra hircus*), reared on the cold dry table land of Thibet, elevated from 14,000 to 16,000 feet above the level of the sea. The goat thrives sufficiently well in many other countries; but in the sultry plains of Hindostan it has hardly more hair than a greyhound; and though in higher latitudes the hair is more abundant, it is for the most part shaggy and coarse. It is only in the intensely cold and dry climate of Thibet that it yields the peculiarly soft woolly hair that constitutes the material of the Indian shawl. We do not, therefore, suppose that the efforts to naturalise the shawl-goat in France will turn out well. On the contrary, we believe the chances of success would be about equal were an attempt made to breed beavers in a hot country, without water, or camels in a moist country, free from heat and drought.

The inner or fine wool is covered over and protected by a quantity of long shaggy hair, which is, of course, carefully separated from it before it is manufactured.

The genuine shawl wool has been imported into this country; and the finest Edinburgh and Paisley shawls have been produced from it. But it must be admitted that shawls have nowhere been made that can come, as respects quality, into successful competition with those of Cashmere. The manufacture has been established at Delhi and Lahore for some years; but notwithstanding it is carried on by native Cashmerians, and though the material employed be quite the same, the fabrics are said to want the

fineness of those made in Cashmere, and to have a degenerated, coarse appearance. It is difficult to account for this superiority. It has been ascribed to some peculiar quality of the water in the valley of Cashmere; but it is most probably owing to a variety of circumstances, which, though each may appear of little importance, collectively give a character to the manufacture.

The following details as to the manufacture of Cashmere shawls have been extracted from an English paper published at Delhi: —

"The great mart for the wool of which shawls are made, is at Kilghet, which is said to be a dependency of Ladak, and situated 20 days' journey from the northern boundaries of Cashmere. There are 2 kinds of it: that which can be readily dyed is white: the other sort is of an asby colour, which being with difficulty changed, or, at least, improved by art, is generally woven of its natural hue. About 2 lbs. of either are obtained from a single goat once a year. After the down has been carefully separated from the hairs, it is repeatedly washed with rice starch. This process is reckoned important; and it is to the quality of the water of their valley that the Cashmerians attribute the peculiar and inimitable fineness of the fabrics produced there. At Kilghet the best raw wool is sold for about 1 rupee a pound. By the preparation and washing referred to, it loses $\frac{1}{2}$, and the remainder being spun, 3 rupees weight of the thread is considered worth 1 rupee.

"Shawls are made of various forms, size, and borders, which are wrought separately, with the view of adapting them to the different markets. Those sent to Turkey used to be of the softest and most delicate texture. Carpets and counterpanes are fabricated of the hair or coarser part of the wool. From a variety of causes, among others the destruction of the Janissaries, who dressed much in shawls, the loss of royalty in Cabul, and the ruined finances of Lucknow, it is certain that the demand for this elegant commodity has greatly declined of late years. Under the Mogul emperors, Cashmere found work for 30,000 shawl looms. In the time of the Afghan kings, the number decreased to 18,000. There are now not more than 6,000 employed. I should attribute little of this diminution to the sale of English imitations among the Asiatic nations. When these counterfeits first appeared, the pretty patterns and brilliancy of the colours took the fancy of some, but their great inferiority in the softness and warmth which marks the genuine shawl, soon caused the new article to be neglected.

"The average value of shawls exported from Cashmere amounts annually to 1,800,000 rupees. Runjeet Singh took $\frac{3}{4}$ in kind as part of the gross revenue of the province, which was about 25 lacs a year. He is said to have sold $\frac{3}{4}$ of what he thus received, and to have kept the remainder for his own court. Of those disposed of by him and left for sale in the valley, 7 lacs' worth went to Bombay and Western India; 3 to Hindostan, chiefly Oude; $\frac{1}{4}$ a lac each to Calcutta, Cabul, Herat, and Balk, whence some were carried to neighbouring countries.

"A curious calculation of the successive exactions, from Cashmere to Bombay inclusive, which magnify the price of shawls, is herewith subjoined.

"Actual cost for materials and labour in making a pair of reel shawls: —

	Fd.	rs.
Four Furrukabad seers of wool	14	8
Cleaning, washing, and spinning	50	0
Dyeing	11	0
Wages to weavers	264	6
Total	357	14
Duties on the same. — On sale and importation to Cashmere	3	14
On the thread	8	4
While the fabric is in the loom	125	0
Fees to chowdries, brokers, assessors, &c.	35	0
Total amount of duties in Cashmere	171	18
Duties from Cashmere to Amritsir	14	6
From Amritsir to Bombay	5	6½
At Bombay	70	0
Total from Amritsir to Bombay	85	12½

	Fd.	rs.
Total from Kilghet to Bombay, 171 18 and 85 12½ = 252	30½	
Prime cost	357	14
Proportion of carriage	0	12
Insurance	21	0
Total cost	610	56½

"A pair of such shawls might sell for 500 rupees at Amritsir, and in Bombay for 900. The amount of the imports, and the sums levied by each government, will appear more in relief if stated as they affect a camel load in its progress. It consists of 14½ catcha maunds, and contains, at an average, 2,000 shawls of different kinds, valued, on reaching Bombay, at 28,500 Furrukabad rupees.

"The government of Lahore exacts Fd. rs. 1,564 6; Patialah, 61 0; Bikeneer, 43 0; Joudpore, 121 4; Bhownuggur, 20 0; — total levied by native princes, 1,809 0; Bombay, 10 per cent. *ad valorem*, 2,550 0 *

SHEA BUTTER, or VEGETABLE TALLOW, the produce of the nut of the *Bassia Parkii*, belonging to the natural order *Sapotaceæ* of botanists; a scrubby growing tree, indigenous to the interior of W. Africa as the oil palm is to the sea coast. It is found in great abundance, covering immense tracts, both of hill and plain.

The *Bassia Parkii* is covered in the season with dense heads of whitish flowers, which have a fragrance similar to that of the hawthorn. The fruit, which ripens in May or June, is said to resemble an over-ripe pear, is exceedingly sweet, and is eaten by the natives. The nuts or kernels have the shape, and the exact colour, of the horse-chestnut, but are a little larger. After being freed from their shells, which is effected by thrashing or bruising after they have been for some time exposed to the action of a slow heat, the kernels are coarsely crushed, then boiled; a fatty matter is thereupon thrown to the surface, which is skimmed off, and put into earthen pots. It soon hardens into a solid mass, when it has the colour and consistence of animal tallow. It is then fit for use, and possesses the valuable quality of not getting rancid by keeping.

The small quantities of Shea butter at first imported into this country commanded a price of 5*l.* per ton above that of palm oil; but the larger parcels which have since been received have not brought so much. It is, however, quite as valuable as palm oil, and possesses this superiority that, for the purposes to which it is applied, it does not, like the oil, require to undergo the expensive process of bleaching.

* It may be used for any of the purposes to which palm oil is applied, and might be

procured to any extent, were there cheap means of transport from the interior of Western Africa to the coast.—(*Private Information.*)

SHEEP (Ger. *Schafe;* Fr. *Brebis, Bêtes à laine, Moutons;* It. *Pecore;* Sp. *Pecora, Ovejas;* Rus. *Owzü;* Lat. *Oves*).

Of the domestic animals belonging to Great Britain, sheep, with the exception of horses, and, perhaps, cattle, are by far the most important. They can be reared in situations and upon soils where other animals would not live. They afford a large supply of food, and one of the principal materials of clothing. Wool has long been a staple commodity of this country, and its manufacture employs an immense number of people. "The dressed skin," says Mr. Pennant, "forms different parts of our apparel; and is used for covers of books. The entrails, properly prepared and twisted, serve for strings for various musical instruments. The bones, calcined (like other bones in general), form materials for tests for the refiner. The milk is thicker than that of cows, and consequently yields a greater quantity of butter and cheese; and in some places is so rich, that it will not produce the cheese without a mixture of water to make it part from the whey. The dung is a remarkably rich manure; inasmuch that the folding of sheep is become too useful a branch of husbandry for the farmer to neglect. To conclude; whether we consider the advantages that result from this animal to individuals in particular, or to these kingdoms in general, we may, with Columella, consider this, in one sense, as the first of the domestic quadrupeds."*—(*Pennant's British Zoology.*) The importation of sheep was prohibited until 1842 when they were admitted on payment of duties, (sheep 3*s.* a head, lambs 2*s.*), which were repealed in 1846. (See CATTLE.)

The following Table exhibits a compendious view of the more prominent characteristics of the principal breeds of sheep in Great Britain.

Names of Breeds.	Head.	Colour of Face and Legs.	Wool.	Wgt. of Fleece.	Weths. per Qr.	Age killed.
				Lbs.	*Lbs.*	*Years.*
1. Teeswater	No horns	White face and legs	Long wool	9	28	2

SHIPS, SHIPPING.

I. SHIPS (GENERAL ACCOUNT OF).
II. SHIPS (CLASSIFICATION OF).
III. SHIPS (SAFETY OF).
IV. SHIPPING OFFICES.
V. SHIPS' PAPERS.

I. SHIPS (GENERAL ACCOUNT OF).

Nautical men apply the term ship to distinguish a vessel having 3 masts, each consisting of a lower mast, a topmast, and top-gallant mast, with their appropriate rigging. In familiar language, it is usually employed to distinguish any large vessel, however rigged: but it is also frequently used as a general designation for all vessels navigated with sails; and it is in this sense that we now employ it.

Merchant Ships.—It is hardly possible to divide merchant ships into classes, at least with any degree of precision. Their size, shape, the mode of their rigging, &c., depend not merely on the particular trade for which they are destined, but on the varying tastes and fancies of their owners. The ships employed in the China and Indian trade

* Post majores quadrupedes ovilli pecoris secunda ratio est; quæ prima sit si ad magnitudinem utilitatis referas. Nam id præcipue contra frigoris violentiam protegit, corporibusque nostris liberaliora præbet velamina; et etiam elegantiam mensas jucundis et numerosis dapibus exornat.—(*De Re Rustică*, lib. vii. cap. 2.)

are the largest and finest merchantmen belonging to this country; those in the West India trade rank next; then follow the whale ships, those engaged in the trade to the Baltic and Canada, the Mediterranean, the coasting trade, &c.

The reader will find, in the articles NAVIGATION LAWS, and REGISTRY, an account of the privileges enjoyed by British ships, the conditions and formalities necessary to be observed in order to acquire and preserve those privileges, the mode of transferring property in ships, &c. And in the articles CHARTERPARTY, FREIGHT, MASTERS, OWNERS, SEAMEN, SEAWORTHY, &c., the law with respect to ships and shipowners, in their capacity of carriers or public servants, and the reciprocal duties and obligations of the masters and crews, is pretty fully expounded. In this place, therefore, we shall content ourselves with laying before the reader some official statements exhibiting the progress and present magnitude of the mercantile navy of Great Britain.

Increase of Shipping in England.—It would be to no purpose, even if our limits permitted, to enter into any details with respect to the shipping of England, previously to the Revolution. Those who wish to examine the subject, will find most of the scattered notices of contemporary writers collected by Anderson, in his "Chronological History of Commerce." The mercantile navy of England first became considerable in the reign of Elizabeth; and gradually increased under her successors, James I. and Charles I. At the Restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that, at the Revolution, the British ships cleared outwards amounted to 190,533 tons. The war terminated by the treaty of Ryswick, in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of two short periods during the war of 1739 and the American war, from the beginning of last century down to the present day.

The first really authentic account of the magnitude of the commercial navy of England was obtained in 1701-2, from returns to circular letters of the commissioners of customs, issued in January of that year. From these it appears that there belonged, at the period in question, to *all* the ports of England and Wales, 3,281 vessels, measuring (or rather estimated to measure) 261,222 tons, and carrying 27,196 men and 5,660 guns. Of these there belonged to

Ports.	Vessels.	Tons.	Men.	Ports.	Vessels.	Tons.	Men.
London	560	84,882	10,065	Hull	115	7,564	187
Bristol	165	17,338	2,359	Whitby	110	8,292	571
Yarmouth	143	9,914	668	Liverpool	102	8,619	1,101
Exeter	121	7,107	978	Scarborough	100	6,860	606

None of the other ports had 100 vessels; and there is some mistake in the returns as to the tonnage assigned to Newcastle and Ipswich. Of the Hull vessels, 80 were at the time laid up, which accounts for the small number of men in that port.—(*Macpherson's Annals of Commerce*, anno 1701.)

The Table No. V. (see p. [1166.]) of the British and foreign shipping cleared outwards from 1663 to 1811, both inclusive, is taken from the last edition of *Chalmers' Comparative Estimate*. It gives a very complete view of the progress of the navigation of the country; and from the attention paid by the author to such subjects, and the facilities which his situation in the Board of Trade gave for acquiring authentic information, its accuracy may be depended on.

1. COLONIAL SHIPPING.—A Return of the Number and Tonnage of Sailing and Steam Vessels registered on the 31st of December, 1808, at each of the Ports of the Colonies of the U. Kingdom; distinguishing between those under and those above Fifty Tons Register, and between Sailing and Steam Vessels.

N.B.—The falling off in the number of ships after 1825 is apparent only. The numbers returned in the previous years were those that appeared on the registers. But a ship when once placed on them, remained till evidence was produced of her having been sold to foreigners, lost, or otherwise destroyed: so that a good many ships were at all times on the register, which, in fact, did not exist. The Registry Act passed in 1826 obliged all owners of ships to register them of new; when, of course, the names of those that had ceased to exist disappeared from the books.

Ship-building. — The cost, including the outfit, of the ships built in the U. Kingdom and colonies in 1857, may, we believe, be taken, at a rough average, at from 12*l.* to 14*l.* per ton, or 13*l.* at a medium, making their total value 3,321,981*l.* Sunderland, London, Glasgow, Newcastle, Liverpool, Hull, Yarmouth, &c. are the principal building ports. The business has increased with extraordinary rapidity at Sunderland: so much so that while only 60 ships, of the burden of 7,560 tons, were built in that port in 1820, no fewer than 110 ships, of the burden of 42,003 tons, were built in it in 1858. Ships built in London, Liverpool, Bristol, and other western ports, are, however, in higher estimation than those built in the Tyne and the Wear, at least for those branches of trade where the best ships are required. We subjoin

An Account of the Ships and their Tonnage annually built in Sunderland since 1848.

Years.	Ships.	Tons.	Average Tons.	Years.	Ships.	Tons.	Average Tons.

Within the last dozen years the building of iron steam ships has been immensely extended on the Tyne and the Clyde, especially the latter, which has become the grand seat of this branch of industry. In 1853–54, no fewer than 266 vessels were built or contracted for on the Clyde. They were partly sailing vessels and partly steamers, the engines for the latter being of 29,000 horse-power. But latterly a check has been given to the business. In 1858 there were launched 60 iron vessels of the aggr. burden of 40,522 tons; and there are now (1859) being built 34 vessels of 18,463 tons. (See antè, p. 532.)

State of the Shipping Interest in 1859. — When the last edition of this work was published during the war with Russia, and when the exports to the Australian colonies had suddenly risen to an extraordinary magnitude, the shipping interest was in the highest state of prosperity. But it was easy to see that the circumstances referred to were of a merely temporary character, and that the prosperity which depended on them would most likely be short-lived. We said so at the time; and our conjectures have been fully verified. The cessation of the Russian war, by putting an end to the extraordinary demand for ships for the conveyance of troops, was followed by an immediate fall of freights. And though this fall was in part, it was not wholly, countervailed by the demand for ships to convey troops to India to quell the revolt of the Bengal native army. Concurrently, too, with these circumstances, the revulsion that took place in the trade with Australia disengaged a considerable number of ships, while the vast additions made by the Americans, Dutch, &c., to their commercial marine contributed still more, by increasing competition beyond the demand, to lower the rate of freight. The latter, consequently, has been much reduced during the last two or three years; and though it has latterly been somewhat increased it is still very low; and a severe check has been given to ship-building both here and in the U. States and Holland.

But independent of the transitory circumstances now alluded to, we apprehend that the grand cause of the depression of the shipping interest here and in America, is to be found in the too great increase of shipping. The truth is, that ship-building has been completely overdone on both sides the Atlantic. It should be borne in mind that in consequence of the more extensive employment of steam ships in the coasting and oversea trades, the same amount of tonnage performs a much greater amount of work. The mere substitution of steam for sailing ships, though there had been no increase of tonnage, would have been really equivalent to a large addition to the latter. Inasmuch, however, as both the proportion of steam ships to the total tonnage and the amount of the latter have greatly increased, we need not be surprised at the existing depression.

But there is no ground for thinking that the latter will be permanent. The continued increase of our trade will afford employment to a still increased amount of shipping; and the check given to building in the meantime will powerfully assist in bringing about the desired equilibrium between the demand and supply.

Some very important changes have been made of late years, and are yet in progress, in the construction of ships. They are now built of a much larger size than formerly, of finer models, and with a power of sailing of which no just idea could previously have been formed. Ships of 2,000 tons burden are now reckoned only of little more than a medium size; and those of 2,300 and 2,500 tons, and upwards, have become very common. But in this, as in most other things, we appear to have run from one extreme into another; and from being too small, our ships, and those of the Americans, were becoming too large and unwieldy. And, speaking generally, they are now being built of a less, though still large, and more convenient size than was customary a few years ago.

Iron ships are also, as previously stated, very extensively constructed; and ships are now frequently fitted out with screws and steam engines to be used only as a subsidiary power in calms, and against contrary winds.

Most sorts of short passage traffic are now carried on by steamers; and it is probable that in the end they will engross the greater part of the coasting trade of most countries and of the trade between foreign countries adjacent to each other. But it is believed by many good judges, that the improved class of sailing ships have little to fear from the competition of steamers in all the more distant branches of trade. This, however, would appear to be very doubtful.

Statements of Shipowners.—It will not excite the reader's surprise to be told that a great many crude projects have been put forward in the view of removing the existing distress. But it must be left to time and to the efforts of the parties concerned to set it to rights. It would be much worse than useless to attempt to improve their situation by engaging in retaliatory proceedings against Spain and those countries that lay discriminating duties on articles conveyed to them in foreign ships. Such proceedings would seriously injure ourselves without having any favourable influence over the foreigner. Certainly he will not abandon the protective system because we complain of its operation, though

that might very probably tempt him to extend it still farther. But there can be little doubt that he will eventually renounce it when he sees that our commerce and shipping, despite the temporary checks to which all departments of industry are necessarily liable, have vastly increased under a free and liberal system.

Besides their reasonings in favour of coercive measures, the shipowners have recently put forth a statement which is intended to show that shippers only profit by a fall in the rate of freight, and that its reduction redounds in no degree to the advantage of the consumers. Suppose, to illustrate this extraordinary statement, that the freight of the barrel of flour from New York to Liverpool generally amounts to 8*s.* or 10*s.*, but that it falls, from some cause or other, to 1*s.*: the shipowners contend that the exporter will pocket the whole of the difference (9*s.* or 7*s.*) between the high and the low rate of freight, and that the British public will in no wise profit by the fall! And such would be the case for the moment; but it is not possible that the exporter should continue to enjoy an advantage of this sort for any length of time: for the fall of freight by adding so much (9*s.* or 7*s.* per barrel) to the profits of the shippers of flour, would give such a stimulus to its exportation, and create so much competition in the trade, that its price would forthwith fall in England. And there can be no manner of doubt that it would continue to fall till the N. York shippers realised only the same profits that are realised by the shippers of other articles either foreign or coastwise; that is, till the price of flour has been reduced 7*s.* or 9*s.* per barrel, or freight has risen to that amount, or till the equalisation has been brought about partly in the one way and partly in the other. To suppose it should be otherwise is to suppose what is evidently contradictory and absurd. The price of articles not consumed on the spot where they are produced, is made up of the cost of their production and carriage. And any reduction of the latter which is not momentary only, has precisely the same influence over the price of an article as if the expense of producing it were diminished to the same extent. One really feels ashamed to have to state what is so very obvious. It is not creditable to the shipowners that they put forth statements so palpably absurd as that now referred to. They can hardly fail, one should think, to be themselves aware of their fallacy; and they count too much upon the ignorance of others if they suppose that they won't be appreciated at their exact value.

II. Classification of Ships.

To insure a ship on right principles, or in such a way that the premium shall be the fair equivalent of the risk, is no easy matter. The risk depends partly on the condition of the ship and the capacity of the master and crew; partly on the nature of the cargo she is to take on board; and partly on the voyage she has to perform. The last two circumstances disclose themselves, and their influence may be appreciated, at least with sufficient accuracy for practical purposes, without any difficulty; but it is far otherwise with the condition of the ship, and the capacity of the master and crew. It is essential to the adjusting of an insurance on fair terms, that these should be known; and it is, at the same time, exceedingly difficult to acquire any accurate information with respect to them.

It is plain that there is but one mode in which any thing satisfactory can be learned with respect to the condition of ships, and that is, by their inspection and examination by persons of competent information as to such matters. To acquire a just character at first, a ship should be repeatedly surveyed while she is being built; and to learn her condition at any subsequent period, some of the planks should be taken off, and her hull and rigging subjected to a thorough examination. This is the only method to be followed if we wish to arrive at results that may be safely depended on. The *age* of a ship should not be altogether overlooked in estimating her condition; but it is not a criterion that, taken by itself, is worth almost anything. There is the greatest possible difference in the materials of which different ships are built, in the way in which they are built, and in the wear and tear to which they are exposed. Some are so very bad, that they actually go to pieces on their first voyage; others, with difficulty, last for 3, 4, or 7 years; and others, again, run for 10, 15, and even 20 years, and upwards, with but little repair. It may be presumed that the condition of ships built of similar materials, on the same plan, and employed in the same departments of trade, will depend materially on their ages, but a thousand circumstances conspire to defeat this presumption; and it would be ludicrous to suppose that it should apply at all in the case of ships constructed of different materials, and engaged in different lines.

But, notwithstanding the criterion of age is thus really worth less than nothing as a rule by which to judge of a ship's condition, it is almost the only one that was referred to in this country down to a late period. From about the year 1760, or perhaps earlier, down to 1834, ships were arranged, by the underwriters at Lloyd's, in classes marked by the letters A, E, I, and O, and the figures 1, 2, and 3; the former referring to the hull of the ship and the latter to the rigging. A ship marked A 1. was in the

highest class; that is, her hull and rigging were both declared to be in the best condition; ships marked E 1. were in the next class; those marked I 1. were in the lowest available class, or that formed of such as were fit only for carrying coals, or other goods not liable to sea damage along the coast; ships marked O were unseaworthy. But to get into the highest class, no examination of the ship, or none worthy of the name, was required. Unless some very flagrant defect was obvious in their construction, all ships were entitled, when new, to be marked in the highest class; and they were entitled, whatever might be their real condition, to stand in it for a certain number of years, varying from 6 to 12, according to the *port* in which they happened to be built! It is not easy to imagine any thing more absurd than such a classification; but the whole extent of the injury arising from it is not immediately obvious. The great majority of merchants and underwriters have not, and could not be expected to have, any personal knowledge of different ships, and have nothing to trust to but the classified accounts. Suppose, now, that two ships were built at the same time in London or any other port; that one was constructed of the best materials, and in the best way, while the other was constructed of the worst materials, and in the most defective manner: these two ships were placed side by side in the class A 1.; the underwriters, seeing them there, were ready, without further inquiry, to insure them at the *same premium*, and the merchants were, for the same reason, quite as willing to employ the one as the other! A bounty was thus given on the construction of what have been called *slop-built* ships, or ships of an inferior class. For a half, or, at most, two thirds, of what would be required to construct a good and really sufficient ship, a ship-owner got an inferior vessel of an equal burden sent to sea; and, owing to the matchless absurdity of the system of classification, the inferior was placed in the same rank with the superior ship; enjoyed all the advantages such distinction could give; and was, in the public estimation, deemed quite as good and as deserving of employment as the other. This has been a more copious source of shipwreck than all the currents, rocks, and fogs that infest our seas; but it was not the only one. At the end of a certain number of years, depending (as already stated) on the port where the ship was built, both the vessels referred to above were degraded to the class E; and yet it might happen, that the superior ship was, when so degraded, better entitled to continue in the class A than the inferior ship was ever to be in it. But even this does not exhaust the whole absurdity of this preposterous scheme; for, supposing that the superior ship had been so thoroughly repaired as to be as good as the day she came off the stocks, and that the inferior ship had got no repair at all, still they were both placed, side by side, in the class E! All the annals of all the maritime nations of the world, from the Phœnicians downwards, furnish no example of a more perverse, contradictory, and absurd regulation. That it should have existed amongst us for the greater part of a century strikingly exemplifies the power of habit to procure toleration for the most destructive practices and errors.

It may be said, perhaps, that, whatever system of classification is adopted, there must be great numbers of inferior vessels; for, though we did not, foreigners would build them; and, being consequently able to sail them cheaper, would drive us totally out of all trades in which they could come fairly into competition with us. This is true; but, provided they be not engaged in the conveyance of passengers, who ever thought of proscribing inferior ships, or of dictating to the ship-owner what sort of ships he should build, or to the merchant what sort he should employ? We do not object to inferior ships, but we do object to the *same character* being given to them that is given to superior ships. This is practising a gross fraud upon the public; and gives an unfair and unjust advantage to the owners of inferior vessels. The interests of navigation and of humanity imperatively require that ships should be correctly classified; that those that are not seaworthy should not be classed with those that are, but that the *real state* of each should be distinctly set forth in the register, and be made known to every one. If this be done, the merchant and the underwriter may be safely left to deal with them as they think fit.

In consequence of the laudable exertions of Mr. Marshall and other gentlemen, the attention of the principal merchants, ship-owners, and underwriters, &c. of the metropolis was some years ago directed to this subject; and in 1824 a committee, consisting of representatives from these different bodies, was appointed to inquire into and report on it. The committee collected a great deal of valuable evidence; and laid an able report before a general meeting of merchants, ship-owners, &c., on the 1st of June, 1826. We subjoin an extract from this report, which more than bears out all that we have stated:—

"From the absence of all control on the original construction of ships while building, and the impossibility of ascertaining by any inspection, after completion, their real quality, it appears to be indisputably proved, by an almost uniform concurrence of testimony, that the first character, or A 1., is indiscriminately extended to ships differing widely in strength, durability of materials, and all those qualities on which character ought to be dependent; that many ships to which the first class is assigned

are decidedly inferior to others which are placed, from lapse of time alone, in a lower class; that many become totally unfit for the conveyance of dry cargoes, long before the expiration of the period during which they are entitled, according to the present system, to remain on the first letter, in which they are notwithstanding continued; that instances are on record of first-class ships which have been unfit from their origin for the conveyance of dry cargoes; and some are declared to have been hardly fit, when new, to proceed to sea with safety. One case is even adduced, in which, from ill construction and insufficiency of fastening in a new ship, her insecurity was predicted, and she actually foundered on her first voyage; and yet this identical vessel was ranked, according to the indiscriminate system pursued, in the first class.

"Such, as respects new ships, appears by the evidence to be the practical results of a system which, assuming to designate by marks their intrinsic quality, provides no means of actually ascertaining that quality; but offers, in effect, *a premium for the building of inferior and insufficient ships*, by the inducement it holds forth to fraudulent construction and by the quality of character it indiscriminately extends to the best and the worst ships built at the same port.

"Nor, your committee regret to have to report, is the evidence of the errors, inconsistencies, and evils arising from the existing system, as applied to old ships, by any means less conclusive. By the *refusal to restore character, in consequence of repairs, however extensive*, the inducement to maintain ships in an efficient state is removed; whilst, from the absence of all regular provision for stated or periodical examination, their efficiency or inefficiency is rendered dependent upon the varying views, the caprices, or the interest of the proprietors. Hence, though the second character, or E, is declared by the rules of the system to be the designation of ships which, having lost the first character from age, are kept in perfect repair, and appear, on survey, to have no defects, and to be completely calculated to carry dry cargoes with safety, the whole body of evidence distinctly proves that character to be, in very numerous instances, assigned to ships, which, from original defect or want of requisite repairs, are *utterly unfit and unsafe* for dry cargoes; while others, which, from sound constitution or efficient reparation, are pronounced in the evidence to be superior to many new ships, are indiscriminately classed with the actually worthless and unseaworthy. Hence, too, the employment of ships, after they have passed the period prescribed by a fallacious standard of classification, becomes uncertain, precarious, and difficult; the ship-owner is injured; the shipper and underwriter misled; the building of superior ships, capable of long service, is discouraged, and direct inducement is held out to the construction of those of an inferior description; the general character of our mercantile marine is degraded; and it is to be feared that, could the system be traced to its ultimate results, it would be found to be productive of a lamentable loss of property and life."

It may have seemed surprising that, despite the continued complaints of the lowness of freights, and the want of employment for shipping, so many new ships should be annually built. But this was, to a considerable extent, at least, occasioned by the system of classification now described. Instead of building a really good and durable ship, the principal object used to be to construct one that should, at farthest, be, as the phrase is, *run off her legs* in about 10 years or thereby; inasmuch as, whatever might be a ship's condition, she was then degraded from class A 1., and that it was hardly possible, in most departments of trade, to find a merchant to employ, on any thing like reasonable terms, a ship to which these symbols of imaginary excellence were not attached. Hence, the ship-owner, instead of repairing his 10-years old ship, sold her for what she would fetch, and built a new one. But the person who purchased the ship degraded to E 1. forced her, though at an enormous reduction, into business; so that there were two bad or inferior ships in the field; whereas, under a reasonable system of classification, there would most likely have been only one good ship. The injury that this practice did to the shipping interest is too obvious to require to be pointed out. It has been infinitely more hostile to it than all those reciprocity treaties, and that foreign competition, about which there has been so much unfounded clamour. "If the system of classification were founded on the principle of *intrinsic merit*, if the real efficiency of the ship formed the basis on which character was given, the consequence, in numerous instances, would be, that, instead of supplying the place of those ships that at present lapse from age only into the second class with new ones, the owners would effectually repair the existing ships; so that there would speedily be not only a material improvement in the construction of ships, but a material increase in the amount of tonnage, and a corresponding increase in the rate of freight."—(*Marshall's Statements*, p. 19.)

The conclusive report and exposition referred to above did not produce the consequences that might have been anticipated. Government, for reasons known only to itself, but which appear to have been of a very questionable description, seems to have concluded that this was not a subject with which it should interfere; and it was laid aside for some years more. But the still increasing amount of shipwreck, and the loss of life

and property consequent thereon, again roused the public attention to the subject; and at length the principal merchants, ship-owners, and underwriters succeeded in setting on foot machinery by which a classified account of shipping has been obtained, founded on more correct principles. The public owe much to the individuals who imposed on themselves this difficult and important task. Notwithstanding the obstacles with which they had to contend, they have done a great deal to improve the character of our mercantile marine, and to lessen the disasters incident to a seafaring life.

2. *New System of Classification.* — This new classification is conducted under the direction and superintendence of a committee of merchants, ship-owners, and underwriters, established in 1834. But many objections have been made to the manner in which this committee is chosen; and we are disposed to think that its composition might be improved, and that, consequently, it might be made to enjoy a larger share of the public confidence. It establishes rules for classifying ships, and appoints, controls, and dismisses the surveyors by whom they are inspected and examined. It is plain, therefore, that the power which it exercises over shipping is very considerable, and that it is of the greatest importance that it should be placed on sound principles, and exercised with the greatest discretion. A classified register is annually published, which should become more and more complete; and the expenses attending the institution are defrayed, partly by the fees charged on making an entry in the register, partly by the profits on the sale of the register or book, and partly from voluntary sources. But, as the subject is of much importance to every one interested in commerce and navigation, we think we shall do an acceptable service to our readers, by laying before them the statement prefixed by the society to their register. It fully explains their objects, the principles on which they proceed, and the means they profess to adopt for carrying their views into effect.

CLASSIFICATION OF SHIPS: RULES AND REGULATIONS FOR, IN 1855.

After announcing the formation of the society, the official statement goes on to say, that —

8. The superintendence of the affairs of the society to be under the direction of a committee in London, of 24 members, consisting of an equal proportion of merchants, ship-owners, and underwriters. The chairman for managing the affairs of Lloyd's, and the chairman of the General Ship-Owners' Society, and also the chairman and deputy chairman of the Liverpool committee, and the chairman of the Rotation Committee for the time being, to be, *ex officio*, members of the committee.

9. Six of the members, namely, two of each of the constituent parts of the committee, to go out annually by rotation, but to be eligible to be re-elected.

10. The vacancies so arising to be filled up by the election of two underwriters and one merchant by the committee for managing the affairs of Lloyd's, and two ship-owners and one merchant by the committee of the General Ship-Owners' Society.

11. The committee to appoint from their own body, annually, a chairman and deputy chairman, and also a chairman for a sub-committee of classification.

12. The committee to appoint a sub-committee of classification, to be so regulated that each member of the general committee may, in rotation, take his turn of duty therein throughout the year.

13. The secretary, clerks, and servants of the society, and the surveyors, to be appointed by, and be under the direction of the general committee.

14. Special meetings to be convened by order of the chairman, or deputy chairman, or on the requisition of any three members.

15. All elections and appointments to be made by ballot.

16. No member of the committee to be permitted to be present on the decision of the classification of any ship of which he is the owner, or wherein he is directly or indirectly interested.

17. The committee to be empowered to make such by-laws for their own government and proceedings as they may deem requisite, not being inconsistent with the original rules and regulations under which the society was established; but no new rule or by-law to be introduced, nor any rule or by-law altered, without special notice being given for that purpose at the meeting of the committee next preceding that at which such motion is intended to be made; such notice to be inserted in the summons convening the meeting. No new rule, or alteration in any existing rule, materially affecting the classification of ships, to take effect until the expiration of six months from the time it shall have been determined upon.

18. All reports of survey to be made in writing by the surveyors according to the forms prescribed, and submitted for the consideration of the general committee, or of the sub-committee of classification; but the character assigned by the latter to be subject to confirmation by the general committee.

19. The reports of the surveyoss, and all documents and proceedings relating to the classification of ships, to be carefully preserved, and parties proving themselves to be interested therein, to have access to the same under the direction of the chairman or deputy chairman.

20. Foreign ships, and ships built in the British possessions abroad where there is not a surveyor (*see also* § 51), to be surveyed on their arrival at a port in the U. K.; but a due regard is to be had to the circumstance of their having been exempted from the supervision while building to which all British ships are subjected, and the character to be assigned to them is to be regulated according to their intrinsic quality, and from the best information the committee can obtain.

21. In every case in which the character assigned to a ship may be proposed, on survey, to be reduced, notice is to be given in writing to the owner, master, or agent, with an intimation that if the reduction be objected to, the committee will be ready to direct a special survey, on the owner, master, or agent, agreeing to pay the expenses attending the same, provided on the said survey there shall appear sufficient ground for the proposed reduction.

22. When the surveyors consider repairs to be requisite, they are respectfully to communicate the same in writing to the owner, master, or agent, and if such repairs be not entered upon within a reasonable time, a corresponding report is to be made to the committee for their decision thereon.

23. Parties considering the repairs suggested by the surveyor to be unnecessary or unreasonable, may appeal to the committee, who will direct a special survey to be held; but should the opinion of the surveyor be confirmed by the committee, then the expense of such special survey is to be paid by the party appealing.

24. The surveyors to the society not to be permitted (without the especial sanction of the committee) to receive any fee, gratuity, or reward whatsoever for their own use or benefit, for any service performed by them in their capacity of surveyors to this society, or pain of immediate dismissal.

25. The surveyors will be directed to attend on special surveys of ships under damage, or repairs for

restoration, when required by merchants, ship-owners, or underwriters; the charge for which is to be regulated according to the nature and extent of the service performed. In all cases, the application for the assistance of the surveyors must be made in writing addressed to the secretary.

Funds.

26. The funds to be under the authority and control of the committee, and a statement of the receipts and expenditure to be annually printed for the information of the subscribers.

27. The following fees to be charged to the owners of ships prior to their vessels being classed and registered in the book.

I.
For entering and classing ships, and for entering and classing ships surveyed for continuation, or repaired for restoration.

	Tons.	£	s.	d.
For each ship - - -	under 100	1	0	0
Ditto - -	of 100 tons and under 200	2	0	0
Ditto - -	200 — 300	3	0	0
Ditto - -	300 — 400	4	0	0
Ditto - -	400 and upwards - -	5	0	0

II.
For registering repairs.

	Tons.	£	s.	d.
For each ship - - - -	under 300	0	10	0
Ditto - -	of 300 tons and under 500	1	0	0
Ditto - -	500 — 1,000	2	0	0
Ditto - -	1,000 and upwards - -	3	0	0

For re-classing ships (except when repaired), the characters of which have been expunged, or change of owners.

	Tons.	£	s.	d.
For each ship - -	under 200 - -	0	10	0
Ditto - - -	200 and above	1	0	0

Special Surveys.

28. For special surveys, and where the surveyors to the society are required by the owners to superintend the building of ships, or repairs for restoration, or otherwise, a charge will be made according to the nature and extent of the service performed. In all such cases the authority of the committee is required.

29. Certificates of character signed by the chairman of the general committee, or by the chairman of the sub-committee of classification, and countersigned by the secretary, will be granted on application; the charge for which will be as follows:—

For ships under 200 tons - - -	2s. 6d. each.
„ 200 „ and above - -	5s. each.
For ships built under special survey, on their first classification - - - -	Gratis.
30. Rules, each copy - - - -	2s. 6d.

Characters.

31. The characters to be assigned to ships to be, as nearly as possible, a correct indication of their real and intrinsic qualities, and to be in all cases fixed (not by the surveyors, but) by the committee, after due consideration of the reports of the surveyors and such other documents as may be submitted to them, and will be distinguished as follows:—

Ships A

To consist of new ships, or ships continued, or restored. *Vide* §§ 34, 54, 55, 57.

Ships Æ asterisk, in Red,

To consist of ships which have passed the period assigned on the original survey, or continuation, or restoration; and also of ships not having had an original character, and which are found on survey of superior description, fit for the conveyance of dry and perishable goods, to and from all parts of the world. *Vide* § 60.

Ships Æ, in Black.

To consist of ships which are found on survey fit for the safe conveyance of dry and perishable goods on shorter voyages. *Vide* § 61.

Ships E

Will comprise all ships which shall be found on survey fit for the conveyance of cargoes not in their nature subject to sea damage on any voyage. *Vide* § 64.

Ships I

To consist of ships fit to carry cargoes not liable to sea damage on shorter voyages. *Vide* § 66.

32. In all cases in which the application of the rules must necessarily be regulated by the ship's admeasurement, the least tonnage is to be adopted.

Rules for Classification.

Ships A

33. Will consist of new ships and those which have not passed a prescribed age, provided they are kept in a state of complete repair and efficiency. The character A will not, however, be granted to any vessel, unless satisfactory evidence of the date of build and place where built is produced.

34. The number of years to be assigned for this character to be determined with reference to the original construction and quality of the vessels, the materials employed, and the mode of building; and their continuance for the time so assigned to depend upon its being shown by occasional surveys (annually if practicable) that their efficiency is duly maintained. The characters of ships A will be struck out of the register, unless re-surveyed within a period of 4 years from the date of last survey,—or, in the case of ships exceeding the 8 years' grade, within one-half of the time assigned. After the expiration of the periods prescribed, ships will be permitted to continue in the character A, or may be restored thereto, for a further limited period, on complying with the conditions hereinafter prescribed in §§ 54, 55, and 57.

35. New ships are to be surveyed while building, by the surveyors to this society, in the following three stages of their progress, or they will be liable to lose one year of the period to which they might otherwise be entitled. *See* § 53.

First.—When the frame is completed.

Second.—When the beams are put in, but before the decks are laid, and with at least two strakes of the plank of the ceiling between the lower deck and the bilge unwrought, to admit of an examination of the inner surface of the plank of the bottom.

Third.—When completed, and before the plank be painted or payed.

All ships for which a higher character than ten years' A may be claimed, must undergo a survey by a surveyor who is an exclusive officer of the society, twice at least, while building; namely, at the first and at the second stages of their progress as above prescribed. Due notice must be given by the builder or owner of their being ready for this additional survey.

36. A full statement of the dimensions, scantlings, &c. of all new ships, verified by the builder, is to be transmitted by the surveyor, and to be kept as a record in the office of the society.

RULES TO BE OBSERVED IN BUILDING SHIPS.

37. The whole of the timber to be of good quality, of the descriptions shown in the Society's tabular form, No. 1, as applicable to the several terms of years for which ships so constructed may respectively be appointed to remain on the character A. The stem, steru post, beams, transoms, apron, knightheads, hawse timbers, and kelson of ships claiming to stand twelve years, to be entirely free from all defects; the frame to be well squared from the first foothook heads upwards and free from sap, and likewise below, unless the timber be proportionably larger than the scantling hereafter described; every alternate set of timbers to be framed and bolted together to the gunwale. The butts of the timbers to be close, and not to be less in thickness than one third of the entire moulding at that place, and to be well chocked with a butt at each end of the chock. In all cases in which the heads and heels of the timbers shall be square, in vessels intended for the twelve years' grade, a dowel (to be in diameter from one-fourth to one-third of the moulding of the timber) must be introduced into the ends of such timbers in order to connect them together. In the construction of poops and top-gallant forecastles* the timbers must be of the same materials as are required by the rules in the society's table A for the "top-timbers" of the frames of ships, according to the several terms of years appointed for such ships to remain on the character A. The outside planking of the forecastle and the sheerstrakes, plank-sheers, shelf or clamp, and spirketting of poops and top-gallant forecastles must be likewise of the materials required by the rules in table A for the "topsides" of the said ships, admitting also mahogany. The remainder of the planking of the poops and top-gallant forecastles may be of fir of good quality. The beams of top-gallant forecastles and the mast beams, breast beam, and transom beam of poops, must be of the material required by the rules in table A for the beams of the said ships. The remainder of the beams and the water-ways of the poop may be of cedar, mahogany, Baltic fir, red pine, pitch pine, larch, hackmatac, tamarac, juniper, or cowdie; and rock elm, for such beams only, in ships of the 7 A grade and upwards, and of yellow pine or American white spruce in all below that grade. This rule does not apply to raised quarter decks.

38. The scantlings of the timbers, keelson, keel, planking, &c. are not to be less than those shown in the Society's Table B.

39. The intermediate dimensions for the scantling of timbers between the floor heads and the gunwale to be regulated in proportion to the distance from the two points. Should the room and space be increased, the siding of the timbers to be increased in proportion. Whenever ships are built with double floors, thick strakes must be worked inside, to extend from the lower part of the short floor head chocks to the upper part of the long floor head chocks, and be well bolted through and clenched.

40. The sizes of the deck and hold beams have been regulated so as to be determined by the length of the beams amidships, as shown in Society's Table C. The beams will be required to be, of the size of the midship beam, except those at the after end of the ship, which may be reduced in proportion to their length. If beams of spruce or yellow pine are used, the siding of such beams shall be one-fourth larger than is prescribed by the above table, or be increased each way, siding and moulding, equally in area to that amount.

41. The beams of all decks to be sufficient in number and size, and securely fastened to the sides either with lodging knees of iron or wood, or with a shelf-piece and waterway†, or with a shelf-piece and knees, or with some other security equal thereto, so as sufficiently to connect the ends of the beams to the sides of the ship: and, in addition, all ships of 150 tons and above to have vertical knees to the deck beams; and those of 200 tons and above to have vertical knees to the hold beams, fitted as standards or hanging knees (the latter being preferred), in number as shown in the Society's Table E. Vessels of 13 feet, and under 15 feet hold, the spacing of the hold beams not to exceed 8 feet apart, and the deck beams 4 feet:—vessels of 15 feet and under 18 feet hold, the spacing not to exceed 8 feet and 4 feet apart alternately, or in that proportion; the deck beams to be placed one over every hold beam, and one in all double spaces—vessels of 18 feet hold and above, the spacing of the beams not to exceed 4 feet 6 inches; the deck beams to be one over every hold beam. The depth in all such cases to be determined by taking the measure from the top of the limber-strake, to the top of the upper deck beams. Ships having a depth of hold, measured from the limber-strake to the under side of the lower deck beam, above 13 feet but not exceeding 15 feet, must be secured with iron riders of the sizes and be fastened as shown in the Society's Table F., and in number not less than one on every fourth floor, on each side, from fore side of fore-mast to aft side of mizen-mast, to extend from the lower deck beams downwards so as to receive not less than two bolts in a substantial part of the floors; or by orlop beams, sufficient in number and properly secured. All ships having two decks (viz. upper and lower deck), and exceeding 23 feet in depth from the top of the limber-strake to the top of the upper deck beams, or having three decks (viz. upper, middle, and lower deck) and exceeding 23 feet in depth from the under side of the middle deck, to have orlop beams, the number to be in no case less than one half the number of lower deck beams in the space between the foremast and the mizen-mast. The application of this rule to British North American built ships and fir ships will not exempt them from the full operation of the rule, § 62. All dimensions, fastenings, and bolts of the middle deck in vessels having three decks (viz. upper, middle, and lower deck), to be the same as those prescribed in the tables, for the upper deck of ships having only two decks; and a reduction of one-sixth from the dimensions, fastenings, and bolts prescribed in the tables, for the upper deck of vessels having only two (viz. upper and lower deck), will be allowed in the third or upper deck, by some called a spar deck. The middle deck to be a perfect deck laid and caulked. The united lengths of poop and forecastle not to exceed three-fifths of the entire length of the upper deck. All timbers of the frame including poop and forecastle to extend to the extreme height. Every ship exceeding 150 tons to have at least one crutch for the security of the heels of the after-timbers of the frame; one pair of pointers in addition to a knee at each end of the wing transom to connect the stern frame with the after-body of the ship; and a transom over the heels of the stern timbers properly kneed. The heels of the cant timbers forward and aft to be stepped into or on the deadwood, and bolted through.

42. Shifts of timber in ships of 200 tons and upwards, to be not less than one-seventh of the main breadth; and in ships under 200 tons, to be not less than one-sixth of the main breadth.

Plank.—43. The outside planking to be of good quality, of the description prescribed in the Society's Tabular Form, No. 2, and to be clear o' sap and free from all defects.

44. The inside planking to be of the description shown in the Society's Tabular Form, No. 3, and free from all foxy, druxy, or decayed planks. With regard to the ceiling plank, and the efficiency of its fastening, it will be required that the planking shall be properly shifted and fastened so that there shall be at least either treenails or through bolts, or short bolts, in each plank of the ceiling in every timber.

45. No butts to be nearer than 5 feet to each other, unless there be a strake wrought between them, and then a distance of 4 feet will be allowed; and no butts to be on the same timber, unless there be

* The united lengths of which must not exceed three-fifths the entire length of the upper deck.—*See Section* 41.

† When the transverse sectional area of the shelf-pieces and waterways are equal in contents to the transverse sectional area of the beams of their respective decks at their ends, as given in Table C., and the beams are either dowelled or dovetailed to their shelf-pieces and waterways, and the shelves and waterways are properly scarphed and through bolted, having also a hanging knee to the lower side of every beam end, then lodging-knees may be dispensed with, except in the mast-rooms. In ships of 500 tons and under, where lodging knees properly bolted are applied, the ordinary plank clamps may be used, but the through bolting of them cannot be dispensed with.

three stakes between; but vessels under 200 tons will be exempted from the full operation of this rule; and in ships of larger tonnage a literal compliance with it will be dispensed with in cases wherein it may be satisfactorily proved that the departure from the rule is only partial, being confined to the ends of the ship, or the planking of the topside, and does not injuriously affect the ship's general strength; but such relaxation will not be sanctioned unless an accurate description of the shifting of the plank be transmitted by the surveyors, to enable the committee to form a proper judgment on the case.

The thickness of the plank, according to the tonnage of the ship, is not in any instance to be less than is prescribed in the Society's Table B.

Fastenings.—46. The treenails to be of good quality, and of a description of wood equal to the best material through which they are to pass. They are to be circular, being either engine-turned, compressed, or planed. In all cases in which planks above twelve inches in width shall be used, they must be double fastened: and those above nine inches in width must be treenailed double and single except bolts intervene; and if less than that width, then to be treenailed single; in each case at least one-half of the treenails must go through the ceiling. All the outside planking to be fastened with at least one bolt in every butt, the bolt to be through and clenched. The bilges to be secured with bolts so placed that from the foremast to the mainmast, in ships under 300 tons, there shall be, at least, one bolt through and clenched in each first foothook; and that in ships of 300 tons and upwards there shall be at least two bolts through and clenched for each set of timbers in one or other of the thick bilge strakes. All the bolts of the knees, breasthooks, crutches, riders, transoms, pointers, kelsons, shelf-pieces, waterways, heels of timbers against fore and after deadwood, and of all other material fastenings, are to be driven through and clenched on rings of the same metal as the bolts. The up and down bolts in the knees to beams are not required to be through the deck, but whether clenched upon the beams, or upon the deck, they must be clenched on rings of the same metal as the bolts. The two bolts, the nearest to the crowns of the pintles and braces of the rudder are also to be through and clenched, those through the braces to be in the main piece of stern post. The limber strakes to be bolted down to the floors, and one bolt in every floor, on each side, to be through and clenched. When the heels of the first futtocks (either with full moulding or with butted chocks) meet at the middle line on the keel under the kelson, the through bolting of the limber strakes may be dispensed with. Ships, otherwise entitled by their materials to stand higher than the six years' grade, in which the flat of upper deck, poop, and forecastle, are fastened with nails or bolts of copper or yellow metal, and the whole outside planking of which is fastened with treenails and copper or yellow metal, to the entire exclusion of iron bolts and iron nails, and in which no iron bolts are used in any part of the vessel, except—the frame bolts and short bolts of inside planking; up and down bolts of knees which clinch upon the upper deck, poop, or forecastle beams when the flat of deck is laid over them; up and down bolts of hold or lower deck beams; fore and aft bolts in arms of knees to beam; bolts of the coamings, windlass or bowsprit bitts; deck fixtures; athwartship bolts in knee of head afore the stem; bolts or fastenings incidental to the rigging; or any fastenings above the respective plank sheers of poop, waist, and forecastle—such ships will be allowed an additional period of one year.

And, in addition thereto, a further period of one year will be allowed to ships so fastened, in which the outside planking above the floor heads is also fastened entirely with bolts of copper or yellow metal in lieu of treenails.

In all such cases of substitution, the number of bolts must be the same as is already prescribed as above for treenails; the proportion of through bolts must be at least one-half*; and all the through bolts must be of malleable metal, and clenched on rings (of the same metal) inside. The sizes of the copper or mixed metal bolts must be as under, viz.—

In Ships of 150 tons and under	200 tons	-	-	-	-	$\frac{7}{8}$ inch.	Smaller sizes must not be used.
— 200	—	350	-	-	-	-	$\frac{7}{8}$ inch.
— 350	—	500	-	-	-	-	$\frac{13}{16}$ inch.
500	—	700	-	-	-	-	$\frac{15}{16}$ inch.
700	—	900	-	-	-	-	1 inch.
900 and above	-	-	-		-	-	1 inch.

and the lengths of the short bolts not less than as follows, viz.—

When used in plank of	2½ inches,	to be	7	inches long.
,,	3 ,,	,,	8	,,
,,	4 ,,	,,	10	,,
,,	5 ,,	,,	12	,,

and so in proportion for plank of other thicknesses. The sizes of the bolts required in the several parts must not be less than is shown in the Society's Table D.

47. In every case where the butt and bilge bolts are not through and clenched, one year will be deducted from the period which would otherwise be assigned in the classification of the vessel.

48. The scantlings and dimensions for all sized vessels to be proportionately regulated, agreeably to a table adopted by the Society, a copy of which is in the hands of each of the surveyors.

49. Ships surveyed while building, in which all the materials required for a 12 years' ship shall have been used, and most of the other requisites for that grade fulfilled, but which, from partial deficiencies, may not appear to be in all respects entitled to the full period, although superior to the description of a 10 years' ship, may be marked in the book thus, 11 A; thereby denoting that they are to remain on that grade 11 years, provided they be kept in a state of efficient repair.

50. Ships surveyed while building, in which the scantlings and shifts of the timbers, the thickness and shifts of the planks, and size of fastenings may be the same as are required by the rules, and in which the description of materials prescribed in the annexed tables shall also have been used, but in which the alternate sets of timbers shall not have been framed, nor the chocks wrought with a butt at each end, nor the frame so well squared as is required for 12 years' ships, but which shall be in other respects equal thereto, shall be marked "10 A;" thereby denoting that they are to remain on that grade for ten years, provided they be kept in a state of efficient repair.

51. In all other cases, ships surveyed while building, and constructed of the materials of good quality, will be allowed the several terms of years respectively appointed, provided they be kept in a state of efficient repair. All ships, not built under survey, whether in the U. Kingdom or abroad, for which a character may be claimed, must be placed in dry dock or laid on blocks in order that their bottoms may be seen and properly examined; they will also be required to have their timbers completely exposed for examination, by a plank or listing (as the surveyor may direct) being taken out, either inside or outside, all fore and aft, on both sides, equal to one entire strake, at the first foothook heads, and another between decks; and a few treenails must likewise be driven out, so that the surveyors, from actual inspection, may be satisfied whether or not they are of the quality and make prescribed by the rules; and the same being thus ascertained shall be reported to the committee, and a character assigned. If of 400 tons and upwards, the survey must be made by two surveyors, and their reports signed accordingly.

52. Ships built under a roof, which shall project at each end beyond the length, and on each side

* Whenever metal fastenings are used in lieu of treenails, this proportion must be observed.

beyond the breadth, a quantity equal to half the breadth of the vessel shall have one year added to the period prescribed, provided they shall have been surveyed whilst building, and shall have occupied a period of not less than twelve months in their construction, and not less than nine months (as part thereof) after the frames shall have been completed.

53. Ships built in the U. Kingdom, or in Quebec after 1851, or St. John, New Brunswick, after 1853, and not surveyed while building by the surveyors to this society, or where the owners or builders may have refused to permit them to survey and examine the same at the several periods prescribed by the rules, will be subjected to the minutest possible examination previously to assigning a character; but in all such cases one year will be deducted from the period which would otherwise have been assigned, in consequence of their not having been submitted to such survey during their construction. In no case, however, will a higher grade than 10 A be assigned to ships built in the U. Kingdom, which shall not have been surveyed while building.

CONTINUATION OF SHIPS A.

54. If, on the termination of the period of original designation, or if at any subsequent period not exceeding one-third of the number of years assigned originally, or on restoration, an owner should wish to have his ship remain, or be replaced on the letter A (*vide* § 59.), he is to send a written notice thereof to the secretary, and the committee shall then direct a special survey as follows to be held, consisting of not less than two competent persons to be appointed by the committee, one of whom shall be a surveyor the exclusive servant of the society, namely,

Survey.

For the purpose of facilitating such survey, the ship shall be either placed in dry dock or laid on blocks so that the keel may be examined, and be scraped from the light-water mark upwards, including the plank-sheer and waterways, so as to expose the surface of the plank to view.* The hold to be cleared and proper stages made. The attention of the surveyors shall then be particularly directed to the state of the upper or main deck and comings, the upper and lower deck bolts, and the outside planks through which they pass, the plankssheers, waterways, and beams, so far as they can be examined; the hawse timbers, knight-heads, breasthooks, and transoms; the floors and kelsons; the keel and rudder; the planking outside, and the treenails passing through from the light water-mark upwards; the ceiling inside, and the frame and inner surface of the outside planking where it may be seen; and the sheer and general form of the ship; and should any suspicious treenails or bolts appear, the same are to be driven out for inspection. The surveyors on these points shall transmit to the committee a detailed report, accompanied by such observations as may occur to them from inspection of the ship, or from information of the repairs she may have received. If from the report of such special survey the ship shall be found to be in a sound and efficient state, and to have preserved her original form unaltered, the committee shall continue such ship on the letter A for such further period as they may think fit, not exceeding, however, one-third of the number of years which had been originally assigned. Ships so continued shall be distinguished in the Register Book by the number of years for which the character is extended, being inserted separately under the number assigned on the original character, thereby denoting that the ship has been found on survey in such good and efficient order as to entitle her to be continued for years. Ships built in the colonies which shall have had the character A for four years will be allowed a continuation for two years, provided that in addition to the above requisitions, and those prescribed by § 63, the owners shall agree to a strake in the topsides, fore and aft, on both sides, being also removed, and the ships specially surveyed in that state, shall be found to be in a sound and efficient condition. The period assigned for continuation will, upon all occasions, commence from the time the ship may have gone off the letter A, without regard to the date when the survey for this purpose may have been held.

In cases of the repair of ships for continuation of character under the rules, § 54 (but in no other) materials of an inferior description (but not below those prescribed for the 6 years' grade) may be permitted to be used in those parts which must of necessity, under the operation of the rules, § 56, be entirely removed on a repair for restoration; subject, however, to the shipowner, in every instance, making a special application to the committee for ther previous sanction.

RESTORATION OF SHIPS TO THE CHARACTER A.

First Rule.

55. If, at any time before the expiration of two-thirds of the number of years beyond the period originally assigned, an owner be desirous to have his ship restored to the A character, such restoration (on his consenting to the special survey hereinafter described, to be held by two surveyors, and performing the repairs found requisite) will be granted for a period not exceeding two-thirds of the time originally assigned, the same to be calculated from the date of such repairs.

Requisites for Restoration.

56. All the bolts in the range of each deck to be driven out, and the planks taken out; the upper deck waterways, and plankssheers and spirketting, and the strake next the waterways on the lower deck in the midships to be taken out; the sheathing to be entirely stripped off the bottom; all the outside planking from the light water-mark upwards to be scraped bright; a strake in the upper course of the bottom, between the wales and the light water-mark fore and aft, and a plank in the ceiling at the floor heads on each side, to be taken out, the limbers to be clear, and the hooks forward to be exposed; and in that state the ship to be submitted to a special survey and examination, at which the attention of the surveyors appointed by this Society is to be particularly directed to the state of the decks, the remaining plank of the topsides, the wales, upper courses, and treenails, and other fastenings; also to the state of the frame, hawse, timbers, and knightheads, kelson, floors, foothooks, ceiling, and breasthooks, the rudder in all its parts and hangings; and if, after such examination, the owner should consent to take out all planks, timbers, beams, knees, waterways, fastenings, and other parts that may be found defective, or objected to, and replace them with materials of the same species, or of equal quality with those of which the ship was originally constructed, such ships to be entitled to restoration for a period proportionate to their real condition and the extent of the repairs performed; or if timber of an inferior

* If the ship has been sheathed with wood over felt, fastened with copper or mixed metal nails, within a period of five years, and the bottom plank from the light water-mark upwards shall, when so sheathed, have been brightened, and the condition of the bolts and treenails and caulking ascertained, and fully and favourably reported upon; and provided that the sheathing which covers the binding bolts, and a strake of sheathing all fore and aft on each side under the wales be removed, and listings cut out at hood ends of stem and stern post; and the planking, fastenings, and caulking so exposed, shall prove to be in good condition, then, on application to the committee, the stripping from the light water-mark upwards may be dispensed with.

If the ship has been recently coppered, and it shall appear to the surveyors that stripping from the light water-mark to the wales may be dispensed with, the case will receive due consideration upon application to the committee by the owner in writing.

description, or second-hand English or African oak or teak be used, then for a period not exceeding that for which such materials would have entitled a new ship to stand A according to the tables, subject in either case to the ship being at all times hereafter kept in a state of efficient repair.

Second Rule.

57. If, at any age of a vessel, an owner be desirous to have his ship restored, such restoration (on his consenting to the special survey hereinafter described, to be held by two surveyors, and performing the repairs thereby found requisite) will be granted for so long a period as may be deemed expedient by the committee, not exceeding, in any case, the term of 8 years.

Requisites for Restoration.

58. The whole of the outside plank of the vessel to be taken off as low as the second foothook heads, and the remainder of the planking, either outside or inside, together with all the decks, to be removed so as to expose the timbers of the frame entirely to view, and in that state the ship to be submitted to a special survey and examination, by the surveyors appointed by this Society; and if, after such examination all timbers, beams, knees, kelsons, transons, breasthooks, remaining plank, inside or outside, or other parts found to be defective, be replaced with materials of the same species, or of equal quality with those of which the ship was originally constructed, and all the treenails driven out and renewed, such ship may be restored. But if timber of an inferior description, or second-hand English or African oak or teak be used, then for a period not exceeding that for which such materials would have entitled a new ship to stand A according to the tables, subject, in either case, to the ship being at all times thereafter kept in a state of efficient repair.

59. Ships which have been restored shall be entitled to continuation, subject to the same conditions of survey and examination as are prescribed for ships proposed to be continued at the expiration of the period first assigned to them (§ 54); but in like manner, the term of such extended continuance shall be limited to a period not exceeding one-third of the number of years for which the ship may respectively have been restored, without any reference whatever to the period originally assigned to them. At the termination of the several periods assigned to ships for remaining on the character A, they will be reduced to the description designated by the diphthong Æ. But if during the last year of the period assigned to them, the owners of a ship shall, in consequence of her being about to proceed on a distant foreign voyage, apply to have her surveyed for continuation on the letter A, or for diphthong Æ with the asterisk, a special survey shall be held conformably to the rules §§ 54 or 60, as the case may be: and if from the report of such special survey, the ship shall appear to be in all respects in a sound and efficient state, such as is required by those rules, the committee shall, from the period at which the ship's character would terminate, continue her on the letter A, or assign to her the character *Æ (in red) in accordance with the rules referred to.

SHIPS Æ ASTERISK, IN RED,

60. Will consist of all ships that have passed the periods which have or might have been assigned to them for the character A, or for continuation, or for restoration, and shall be found on survey to be of superior description, being fit for the conveyance of dry and perishable goods to and from all parts of the world, shall be distinguished by inserting their characters in red with an asterisk thus prefixed,* Æ. But in all cases in which the owner may claim this distinction, the ship must undergo a special survey by two surveyors, to be appointed in every instance by the committee, and be subject in other respects to a compliance with the undermentioned requisitions of

Survey.

The ship to be either placed in dry dock or laid on blocks, so that the keel may be examined, and be scraped from the light water-mark upwards, including the plank sheer and waterways, so as to expose the surface of the plank to view.* The hold to be cleared, and proper stages made both inside and outside. The attention of the surveyors shall then be particularly directed to the state of the upper or main deck and comings, the upper and lower deck bolts, and the outside planks through which they pass, the plank-sheers, waterways, and beams, so far as they can be examined; the hawse timbers, knightheads, breasthooks, and transoms; the floors and kelsons; the keel and rudder; the planking outside, and the treenails passing through from the light water mark upwards; the ceiling inside, and the frame and inner surface of the outside planking where it may be seen: and the sheer and general form of the ship; and should any suspicious treenails or bolts appear, the same are to be driven out for inspection.

And to entitle them to continue this character, such vessels will be required, in addition to the usual annual survey, to undergo a special re-survey, as prescribed above, within a period (from the date of the last special re-survey) not exceeding two-thirds of the several terms of years originally assigned to them, or earlier, if in the judgment of the surveyors, upon a careful examination of the ship, the same shall appear to them to be necessary. With respect to the materials to be used in the repair of vessels, the owners of which may apply for a special survey for the asterisk, not any will be permitted of a description inferior to the materials contained in the tables for vessels of the 6 years' grade, or to those prescribed by the tables for new ships of higher character, for periods equal to two-thirds of the several terms of years of orignal designation of the ships undergoing repair. Those ships, however, the original construction of which may not have entitled them to the A character for a longer period than five years, will not be allowed the distinction of the asterisk. Whenever it shall appear to the surveyors that a vessel classed Æ with the asterisk shall no longer be in a condition to deserve that distinction, notice of the proposal to reduce her shall be given in writing to the owner, master, or agent, in the same manner as is prescribed by the rules, § 21.

SHIPS Æ, IN BLACK.

61. Will consist of ships that have passed the prescribed age for the A character, but have not undergone the repairs which would have entitled them to be continued or restored; or having been continued or restored, and the additional period thus assigned expired, and of ships of the Æ asterisk character, in red, and also such ships as have never had an original character, which shall be found on survey fit for the conveyance of dry and perishable goods on shorter voyages, shall be distinguished by the diphthong Æ in black; and a careful survey will be required to be made annually, or on the return of the ship from every foreign voyage, by one of the surveyors to this society, who is to state distinctly and separately the actual condition of the upper deck fastenings, waterways, spirketting, plank sheers, topsides, upper deck with its appendages, lower deck fastenings, wales, counter, plank, and treenails outside to the water's

* If the ship has been sheathed with wood over felt, fastened with copper or mixed metal nails, within a period of five years, and the bottom plank from the light water-mark upwards shall, when so sheathed, have been brightened, and the condition of the bolts and treenails and caulking ascertained, and fully and favourably reported upon; and provided that the sheathing which covers the binding bolts, and a strake of sheathing all fore and aft on each side under the wales be removed, and listings cut out at hood ends of stem and stern post; and the planking, fastenings, and caulking so exposed, shall prove to be in good condition, then, on application to the committee, the stripping from the light water-mark upwards may be dispensed with.

If the ship has been recently coppered, and it shall appear to the surveyors that stripping from the light water-mark to the wales may be dispensed with, the case will receive due consideration upon application to the committee by the owner in writing.

edge, rudder, windlass and capstan, beams, breasthooks, transoms, and timbers; but if not surveyed within twelve months, such ship having been during that time in some port in the U. K., the character will be omitted until such survey be held; or, as the case may be, she will be allowed to pass into the class E.

BRITISH NORTH-AMERICAN BUILT SHIPS, AND FIR SHIPS.

62. Ships built in the British North-American colonies, and all ships wherever built, the frames of which are composed of fir, of 400 tons and above, shall, in order to entitle them to be classed in the register book of the society, be secured in their bilges by the application of iron knee riders, or hanging knees and riders to cover the joints of the floor and foothook heads, to extend from the height of the hold beams to the floors, so as to receive not less than two bolts in a substantial part of the floors; the number of iron knees and riders to be not less than one of each to every hold or lower deck beam on each side. The knees to be connected with the riders or not, at the option or convenience of the owners; but if not so connected, the side arms of the knees are to be of the length and to be fastened as prescribed in the society's table F. The number of knees to each deck, and of riders, also their dimensions, and number of bolts, are fully explained in the said table F. In cases of refusal, the words "not fastened as per rule, § 62," will be inserted against the vessel's name. All ships built in the colonies will be considered as "iron fastened" in their centre lines, unless it shall be satisfactorily shown to the contrary, either by the exposure of some of the bolts, or by a certificate to be produced from the builders.

63. All British North-American built ships, which have gone, or may go off the list of ships of the A character, or which may be of an age exceeding the period for which they might have had claims to be put upon that grade (whether classed or not), shall, as from time to time they come under examination, be subjected to a careful survey, to be made by one of the surveyors to this society;—and no further character shall be assigned them unless a survey shall be held as follows; and planking, either inside or outside, at the discretion of the surveyors, in quantity equal to one entire strake fore and aft on both sides, shall be removed; to be taken out in midships immediately above the turn of the bilge, and at such height forward and aft as may, in their judgment, best expose the timbers of the frame to view; that a special report of the state of these timbers, and of the general state and condition of the upper deck fastenings, wa erways, spirketting, plankshеers, topsides, upper deck with its appendages, lower deck fastenings, wales, counter, plank and treenails outside to the water's edge, rudder, windlass and capstan, beams and breasthooks, shall be transmitted by the surveyors to the committee; and on the receipt of such report the character shall be assigned. If the diphthong character be then assigned, it shall be continued (subject to an annual survey) for a period not exceeding the number of years originally assigned; at the expiration of which the character will be discontinued, unless a similar survey and examination of the frame be again submitted to.

Ships E.

64. Will comprise all ships which shall be found on survey fit for the conveyance of cargoes not in their nature subject to sea damage on any voyage.

65. Subject to occasional inspection, at least once in every two years, ships will continue in this class so long as their condition shall, in the opinion of the committee, entitle them thereto.

Ships I.

66. Will comprise ships which shall be found on survey fit for the conveyance, on shorter voyages (not out of Europe), of cargoes in their nature not subject to sea-damage.

67. The bottom of every ship is to be caulked once in every five years, unless wood-sheathed and felted, and then once in every 7 years, except in the case of teak-built ships, upon which a special survey may have been requested, and the surveyors having ascertained, by the removal of a strake of sheathing fore and aft under the wales, and a strake at the first foothook heads, and by causing listings to be cut out at the wood's ends, that such caulking is not required, the same may then be dispensed with. If any ship shall be stripped within the periods above mentioned, her bottom is to be caulked, if necessary.

68. In all cases in which ships may be doubled, doubling of not less than the thicknesses hereinafter mentioned will be required, the same to be properly wrought and fastened as follows: in every instance the doubling is to be at least single fastened either with treenails or with bolts, and a through bolt in every butt. If treenails be used, every treenail must, if practicable, be a through fastening; and if bolts be used, then one-sixth of them from the lower part of the bilge upwards must be through and clenched on the ceiling in addition to the butt bolts.

The throat bolts of iron knees, and the bolts of iron hooks, crutches, and pointers, must be renewed through the doubling.

The thickness of the doubling for the wales and bottom, on ships

Under 400 tons to be not less than	-	2 inches
of 400 „ and under 600 tons	-	2½ „
of 600 „ and above	-	3 „

On the topsides of ships not exceeding 300 tons, the thickness may be 1¼ inches.

No ship hereafter doubled, shall be entitled to the asterisk or any higher class, unless it shall be ascertained at the time of doubling that the frame is capable of securely retaining the fastenings.

Iron-fastened Ships.

69. All ships, although iron fastened (except as hereinafter mentioned), shall be classed in the same manner as copper-fastened ships, so long as they remain unsheathed with copper, provided they are, in all other respects, constructed in accordance with the rules; but when sheathed with copper over the iron fastenings, the words "coppered over iron bolts" shall be added to the character in the register book, and continued until the ship be thoroughly copper-fastened.

70. Ships built in India, although fastened with iron, shall be permitted to be copper-sheathed without any mark being placed in the book, provided the bottom be felted or chunamed and wood-sheathed, and subjected to a careful examination of the iron fastenings on every occasion on which the sheathing is stripped off, for which purpose some of the bolts and nails are to be taken out of the lower part of the bottom, and to be seen by the surveyor; but no such ship shall be permitted to continue either on the A or on the *Æ in red class for a longer period than one-half the number of years beyond the term originally assigned for her remaining on the A character, unless the bottom shall have been doubled, or the whole of the iron fastenings taken out or properly secured, and the bottom refastened with bolts, or treenails, or both, including the middle line and breasthook and crutch bolts.

ANCHORS, CABLES, AND STORES.

71. All vessels are required to have their masts, spars, and standing rigging in good order, and sails in sufficient number and good condition, and every ship is to be supplied with a good hempen stream-cable or tow-line of sufficient size and length, and with at least one good warp; and all vessels are to be provided with anchors of proper weight, and cables of approved quality and size, properly tested, in number and length according to the undermentioned scale:

Anchors.

72. All vessels under 200 tons to have at least two bower anchors, and all vessels of 200 tons and above to be provided with at least three bower anchors.

Cables.

	Tons.		*Tons.*		*Fathoms.*	
75.—All vessels of		and under	150	to have at least	150	if chain.
—	150	—	250	—	180	—
—	250	—	350	—	200	—
—	350	—	500	—	240	—
—	500	—	700	—	270	—
—	700 and upwards			—	300	—

A certificate of all new chains having been tested, and of the strain applied to them, must be produced before a ship is classed. The amount of strain applied should be marked on each length.

74. In all cases where hempen cables are used, one-sixth more in length will be required.

Boats.

75. All vessels under 150 tons to be provided with one good boat; and every vessel of 150 tons and above to have a suitable number, and with not less than two good boats.

76. The efficient state and condition of ships' anchors, cables, and stores, will be designated by the figure 1; and where the same are found insufficient in quantity, or defective in quality, by the figure 2.

SHIPS NAVIGATED BY STEAM.

77. All sea-going vessels navigated by steam shall be required to be surveyed twice in each year, when a character will be assigned to them according to the report of survey.

78. That with respect to the boilers and machinery, the owners are required to produce to the surveyors at the above-directed surveys, a certificate from some competent master engineer, describing their state and condition at those periods; and to which certificate it is desirable there should be added a description of the particulars of the same, as far as may be practicable, to be appended to the report of survey, and delivered to the committee, who will thereupon insert in the register book the letters "M.C." denoting that the boilers and machinery have been inspected and certified to be in good order and safe working condition; but if no certificate of their condition be furnished by the owner or master, then no character can be assigned for the machinery.

79. *Hull:*—The surveyors are directed to examine and report the scantling of timbers, plank, and fastenings, and to state where built, and by whom, in the same manner as directed for sailing vessels.

The following relaxation from the rules applicable to sailing vessels will be allowed in favour of steamers.

Fir (to be either pitch pine, Baltic red fir, or American red pine), larch, hackmatack, or juniper, may be used for upper deck beams, to an extent not exceeding one-half the number of beams required according to the vessel's tonnage.

The same materials may be used in the outside planking from the first foothook heads upwards, excepting for the wales, sheerstrakes, and planksheers.

The same materials may be likewise used in the inside planking, excepting for the bilge planks, shelf-pieces and stringers, and clamps.

Steam-vessels built in all other respects in conformity with the annexed tables shall be classed for the term of years therein respectively prescribed, subject to the following conditions:—

That the rule requiring a survey "twice a year" be rigidly enforced, and that whenever the boilers are taken out, the vessel shall be subjected to a particular and special survey, in order to ascertain her general condition, and particularly the state of the fir, or other materials herein allowed to be used.

That unless such surveys be held, the characters which may have been assigned to steam-vessels shall be struck out annually on reprinting the register book.

80. *Scantlings.*—The scantlings for a steam-vessel under 300 tons register including the engine room, are to be deemed sufficient, if equal to those required by the scale prescribed in the rules of this Society for a sailing vessel of two-thirds of the total tonnage of such steam-vessel.

81. But for a steam-vessel above 300 tons register, including the engine-room, the scantlings are to be equal to those required by the scale for a sailing vessel of three-fourths of the total tonnage of such steam-vessel.

82. *Floors.*—Where the vessel is not filled in solid to the floor-heads in the engine room, an exception will be specially made against any reduction of the scantling of the floors, which in such cases will not be permitted to be upon the reduced scale of two-thirds or three-fourths of the dimensions for the scantlings of sailing vessels as before stated; but the floors will then be required to be equal to the dimensions set forth in the rules for ships of the tonnage of the steam-vessel, including the engine-room.

Vessels fitted with auxiliary steam power are considered to be sailing vessels (not steamers), and will not be allowed any exception as to their scantlings.

83. The surveyors are required to report the number, size, length, fastenings, and mode of arrangement of the engine and boiler sleepers, and the description of timber of which they are composed, and whether diagonally trussed with wood or iron, and to what extent; the length, size, and fastenings of shelf-pieces and paddle-beams; and whether the vessel be constructed with sponcings, and how they are formed; and to give the length and shifting of the plank outside and inside.

84. *Materials and Stores.*—The surveyors are to examine and report the number and description of the masts, sails, anchors, cables, hawsers, warps, and boats, as directed to be done for sailing vessels; but the anchors and cables will not be required to exceed in weight and length those of a sailing vessel of two-thirds of the total tonnage of the steam-vessel.

85. The surveyors are to be particular in examining and reporting the condition of the boats of all vessels employed in carrying passengers.

RULES FOR THE BUILDING OF SEA-GOING IRON SHIPS, OF ALL DESCRIPTIONS, WHETHER SAILING OR NAVIGATED BY STEAM.

Considering that iron ship-building is yet in its infancy, and that there are no well-understood general rules for building iron ships, the committee have not deemed it desirable to frame a scheme compelling the adoption of a particular form or mode of construction, but that certain general requirements should be put forward, having for their basis thickness of plates and substance of frame, showing a *minimum in each particular* to entitle ships to the character A for a period of years, subject however to certain periodical surveys; and also to a continuation of such character, should their state and condition justify it on subsequent examination. For the purpose of attaining this object the following rules and the Society's Table G of dimensions have been formed.

1. The whole of the iron to be of good malleable quality, the workmanship to be well-executed, and to be submitted to the closest inspection before coating or painting, and any brittle or inferior article to be rejected. It is not intended to prevent the coating of the plates inside in the way of the frame.

2. The keel, stem, stern, and propeller posts to be scarphed or welded together at discretion, and to be in size according to Table G; if scarphed, the length of scarphs to be regulated in the proportion of eight times the thickness of the keel, and the stern posts and after end of keel, for screw propelled vessels, to be double the thickness of, and tempered fair into, the adjoining length of keel.

N. B.—Where the keel and keelsons are made of several thicknesses of plates, the plates that form the keel, to be in thickness, taken together, the same as is required for a solid keel as per Table G; and the butts of the several plates of which the keel is formed, to be carefully shifted from each other, and from the butts of the garboard strakes.

3. The spacing and dimensions of the ribs or frames, to be as per Table G, and the ribs or frames in as great lengths as possible, and to be fitted close on to the upper edge of the keel, and in all cases to extend to the gunwale, and wherever butted, to have not less than four feet lengths of corresponding angle iron fitted back to back to cover and support the butts and receive the plating. And if welded together, the welds to be perfect, and the shifts not to be less than four feet.

4. The reversed angle irons to be in size as per Table G, and in vessels of 300 tons and upwards, to be rivetted on to every other frame up to the height of deck beam stringer, and in vessels above 1000 tons, to be rivetted on every frame to the height of the lower deck or hold beam stringer; the rivets for securing the angle iron to the frame, not to exceed six times their own diameter apart.

5. The floor plates to be in thickness as per Table G, the depth to be regulated according to the depth of the vessel, as described in foot note of Table G, and the reversed angle iron on the upper edges to run across each floor or frame to above the turn of bilge. A floor plate to be fitted and rivetted to every frame, and at the ends of the vessel the floor plates to be worked across the stem and stern posts, so as to support and unite the sides sufficiently to each other.

6. The middle line keelson, if of single plate, to be of the same thickness as the floor plates, and to be well fitted and rivetted to the same, and a reversed angle iron to be fitted on each side, both of the top and the bottom, extending all fore and aft, the lower angle irons to be secured to the reversed angle irons on the top of floors. If box keelsons be adopted, the plating to be of the thickness as per Table G, and in either case to be two-thirds of the depth of floor plates.

7. The bilge keelsons to be fitted and secured in an efficient manner, extending all fore and aft, and placed according to the form of the bottom.

8. All plates to be well fitted and secured to the ribs and each other, the butts to be closely fitted, and to be united by lining pieces or strips of not less than the same thickness as the plates, and of sufficient breadth for rivetting, as described hereafter. No butts of outside plating to be nearer each other than one space of frames, nor to be nearer to a scarph of keel, than that distance.

The space between the outside plating and the frames, to have solid filling pieces closely fitted in one length, of the same breadth as the frames.

9. All vessels to have a clamp or ceiling plate fitted between each tier of beams all fore and aft inside the frames, and in small vessels where there is but one tier of beams, then about two feet below them, the plate to be of the same dimensions as given for stringer plates upon beams in the Table G, and to be properly rivetted to the frame.

All vessels above 500 tons to have fitted between the bilge keelsons and the hold beams, at the upper part of the turn of bilge, strong angle irons, as stringers, extending all fore and aft, rivetted back to back to the reversed irons on the frames, the size of them not to be less than those used for the middle line keelson.

10. The depth of hold to be measured amidship from the top of the floor plates to the top of the upper deck beams in vessels with two decks, and to the top of the middle deck beams in vessels with three decks.

The beams to be of the dimensions as per Table G, and to be made of "bulb," or any other approved iron plates, with reversed iron angle rivetted to the plates, the beams to be well and efficiently connected or rivetted to the corresponding frames at the sides of the vessel, with bracket ends or knee plates of thickness equal to the beams, and in length, as per Table G, also to the stringer plates, the beams of each deck to be over each other, and pillared where practicable.

Upper deck beams in vessels with one or two tiers of beams, and the upper (or spar deck) and middle deck beams in vessels with three tiers of beams, to be fastened to alternate frames.

Vessels of 12 feet and 13 feet depth of hold, or where the gross register tonnage exceeds 200 tons, shall be required to have as many hold beams as may be practicable or convenient, fastened to, at least, every eighth frame.

Vessels of 13 feet depth and under 15 feet to have hold beams fastened to every fourth frame.

Vessels of 15 feet depth and under 18 feet to have hold or lower deck beams fastened to every second and fourth frame alternately.

Vessels of 18 feet depth and under 23 feet, to have hold or lower deck beams fastened to every alternate frame.

All vessels having two decks, and exceeding 23 feet in depth to the upper side of upper deck beams, and in vessels with three decks, viz., upper (or spar), middle, and lower deck, and exceeding 23 feet in depth to upper side of middle deck beams, such vessels to have orlop beams fastened to every sixth frame.

Where a deviation from the foregoing rules as applying to beams takes place in way of engine room or hatchways, and where partial or entire bulkheads with horizontal shelves, and stringers between them, are substituted for beams, a sketch with all particulars must be submitted through the resident surveyor, for the committee's consideration.

The united lengths of poop and forecastle not to exceed three-fifths of the entire length of the upper deck.

In the scantlings of beams, plating and stringers to upper (or spar deck) in vessels with three decks, viz., upper, middle, and lower deck, and of poop and forecastle, a reduction of one-sixth from the dimensions given for upper deck beams, &c., in the Table G, will be allowed.

The middle deck to be a perfect deck, laid and caulked.

11. The rivets to be of the best quality and to be one quarter of an inch larger in diameter than the thickness of plates through which they pass in the stem, stern post, and keel, and in the remainder of the plating, as per Table G, to be regularly and equally spaced and carefully punched opposite each other in the laps and lining pieces, or strips; to be counter-sunk all through the outer plating, and not to be nearer to the butts or edges of the plating, lining pieces to butts, or any angle iron, than a space not less than their own diameter, and not to be further apart from centre to centre than three times their diameter, and to be spaced through the frames and outside plating a distance equal to eight times their diameter apart. When rivetted up, they are completely to fill the holes, and their points, or outer ends are to be round or convex, and not to be below the surface of the plating through which they are rivetted. The stem, stern post, keel, garboard strakes, and butts of outside plating to be double rivetted in all vessels. The butts and edges of outside plating to be truly fitted, carefully caulked, and made water tight.

12. In addition to the engine room bulkheads of steamers, all vessels to have two water-tight bulkheads, built at a reasonable distance from the ends, to extend from the keel to the upper deck in vessels of two decks, and to the middle deck in vessels of three decks (otherwise called "tonnage deck.") All plating of bulkheads to be of the thickness prescribed in the Table G, and to be closely fitted between two frames or ribs at each side of the vessel, and strongly rivetted through them, or if attached only to one frame, then to have brackets or knee plates rivetted horizontally against the side plating of the vessel, and to the bulkheads, foreside and aftside alternately, near the middle of the outside plates, to be strongly rivetted thereto, also to be supported vertically by angle iron (of the dimensions given in the Table G), which are not to exceed 2 feet 6 inches apart, the whole to be efficiently connected and rivetted together, and to the corresponding floors, beams of the several decks, and the frames or ribs. The whole of the bulkheads to be made thoroughly water-tight.

13. The wood ceiling or lining of all vessels, from 100 to 3,000 tons, to be from 1½ inches to 3 inches in thickness, in proportion to the tonnage, and to be so fastened to the reversed angle irons or frames, that in the event of rivets springing or leaking, it may easily be removed.

14. The decks, waterways, and plancksheers, if of wood, not to be less in thickness or inferior in quality than is prescribed for vessels built of wood of the same tonnage and grade. The flat of upper

deck to be fastened by screw bolts put through from the upper side, and to have nuts at under side of the angle iron of the beams; and the waterways to be similarly fastened to the stringer plates.

15. In all vessels having three decks, the middle deck stringers are to be fitted home to the outside plating and rivetted to the angle irons secured thereto; also to have an additional angle iron extending all fore and aft inside of the ribs, and either above or below the stringers rivetted to the same, and to the reversed angle irons of the frames. All vessels to have above each tier of beams a plate each side the hatchways, of not less than 10 inches in breadth by ½ inch in thickness, and extending all fore and aft throughout, and well rivetted to upper side of all the beams, deck hooks, and transom. Also to have plates, where practicable, of the same dimensions, extended diagonally from side to side, rivetted to the upper side of upper deck beams and stringer plates.

16. The main piece of rudder to be made of the best hammered iron, and so arranged as to ship and unship, where practicable, without docking, and the main piece to be in size according to Table G.

17. Vessels intended for either the 12, 9, or 6 years' grade to be surveyed at least five times, in the following order, viz :—

On the several parts of the frame, when in place, and before being coated, and before the plating is wrought.

On the plating during the progress of rivetting.

When the beams are in and fastened, and before the decks are laid.

Again when the ship is complete, and before the plating is finally coated.

And, lastly, after the ship is launched, either in dry dock or laid on blocks, or otherwise so that the keel may be examined,

All vessels to be subject to occasional or annual survey when practicable, and every third year to be specially surveyed in dry dock or laid on blocks, with both surfaces of outside plating exposed, also at the expiration of the full period originally assigned, when the waterways and plankskeers, if of wood, are to be scraped bright, and at that time, if it is found that no material diminution of thickness by corrosion or wear has occurred, the vessel, being in all respects in efficient condition, may then be continued for a further period, not exceeding one-half the whole number of years first assigned.

On the expiration of the terms assigned to ships classed A, they will be liable to lapse (like ships built of wood) into the diphthong Æ class, unless again especially re-surveyed, to determine their claims to be allowed a higher character.

18. One year will be added to the character of all ships of the A class built under a roof which shall project at each end beyond the length, and on each side beyond the breadth, a quantity equal to one-half the breadth of the vessel.

19. Vessels not surveyed while building, will be classed A from year to year only, but for a period not exceeding six years.

No. 2. White Lion Court, Cornhill,
London, 12th April, 1855.

No one can question the advantages that will result from carrying a plan of this sort completely into execution, or those that have already been derived from the extent to which it has been carried. We confess, however, that we incline to think that the classification of ships should be effected by government agents. It is invidious to impose on one set of merchants and ship owners the task of deciding upon the condition of the ships or other property belonging to others; and, though we have every confidence in the integrity of the gentlemen composing the committee, the most honourable men are liable to be influenced by an *esprit du corps*, and by insensible biasses. We, therefore, cannot help thinking that the scheme would have a much better chance of success, and that the classification would be more likely to be correct, were it managed by individuals nowise connected with business. The surveyors, on whose capacity and honesty the whole scheme principally depends, should be quite independent of the good or ill will of those on whose property they have to report. But can that be said to be the case at present? and can it be fairly presumed that merchants or ship owners will deal by the property of their friends and neighbours as it might be dealt with by officers appointed by, and responsible only to, government? We apprehend that both those questions must be answered in the negative; and hence our conviction that this is a matter in which government should interfere. No one can doubt that it is bound to do every thing in its power to promote the safety of navigation, and to preserve the lives of our seamen. In this view it erects lighthouses, and prescribes regulations as to pilotage, &c. But, how indispensable soever, these are not more essential to the interests of navigation than a proper classification of ships; and, if other means should fail fully to effect this desirable purpose, government will certainly neglect a most important duty if it do not interpose. In the mean time, however, the mercantile and shipping interests are deeply indebted to the gentlemen who have done so much to obviate the abuses of the old system. —(For a further discussion of this important question, see the article on the Frequency of Shipwrecks in the 122d number of the *Edinburgh Review*; see also the *Reports of the Commons Committees* of 1836 and 1843, on Shipwreck.)

III. Ships (Safety of).

The self-interest and the security of the owners and masters of ships may, perhaps, be supposed to afford the only real guarantee against the occurrence of accidents. But this guarantee is not always, nor perhaps in most instances, to be depended upon; and to obviate in as far as possible the calamitous results that might be occasioned by the carelessness of owners and the ignorance or misconduct of masters, the legislature has enacted certain rules in the view of securing the proper fitting out of ships and their management. But it is needless to say that a vast deal depends in such cases on the way in which the rules are enforced. And it were better that they did not exist at all, and that passengers and others were left to depend on their own estimate of the parties,

than that they should be taught to place an undeserved reliance on rules which are not properly carried out.

The following rules on this subject are embodied in Part IV. of the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104.

Application of Part IV. of Act.—The fourth part of this Act shall apply to all British ships: and all foreign steam ships carrying passengers between places in the U. K. shall be subject to all the provisions contained in the 4th part of this Act, and likewise to the same provisions with respect to the certificates of the masters and mates thereof to which British steam ships are subject.—§ 291.

BOATS FOR SEA-GOING SHIPS.

Rules as to Boats and Life Buoys.—The following rules shall be observed with respect to boats and life buoys, viz.:

(1.) No decked ship (except ships used solely as steam tugs and ships engaged in the whale fishery) shall proceed to sea from any place in the U. K., unless she is provided, according to her tonnage, with boats duly supplied with all requisites for use, and not being fewer in number nor less in their cubic contents than the boats the number and cubic contents of which are specified in the following table:

(2.) No ship carrying more than 10 passengers shall proceed to sea from any place in the U. K., unless, in addition to the boats above required, she is also provided with a life boat furnished with all requisites for use, or unless one of her boats above required is rendered buoyant after the manner of a life boat:

(3.) No such ship as last aforesaid shall proceed to sea unless she is also provided with two life buoys: And such boats and life buoys shall be kept so as to be at all times fit and ready for use: provided, that the enactments with respect to boats and life buoys herein contained shall not apply in any case in which a certificate has been duly obtained under the 10th section of the "Passengers' Act, 1852" (the 15 & 16 Vict. c. 44. s. 10.) (SEE PASSENGERS.)—§ 292.

as the Case may be

Note.—In sailing ships carrying the number of boats above specified, and steam ships carrying the larger of the two numbers above specified, the boats are to be considered sufficient, if their aggregate cubic contents are equal to the aggregate cubic contents of the boats specified.

In steam ships carrying the smaller of the two numbers above specified, one of the boats must be a launch of the capacity specified in col. 2.

In sailing ships of 200 tons burden and under, not carrying passengers, a dingy may be substituted for the boat in col. 1.

In sailing ships of 150 tons burden and under, not carrying passengers, a substantial boat of capacity sufficient to carry the crew may be substituted for those above specified.

In all steam ships, two paddlebox boats may be substituted for any two of the boats in col. 3.

Penalties on Masters and Owners, &c., neglecting to provide Boats and Life Buoys.—In any of the following cases, viz.:—

(1.) If any ship herein required to be provided with boats or life buoys proceeds to sea without being so provided therewith, or if any of such boats or life buoys are lost or rendered unfit for service in the course of the voyage through the wilful fault or negligence of the owner or master; or,

(2.) If, in case of any of such boats or life buoys being accidentally lost or injured in the course of the voyage, the master wilfully neglects to replace or repair the same on the first opportunity; or,

(3.) If such boats and life buoys are not kept so as to be at all times fit and ready for use;

then if the owner appears to be in fault he shall incur a penalty not exceeding 100*l.*, and if the master appears to be in fault he shall incur a penalty not exceeding 50*l.*—§ 293.

Officers not to clear Ships not complying with the above Provisions.—No officer of customs shall grant a clearance or transire for any ship herein required to be provided with boats or with life buoys unless the same is duly so provided; and if any such ship attempts to go to sea without such clearance or transire any such officer may detain her until she is so provided.—§ 294.

LIGHTS AND FOG SIGNALS, AND MEETING AND PASSING.
BUILT AND EQUIPMENT OF STEAM SHIPS.

Iron Steamers to be divided by Water-tight Partitions.—The following rules shall be observed with respect to the built of iron steam ships, viz.:

(1.) Every steam ship built of iron, of 100 tons or upwards, the building of which commenced after the 28th of August, 1846, and every steam ship built of iron of less burthen than 100 tons, the building of which commenced after the 7th of August, 1851, (except ships used solely as steam tugs,) shall be divided by substantial transverse water-tight partitions, so that the fore part of the ship shall be separated from the engine room by one of such partitions, and so that the after part of such ship shall be separated from the engine room by another of such partitions:

(2.) Every steam ship built of iron, the building of which commences after the passing of this Act,

shall be divided by such partitions as aforesaid into not less than 3 equal parts, or as nearly so as circumstances permit:

(3.) In such last-mentioned ship each such partition as aforesaid shall be of equal strength with the side plates of the ship with which it is in contact:

(4.) Every screw steam ship built of iron, the building of which commences after the passing of this Act, shall, in addition to the above partitions, be fitted with a small water-tight compartment inclosing the after extremity of the shaft:

And no officer of customs or other person shall grant a clearance or transire for any iron steam ship required to be divided or fitted as aforesaid, unless the same is so divided and fitted; and if any such ship attempts to ply or go to sea without such clearance or transire, any such officer may detain her until she is so divided and fitted: and if any steam ship herein required to be so divided or fitted plies or goes to sea without being so divided or fitted, the owner shall incur a penalty not exceeding 100*l*. — § 300.

Equipment of Steam Ships. — Steam ships shall be provided as follows; (that is to say,)

(1.) Every steam ship of which a survey is hereby required shall be provided with a safety valve upon each boiler, so constructed as to be out of the control of the engineer when the steam is up, and, if such valve is in addition to the ordinary valve, it shall be so constructed as to have an area not less and a pressure not greater than the area of and pressure on that valve:

(2.) Every sea-going steam ship employed to carry passengers shall have her compasses properly adjusted from time to time; such adjustment, in the case of ships surveyed as after mentioned, to be made to the satisfaction of the shipwright surveyor, and according to such regulations as may be issued by the B. of Trade:

(3.) Every sea-going steam ship (unless used solely as a steam tug) shall be provided with a hose adapted for the purpose of extinguishing fire in any part of the ship and capable of being connected with the engines of the ship:

(4.) Every sea-going ship employed to carry passengers shall be provided with the following means of making signals of distress; viz., 12 blue lights or 12 port fires, and 1 cannon with ammunition for at least 12 charges, or, in the discretion of the master or owner of such ship, with such other means of making signals (if any) as may have previously been approved by the B. of Trade:

(5.) Every home trade steam ship employed to carry passengers by sea shall be provided with such shelter for the protection of deck passengers (if any) as the B. of Trade, having regard to the nature of the passage, the number of deck passengers to be carried, the season of the year, the safety of the ship, and the circumstances of the case, may require:

And if any steam ship as aforesaid plies or goes to sea from any port in the U. K. without being so provided as herein required, then for each default in any of the above requisites the owner shall (if he appears to be in fault) incur a penalty not exceeding 100*l*., and the master shall (if he appears to be in fault) incur a penalty not exceeding 50*l*.—§ 301.

Penalty for improper Weight on Safety Valve.—If any person places an undue weight on the safety valve of any steam ship, or, in the case of steam ships surveyed as hereinafter mentioned, increases such weight beyond the limits fixed by such engineer surveyor as herein-after mentioned, he shall, in addition to any other liabilities he may incur by so doing, incur a penalty not exceeding 100*l*.—§ 302.

Survey of Passenger Steamers.

Definition of Passenger Steamer.—For the purpose of the enactments herein contained with respect to surveys and certificates of passenger steam ships, the word "passengers" shall be held to include any persons carried in a steam ship, other than the master and crew and the owner, his family and servants; and the expression "passenger steamer" shall be held to include every British steam ship carrying passengers to, from, or between any place or places in the U. K., excepting steam ferry boats working in chains, commonly called steam bridges.—§ 303.

Passenger Steamers to be surveyed.—Every passenger steamer shall be surveyed twice at least in each year in manner after mentioned.—§ 304.

B. of Trade to appoint Surveyors and fix their Remuneration.—The B. of Trade may from time to time appoint such number of fit and proper persons to be shipwright surveyors and engineer surveyors for the purposes of this act at such ports or places as it thinks proper, and may also appoint a surveyor general for the U. K., and may from time to time remove such surveyors or any of them, and may from time to time fix and alter the rates of remuneration to be received by such surveyors. — § 305.

Surveyors to have Power to inspect. — It shall be lawful for the said surveyors in the execution of their duties to go on board any steam ship at all reasonable times, and to inspect the same or any part thereof, or any of the machinery, boats, equipments, or articles on board thereof, or any certificates of the master or mate to which the provisions of this act or any of the regulations to be made by virtue thereof apply, not unnecessarily detaining or delaying the ship from proceeding on any voyage, and, if in consequence of any accident to any such ship or for any other reason they consider it necessary so to do, to require the ship to be taken into dock for the purpose of surveying the hull thereof; and any person who hinders any such surveyor from going on board any such steam ship or otherwise impedes him in the execution of his duty under this act, shall incur a penalty not exceeding 5*l*. — § 306.

B. of Trade to regulate Mode of making Surveys. — The said surveyors shall execute their duties under the direction of the B. of Trade, and such board shall make regulations as to the manner in which the surveys after mentioned shall be made, and as to the notice to be given to the surveyors when surveys are required, and as to the amount and payment of any travelling or other expenses incurred by such surveyors in the execution of their duties, and may thereby determine the persons by whom and the conditions under which such payment shall be made. — § 307.

Penalty on Surveyors receiving Fees unlawfully. — Every surveyor who demands or receives directly or indirectly from the owner or master of any ship surveyed by him under the provisions of this act any fee or remuneration whatsoever for or in respect of such survey, otherwise than as the officer and by the direction of the B. of Trade, shall incur a penalty not exceeding 50*l*. — § 308.

Owners to have Surveys made by Shipwright and Engineer Surveyors, &c. — The owner of every passenger steamer shall cause the same to be surveyed at the times herein-after directed by one of the said shipwright surveyors and by one of the said engineer surveyors appointed as aforesaid; such shipwright surveyor being in the case of iron steamers, a person who is in the judgment of the B. of Trade properly qualified to survey such ships; and such surveyors shall thereupon, if satisfied that they can with propriety do so, give to such owner declarations as follows:

The declaration of the shipwright surveyor shall contain statements of the following particulars; (that is to say,)

(1.) That the hull of the ship is sufficient for the service intended and in good condition.

(2.) That the partitions, boats, life buoys, lights, signals, compasses, and shelter for deck passengers, and the certificates of the master and mate or mates, are such, and in such condition, as required by this act.

(3.) The time (if less than 6 months) for which the said hull and equipments will be sufficient.

(4.) The limits (if any) beyond which, as regards the hull and equipments, the ship is in the surveyor's judgment not fit to ply.

(5.) The number of passengers which the ship is in the judgment of the surveyor fit to carry, distinguishing, if necessary, between the respective numbers to be carried on the deck and in the cabins, and in different parts of the deck and cabins; such numbers to be subject to such conditions and variations, according to the time of year, the nature of the voyage, the cargo carried, or other circumstances, as the case requires.

And the declaration of the engineer surveyor shall contain statements of the following particulars; (that is to say,)

(1.) That the machinery of the ship is sufficient for the service intended, and in good condition.
(2.) The time (if less than 6 months) for which such machinery will be sufficient.
(3.) That the safety valves and fire hose are such and in such condition as are required by this act.
(4.) The limits of the weight to be placed on the safety valves.
(5.) The limits (if any) beyond which, as regards the machinery, the ship is in the surveyor's judgment not fit to ply.

And such declarations shall be in such form as the B. of Trade directs. — § 309.

Transmission of Declarations to B. of Trade. — The said owner shall transmit such declarations to the B. of Trade within 14 days after the dates of the receipt thereof respectively; and in default shall forfeit a sum not exceeding 10*s.* for every day that the sending of such declarations is delayed; and such sum shall be paid upon the delivery of the certificate herein-after mentioned in addition to the fee payable for the same, and shall be applied in the same manner as such fees. — § 310.

Times appointed for Surveys and Transmission of Declarations. — In all cases where it is possible the said half-yearly surveys shall be made in the months of April and of October, and the declarations shall be transmitted on or before the 30th April and the 31st October respectively; but if the owner of any passenger steamer is unable to have the same surveyed in the month of April or October, (as the case may be,) either by reason of such ship being absent from the U. K during the whole of those periods respectively; or by reason of such ship or the machinery thereof being under construction or repair, or of such ship being laid up in dock, or for any other reason satisfactory to the B. of Trade, then he shall have the same surveyed as aforesaid as soon thereafter as possible, and shall transmit such declarations to the B. of Trade within 14 days after the receipt thereof, together with a statement of the reasons which have prevented the survey of such ship at the time before prescribed, and shall, in case of delay in transmitting the declarations, be liable to a forfeiture similar to that mentioned in the last section. — § 311.

B. of Trade to issue Certificates. — Upon the receipt of such declarations the B. of Trade shall, if satisfied that the provisions of the 4th part of this act have been complied with, cause a certificate in duplicate to be prepared and issued to the effect that the provisions of the law with respect to the survey of the ship and the transmission of declarations in respect thereof have been complied with; and such certificate shall state the limits (if any) beyond which, according to the declaration of the surveyors, such ship is not fit to ply, and shall also contain a statement of the number of passengers which, according to the declaration of the shipwright surveyor, such ship is fit to carry, distinguishing (if necessary) between the respective numbers to be carried on the deck and in the cabins and in different parts of the deck and cabins, such number to be subject to such conditions and variations according to the time of year, the nature of the voyage, the cargo carried, and other circumstances, as the case requires. — § 312.

Issue and Transmission of Certificates. — The B. of Trade shall transmit such duplicate certificate to the shipping master or to some other public officer at such port as the owner may mention for the purpose or at the port where the owner or his agent resides or where the ship was surveyed and is for the time being lying, and shall cause notice of such transmission to be given by post or otherwise to the master or owner or his agent; and the said shipping master or officer shall deliver such duplicate certificate to the said owner, master, or agent on his applying and paying the fees and other sums (if any) herein mentioned as payable in that behalf; and in proving the due issue and transmission to the owner, agent, or master of such certificate, it shall be sufficient to show that the same has been duly received by such shipping master or public officer as aforesaid, and that due notice of the transmission thereof to such shipping master or officer has been given to such owner, master, or agent. — § 313.

Fees to be paid for Certificates.—The owner of every passenger steamer requiring a certificate under this Act shall pay for every certificate granted by the B. of Trade such fees as such Board directs, not exceeding the fees undermentioned.

	£	s.	d.
For steamers not exceeding 100 tons	2	0	0
— steamers exceeding 100 and not exceeding 300 tons	3	0	0
— steamers exceeding 300 and not exceeding 600 tons	4	0	0
And for every additional 300 tons an additional	1	0	0

— § 314.

How long Certificates to continue in force. — No such certificate shall be held to be in force for the purposes of this act beyond the date fixed by the B. of Trade for the expiration thereof; and no certificate shall be in force after notice is given by the B. of Trade to the owner, agent, or master of the ship to which the same relates, that such Board has cancelled or revoked the same: provided, that if any passenger steamer is absent from the U. K. at the time when her certificate expires, no penalty shall be incurred for the want of a certificate until she first begins to ply with passengers after her next subsequent return to the U. K.; and the B. of Trade may require any certificate which has expired, or has been revoked or cancelled, to be delivered up as it directs; and any owner or master who, without reasonable cause, neglects or refuses to comply with such requirement, shall incur a penalty not exceeding 10*l.*—§ 315.

B. of Trade may cancel Certificates.—The B. of Trade may revoke and cancel such certificates in any case in which it has reason to believe,—

(1.) That the declarations of the sufficiency and good condition of the hull, equipments, and machinery of any passenger steamer, or either of them, have been fraudulently or erroneously made; or,
(2.) That such certificate has otherwise been issued upon false or erroneous information; or,
(3.) That since the making of such declarations the hull, equipments, or machinery of such ship have sustained any injury, or are otherwise insufficient.

And in every such case the B. of Trade may, if it think fit, require the owner to have the hull, equipments, or machinery of such ship again surveyed, and to transmit a further declaration or declarations of the sufficiency and good condition thereof, before re-issuing any certificate or granting a fresh one in lieu thereof.—§ 316.

Copy of Certificate to be placed in conspicuous Part of Ship.—The owner or master of every passenger steamer shall forthwith on the transmission of any such certificate as aforesaid to him or his agent cause one of the duplicates thereof so transmitted to be put up in some conspicuous part of the ship, so as to be visible to all persons on board the same, and shall cause it to be continued so put up so long as such certificate remains in force and such ship is in use; and in default such owner or master shall for every offence incur a penalty not exceeding 10*l.*—§ 317.

Ship not to proceed on her Voyage without Certificate.—It shall not be lawful for any passenger steamer to proceed to sea or upon any voyage or excursion with any passengers on board, unless the owner

thereof has transmitted to the B. of Trade the declarations before required, nor unless the owner or master thereof has received from such Board such a certificate as is before provided for, such certificate being a certificate applicable to the voyage or excursion on which such ship is about to proceed; and no officer of customs shall grant any clearance or transire for any passenger steamer unless upon the production of such certificate; and if any passenger steamer attempts to ply or go to sea without such production, any such officer may detain her until such certificate is produced; and if any passenger steamer plies or goes to sea with any passengers on board, without having one of the duplicates of such certificate as aforesaid (being a certificate then in force, and applicable as aforesaid,) so put up as aforesaid in some conspicuous part of the ship, the owner thereof shall for such offence incur a penalty not exceeding 100*l*., and the master of such ship shall also incur a further penalty not exceeding 20*l*.—§ 318.

Penalty for carrying Passengers in Excess of Numbers specified in Certificate.—If the owner or master or other person in charge of any passenger steamer receives on board thereof, or if such ship has on board, any number of passengers which, having regard to the time, occasion, and circumstances of the case, is greater than the number of passengers allowed by the certificate, the owner or master shall incur a penalty not exceeding 20*l*., and also an additional penalty not exceeding 5*s*. for every passenger over and above the number allowed by the certificate, or, if the fare of any of the passengers on board exceeds 5*s*., not exceeding double the amount of the fares of all the passengers who are over and above the number so allowed as aforesaid, such fares to be estimated at the highest rate payable by any passenger on board.—§ 319.

Forgery of Declaration or Certificate a Misdemeanor.—Every person who knowingly and wilfully makes or assists in making or procures to be made a false or fraudulent declaration or certificate with respect to any passenger steamer requiring a certificate under the 4th part of this act, or who forges, assists in forging, or procures to be forged, fraudulently alters, assists in fraudulently altering, or procures to be fraudulently altered, any declaration or certificate required by the 4th part of this act, or any words or figures in any such declaration or certificate, or any signature thereto, shall be deemed guilty of a misdemeanor.—§ 320.

Surveyors to make Returns of the Build and other Particulars of Steam Ships, &c.—The said surveyors shall from time to time make such returns to the B. of Trade as it requires with respect to the build, dimensions, draught, burden, rate of sailing, room for fuel, and the nature and particulars of machinery and equipments of the ships surveyed by them; and every owner, master, and engineer of any such ship shall, on demand, give to such surveyors all such information and assistance within his power as they require for the purpose of such returns; and every such owner, master, or engineer who, on being applied to for that purpose, wilfully refuses or neglects to give such information or assistance, shall be liable to a penalty not exceeding 5*l*.—§ 321.

Penalties on Persons forcing Way on board; or refusing to quit the Ship.—The following offenders, viz.,

(1.) Any person who, after having been refused admission into any steamer by the owner or person in charge thereof or by any person in the employ of the owner, on account of such steamer being full, and after having had the full amount of his fare (if he has paid the same) returned or tendered to him, nevertheless persists in attempting to enter the same; and

(2.) Any person, having got on board any steamer, who, upon being requested on the like account by the owner or person in charge thereof or by any person in the employ of the owner to leave such steamer before the same has quitted the place at which such person got on board, and upon having the full amount of his fare (if he has paid the same) returned or tendered to him, refuses to comply with such request,

shall for each such offence incur a penalty not exceeding 40*s*., to be paid to the said owner.—§ 322.

Penalty for avoiding Payment of Fares.—The following offenders, viz.,

(1.) Any person who travels or attempts to travel in any passenger steamer which has been duly surveyed in conformity with the provisions of this act, without having previously paid his fare, and with intent to avoid payment thereof; and

(2.) Any person who, having paid his fare for a certain distance, knowingly and wilfully proceeds in any such steamer beyond such distance, without previously paying the additional fare for the additional distance, and with intent to avoid payment thereof; and

(3.) Any person who knowingly and wilfully refuses or neglects, on arriving at the point to which he has paid his fare, to quit any such steamer;

shall for every such offence incur a penalty not exceeding 5*s*., in addition to the fare payable by him, such penalty to be payable to the owner of such steamer.—§ 323.

Penalty on Persons refusing to give their Name and Address.—Every person who, having committed any of the offences mentioned in the two last preceding sections or either of them, refuses on application of the master of the ship or of any other person in the employ of the owner to give his name and address, or who on such application gives a false name or address, shall incur a penalty not exceeding 20*l* to be paid to the said owner.—§ 324.

Power to refuse or remove Passengers who are drunk or misconduct themselves.—The master of any home trade passenger steam ship may refuse to receive on board thereof any person who by reason of drunkenness or otherwise is in such a state, or misconducts himself in such a manner, as to cause annoyance to other passengers on board, or if such person is on board, may put him on shore at any convenient place; and no person so refused admittance or put on shore shall be entitled to the return of any fare he may have paid.—§ 325.

Accidents to Steam Ships to be reported to B. of Trade.—Whenever any steam ship has sustained or caused any accident occasioning loss of life, or any serious injury to any person, or has received any material damage affecting her seaworthiness or her efficiency either in her hull or in any part of her machinery, the owner or master shall, within twenty-four hours after the happening of such accident or damage, or as soon thereafter as possible, send to the B. of Trade, by letters signed by such owner or master, a report of such accident or damage, and of the probable occasion thereof, stating the name of the ship, the port to which she belongs, and the place where she is; and if such owner or master neglect so to do he shall for such offence incur a penalty not exceeding 50*l*.—§ 326.

Notice to be given of apprehended Loss of Steam Ships.—If the owner of any steam ship have reason, owing to the nonappearance of such ship, or to any other circumstance, to apprehend that such ship has been wholly lost, he shall as soon as conveniently may be send notice thereof in like manner to the B. of Trade, and if he neglect so to do within a reasonable time he shall for such offence incur a penalty not exceeding 50*l*.—§ 327.

Collisions to be entered in Official Log.—In every case of collision, in which it is practicable so to do, the master shall immediately after the occurrence cause a statement thereof, and of the circumstances under which the same occurred, to be entered in the official log book (if any), such entry to be signed by the master, and also by the mate or one of the crew, and in default shall incur a penalty not exceeding 20*l*.—§ 328.

Provisions to prevent carrying dangerous Goods without due Notice.—No person shall be entitled to carry in any ship, or to require the master or owner of any ship to carry therein, any aquafortis, oil of vitriol, gunpowder, or any other goods which, in the judgment of such master or owner, are of a dan-

gerous nature; and if any person carries or sends by any ship any goods of a dangerous nature, without distinctly marking their nature on the outside of the package containing the same, or otherwise giving notice in writing to the master or owner at or before the time of carrying or sending the same to be shipped, he shall for every such offence incur a penalty not exceeding 100*l.*; and the master or owner of any ship may refuse to take on board any parcel that he suspects to contain goods of a dangerous nature, and may require them to be opened to ascertain the fact.—§ 329.

IV. Shipping Offices, &c.

These were established by the 13 & 14 Vict. c. 93. Their object, as explained below, was to afford facilities for the engagement of seamen and apprentices; to keep an account of their names and characters; to see to their being on board when required; and generally to promote their interests and those of the masters. The following clauses of the Mercantile Shipping Act, the 17 & 18 Vict. c. 104., relate to this subject, viz.:

Marine Boards to establish Shipping Offices.—In every seaport in the U. K. in which there is a Local Marine Board, such board shall establish a shipping office or shipping offices, and may for that purpose, subject as after-mentioned, procure the requisite premises, and appoint and from time to time remove and re-appoint superintendents of such offices, to be called shipping masters, with any necessary deputies, clerks, and servants, and regulate the mode of conducting business at such offices, and shall have complete control over the same; and every act done by or before any deputy duly appointed shall have the same effect as if done by or before a shipping master.—§ 122.

B. of Trade to have partial Control over Shipping Offices.—The sanction of the B. of Trade shall be necessary so far as regards the number of persons appointed by any Local Marine Board, and the amount of their salaries and wages and all other expenses; and the B. of Trade shall have the immediate control of such shipping offices, so far as regards the receipt and payment of money thereat; and all shipping masters, deputies, clerks, and servants appointed as aforesaid shall before entering upon their duties give such security (if any) for the due performance thereof as the B. of Trade requires; and if in any case the B. of Trade has reason to believe that any shipping master, deputy, clerk, or servant appointed by any Local Marine Board does not properly discharge his duties, the B. of Trade may cause the case to be investigated, and may, if it thinks fit so to do, remove him from his office, and may provide for the proper performance of his duties until another person is properly appointed in his place.—§ 123.

Business of such Offices generally.—It shall be the general business of shipping masters appointed as aforesaid—

To afford facilities for engaging seamen by keeping registries of their names and characters.
To superintend and facilitate their engagement and discharge in manner herein-after mentioned.
To provide means for securing the presence on board at the proper times of men who are so engaged.
To facilitate the making of apprenticeships to the sea service.
To perform such other duties relating to merchant seamen and merchant ships as are hereby or may hereafter under the powers herein contained be committed to them.—§ 124.

Fees to be paid upon Engagements and Discharges.—Such fees, not exceeding the sums specified in the annexed table, as are from time to time fixed by the B. of Trade, shall be payable upon all engagements and discharges effected before shipping masters as after mentioned, and the B. of Trade shall cause scales of the fees payable for the time being to be prepared and to be conspicuously placed in the shipping offices: and all shipping masters, their deputies, clerks, and servants, may refuse to proceed with any engagement or discharge unless the fees payable thereon are first paid.—§ 125.

Fees to be charged for Matters transacted at Shipping Offices.

1. Engagement of crews.

	£	s.	d.
In ships under 60 tons.	0	4	0
60 to 100 ,,	0	7	0
100 to 200 ,,	0	15	0
200 to 300 ,,	1	0	0
300 to 400 ,,	1	5	0
400 to 500 ,,	1	10	0
500 to 600 ,,	1	15	0
600 to 700 ,,	2	0	0
700 to 800 ,,	2	5	0
800 to 900 ,,	2	10	0
900 to 1,000 ,,	2	15	0
Above 1,000 ,,	3	0	0

And so on for ships of larger tonnage, adding for every 100 tons above 1,000, 5*s.*

2. Engagement of seamen separately. 2*s.* for each.

3. Discharge of crews.

	£	s.	d.
In ships under 60 tons	0	4	0
60 to 100 ,,	0	7	0
100 to 200 ,,	0	15	0
200 to 300 ,,	1	0	0
300 to 400 ,,	1	5	0
400 to 500 ,,	1	10	0
500 to 600 ,,	1	15	0
600 to 700 ,,	2	0	0
700 to 800 ,,	2	5	0
800 to 900 ,,	2	10	0
900 to 1,000 ,,	2	15	0
Above 1,000 ,,	3	0	0

And so on for ships of larger tonnage, adding for every 100 tons above 1,000, 5*s.*

4. Discharge of seamen separately. 2*s.* for each.

Masters to pay Fees, and to deduct Part from Wages.—Every owner or master of a ship engaging or discharging any seamen or seaman in a shipping office or before a shipping master, shall pay to the shipping master the whole of the fees hereby made payable in respect of such engagement or discharge, and may, for the purpose of in part reimbursing himself, deduct in respect of each such engagement or discharge from the wages of all persons (except apprentices) so engaged or discharged, and retain any sums not exceeding the sums specified in the annexed table, provided that, if in any cases the sums which the owner is so entitled to deduct exceed the amount of the fee payable by him, such excess shall be paid by him to the shipping master in addition to such fee.—§ 126.

Sums to be deducted from Wages by way of partial Repayment of Fees in preceding Table.

1. In respect of engagements and discharges of crews, upon each engagement and each discharge.

	s.	d.
From wages of any mate, purser, engineer, surgeon, carpenter, or steward	1	6
From wages of all others except apprentices	1	0

2. In respect of engagements and discharges of seamen separately, upon each engagement and each discharge. One Shilling.

Penalty on Shipping Masters taking other Remuneration.—Any shipping master; deputy shipping master, or any clerk or servant in any shipping office, who demands or receives any remuneration whatever, either directly or indirectly, for hiring or supplying any seaman for any merchant ship,

excepting the lawful fees payable under this act, shall for every such offence incur a penalty not exceeding 20*l.*, and shall also be liable to be dismissed from his office by the B of Trade. — § 127.

Business of Shipping Offices may be transacted at Custom Houses.—The B. of Trade may, with the consent of the commissioners of customs, direct that at any place in which no separate shipping office is established the whole or any part of the business of the shipping office shall be conducted at the custom house, and thereupon the same shall be there conducted accordingly; and in respect to such business such custom house shall for all purposes be deemed to be a shipping office, and the officer of customs there to whom such business is committed shall for all purposes be deemed to be a shipping master within the meaning of this act. — § 128.

In London Sailors Homes may be Shipping Offices.—The B. of Trade may appoint any superintendent of or other person connected with any sailors home in the port of London to be a shipping master, with any necessary deputies, clerks, and servants, and may appoint any office in any such home to be a shipping office; and all shipping masters and shipping offices so appointed shall be subject to the immediate control of the B. of Trade and not of the Local Marine Board of the port. — § 129.

Dispensation with Shipping Master's Superintendence.—The B. of Trade may from time to time dispense with the transaction before a shipping master or in a shipping office of any matters required by this act to be so transacted; and thereupon such matters shall, if otherwise duly transacted as required by law, be as valid as if transacted before a shipping master or in a shipping office. — § 130.

V. Ships' Papers.

The papers or documents required for the manifestation of the property of the ship and cargo, &c. They are of 2 sorts; viz. 1st, those required by the law of a particular country — as the certificate of registry, licence, charterparty, bills of lading, bill of health, &c. — (see these titles) — required by the law of England to be on board British ships; and, 2dly, those required by the law of nations to be on board neutral ships, to vindicate their title to that character. Mr. Serjeant Marshall, following Hubner (*De la Saisie des Bâtimens Neutres*, i. 241—252.), has given the following description of the latter class of documents: —

1. *The Passport, Sea Brief, or Sea Letter.* — This is a permission from the neutral state to the captain or master of the ship, to proceed on the voyage proposed, and usually contains his name and residence; the name, property, description, tonnage, and destination of the ship; the nature and quantity of the cargo, the place whence it comes, and its destination; with such other matters as the practice of the place requires. This document is indispensably necessary for the safety of every neutral ship. Hubner says that it was the only paper rigorously insisted on by the Barbary corsairs; by the production of which alone their friends were protected from insult.

2. *The proofs of Property.*—These ought to show that the ship really belongs to the subjects of a neutral state. If she appear to either belligerent to have been built in the enemy's country, proof is generally required that she was purchased by the neutral before, or captured and legally condemned and sold to the neutral after, the declaration of war; and in the latter case the *bill of sale*, properly authenticated, ought to be produced. Hubner admits that these proofs are so essential to every neutral vessel, for the prevention of frauds, that such as sail without them have no reason to complain if they be interrupted in their voyages, and their neutrality disputed.

3. *The Muster Roll.*—This, which the French call *rôle d'équipage*, contains the names, ages, quality, place of residence, and, above all, *the place of birth*, of every person of the ship's company. This document is of great use in ascertaining a ship's neutrality. It must naturally excite a strong suspicion, if the majority of the crew be found to consist of foreigners; still more, if they be natives of the enemy's country.—(See Seamen.)

4. *The Charterparty.*—Where the ship is chartered, this instrument serves to authenticate many of the facts on which the truth of her neutrality must rest, and should therefore be always found on board chartered ships.

5. *The Bills of Lading.*—By these the captain acknowledges the receipt of the goods specified therein, and promises to deliver them to the consignee or his order. Of these there are usually several duplicates; one of which is kept by the captain, one by the shipper of the goods, and one transmitted to the consignee. This instrument, being only the evidence of a private transaction between the owner of the goods and the captain, does not carry with it the same degree of authenticity as the charterparty.

6. *The Invoices.* — These contain the particulars and prices of each parcel of goods, with the amount of the freight, duties, and other charges thereon, which are usually transmitted from the shippers to their factors or consignees. These invoices prove by whom the goods were shipped, and to whom consigned. They carry with them, however, but little authenticity; being easily fabricated where fraud is intended.

7. *The Log Book, or Ship's Journal.* — This contains a minute account of the ship's course, with a short history of every occurrence during the voyage. If this be faithfully kept, it will throw great light on the question of neutrality; if it be in any respect fabricated, the fraud may in general be easily detected. See Log, Official.

8. *The Bill of Health.*—This is a certificate, properly authenticated, that the ship comes from a place where no contagious distemper prevails; and that none of the crew,

at the time of her departure, were infected with any such disorder. It is generally found on board ships coming from the Levant, or from the coast of Barbary, where the plague so frequently prevails.

A ship using false or simulated papers is liable to confiscation.—(*Marshall on Insurance*, book i. c. 9. § 6.)

SHOES (Du. *Schoenen*; Fr. *Souliers*; Ger. *Schuhe*; It. *Scarpe*; Rus. *Baschmaki*, Sp. *Zapatos*), articles of clothing that are universally worn, and require no description. The shoe manufacture is of great value and importance; much more so, indeed, than is generally supposed; for it ranks in the public estimation far below many branches to which it is really much superior in intrinsic value. This results from the circumstance of machinery being hardly introduced into the business, and from its being principally carried on either in petty workshops, or, as is the more usual practice, in the houses of the shoemakers. It is very extensively practised in the metropolis, where the best shoes are made; and is diffused over every part of the country. Northamptonshire and Staffordshire have attained to considerable distinction in the business; large quantities of shoes being made in them, partly for the supply of the metropolis and other large towns, where they are sold "ready made," and partly for exportation. Shoemaking (boot-making is always included) is the most extensively practised of all the common trades. At last census, 1851, no fewer than 274,451 persons (243,033 males, and 31,418 females) were engaged in Great Britain in this business, exclusive of 94,175 shoemakers' wives! In London the business furnished employment to 38,855 persons; and in Northamptonshire to 10,743. It may be worth mentioning that, according to the official returns, the business of millinery and dressmaking employed the next greatest number of hands to shoemaking, viz. 267,791.

We estimated in the art. LEATHER the value of the shoes annually manufactured in Great Britain at 7,400,000*l.* But we have no doubt that this estimate, which is some years old, is now a great deal too low; and that their value may at present (1855) be safely estimated at above 10,000,000*l.* If we reckon the wages of the 274,451 persons employed in the business at 18*l.* a year, at an average (which as young people and women are extensively employed is probably not far from the mark), their total amount will be 4,939,518*l.*, to which has to be added the value of the leather and other materials.

Boots and shoes used formerly to be prohibited, but they are now admitted under reasonable duties. With the exception, however, of ladies' shoes (mostly silk), and of boot fronts, their importation is inconsiderable: of the former 26,054, and of the latter 580,386 pairs were entered for consumption in 1853. The export of boots and shoes is very considerable; but being included under the general term of "wrought leather," neither their quantity nor value can be stated.

Massachusetts is the grand seat of the shoemaking business in the U. States; and large quantities of shoes are annually shipped from Boston for N. York, and other southern ports.

Though many, and some very ingenious, efforts have been made to manufacture shoes by the aid of machinery, they have hitherto had but little success. This, however, will not appear surprising when it is considered that the size and shape of the feet differ extremely in different persons, and that, consequently, the articles to be produced are destitute of that sameness in their corresponding parts that is so essential in work produced by machinery. The latter has, however, been applied with considerable advantage to the manufacture of shoes (clogs) with wooden soles; and it may, also, be applied, though with no great advantage, where fine work and accurate fitting are little cared for. On the whole, however, it would seem that the craft of St. Crispin is not very likely to be disturbed by those inventions that have so greatly changed so many other handicrafts. And the vast improvement in the shoes of modern times, compared with those used in antiquity, seems rather to result from the superiority of the leather, or material of which they are made, and the greater skill and dexterity of the workmen, than from the improvement of their tools.

SHUMAC OR SUMACH (Ger. *Schmack, Sumach*; Fr. *Sumac, Roure, Roux*; It. *Sommaco*; Sp. *Zumaque*; Rus. *Sumak*). Common shumac (*Rhus Coriaria*) is a shrub that grows naturally in Syria, Palestine, Spain, and Portugal. That which is cultivated in Italy, and is improperly called *young fustic*, is the *Rhus Cotinus*. It is cultivated with great care: its shoots are cut down every year quite to the root; and, after being dried, they are chipped or reduced to powder by a mill, and thus prepared for the purposes of dyeing and tanning. The shumac cultivated in the neighbourhood of Montpellier is called *rédoul* or *roudo*. Shumac may be considered of good quality when its odour is strong, colour of a lively green, is well ground, and free from stalks. Italian shumac is used in dyeing a full high yellow, approaching to the orange, upon wool or cloth; but the colour is fugitive. Common shumac is useful for drab and

dove colours in calico printing, and is also capable of dyeing black. — *Bancroft on Col urs*, vol. ii. p. 100.

Of 12,929 tons of shumac imported in 1850, no fewer than 12,494 were from Italy. The price of shumac varies from 9*s.* to 18*s.* a cwt. About 10,000 tons are retained for consumption.

The duty of 1*s.* a ton on shumac was repealed in 1845.

SIERRA LEONE, an English settlement, near the mouth of the river of the same name, on the west coast of Africa, lat. 8° 30′ N., lon. 13° 5′ W.

Objects of the Colony. — This colony was founded partly as a commercial establishment, but more from motives of humanity. It was intended to consist principally of free blacks, who, being instructed in the Christian religion, and in the arts of Europe, should become, as it were, a focus whence civilisation might be diffused among the surrounding tribes. About 1,200 free negroes, who, having joined the royal standard in the American war, were obliged, at the termination of that contest, to take refuge in Nova Scotia, were conveyed thither in 1792: to these were afterwards added the Maroons from Jamaica; and, since the legal abolition of the slave trade, the negroes taken in the captured vessels, and liberated by the mixed commission courts, have been carried to the colony. The total population of the colony in 1850, amounted to about 55,500, all black or coloured, with the exception of about 100 whites.

Success of the Efforts to civilise the Blacks.—Great efforts have been made to introduce order and industrious habits amongst these persons. We are sorry, however, to be obliged to add, that these efforts, though prosecuted at an enormous expense of blood and treasure, have been signally unsuccessful. There is, no doubt, some discrepancy in the accounts of the progress made by the blacks. It is, however, sufficiently clear, that it has been very inconsiderable, and we do not think that any other result could be rationally anticipated. Their laziness has been loudly complained of, but without reason. Men are not industrious without a motive; and most of those motives that stimulate all classes in colder climates to engage in laborious employments, are unknown to the indolent inhabitants of this burning region, where clothing is of little importance, where sufficient supplies of food may be obtained with comparatively little exertion, and where more than half the necessaries and conveniences of Europeans would be positive incumbrances. And had it been otherwise, what progress could a colony be expected to make, into which there have been annually imported crowds of liberated negroes, most of whom are barbarians in the lowest stage of civilisation?

Influence of the Colony upon the illicit Slave Trade. — As a means of checking the prevalence of the illicit slave trade, the establishment of a colony at Sierra Leone has been worse than useless. The trade is principally carried on with the countries round the Bight of Biafra and the Bight of Benin, many hundred miles distant from Sierra Leone; and the mortality in the captured ships during their voyage to the latter is often very great. The truth is that this traffic will never be effectually put down otherwise than by the great powers declaring it to be *piracy*, and treating those engaged in it, wherever and by whomsoever they may be found, as sea robbers or pirates. Such a declaration would be quite conformable to the spirit of the declaration put forth by the Congress of Vienna in 1824. — (See SLAVE TRADE.) But the jealousies with respect to the right of visitation and search are so very great, that it is exceedingly doubtful whether the maritime powers will ever be brought to concur in any declaration of the kind now alluded to; unless, however, something of this sort be done, we apprehend there are but slender grounds for supposing that the trade will be speedily suppressed.

Climate of Sierra Leone. — The soil in the vicinity of Sierra Leone seems to be but of indifferent fertility, and the climate is about the most destructive that can be imagined. The mortality among the Africans sent to it seems unusually great; and amongst the whites it is quite excessive. Much as we desire the improvement of the blacks, we protest against its being attempted by sending our countrymen to certain destruction in this most pestiferous of all pestiferous places. It would seem, too, that it is quite unnecessary, and that blacks may be employed to fill the official situations in the colony. But if otherwise, it should be unconditionally abandoned.

Commerce of Sierra Leone, and the West Coast of Africa. — Commercially considered, Sierra Leone appears to quite as little advantage as in other points of view. We import from it teak wood, palm oil, ginger, and ground-nuts, with small quantities of camwood, ivory, hides, gum copal, and other articles; but their value is inconsiderable, not amounting to more than from 50,000*l.* to 70,000*l.* a year. Palm oil is the great article of export from the W. coast of Africa; and by far the largest portion of it is furnished by the coast to the west and south of the Rio Volta, many

hundred miles from Sierra Leone. We doubt, indeed, whether the commerce with the latter will ever be of much importance. At all events, we hardly think that it can be expected materially to increase if it be conducted in the way in which it is affirmed that the intercourse with the liberated negroes is at present conducted.—(*Reports on Colonial Possessions*, 1851, p. 175.) If there be not some mistake or exaggeration in the statement now referred to, nothing can be conceived more disgraceful. Should it, however, be ascertained that an establishment is really required for the advantageous prosecution of the trade to Western Africa, it is abundantly obvious that it should be placed much further to the south than Sierra Leone. The island of Fernando Po has been suggested for this purpose; but, after the dear-bought experience we have already had, it is to be hoped that nothing will be done with respect to it without mature consideration.

Account of the Quantities and Values of the Principal Articles imported into the U. K. from Sierra Leone in each of the 4 Years ending with 1857.

Principal Articles.	Quantities.				Computed Values.			
	1854.	1855.	1856.	1857.	1854.	1855.	1856.	1857.
Camwood - - tons	405	256	362	157	£7,784	£4,823	£7,806	£4,942

In 1855 and 1856 the exports of palm oil from Sierra Leone to all parts amounted to 364,414 and 463,130 gallons. The exports of British produce to the colony consist principally of cottons, arms, and ammunition, and are but inconsiderable. In 1857 their value amounted to 223,495*l.*, but that was much above the average. The only manufacture that can be said to exist in the colony is the expression of the oil from the ground nut by means of machinery.—(See NUTS, GROUND.)

Expenses incurred on account of Sierra Leone.—The pecuniary expense occasioned by this colony, and our unsuccessful efforts to suppress the foreign slave trade, have been altogether enormous. Mr. Keith Douglas is reported to have stated, in his place in the House of Commons, in July, 1831, that "down to the year 1824, the *civil* expenses of Sierra Leone amounted to 2,268,000*l.*; and that the same expenses had amounted, from 1824 to 1830, to 1,082,000*l.* The naval expenses, from 1807 to 1824, had been 1,630,000*l.* The payments to Spain and Portugal, to induce them to relinquish the slave trade, amounted to 1,230,000*l.* The expenses on account of captured slaves were 533,092*l.* The expenses incurred on account of the mixed commission courts were 198,000*l.* Altogether, this establishment had cost the country nearly 8,000,000*l.*!"

The prodigality of this expenditure is unmatched, except by its uselessness. It is doubtful whether it has prevented a single African from being dragged into slavery, or conferred the smallest real advantage on Africa. It, however, enabled the kings of Spain and Portugal to turn their mercenary humanity to good account.

For further details with respect to Sierra Leone, and the trade of Western Africa, see the *Report of the Select Committee of the House of Commons, on the West Coast of Africa*, Sess. 1842, and the *Parl. Paper* for 1851, already referred to.

SILK (Lat. *Sericum*, from *Seres*, the supposed ancient name of the Chinese), a fine glossy thread or filament spun by various species of caterpillars or larvæ of the *phalæna* genus. Of these, the *Phalæna atlas* produces the greatest quantity: but the *Phalæna bombyx* is that commonly employed for this purpose in Europe. The silkworm, in its caterpillar state, which may be considered as the first stage of its existence, after acquiring its full growth (about 3 inches in length), proceeds to enclose itself in an oval-shaped ball, or cocoon, which is formed by an exceedingly slender and long filament of fine yellow silk, emitted from the stomach of the insect preparatory to its assuming the shape of the chrysalis or moth. In this latter stage, after emancipating itself from its silken prison, it seeks its mate, which has undergone a similar transformation; and in 2 or 3 days afterwards, the female having deposited her eggs (from 300 to 500 in number), both insects terminate their existence. According to Reaumur, the *phalæna* is not the only insect that affords this material,—several species of the *aranea*, or spider, enclose their eggs in very fine silk.

Raw Silk is produced by the operation of winding off, at the same time, several of the balls or cocoons (which are immersed in hot water, to soften the natural gum on the filament) on a common reel, thereby forming one smooth even thread. When the skein is dry, it is taken from the reel and made up into hanks; but before it is fit for weaving, and in order to enable it to undergo the process of dyeing, without furring up or separating the fibres, it is converted into one of three forms; viz. *singles, tram,* or *organzine.*

Singles (a collective noun) is formed of *one* of the reeled threads, being twisted, in order to give it strength and firmness.

Tram is formed of 2 or more threads twisted together. In this state it is commonly used in weaving, as the *shoot* or *weft.*

Thrown Silk is formed of 2, 3, or more singles, according to the substance required, being twisted together in a *contrary* direction to that in which the singles of which it is composed are twisted. This process is termed organzining; and the silk so twisted, *organzine.* The art of throwing was originally confined to Italy, where it was kept a secret for a long period. Stow says it was known in this country since the 5th of Queen Elizabeth, "when it was gained from the strangers;" and in that year (1562), the silk throwsters of the metropolis were united into a fellowship. They were incorporated in the year 1629; but the art continued to be very imperfect in England until 1719. — (See *post.*)

1. *Historical Sketch of the Manufacture.* — The art of rearing silkworms, of unravelling the threads spun by them, and manufacturing the latter into articles of dress and ornament, seems to have been first practised by the Chinese. Virgil is the earliest of the Roman writers who has been supposed to allude to the production of silk in China, and the terms he employs show how little was then known at Rome of the real nature of the article: —

Velleraque ut foliis depectant tenuia Seres. — (*Georg.* lib. ii. lin. 121.)

But it may be doubted whether Virgil do not, in this line, refer to cotton rather than silk. Pliny, however, has distinctly described the formation of silk by the *bombyx.* — (*Hist. Nat.* lib. xi. c. 17.) It is uncertain when it first began to be introduced at Rome: but it was most probably in the age of Pompey and Julius Cæsar; the latter of whom displayed a profusion of silks in some of the magnificent theatrical spectacles with which he sought to conciliate and amuse the people. Owing principally, no doubt, to the great distance of China from Rome, and to the difficulties in the way of the intercourse with that country, which was carried on by land in caravans whose route lay through the Persian empire, and partly, perhaps, to the high price of silk in China, its cost, when it arrived at Rome, was very great; so much so, that a given weight of silk was sometimes sold for an equal weight of gold; at first it was only used by a few ladies eminent for their rank and opulence. In the beginning of the reign of Tiberius, a law was passed, *ne vestis serica viros fœdaret* — that no man should disgrace himself by wearing a silken garment. — (*Tacit. Annal.* lib. ii. c. 33.) But the profligate Heliogabalus despised this law, and was the first of the Roman emperors who wore a dress composed wholly of silk (*holosericum*). The example once set, the custom of wearing silk soon became general among the wealthy citizens of Rome, and throughout the provinces. According as the demand for the article increased, efforts were made to import larger quantities; and the price seems to have progressively declined from the reign of Aurelian. That this must have been the case, is obvious from the statement of Ammianus Marcellinus, that silk was in his time (anno 370), very generally worn, even by the lowest classes. *Sericum ad usum antehac nobilium, nunc etiam infimorum sine ullâ discretione proficiens.* —(Lib. xviii. c. 6.)

China continued to draw considerable sums from the Roman Empire in return for silk, now become indispensable to the Western World, till the 6th century. About the year 550, two Persian monks, who had long resided in China and made themselves acquainted with the mode of rearing the silkworm, encouraged by the gifts and promises of Justinian, succeeded in carrying the eggs of the insect to Constantinople. Under their direction they were hatched and fed; they lived and laboured in a foreign climate; a sufficient number of butterflies was saved to propagate the race, and mulberry trees were planted to afford nourishment to the rising generations. A new and important branch of industry was thus established in Europe. Experience and reflection gradually corrected the errors of a new attempt; and the Sogdoite ambassadors acknowledged in the succeeding reign, that the Romans were not inferior to the natives of China in the education of the insects, and the manufacture of silk. — (*Gibbon, Decline and Fall,* vol. vii. p. 99.)

Greece, particularly the Peloponnesus, was early distinguished by the rearing of silk-

worms, and by the silk and success with which the inhabitants of Thebes, Corinth, and Argos carried on the manufacture. Until the 12th century, Greece continued to be the only European country in which these arts were practised: but the forces of Roger king of Sicily having, in 1147, sacked Corinth, Athens, and Thebes, carried off large numbers of the inhabitants to Palermo; who introduced the culture of the worm, and the manufacture of silk, into Sicily. From this island the arts spread into Italy; and Venice, Milan, Florence, Lucca, &c. were soon after distinguished for their success in raising silkworms, and for the extent and beauty of their manufactures of silk.—(*Gibbon*, vol. x. p. 110.; *Biographie Universelle*, art. *Roger II.*)

The silk manufacture was introduced into France in 1480; Louis XI. having invited workmen from Italy, who established themselves in Tours. The manufacture was not begun at Lyons till about 1520; when Francis I., having got possession of Milan, prevailed on some artisans of the latter city to establish themselves, under his protection, in the former. Nearly at the same period the rearing of silkworms began to be successfully prosecuted in Provence, and other provinces of the south of France. Henry IV. rewarded such of the early manufacturers as had supported and pursued the trade for 12 years, with patents of nobility.

Silk Manufacture of England. — The manufacture seems to have been introduced into England in the 15th century. Silk had, however, been used by persons of distinction two centuries previously. The manufacture does not appear to have made much progress till the age of Elizabeth; the tranquillity of whose long reign, and the influx of Flemings occasioned by the disturbances in the Low Countries, gave a powerful stimulus to the manufactures of England. The silk throwsters of the metropolis were united, as already observed, in a fellowship, in 1562; and were incorporated in 1629. Though retarded by the civil wars, the manufacture continued gradually to advance; and so flourishing had it become, that it is stated in a preamble to a statute passed in 1666 (13 & 14 Cha. 2. c. 15.), that there were at that time no fewer than 40,000 individuals engaged in the trade! And it is of importance to observe, that though the importation of French and other foreign silks was occasionally prohibited during the reigns of James I. and Charles I., the Protectorate, and the reign of Charles II., the prohibition was not strictly enforced; and, generally speaking, their importation was quite free.

A considerable stimulus, though not nearly so great as has been commonly supposed, was given to the English silk manufacture by the revocation of the edict of Nantes, in 1685. Louis XIV. drove, by that disgraceful measure, several hundreds of thousands of his most industrious subjects to seek an asylum in foreign countries; of whom it is supposed about 50,000 came to England. Such of these refugees as had been engaged in the silk manufacture established themselves in Spitalfields, where they introduced several new branches of the art. When the refugees fled to England, foreign silks were freely admitted; and it appears from the Custom-house returns, that from 600,000*l.* to 700,000*l.* worth were annually imported in the period from 1685 to 1692, being the very period during which the British silk manufacture made the most rapid advances. But the manufacture was not long permitted to continue on this footing. In 1692, the refugees, who seem to have been quite as conversant with the arts of monopoly as with those either of spinning or weaving, obtained a patent, giving them an exclusive right to manufacture lustrings and *à-la-modes*, the silks then in greatest demand. This, however, was not enough to satisfy them; for, in 1697, Parliament passed an act, in compliance with their solicitations, prohibiting the importation of all French and other European silk goods; and in 1701, the prohibition was extended to the silk goods of India and China.

These facts show the fallacy of the opinion, so generally entertained, that we owe the introduction and establishment of the silk manufacture to the prohibitive system. So far from this being the case, it is proved, by statements in numerous acts of parliament, and other authentic documents, that the silk manufacture had overcome all the difficulties incident to its first establishment, had been firmly rooted, and had become of great value and importance, long before it was subjected to the trammels of monopoly; that is, before the manufacturers were taught to trust more to fiscal regulations, and the exertions of custom-house officers, than to their skill and ingenuity, for the sale of their goods.

The year 1719 is an important epoch in the history of the British silk manufacture; a patent being then granted to Mr. (afterwards Sir Thomas) Lombe and his brother, for the exclusive property of the famous silk mill erected by them at Derby, for throwing silk, from models they had clandestinely obtained in Italy. At the expiration of the patent, Parliament refused the petition of Sir Thomas Lombe for its renewal; but granted him 14,000*l.* in consideration of the services he had rendered the country, in erecting a machine which, it was supposed, would very soon enable us to dispense wholly

with the supplies of thrown silk we had previously been in the habit of importing from Italy: but instead of being of any advantage, it is most certainly true that the establishment of throwing mills in England has proved one of the most formidable obstacles to the extension of the manufacture amongst us. These mills could not have been constructed unless oppressive duties had been laid on thrown or organzine silk; and the circumstance of their having been erected, and a large amount of capital vested in them, was successfully urged, for more than a century, as a conclusive reason for continuing the high duties!

From this period down to 1824, the history of the silk manufacture presents little more than complaints, on the part of the manufacturers, of the importation of foreign silks; of impotent efforts on the part of parliament to exclude them; and of combinations and outrages on the part of the workmen. Among the multitude of acts that were passed in reference to this manufacture, from 1697 to the æra of Mr. Huskisson, we believe it would be exceedingly difficult to point out one that is bottomed on any thing like sound principle, or that was productive of any but mischievous consequences. The French writers estimate the average exportation of silks from France to England, during the period from 1688 to 1741, at about 12,500,000 francs, or 500,000*l.* a year! In 1763, attempts were made to check the prevalence of smuggling; and the silk mercers of the metropolis, to show their anxiety to forward the scheme, are said to have recalled their orders for foreign goods! It would seem, however, either that their patriotic ardour had very soon cooled, or they had been supplanted by others not quite so scrupulous; for it appears from a report of a committee of the privy council, appointed, in 1766, to inquire into the subject, that smuggling was then carried on to a greater extent than ever, and that 7,072 looms were out of employment. The same committee reported, that though the French were decidedly superior to us in some branches of the trade, we were quite equal, and even superior, to them in others; but instead of proposing, consistently with their report, to admit French silks on a reasonable duty, a measure which would have proved very advantageous to those branches of the manufacture in which we were superior, or nearly equal, to the French, without doing any material injury to the others, which were already in the most depressed condition, they recommended the continuance of the old system; substituting absolute prohibitions in the place of the prohibitory duties that formerly existed! Whatever immediate advantages the manufacturers might have reaped from this measure, the ultimate tendency of which could not fail of being most injurious, were effectually countervailed by the turbulent proceedings of the workmen, who suceeded, in 1773, in obtaining from the legislature an act which, by itself, was quite sufficient to have destroyed even a prosperous trade. This, which has been commonly called the Spitalfields Act, entitled the weavers of Middlesex to demand a fixed price for their labour, which should be settled by the magistrates; and while both masters and men were restricted from giving or receiving more or less than the fixed price, the manufacturers were liable in heavy penalties if they employed weavers out of the district! The monopoly which the manufacturers had hitherto enjoyed, though incomplete, had had sufficient influence to render inventions and discoveries of comparatively rare occurrence in the silk trade; but the Spitalfields Act extinguished every germ of improvement. Parliament, in its wisdom, having seen fit to enact that a manufacturer should be obliged to pay as much for work done by the best machinery as if it were done by hand, it would have been folly to have thought of attempting any thing new! It is not, however, to be denied that Macclesfied, Manchester, Norwich, Paisley, &c. are under obligations to this act. Had it extended to the whole kingdom, it would have totally extirpated the manufacture; but being confined to Middlesex, it gradually drove the most valuable branches from Spitalfields to places where the rate of wages was determined by the competition of the parties, on the principle of mutual interest and compromised advantage. After having done incalculable mischief, the act was repealed in 1824. Had it continued down to the present day, it would not have left employment in the metropolis for a single silk weaver.

But, as the effects of this act did not immediately manifest themselves, it was at first exceedingly popular. After 1785, however, the substitution of cottons in the place of silk gave a severe check to the manufacture, and the weavers then began to discover the real nature of the Spitalfields Act. Being interdicted from working at reduced wages, they were totally thrown out of employment; so that, in 1793, upwards of 4,000 Spitalfields looms were quite idle. In 1798, the trade began to revive; and continued to extend slowly till 1815 and 1816, when the Spitalfields weavers were again involved in sufferings far more extensive and severe than at any former period.

It appears from this brief sketch of the progress of the English silk trade, that from the year 1695, down to our own times, it has been exposed to the most appalling vicissitudes. The reason is obvious. The monopoly enjoyed by the manufacturers, and the Spitalfields Act, effectually put a stop to all improvement; so that the ma-

nufacture continued stationary in England, while on the Continent it was rapidly advancing. Whenever, therefore, the markets were, either from the miscalculation of the manufacturers, or a change of fashion, overloaded with silks, there were no means of disposing of the surplus profitably abroad, and the distress became extreme. Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed, in 1826, by the member for Coventry (Mr. Ellice), in his place in the House of Commons, "that there were in that city 9,700 looms; 7,500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery, to the manufacture of ribands. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce 5 times as much riband as the common loom in England with the same manual labour! He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velvet as could be made in an equal time by an English machine.* What chance was there that the English manufacturer could maintain such a competition?"

Perhaps these statements may have been somewhat exaggerated; but there can be no doubt of their substantial accuracy. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers was ascribable to any thing except that the protection they enjoyed had made them indifferent to improvements. No one believes that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by everybody else. That that spirit of invention, which has effected such astonishing results in the cotton manufacture, should have been so long wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers — to avail themselves of every resource of science and of art — they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place amongst the manufactures, not of this country only, but of the world!

Change, in 1826, *of the Monopoly System.* — At length, however, the impolicy of the system by which the silk manufacture had been so long depressed, became obvious to every intelligent individual. The principal manufacturers in and about London subscribed, in 1824, a petition to the House of Commons, in which they stated that "this important manufacture, though recently considerably extended, is still depressed below its natural level, by laws which prevent it from attaining that degree of prosperity which, under more favourable circumstances, it would acquire." Fortified by this authority, by the experience of 130 years, during which the prohibitive system had been allowed to paralyse the energies of the manufacturers, and by the sanction of parliamentary committees, Mr. Huskisson moved, on the 8th of March, 1824, that the prohibition of foreign silks should cease on the 5th of July, 1826, and that they should then be admitted for importation on payment of a duty of 30 per cent. *ad valorem.* On this occasion Mr. H. observed — "The monopoly had produced, what monopoly was always sure to produce, an indifference with regard to improvement. That useful zeal which gives life to industry, which fosters ingenuity, and which in manufactures occasions unceasing efforts to produce the article in the most economical form, had been comparatively extinguished. *To the prohibitive system it was to be ascribed, that in silk only, in the whole range of manufactures, we were left behind our neighbours!* We have here a proof of that chilling and benumbing effect which is sure to be produced when no genius is called into action, and when we are rendered indifferent to exertion by the indolent security derived from restrictive regulations. I have not the slightest doubt, that if the same system had been continued with respect to the cotton manufacture, it would have been at this moment as subordinate in amount to the woollen as it is junior in its introduction into the country."—(*Speeches*, vol. ii. p. 249.)

We have already alluded to the enormous duties imposed, in 1719, when Sir Thomas Lombe erected his throwing mill at Derby, on foreign organzine silk. These, though subsequently reduced, amounted, in 1824, to no less than 14*s.* 7½*d.* per lb. There was also, at the same time, a duty of 4*s.* per lb. on raw silk imported from Bengal, and of 5*s.* 7½*d.* per lb. on that imported from other places. Even had the manufacture been otherwise in a flourishing condition, such exorbitant duties on the raw material were enough to have destroyed it. Mr. Huskisson, therefore, proposed, by way of preparing the manufacturers for the approaching change of system, that the duty on foreign thrown silk should be immediately reduced to 7*s.* 6*d.* (it was further reduced to 5*s.* in 1826), and the duty on raw silk to 3*d.* per lb. These proposals were all agreed to: and considerable reductions were at the same time effected in the duties charged on most of the dye stuffs used in the manufacture.

It is to be regretted that Mr. Huskisson did not propose that the reduction of the

duties on raw and thrown silk, and the legalised importation of foreign silks, should be simultaneous and immediate. During the interval that was allowed our manufacturers to make preparations for the change, the French accumulated a large stock of goods to pour into our markets. To quiet the alarm occasioned by this circumstance, a singular device was fallen upon. The French had long been accustomed to manufacture their goods of a certain length: and, in the view of rendering their accumulated stock unfit for our markets, a law was passed in 1826, prohibiting the importation of any silks except such as were of entirely different lengths from those commonly manufactured by the French! No one can regret that this wretched trick, for it deserves no better name, entirely failed of its object. The French manufacturers immediately commenced, with redoubled zeal, the preparation of goods of the legitimate length: and the others, having become unsaleable at any thing like fair prices, were purchased up by the smugglers, and imported, almost entirely, into this country.

But no permanent injury arose from this circumstance; and, on the whole, the effect of the opening of the trade has been such as to justify all the anticipations which the advocates of the measure had formed of its success.

Effects of the Change of 1826. — We do not exaggerate, we only state the plain matter of fact, when we affirm that the silk manufacture has made a more rapid progress since the abolition of the prohibitive system in 1826, than it did during the preceding century. The former disparity in quality between goods of French and English make has been materially abated in most articles, while in some the superiority is now on our side. Most part of our readers will, probably, be rather surprised to learn that the real or declared value of the silk goods of British manufacture exported to France, in 1852, amounted to 257,555*l.*

But though a great step at the time, the change of system effected in 1826 was far from being sufficiently complete. The duty then imposed of 30 per cent. on the importation of foreign silks was, at least, double what it should have been. The expenses of smuggling silk goods into England may, speaking generally, be estimated at about 12 or 15 per cent.; so that the high duty, instead of excluding them, acted as a bounty on their importation through clandestine channels; and, probably, occasioned, by the temptation which it held out to gambling adventures, a larger quantity to be imported than if the duty had been more nearly proportioned to the expense of smuggling. We ventured to contend in a former edition that in "the event of the duties being reduced to 12 or 15 per cent. *ad valorem*, the legitimate imports of foreign silk goods would be considerably increased, and their clandestine importation more than proportionally diminished; and the apparent protection given to the manufacture being reduced, a new stimulus would be applied to industry and invention. Were such a system adopted, we have little doubt that, in no very long time, perhaps not more than 5 or 6 years, our superiority over France in some important departments of the silk manufacture would be little less decided than in that of cotton.

"It is not, however, to be supposed, that all departments of the silk manufacture will be equally benefited by the change of system from prohibition to duties. — *Non omnia possumus.* The probability is, that the trade, were it placed on a proper footing, would be divided between the English and French. In point of substantial excellence, the plain silk goods manufactured in England are equal to those of France; and the difference in favour of the latter in point of *finish* has become less perceptible; while in all mixed manufactures, of silk and wool, silk and cotton, silk and linen, &c., our ascendancy is admitted by the French themselves. On the other hand, the ribands, figured gauzes and light fancy goods, manufactured in France, are superior to those of this country. But even in this department we have made great progress; and fancy goods are now produced at Spitalfields, Coventry, and other places, contrasting most advantageously, in point of taste and beauty, with those produced previously to the introduction of the new system. Still, however, we are not sanguine in our expectations of our countrymen being able to maintain a successful competition with our neighbours in the manufacture of this class of articles. The greater attention paid to the art of designing in Lyons, the consequent better taste of the artists, and the superior brightness and lustre of their colours, give them advantages with which it will be very difficult to contend.

"But supposing that the trade is partitioned between the two countries in the way now stated, it is easy to see that a large share will belong to us, and that that share will be more valuable than the whole manufacture formerly was." Proofs of the accuracy of these statements have since been supplied in abundance. Notwithstanding the decline of the trade at a few places, the manufacture, taken as a whole, has greatly increased. During 1821, 1822, and 1823, when the restrictive system was in its vigour, the imports of all sorts of raw and thrown silk amounted at an average to 2,399,000 lbs. a year. But, despite the sinister predictions indulged in with respect to the ruin of the manufacture, the imports amounted, at an average of 1850, 1851, and 1852, to above

7,000,000 lbs., and the consumption to above 6,000,000 lbs.; being an increase of more than 250 per cent. upon the quantity consumed during the monopoly!

The manufacture of silk in France has, we are glad to say (for we have nothing in common with those who grudge or envy the prosperity of others), been materially improved of late years, and a large increase has taken place in the value of the silks exported, which amounted, in 1852, to about 280,000,000 fr., or about 11,200,000*l.* But it is satisfactory to know that we have been able to make head against this formidable competitor, and that, while the value of the exports of our silk goods amounted, in 1823, when the monopoly system was in full vigour, to only 351,409*l.*, it amounted, in 1852, to 1,551,846*l.*, being an increase in the interval of nearly 500 per cent.! In fact, we undersell the French in some of the heavier and more important species of goods in every market equally accessible to both parties. The value of our exports of silk goods to the U. States amounted, in 1852, to 464,590*l.*; and does any one suppose that the Americans would have bought so largely of us, or that they would have bought anything at all, had the French or any other party been able to supply them on lower terms?

When we formerly ventured to recommend a reduction of the duty of 30 per cent. on silks, we were inclined to think that it might, perhaps, oblige some of the manufacturers of fine and fancy goods to relinquish their employment; and we endeavoured to show that that was not too great a sacrifice to incur to place the trade on a proper footing. Happily, however, no such sacrifice has been required; and there is no department of the manufacture in which we have any thing to fear, with the existing duty, from the competition of the foreigner. Indeed, the fair presumption seems to be that the duties might be advantageously reduced.

No doubt, however, the improvement of the manufacture has been considerably promoted by the total abolition of the duties on raw and thrown silk effected in 1845.

State of the Silk Trade previously to 1826. — Those unacquainted with the history of the silk trade, who may have looked into the pamphlets and speeches of those opposed to the alterations in 1825, will probably be disposed to think that, though more limited in point of numbers, the condition of the workmen engaged in the trade was better previously to 1825 than afterwards. But those who have looked, however cursorily, into the history of the trade, must know that such is not the fact; and that the situation of those engaged in it has been most materially improved since 1825. We have already adverted to the state of the trade in 1793 and 1816. At the last mentioned period, 7 years before any relaxation of the monopoly had been so much as thought of, the distress in the silk trade was infinitely more severe than it has ever been since the introduction of the new system. In proof of this, we may mention, that at a public meeting held for the relief of the Spitalfields weavers, at the Mansion-house, on the 26th of November, 1816, the secretary stated, that *two thirds* of them were without employment, and without the means of support; "that some had deserted their houses in despair, unable to endure the sight of their starving families; and many pined under languishing diseases brought on by the want of food and clothing." And Sir Fowell Buxton stated, at the same meeting, that the distress among the silk manufacturers was so intense, that "*it partook of the nature of a pestilence*, which spreads its contagion around, and devastates an entire district." Such was the state of the workmen under that monopoly system that has been the worthless theme of so much eulogy. But such, we are glad to say, is not their state at present. The trade, being no longer conducted under an artificial system, is comparatively secure against revulsions: it would, indeed, be an absurdity to imagine, that measures that have about trebled the manufacture, should have been otherwise than supremely advantageous to the workmen.

We have already noticed the smuggling of foreign silks carried on in the early part and towards the middle of last century. The evil was not afterwards abated. The vigilance of the custom-house officer was no match for the ingenuity of the smuggler; and at the very moment when the most strenuous efforts were made to exclude them, the silks of France and Hindostan were openly displayed in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation which sought to exclude them. "I have lately," said Mr. Huskisson, in an able speech in vindication of his policy as to the silk trade, "taken some pains to ascertain the quantity of smuggled silks that has been seized inland throughout the kingdom during the last 10 years; and I find that the whole does not exceed 5,000*l.* a year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate of this quantity must be very vague; but I have been given to understand that the value of such goods as are regularly entered at the custom-houses of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a year; and this, of course, is exclusive of the *far greater supply* which is poured in throughout all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried, that there is scarcely a haberdasher's shop in the smallest village of

the United Kingdom, in which prohibited silks are not sold; and that in the face of day, and to a very considerable extent.

"The honourable member for Coventry (Mr. Ellice) has mentioned the silk goods from India as those against which anything but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the honourable member's own argument. I believe it is universally known that a large quantity of Bandana handkerchiefs are sold every year, for exportation, by the East India Company. But does any gentleman suppose that these Bandanas are sent to the Continent for the purpose of remaining there? No such thing! They are sold at the Company's sales, to the number of about 800,000 or 1,000,000 a year, at about 4*s.* each; they are immediately shipped off for Hamburg, Antwerp, Rotterdam, Ostend, or Guernsey, and from thence they nearly all illicitly find their way back to this country.

"Mark, then, the effect of this beautiful system. — These Bandanas, which had previously been sold for exportation at 4*s.*, are finally distributed in retail to the people of England at about 8*s.* each: and the result of this prohibition is to levy upon the consumer a tax, and to give those who live by evading your law a bounty of 4*s.* upon each handkerchief sold in this country!"— (*Speeches*, vol. ii. p. 510.)

This, no doubt, was all very true and very striking. But had Mr. Huskisson been in the House of Commons in 1844, he might have used nearly the same language. He scotched, but did not kill, the snake. The 30 per cent. *ad valorem* duty which he established, was but little less productive of smuggling than the prohibition which he repealed; and being about double the expense of the clandestine importation of foreign silks, gave rise within the port of London, and, indeed, within the very walls of the custom-house, to a system of fraud ruinous alike to the interests of the revenue and of the honest dealers. The abuse continued till 1845, when Sir Robert Peel reduced the duty to 15 per cent. *ad valorem*. And while this wise and liberal measure has gone far to suppress smuggling, and to place all classes of dealers on the same footing, it has not materially increased the imports of silk goods. The existing duties on silks are specified in the TARIFF.

Regulations as to the Importation of Silks.—Silk manufactures, the produce of Europe, are not to be imported unless into London, Liverpool, Hull, Southampton, Leith, or Dublin, or ports appointed by the Commissioners of Customs, or into the ports of Dover and Folkestone direct from Calais or Boulogne, and unless in ships of 50 tons burden and upwards.—16 & 17 Vict. c. 107. § 44.

I. Account, illustrative of the Progress of the Silk Manufacture, showing the Quantities of Raw, Waste, and Thrown Silk imported at different Periods.—(*Report of* 1832 *on Silk Trade*, p. 10., and later *Parl. Papers.*)

Average Imports.	Raw.	Waste.	Thrown.	Total.

1841	3,209,885	1,379,314	267,533	4,856,532	59,890 2 3

In 1845 the duties on raw and thrown silk were repealed, so that it is no longer possible to give any account of the exact quantities admitted to consumption. But they may, notwithstanding, be learned with sufficient precision for every practical purpose from the following statement.

III.—Account of the Imports and Exports of Raw and Thrown Silk during each of the 7 Years ending with 1858.

The silk exported from China consists of two leading varieties, known in commerce by the names of Canton and Nanking. The first, which is raised principally in the province of Canton, is divided into 5 sorts. The Nanking silk, produced in the province of Kiangnan, is divided into two sorts, known in commerce by the names of Tsatlee and Taysaam. It is very superior to the other, and usually fetches more than double its price. It is wholly imported from Shanghae.

The quantity of Chinese silk produced to supply the native consumption is so enormous, that notwithstanding the vast increase of the exports during the 10 years ending

with 1854-55, the average price was lower than when the export was but $\frac{1}{4}$th part its present amount. The silk grower looks to the home market for fixing the value of his produce, and prices range according as that demand is active or dull, little or no effect being produced by the foreign exportation, except among speculative holders at the ports.—(*Chinese Commercial Guide*, p. 185.)

East India native silk comes wholly from Bengal. About the year 1760, the East India Company introduced the Italian mode of reeling silk, which was productive of a very great improvement in the quality of the article; but we are not aware that any subsequent improvement has been effected. The silk goods brought from India are not only inferior, in point of quality, to those of Europe, but also to those of China. The imports of Indian raw silk are specified in Tables Nos. III. and IV.

Turkey silk wholly consisted some years back of what is termed long reel and short reel brutia, a rather coarse description, suited to few buyers, and chiefly used in the ribbon trade of Coventry; but of late it has been imported of a very far superior texture and quality, coming successfully into competition with Italian and China silk. The qualities now known as brutias may be classed as follows, viz. long reel brutia, short reel brutia, long reel Mestup (being a finer thread than common brutia), short reel Mestup Selè (a finer sort, generally in loose skeins), Demirdask (a superior kind).

At Brusa, the seat of the silk trade in Asia Minor, it is now sold by the oke of 400 drams, and not by the teffee of 610 drams, as formerly; the teffee, is, however, still used at Constantinople. The plains of Brusa and the adjacent villages produce different qualities, varying considerably in size, colour, and quality. The village of Demirdask produces the finest, owing to the care taken by the natives in selecting the best cocoons, and attending carefully to the evenness of the thread throughout the process of reeling; consequently this description commands a high price, and is approved by our throwsters.

The water of this place is considered favourable to the brightness and glossiness of the silk, by which it may be distinguished from that of Brusa. The silk at Brusa is taken by the country people in small parcels to the bechestar or customs, where it pays duty. The proprietor with a broker then takes it to the silk bazaar, where it is handed round to the different stands and sold to the highest bidder, resembling, in this respect, the mode of selling the ores in Cornwall to the different smelters.

Thus a person buying okes at a time, assorts as well as he can the different qualities for packing. It is generally bought by speculators for the Constantinople market, and is forwarded to Ghemlek on camels for shipment per steamers to Constantinople, where it finds its way to the Mizam or some broker's rooms, where it is sold to the different merchants. The finest longs are mostly bought for the French and Russian markets, generally the latter. The long reels are going out of use in this country, as the more modern machinery is not adapted to its use.

The prices of silk at Brusa, in September, 1842, were—

1st quality Demirdask	$235 to $240	per oke of 400 drams.
2nd quality ditto	210 — 215	—
1st Selè	190 — 193	—
2nd Selè	180 — 185	—
Long Mestups	165	
Long Brusas	150	
Short Brusas	170 — 175	

Costs and Charges on Silk bought at Brusa and shipped at Constantinople for London

1 case 46 teffees = 70 okes 60 drams, at $216½		$15,167
Packing charges and commission		428
		$15,595
Carriage from Brusa to Constantinople		
Loss on gold sent to Brusa		
Bills, lading, and petty expenses	$28½ per oke,	
Inward duty 70 okes 60 drams, at $18, and 7,0/0 thereon	or ca. 15½ per cent.	2,115
		$17,710
Export duty, 70 okes 60 drams, at $6 and 7,0/0 thereon		
Carriage of money, ½ per cent.		
Constantinople commission, 3,0/0		531
		$18,241

Ex. 118. 155*l*.—46 at 4½, 194 lbs. = 16*s*. 6*d*.
Discount and charges in London 2 3
18*s*. 9*d*.

By far the greater part of the raw and thrown silk that comes to us from France is not the growth of that country, but of Italy; being principally conveyed by the canal of Languedoc and the Garonne to Bordeaux, whence it is shipped for England. So much is this the case, that it appears from the official accounts published by the French government, that while the aggregate quantity of the French and foreign raw and thrown silk exported from France in 1857 amounted to 1,261,989 kilog., the portion which was of French origin amounted to only 431,517 kilog.—(*Administration des Douanes*, 1857, p. 206.)

SILVER (Ger. *Silber*; Du. *Zilver*; Da. *Solv*; Sw. *Silfver*; Fr. *Argent*; It. *Argento*; Sp. *Plata*; Port. *Prata*; Rus. *Serebro*; Pol. *Srebro*; Lat. *Argentum*; Gr. ἄργυρος; Arab. *Fazzeh*), a metal of a fine white colour, without either taste or smell; being in point of brilliancy inferior to none of the metallic bodies, if we except polished steel. It is softer than copper; but harder than gold. When melted its specific gravity is 10·474; when hammered, 10·51. In malleability, it is inferior to none of the metals, if we except gold. It may be beaten out into leaves only $\frac{1}{100000}$ of an inch thick. Its ductility is equally remarkable: it may be drawn out into wire much finer than a human hair; so fine, indeed, that a single grain of silver may be extended about 400 feet in length. Its tenacity is such, that a wire of silver 0·078 inch in diameter is capable of supporting a weight of 187·13 lbs. avoirdupois without breaking. Silver is easily alloyed with copper by fusion. The compound is harder and more sonorous than silver, and retains its white colour even when the proportion of copper exceeds $\frac{1}{2}$. The hardness is at a maximum when the copper amounts to *one-fifth* of the silver. The standard or sterling silver of Britain, of which coin is made, is a compound of $12\frac{1}{2}$ parts silver and 1 copper. Its specific gravity is 10·2. The specific gravity of Paris standard silver, composed of 137 parts silver and 7 copper, is 10·175. The French silver coin during the old government was not nearly so fine, being composed of 261 parts silver and 27 copper, or $9\frac{2}{3}$ parts silver to one part copper. The Austrian silver coin contains $\frac{13}{283}$ of copper. The silver coin of the ancients was nearly pure, and appears not to have been mixed with alloy.—(*Thomson's Chemistry.*) Besides being used as coin, or money, silver is extensively employed in the arts. The value of the silver plate annually manufactured is very considerable. Large quantities are also used in plating.

The most productive silver mines are in America, particularly in Mexico and Peru. There are also silver mines in Hungary, Saxony, Spain, and other parts of Europe, and in Asiatic Russia.—(See PRECIOUS METALS.) And we have already seen (art. LEAD)

that considerable quantities of silver have been obtained in this country by the refining of lead. In proof of this we subjoin the followng statement of the

Silver produced from Ores raised in G. Britain during each of the 5 Years ending with 1858. — (*Hunt's Mining Records* for 1858, p. 41.)

SINGAPORE, an island and British settlement at the eastern extremity of the Straits of Malacca, the town being in lat. 1° 17′ 22″ N., lon. 103° 51′ 45″ E.

The island is of an elliptical form, about 27 miles in its greatest length, and 11 in breadth, containing an estimated area of 275 square miles. But the whole British settlement embraces a circumference of above 120 miles; in which is included about 50 desert islets, and the seas and straits within 10 miles of the coast of the principal island. The latter is separated from the main land by a strait of the same name, of small breadth throughout, and scarcely, indeed, ¼ of a mile wide in its narrowest part, which, in the early period of European navigation, was the thoroughfare between India and China. But the grand commercial highway between the eastern and western portions of maritime Asia now passes along the south side of the island, on which the town is built, between it and a chain of desert islands about 9 miles distant; the safest and most convenient channel being so near to the island that ships in passing and repassing come close to the roads. The town is wholly indebted for its rapid rise and growing importance to its position on this strait. This has rendered it not merely a convenient *entrepôt* for the trade between the Western world and India on the one hand, and China on the other; but also for that between the former and the Eastern Archipelago, the Philippines, &c. It is situated on a river, or rather salt creek, navigable by lighters about ¾ of a mile from the sea. Ships lie in the roads, or open harbour, at the distance of from 1 to 2 miles from town, according to their draught of water. The assistance of a number of convenient lighters, which are always in readiness, enables them to load or unload, with scarcely any interruption, throughout the year. The creek is accessible to the lighters, and the goods are taken in and discharged at convenient quays, at the doors of the principal warehouses. — (See *Chart* of the *Island of Singapore* in the *Mercator's Chart* in this work.)

The climate of Singapore, though hot, is healthy. Fahrenheit's thermometer ranges from 71° to 89°. Being only about 80 miles from the equator, there is, of course, very little variety in the seasons. There is neither summer nor winter; and even the periodical rains are short, and not very well marked — moderate showers of rain falling for about 150 days each year. The settlement of Singapore was formed in February, 1819, and its sovereignty and property, in their present extent, confirmed to the British government in 1825, by a convention with the king of the Netherlands, and a treaty with the Malay princes to whom it belonged. Previously to its being taken possession of by the English, it had been inhabited for about 8 years by a colony of Malays, half fishermen and half pirates. When the first census was taken in January, 1824, the population was found to amount to 10,683. In 1828, it had increased to 15,834; in both cases, exclusive of troops, camp followers, Indian convicts, and a floating population of about 3,000. In 1837 it amounted to 29,984, of whom 13,749 were Chinese settlers and 9,132 Malays, the Europeans being but few in number; and at present (1858) the population exceeds 50,000, of whom about a half are Chinese.

The principal merchants and agents are Englishmen, of whom also there are a few shopkeepers, auctioneers, &c. There are also some respectable Chinese merchants; and the bulk of the shopkeepers, with the most valuable part of the labouring population, consist of Chinese. About 5,000 adult males arrive annually from China by the junks; about 1,000 of whom remain at Singapore, the rest dispersing themselves among the neighbouring Dutch, English, and Malay settlements. The boatmen are chiefly natives of the Coromandel coast; and the Malays employ themselves as fishermen, in cutting timber, and in supplying the settlement with the rude produce of the neighbourhood. There are good daily markets, open at all hours, and well-supplied with vegetables, fruits, grain, fish, pork, and green turtle; the latter, the cheapest animal food that can be procured. There are no export or import duties, nor anchorage, harbour, lighthouse dues, or any fees; but a register is kept of all exports and imports. Reports must be made to the master attendant by the masters of vessels, and invoices delivered to the superintendent of imports and exports.

Currency, Weights, Language, &c. — The currency and weights are simple and convenient. Accounts are kept in Spanish dollars, divided into 100 parts, represented either by Dutch doits, or by English copper coins of the same value. The weights in use (and almost everything is sold by weight, as in China) are the Chinese picul of 100 catties, or 133⅓ lbs. avoirdupois. Rice (the produce of Siam and the

Archipelago) and salt are sold by the coyan of 40 piculs. Gold dust is sold by a Malay weight called the bungkal, which weighs 2 Spanish dollars, or 832 grains Troy. Bengal rice, wheat, and pulses of the same country, are sold by the bag, containing 2 Bengal maunds, or 164½ lbs. avoirdupois. Piece goods, &c., are sold by the corge or score. English weights and measures are frequently used in reference to European commodities. The mode of transacting business among the European merchants is simple and efficient. Instead of trusting their affairs to native agents, as in other parts of India, they transact them in person, with the occasional assistance of a Chinese creole as an interpreter and broker. The European merchants transact business on their own account; but a great deal of their employment consists in acting as agents for houses in London, Liverpool, Glasgow, Amsterdam, Antwerp, Calcutta, Bombay, Madras, Canton, and Batavia. They are also agents for various insurance offices at Calcutta and elsewhere, and policies of insurance to any extent may be effected without difficulty. The language of commercial intercourse, where any of the natives of the East are concerned, is universally Malay,—a simple and easy dialect, of which all the resident merchants have a sufficient acquaintance to enable them to transact ordinary business. The *Singapore Free Press*, published once a week, contains a price current, an account of the arrivals and departures of shipping, and an official detail of the exports and imports of the preceding week. The administration of justice is entirely English, there being a recorder's court for the settlement, in common with the two neighbouring ones of Penang and Malacca.

Commodities and Prices. — Singapore is chiefly an *entrepôt*, having, with the exception of pearl sago manufactured on the spot from the raw material imported from the north coast of Sumatra, implements of agriculture, and some others fabricated by the Chinese from European iron, with gambier and catechu grown and manufactured on the island, few commodities of its own for exportation. The grain produced on the island not being sufficient for the consumption of the inhabitants for a week, their supplies of rice, wheat, &c. are mostly all imported, principally from Java and Calcutta.

Trade of Singapore. — The following Table has been obligingly furnished to us by Mr. Hornidge of the East India House.

Abstract Statement of the Import and Export Trade of Singapore with the undermentioned Places in the Year 1855-56.

The following rates of commission and warehouse rent are charged at Singapore, except in cases of special agreement: —

Commission.

1. On all sales or purchases, except the following, 5 per cent.
2. On purchases of goods or produce for returns, 2½ per cent.
3. On sales or purchases of opium, 3 per cent.
4. On sale or purchase of ships, vessels, houses, or lands, 2½ per cent.
5. On sale, purchase, or shipment of bullion, 1 per cent.
6. On sale or purchase of diamonds, jewels, &c., 2 per cent.
7. On returns in treasure, bullion, or bills, 1 per cent.
8. On all goods consigned and withdrawn, ½ commission.
9. On sale, purchase, or negotiating of bills not serving for purchase of goods, or produce, 1 per cent.
10. On all goods sold by auction by the agents themselves, in addition to the above, 2½ per cent.
11. On del credere, or guaranteeing sales, when specially required, 2½ per cent.
12. Shroffage, 1 per cent. per mile.
13. On all advances of money for the purpose of trade, whether the goods are consigned to the agent or not, and where a commission of ½ per cent. is not charged, 2½ per cent.
14. On ordering goods, or superintending the fulfilment of contracts whence no other commission is derived, 2½ per cent.
15. On guaranteeing bills, bonds, or other engagements, and on becoming security for administration of estates, or to government or individuals for contracts, agreements, &c., ½ per cent.
16. On acting for the estates of persons deceased as executors or administrators, 5 per cent.
17. On the management of estates for others, on the amount received, 2½ per cent.
18. On procuring freight, or advertising as the agent of owner or commanders, on the amount of freight, whether the same passes through the hands of the agent or not, 5 per cent.
19. On chartering ships for other parties, 2½ per cent.
20. On making insurance, or writing orders for do., ½ per cent.
21. On settling insurance losses, total or partial, and on procuring return of premium, 1 per cent.
22. On debts, when a process at law or arbitration is necessary, 2½ per cent.—And if received by such means, 5 per cent.
23. On bills of exchange noted or protested, 2 per cent.
24. On collecting house rent, 5 per cent.
25. On ships' disbursements, 2½ per cent.
26. On negotiating loans on respondentia, 2 per cent.
27. On letters of credit granted for mercantile purposes, 2½ per cent.
28. On purchasing or selling government securities, or on exchanging or transferring the same, ½ per cent.
29. On delivering up do., ½ per cent.
30. On all advances, not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge be only made once in the same year.
31. On transhipping all goods or produce, except the following, 1 per cent.
32. On transhipping whole chests of cassia, cassia buds, aniseed, camphor, nankeens, and gunny bags, per package, ¼ dollar.
33. At the option of the agent, on the amount debited or credited within the year, including interest, and excepting only such items, on which at least 2½ per cent. has been charged, 1 per cent.

This charge is not to apply to paying over a balance due on an account made up to a particular period, unless where such balance is withdrawn without reasonable notice.

Warehouse Rent per Month.

Chests of opium or silk, bales of woollens, pipes of wine or brandy, leaguers of arrack, &c., 1 dollar.
Bales of Indian piece goods, cotton and gunny bags, 50 cents.
Cases of European piece goods, trusses of woollens, &c., 25 cents.
Hogsheads of liquor, ½ chests of wine, &c., 40 cents.
Pepper, rice, coffee, sugar, saltpetre, &c., 10 per cent.
Iron, tin, tutenague, spelter, lead, &c., 5 per cent.
All other goods not mentioned, to pay accordingly, or by measurement, at the rate of, per ton of 50 cubic feet 1 dollar.

Eastern Ports trading with Singapore. — As everything that relates to the trade of the East is now becoming of the greatest importance, we make no apology for laying before the reader the following statements, taken from the *Singapore Free Press*, respecting the Eastern ports from which native ships arrive at Singapore. They are mostly all very imperfectly known even to residents in the settlement; and the names of some of them may now, perhaps, be learned for the first time by the English reader.

Commencing with ports to the northward, those in China, from which junks (which are included among the *native craft*) arrive here, are, CANTON, TEW-CHEW, CHUNGLIM, and MACAO, in Canton province; AMOY and CHINCHEW in Fokien; and SHANGHAE and NINGPO, large commercial cities, in Chekeang province. They come also from HAILAM or HAINAN, which is subject to Canton. The average number of these vessels (some of which are of large burden, 300 to 400 tons), is 20 arriving here annually. The cargoes they bring are chiefly intended for the consumption of the numerous Chinese who are settled in Dutch and English colonies in these parts, as well as in the native states, and are re-exported thence by smaller vessels, to places where they may be mostly required. The only articles they bring, in any way required by Europeans, are raw silks, nankeens, and teas. These vessels likewise convey a large number of emigrants from China every year, probably from 4,000 to 5,000, most of whom, however, proceed to other places soon after landing here.

The ports in Cochin-China and Cambodia, from which similar vessels arrive, are KANGKAO and LOKNOI, in Cambodia, and TURON and SAIGON, in Cochin-China Proper. Anom or Anam, from which many vessels report themselves to come, is but a general name for either Cochin-China or Tonquin. The average number of vessels arriving from these ports are 40 annually, bringing, principally, sugar, rice, oil, salt, and some other articles of minor importance. These vessels are usually smaller than the Chinese and Siamese junks.

The total imports from Cochin-China during the official year 1842-43 were valued at 254,785 dollars. They consisted of raw silk, 149 piculs; rice, 12,010 piculs; sugar, 27,540 piculs; and salt, 15,120 piculs. The gross exports during this period were 227,848 dollars, consisting chiefly of cotton, 1,084 bales and 985 piculs; British cotton goods, 3,588 pieces; opium, 263 chests; and woollens, to the value of 25,378 dollars. During the same time 82 boats, equal to 4,195 tons, arrived here from Cochin-China.

It was formerly noticed how extremely liable the Cochin-Chinese boats were to be plundered, and their crews murdered or made slaves of, by Malay and Chinese pirates, in consequence of their being entirely defenceless. During the past year many instances have occurred which too well justify the statement. It is to be hoped that the measures which government are contemplating may have the effect during the approaching season of materially diminishing, if not altogether checking the evil, at least in the vicinity of our shores.

BANKOK and CHANTIBUN are the only two ports in Siam of any note, and from these about 30 to 40 junks and topes arrive annually. They are manned and owned almost entirely by Chinese residing in Siam, and bring, chiefly, sugar, rice, oil, iron pans, sticklac, gamboge, salt, indigo, paddy, tobacco, and sapan-wood.

We have had too frequent occasion to notice the depredations and cruelties which every class of vessels from the places above mentioned have suffered at the hands of pirates every year, on their way to this port, which certainly contributes to check an increase of trade with the countries they come from.

The ports on the east coast of the Peninsula are SUNGORA and CALANTAN, subject to Siam; and TRINGANU, KEMMAMAN and PAHANG, independent states. There are other ports on this coast, but of little note; namely, Doongoon, Endau, Pakoh, Sudeelee, and Teloban. The produce usually brought here by pucats and other craft from those first mentioned consists chiefly of tin, gold dust, pepper, Malay sarongs and trowsers, bees'-wax, hides, elephants' teeth. Junks occasionally touch at these ports, and we sometimes have the produce of Siam and China brought here from them. The average number of craft arriving thence may be about 120 to 130 annually.

BORNEO. — The imports into Singapore from Borneo in 1842-43 consisted of antimony ore, 7,478 piculs; gold dust, 4,337 bunkals, valued at 126,652 dollars; rattans, 9,050 piculs; specie, 7,395 dollars, &c. The antimony ore comes principally from Sarawak; where it is said, Mr. (now Sir James) Brooke, has a monopoly of the trade. The exports for the year 1842-43 amounted to 296,637 dollars, showing a decrease of 22,311 dollars. The most important were British cotton goods, 3,908 corges and 15 dozen; opium, 227 chests; téa, 1,928 boxes and 52 piculs; and specie equal to 34,202 dollars.

The ports in Borneo, from which vessels report themselves, are *BANJERMASSIN, BALEMBANGAN, BURNAI, COTI, MEMPAWA, MATTAN, PONTIANAK, PASSEIR, PEGGOTAN, SARAWAK, SAMBAS, SUCCADANA, *Brissil, Batulichen, Buncalan, Bintooloo, Calakak, Coti-ringin, Cooboo, Chinkol, Kayong, Monterado, Mukah, Mahto, Oyak, Pambuang Sadong, Sampit, Tekrang*, and *Tannah Darat*. Some of these ports are well known; but of others we know little except the names. Those with which trade is principally carried on are Brunai, or Borneo Proper, Banjermassin, Pontianak, Sambas, Coti, Passeir, Peggotan, and Sarawak. The products commonly brought here from Borneo are, rattans, birds' nests, bees' wax, tortoiseshell, gold dust, and diamonds, biche de mer, pearl and raw sago, camphor, rice and paddy, mother of pearl shells, garro and lakka woods, pepper, seaweed, mats, ebony, and antimony ore. The boats which come from the southern and eastern ports are commonly manned by Bugis, the principal carriers in the Archipelago, and, next to the Chinese, the most enterprising and industrious of the traders in these regions. They are considerably less tainted with piracy than the Malays.

MANILLA.—The commerce with Manilla continues to increase. In a late year the gross imports were valued at 323,932 dollars. The most important articles consisted of hemp and rope, 2,044 piculs; cigars, 20,770,100; sugar, 6,546 piculs; tea, 585 piculs; and sapan wood, 19,306 piculs; it would also appear 5,300 pieces of British piece goods were imported, probably on account of their being unsuitable for the Manilla market. The exports amounted to 127,315 dollars. The chief articles were opium, 49 chests; iron, 3,762 piculs; and British cotton goods, 88 dozen, 60 corges and 4,189 pieces.

CELEBES is the parent country of the Bugis, which name, though properly belonging only to one of the tribes on Celebes, is applied generally to all traders from that island, from the east and south-east coasts of Borneo, and from the islands to the southward and eastward of it. Of these tribes, by far the most considerable in point of improvement and numbers are the Bugis of Wajo or Tuwajo, a country near the centre of Celebes, and situated up the Bay of Boni. The ports in Celebes from which prahus arrive here are Bonirati, Bugis Pari-para, Wajok, Bugis Pemana, Kailie, Macassar, Mandhar, and Sangye. They usually bring sarongs — the produce of their own looms — rattans, wax, tortoiseshell, pearl shells, seaweed, biche de mer, coffee, birds' nests, sándal and bookoo woods, and other articles of minor importance. The number of vessels arriving here from the above places averages about 50 or 60 annually.

The islands to the eastward and southward of Celebes, from which the Bugis bring cargoes to this port, are chiefly Bootoon, Enday or Flores, Selayer, Timor, Booroo, Lombok, Sumbawa, Amboyna, Ceram, and even from the Aroos and Papua. The articles are the same as those from Celebes, with the addition of kayu-pooteh oil, birds of paradise, and wild nutmegs. The vessels arriving from these places may average about 30 every year. The island of Bali, or Bally, contains several ports, from which upwards of 50 prahus annually arrive here: the principal of these are Baliling, Bali Badong, Sasak, Saliparang, and Anpanan.

SUMATRA, the various ports on the east coast of which furnish the greatest number of native craft frequenting this port, amounting on an average to between 300 and 400 annually. The names of these ports are, Acheen, Apong, Assahan, Batubara, Bukitbatu, Billah, Ayeretam, Campar, Delli, Gawang, Indragiri, Jambie, Kitaman, Langkat, Lampung, Manda, Merba, Pulo Padang, Panai, Palembang, Rantow, Rittee, Siac, Subee, and Tabing Tingie. The greatest portion of boats come from Apong, Manda, Ranto, and Tabing Tingie, with raw sago. The next in number are those from Campar, Jambie, and Siac, bringing coffee, rice, wax, rattans, ivory, gold dust, benzoin, dragons' blood, lakka, wood, and a few other articles. From Palembang come the lacquered basons and creeree boxes so much in request among natives; and the best rattan mats are made there. The coast near Siac furnishes in great abundance the *Trubo*, or fish-roe, so universally used, and affords our principal supply of sago, which has now become an important article of commerce at Singapore.

The names of the petty places on the west side of the MALAY PENINSULA, opposite the Sumatra shore, between this and Penang, are, — Batu Pahat, Beenook, Beladong, Dooyong, Brooas, Muar, Padang, Poontian, and Panghie; while the principal ports, besides Malacca and her dependencies, are— Perak, Selengore, Lingin, and Lookoot. From the former very few articles, and those only of trifling value, are brought here, consisting chiefly of fowls, cocoa nuts, paddy, fruit, &c.; but the other ports all furnish tin in large quantities, besides several other articles of less importance. The whole of this coast, however, bears a bad name for piracy. The number of prahus arriving here from all the places above named amounts to about 100 every year.

Of the neighbouring islands, RHIO is the one with which we carry on the most extensive and constant trade; the number of boats, or rather trips of a regular set of Chinese boats, called *sampan pucats*, employed in the trade, being about 300 a year. They bring chiefly pepper and gambier, the produce of Bintang. The chief imports are gambier, pepper, and rice. Rhio is the only place from whence gambier is imported into Singapore, and the quantity now grown and manufactured is certainly not less than 70,000 piculs. Rhio may be considered as a free port, as there are neither import nor export duties, strictly so called. From LINGIN, or LINGA, also, we have upwards of 70 or 80 boats arriving annually, bringing a great variety of useful produce, but principally pepper, tin, rattans, &c. BILLITON sends about 25 boats yearly, which bring biche de mer, seaweed, tortoiseshell, wax, &c.

BUNGORAN (or Great Natunas) and SEANTAN (or N. Anambas) are the next in importance, from which 30 or 40 vessels trade with this settlement. The other islands are— Pulo Awore, Benawang, Condore, Carimons, Jamaja (or S. Anambas), Pulo Laut, Laboo, Leboc, Meppa, Nongsa, Sarassan, Sinkip, Soobie, Tajam, Timblan, Timiang, Tingih, Trong, Carimata, Ungaran, and some others.

* The places mentioned in this statement, of which the names are in capitals, are either well known to Europeans by long report or actual intercourse; while those in italics remain, so far as we have ascertained, not only unvisited by, but are only recently known by name to them; few or none of them earlier than the foundation of this settlement.

JAVA.—The trade with this rich and flourishing island is of great importance. During 1854, 90 vessels, of the burden of 14,409 lasts, cleared out from Java for Singapore; and the value of the merchandise imported in 1855–56 into the latter from the former, ex treasure, amounted to 1,602,000 dollars. Among the principal items were, birds' nests, benjamin, coffee, cotton goods, rice, copper, mace, nutmegs, cloves, spirits, sugar, tin, tobacco, woollens. During the same space the exports from Singapore to Java amounted, ex treasure, to 1,305 dollars. The principal articles were, country cotton goods, and China cotton goods, crockery china, opium, raw silk, tea, China paper. The small quantity of grain produced in Singapore, hardly equal to the consumption of the population for one week, renders it exceedingly desirable to have the means at hand of obtaining a large and constant supply: this Java furnishes us with, and this alone renders our trade with that island of considerable importance and interest.

Piracy in the Eastern Seas. — We regret to have to state that piracy has always prevailed to a less or greater extent in the Eastern Seas. In 1824 we bound ourselves by treaty with the Dutch to co-operate with them for its suppression; but it is affirmed that, for a long while, we did little or nothing towards the fulfilment of this engagement, though we are far more interested in the cessation of piracy than any other people. Hitherto the trade of Singapore has chiefly suffered from piratical attacks; but, besides waylaying the smaller junks and ships of the Chinese, Siamese, &c., the pirates, emboldened by impunity, have sometimes attacked British ships in the Straits of Malacca, and actually captured ships in the seas more to the eastward, inflicting the most horrid barbarities on the unhappy passengers and crews. The Andromache ship of war destroyed in June, 1836, a nest of pirates; and in 1843, H. M. ship Dido fell in with and destroyed another nest in one of the ports of Borneo. But an example of this sort, if not vigorously followed up, is of little use. This, however, is a matter of more importance, perhaps, than is commonly supposed. We believe we are within the mark when we affirm that from 20 to 25 millions' worth of British property (including the trade between India and Canton) is annually conveyed through the Straits of Malacca and other Eastern Seas infested by pirates. The trade from England to China, already of vast importance, and increasing more rapidly, perhaps, than any other department of our commerce, is wholly carried on through the channels referred to; and, as we do not hesitate to send powerful squadrons to secure less valuable interests in other quarters, it is not easy to see why we should not send some half-dozen war steamers to protect this great and growing trade, as well as that which we carry on with the Philippine Islands, New South Wales, &c., from the depredations of a piratical banditti. Nothing but the employment of steamers can effectually abate the evil of piracy. The infinite number of small islands in the Eastern Seas, the difficulty of their navigation, and our little acquaintance with any but the principal lines of intercourse, afford the greatest facilities for the escape of pirates from ordinary cruisers. But steam ships of small draught of water could follow them into their haunts; and the pirates would not be able to escape from them, as they frequently do from sailing vessels, by taking to their oars while their pursuers are becalmed. Except when defending our own shores, the navy is never so legitimately employed as in the defence and extension of commerce. Its protection is one of the most important duties which government has to discharge; and considering the immense naval force at our disposal, it may well excite astonishment that piracy in the Eastern Seas — one of the great highways by which commerce is carried on — should have been allowed to attain to any considerable magnitude, and that the reiterated complaints of the merchants and others, who have suffered by its prevalence, should have been so little attended to. A very little outlay on the part of the government might make, in so far at least as piracy is concerned, the navigation of the Eastern Seas quite as safe as that of the Channel; and the advantages thence resulting to our trade would, in a very short period, far more than countervail the little sacrifice required at the outset.

But, at the same time, it is indispensable that when we endeavour to suppress piracy, we should not confound the innocent with the guilty, and chastise those who have not made themselves amenable to any punishment at our hands. It would be inconsistent alike with our objects and limits to enter into any inquiries with respect to the conduct of Sir James Brooke in relation to this subject. He may have been warranted in the vengeance he inflicted on the Dyaks and other alleged pirates of Borneo; and, if so, the severest treatment in the meantime was perhaps the most humane in the end. At the same time we confess that the accounts of his expeditions appear to be singularly revolting; and that it would require much stronger testimony of the guilt of the natives than any hitherto produced to justify the atrocities of which they have been made the victims. We subjoin

A Statement of the Prices of the Principal Articles of Eastern Produce at Singapore on the 20th of January, 1859, from *Ker, Rawson, and Co's Circular* of that date.

In this port there are no duties on imports and exports, and vessels of every nation are free of all charges, except light dues levied on certain vessels under the Act 13. of 1854, the highest of which is one anna (less than 3 cents) per ton.

Accounts are kept in Spanish dollars divided into cents. The usual credit on sales is as follows: — Europe goods 3 months; Indian and China goods, 2 months; opium and produce are generally bought for cash.

The common weight is the picul of 133⅓ lbs. avoirdupois divided into 100 catties. Rice is sold by the coyan of 40 piculs. Salt by the same measure, but weighs about 52 piculs. Java tobacco, by the corge of 40 baskets. Bengal wheat, rice, and

gram, by the bag containing 2 Bengal maunds. Indian piece goods by the corge of 20 pieces. Gold and silver thread by the catty of 56 dollars' weight. Gold dust by the bunkal, which weighs 2 dollars, equal to 352 grams troy.

SINOPE, a town of Asia Minor, on the S. coast of the Black Sea, lat. 42° 2′ 30″ N., lon. 35° 9′ 45″ E. Population uncertain, probably from 8,000 to 10,000. Sinope is situated on a low narrow isthmus, connecting the high rocky promontory of Ada with the main land. Its port, which is the best on this coast, on the south side of the town, is protected from the N. and N.E. gales by the isthmus and promontory already mentioned. Ships anchor within $\frac{1}{3}$ mile of the town, in from 13 to 17 fathoms; or nearer to it, in from 5 to 7 fathoms. There is a roadstead on the north side of the isthmus, but it is open and exposed. Sinope is one of the principal stations of the Turkish fleet; and there are docks and arsenals for its accommodation and outfit. But the fortifications can neither afford efficient protection to the town or the shipping. This was strikingly exemplified in the latter part of 1853, when a Russian squadron attacked, and, without any material loss to itself, totally destroyed 6 Turkish frigates with several transports at anchor in the roads. Its exports are inconsiderable, the principal being timber, salt, cordage, fish oil, &c.

In ancient times, Sinope was a city of great wealth, magnitude, and importance. It was the birthplace of Diogenes the Cynic; and Mithridates made it the capital of his dominions. After its conquest by the Romans under Lucullus, it became the seat of a colony; and continued for a lengthened period to enjoy a good deal of consideration.

Should civilisation and the arts once more revive in the ancient Pontus, and the other countries to the South of the Black Sea, the excellence of its port could not fail to restore to Sinope some portion of its former grandeur. Even now a considerable intercourse is beginning to take place with the countries E. and S. of Sinope. Diarbeker on the Tigris, in lat. 37° 54′ N., lon. 39° 53′ 45″ E., is one of the principal seats of Eastern commerce; and caravans set out regularly from it for Aleppo, Smyrna, and Constantinople: but any one who consults a map of Asia Minor, and of the contiguous countries, will see at once that Trebisond and the neighbouring ports on the S.E. coast of the Black Sea are the natural channels through which Armenia, Koordistan, and the north-western ports of Persia may best maintain an intercourse with Europe. We shall afterwards show that the danger to vessels in the roads of Trebisond has been very much exaggerated. — (See TREBISOND.) In the event, however, of the commerce with the countries referred to becoming of any considerable importance, Sinope would be an advantageous *entrepôt* to which goods might be brought, and whence they might be conveyed in proper vessels, and at proper times, to the other ports. At all events, it is of material importance that a direct intercourse with the southern coast of the Black Sea should be established, and that the trade with it should not be carried on, as hitherto, through Odessa. — (For further particulars as to Sinope, see *Tournefort, Voy-*

age au Levant, tom. ii. pp. 202—212.; and *Norie's Sailing Directions for the Black Sea.* See also the article TREBISOND, in this work.)

SKINS. The term is applied in commercial language to the skins of those animals, as deer, goats, kids, lambs, &c., which, when prepared, are used in the lighter works of bookbinding, the manufacture of gloves, parchment, &c.; while the term hides is applied to the skins of the ox, horse, &c. which, when tanned, are used in the manufacture of shoes, harness, and other heavy and strong articles. Lamb and kid skins are principally used in the glove manufacture; 120 skins being supposed to produce, at an average, 18 dozen pairs of gloves.

Account of the Quantities of the different Kinds of Skins imported into the U. Kingdom during each of the undermentioned Years ending with 1852, specifying the Countries whence they were brought, and the Quantities brought from each.

* The duty on skins having been repealed in 1846, the quantities retained for consumption in 1852 cannot be stated; but the re-exports in that year are given.

SLATE (ROOF), (Ger. *Schiefer*; Fr. *Ardoise*; It. *Lavagna, Lastra*; Sp. *Pizarra*), a fossil or compact stone (*argillaceous schistus*) that may be readily split into even, smooth, thin laminæ. There are several varieties of this valuable mineral, the prevailing colours being grey, blue, and brown. But the tints are very various; and slates are often marked with streaks of a different colour from the ground. Slate is principally used in the covering of houses, for which purpose it is infinitely superior to thatch or tiles, and is far less expensive than lead. Good roofing slate should not absorb water; and it should be so compact as not to be decomposed by the action of the atmosphere. When properly selected, roof slates are of almost perpetual duration; but those which are spongy and imbibe moisture speedily get covered with moss, and require, at no very distant period, to be renewed.

The use of slates in the covering of houses is entirely European. From the Hellespont to China inclusive there is not a single slated house; and this does not arise from any want of slate, which is as abundant in Asia as in Europe.

Slates carried by land have never been subjected to any duty; but those carried coastwise were, until 1831, charged with duties varying according to their size and species. The injustice of this distinction, and the impolicy of laying any duty on an article of this sort, are obvious. The revenue it produced was quite inconsiderable, not exceeding 35,000*l.* a-year. It was repealed at the same time as the duty on coal carried coastwise.

Since the repeal of the duty, the consumption of slate has been materially increased; and it is now

extensively employed for various purposes to which it was not formerly made applicable, such as the flooring of warehouses and vaults, the paving of streets, the formation of cisterns, the covering of worn or decayed floors, and of the walls of houses in exposed situations, &c. The slate used for these purposes is cut by the circular saw into pieces of from ½ an inch to 2 inches thick. Many hundred tons have been used in the course of the last few years in paving, flooring, &c. at the London Docks, and other large establishments.

The principal slate quarries in Great Britain are in Caernarvonshire. Those belonging to Mr. Pennant (formerly Lord Penrhyn's), near Bangor, employ about 1,500 men and boys, and are the most extensive and valuable in the empire. The other quarries in the same county employ about 1,620 men and boys: and there are some in other parts of Wales. There are also extensive quarries at Ulverstone, in Lancashire; and others, of inferior magnitude, in various parts of Westmoreland and Cumberland.

The principal slate quarries in Scotland are at Easdale and Balachulish, in Argyleshire. Speaking generally, the Scotch quarries do not afford slates of the size and smoothness of those obtained from the Welsh quarries; and the wood-work of the roofs covered with them requires to be stronger.

Roofing slates are of different sizes, and are denominated Imperials, Queens, Princesses, &c. Their price, supposing their quality to be in other respects equal, depends partly on their size and partly on their weight.

SLAVES AND SLAVE TRADE. A slave, in the ordinary sense of the term, is an individual at the absolute disposal of another, who has a right to employ and treat him as he pleases. But the state of slavery is susceptible of innumerable modifications; and it has been usual, in most countries where it has been long established, to limit in various ways the power of the master over the slave. The *slave trade* is, of course, the business of those who deal in slaves.

Origin of Slavery.—A great deal of learning has been employed in tracing the history of slavery, though the subject is still far from exhausted. It seems most probable that it originally grew out of a state of war. In rude uncivilised communities, where the passion of revenge acquires a strength unknown in more advanced states of society, captives taken in war are adjudged to belong to the victors, who may either put them to the sword, or reduce them to a state of servitude. In antiquity, the ideas of war and slavery were inseparable. Probably in very remote ages, prisoners were most commonly put to death; but the selfish gradually predominated over the more passionate feelings, and for many ages it was usual to reduce them to the condition of slaves; being either sold by their captors to others, or employed by them as they might think fit.

The practice of reducing men to a state of slavery, having once begun, was extended in various ways. The progeny of slaves or of women in a state of slavery were slaves; men born free might sell themselves as slaves; and parents had authority, in Judæa and Rome, to dispose of their children for the same purpose.—(*Michaelis on the Laws of Moses*, ii. 163. Eng. ed.) It was the law of Rome, and of most other ancient states, that the persons of debtors who had contracted obligations which they could not discharge, should become the property of their creditors. "*Servi*," says Justinian, "*autem aut nascuntur aut fiunt: nascuntur ex ancillis nostris, fiunt aut jure gentium, id est ex captivitate; aut jure civili, cum liber homo major viginti annos ad pretium participandum sese venundari passus est.*"—(*Instit.* lib. i. tit. 3.)

Treatment of Slaves.—The treatment of slaves in antiquity, as in more modern times, differed very widely in different countries and periods, and among different classes of slaves in the same country, and at the same time. A great deal also depended on the character of particular masters. Slaves bred up in the house or family of the masters were uniformly treated with greater indulgence than others, and became entitled, by custom, to several important privileges. At Athens, slaves appear to have been better treated than in any other ancient state; and Demosthenes affirms, in his second Philippic, that, "a slave was better off at Athens than a free citizen in many other countries." In republican Rome, the masters had the power of life and death over their slaves, who were often treated with the most detestable barbarity. It was not an uncommon practice to expose old, useless, or sick slaves to starve in an island in the Tiber! We may, as Hume has justly remarked, "imagine what others would practise, when it was the professed maxim of the elder Cato to sell his superannuated slaves at any price, rather than maintain what he esteemed a useless burden."—(*Plutarch, in Vitâ Catonis,*) *Ergastula*, or dungeons, where slaves were confined and chained at night, and where they were sometimes made to work in the day, were common all over Italy. Columella advises that they be always built under ground—(lib. i. c. 6.): and remains of them are still seen in the lower stories of ancient buildings in Italy and Sicily. Hundreds of slaves were sometimes put to death for the crime of one only; and they were exposed, when they committed any petty fault, to all the violence of the most capricious and unrestrained despotism.

It was not uncommon in the barbarous ages to immolate captives on the tomb of such chiefs as had fallen in battle; and magnificent games were celebrated on these occasions.* The gladiatorial exhibitions, so common at Rome after the Punic wars, seem to have grown out of this practice. These were contests between slaves, denominated gladiators, trained to fight in public for the amusement of a ferocious populace, who took the

* Achilles sacrificed 12 Trojan captives on the tomb of Patroclus.—(*Iliad*, lib. 23.)

greatest delight in their sanguinary combats. Thousands of unfortunate wretches were annually sacrificed in this inhuman sport. After his triumph over the Dacians, Trajan exhibited spectacles, in which no fewer than 11,000 wild beasts of different kinds were killed, and 10,000 gladiators fought!—(*Adam's Roman Antiquities*, p. 317.)

The cruelties inflicted on the slaves occasioned frequent revolts, attended by the most dreadful excesses. Spartacus, a Thracian captive, destined for the profession of a gladiator, headed a rebellion of gladiators and slaves, which continued for 3 years, and required all the force of the republic to suppress. When finally defeated by Crassus, about 6,000 of his followers were nailed to the cross, in double rows, that extended almost from Capua to Rome.—(*Ferguson, Rom. Republic*, c. 16.) No one acquainted with the manners of the Romans can be surprised at the atrocities of so many of the emperors. The worst of them treated the citizens better than the latter treated the slaves. Humanity could not be looked for in the rulers of a state in which human life was held in contempt, and human suffering made the subject of popular sport.

In consequence partly of their ill usage, and partly of its being accounted cheaper to buy than to breed slaves, vast numbers were annually imported into Italy. Thrace and the countries round the Black Sea furnished large supplies of the best slaves; and numbers were obtained from Egypt, Syria, Britain, Gaul, and other countries. The famous island of Delos, in the centre of the Cyclades, was the greatest slave market of antiquity; as many as 10,000 slaves have been sold there in a single day.—(*Strabo*, lib. xiv.)

It should, however, be observed, that slavery among the ancients was very different from the slavery of modern times, at least from the slavery that exists in the U. States, Cuba, &c., and which did till lately exist in our West India islands. Slaves in antiquity were physically identical with freemen, and were discriminated only by peculiar marks*, or by the character of their employments. It was truly said of them, "*Servi homines sunt, et æque unum lactem biberunt, etiamsi illos malus fatus oppresserit.*" (*Petronius ed Burm.* cap. 71.) But modern slaves belong to a different variety of the human race; the distinction between them and their masters being obvious and striking. Owing to this difference between the slaves of ancient and modern times, the influence of slavery at the two periods has been materially different. The freemen of antiquity, who were accustomed to tyrannise over persons in all respects (except their social rank) on a level with themselves, could hardly fail to acquire a ferocity of disposition, and coarseness of manner, that either disappear, or are much softened down in a society where all are equal. But such results do not certainly follow to the same, nor perhaps to any extent, from the practice of modern slavery. In this case the masters do not tyrannise over their equals, but over those who differ from the class to which they belong by the broadest and most distinctly marked characters; and their behaviour towards their slaves is found to have very little influence over their behaviour towards their fellow citizens. The white inhabitants of Virginia, for example, are quite as gentlemanlike in their manners, and observant of the respect due to others, as their countrymen of New York or New England. Indeed, if there be any difference between them, it will probably be found to be in favour of the former.

Although, therefore, there can be no doubt that the slavery that existed in the ancient world had a brutalising influence over the manners of the people, and gave them a degree of ferocity to which happily we have long been strangers, it by no means follows that the slavery which prevails in the new world should have the same influence. In the former case, masters and slaves were of the same variety of the species; but in the latter, the masters belong to one variety, and the slaves to a totally distinct, and most probably lower, variety; so that the domination of the one set, and the subjection of the other, partake in some measure of the character of the supremacy exercised by man over the lower animals: and have comparatively little influence over the morals or conduct of the masters.

There can be no manner of doubt that the slavery that existed in the ancient world was unfavourable to the progress of arts and industry. In the most celebrated nations of antiquity, the greater number of mechanical employments were principally carried on by slaves and the dregs of the free population; so that, while the workmen employed in them were without emulation or invention, the employments themselves were looked upon as mean and servile. To such an extent did this prejudice operate, that in Rome, Sparta, and other celebrated states, agriculture and arms were the only occupations that were reckoned worthy of a freeman, or in which he could engage without being degraded.

But the principal difference between the slavery of the ancient and modern world

* Slaves wore their beards and hair long; and when manumitted they shaved their head and put on a cap, which has in consequence become the symbol of liberty. Brutus, after the assassination of Cæsar, coined money, on which the figure of a cap was impressed, to indicate that the people had been rendered free.—(See *Adam's Antiquities*, p. 376.; See, also, *Burlamaqui, Principes du Droit des Gens*, iv. 454., where the reader will remark a singular error.)

consists in the fact that in the former freemen were quite as well suited as slaves for carrying on every art and employment; while in the latter the peculiar constitution of the slaves fit them for employments which, though of the highest importance, cannot be carried on by their masters. The greater intelligence of the whites enables them to exercise a decided superiority over the black or coloured natives of the torrid zone, notwithstanding the latter are incomparably better adapted for the prosecution of those laborious occupations which are indigenous, as it were, to the soil they occupy. It is doubtful whether the constitution of the whites will ever be so accommodated to the climate of the Tropics, as to enable them to engage in that field labour, carried on in the lower and hotter districts (*tierras calientes*), which is congenial to the blacks. At all events, no such accommodation has hitherto taken place; and, therefore, it would appear that some modification of slavery, or that a supply of suitable compulsory labour of some sort or other, is necessary to enable civilised man to occupy, and to turn to a useful account, some of the most fertile and extensive regions of the earth. And hence the propriety of inquiring into the policy of institutions like this, of carefully considering the peculiar conditions or circumstances under which they are to be acted upon. Slavery in Europe may be, and we believe is (notwithstanding the opinion of Michaelis to the contrary), in all respects most objectionable; but it is quite another matter with slavery in Louisiana, Cuba, and Brazil; the circumstances under which they are placed are so very different from ours, that an institution exceedingly inexpedient on this side the Atlantic, may be especially suited to them.

The establishment of Christianity contributed more, perhaps, than any thing else, first to mitigate, and finally to suppress slavery in Europe. But, within no very long period after its abolition had been completely effected in this part of the world, it began to be established in America.

The African Slave Trade was commenced by the Portuguese, in 1442. It was, however, but of trifling extent till the commencement of the 16th century. In consequence, however, of the rapid destruction of the Indians employed in the mines of St. Domingo or Hayti, Charles V. authorised, in 1517, the introduction into the island of African slaves from the establishments of the Portuguese on the coast of Guinea. The concurrence of the emperor was obtained by the intercession of the celebrated Las Casas, bishop of Chiapa, who laboured to protect the Indians by enslaving the Africans; though, as the latter were certainly more vigorous and capable of bearing fatigue than the former, the measure was not in reality so contradictory as it would, at first sight, appear to be. —(*Robertson's Hist. America*, book iii.)

The importation of negroes into the West Indies and America, having once begun, gradually increased, until the traffic became of great extent and importance. Sir John Hawkins was the first Englishman who engaged in it: and such was the ardour with which our countrymen followed his example, that they exported from Africa more than 300,000 slaves between the years 1680 and 1700; and between 1700 and 1786, 610,000 Africans were imported into Jamaica only; to which adding the imports into the other islands and the continental colonies, and those who died on their passage, the number carried from Africa will appear immense. —(*Bryan Edwards, Hist. West Indies*, ii. 64.) The importations by other nations, particularly the French and Portuguese, were also very great.

We do not intend, though the subject be one of the highest interest, to make any lengthened inquiries as to the legitimacy or illegitimacy, the policy or impolicy, of the slave trade. We may, however, shortly observe that there can be no doubt that slavery has always existed in Africa; and it is sufficiently well known that previously to the commencement of the traffic, such of the captives taken in war as could not be advantageously employed as slaves were most commonly put to death; cannibalism, the exposure of infants, and human sacrifices being then also very frequent. The slave trade, by opening a ready and profitable market for slaves, assisted in putting an end to these enormities, though it be, at the same time, true that the desire of profiting by their sale has tempted the petty princes to make war on each other for the chance of making captives, and has given a stimulus to man-stealing and other atrocities. —(*Geog. Dict.* art. *Africa.*) There can, however, be no reasonable doubt that civilisation has been, on the whole, advanced by the practice of the trade. At all events, no evidence either has been, or, we believe, can be, produced to show that the state of Africa would have been perceptibly improved had the slave trade never been heard of. But it is quite certain, had such been the case, that there would have been a wide difference in the condition of the West Indies, the Southern States of North America, Brazil, &c. It will, we apprehend, be found that the culture of sugar and other great colonial staples cannot be profitably carried on in these countries, nor, perhaps, anywhere within the Tropics, without a supply of compulsory labour of some sort or other (see *antè*, p 342.). Neither, we apprehend, can there be a question that the extensive culture of these staples has added greatly to the comforts and conveniences of the

inhabitants of most civilised countries; and, if this addition to their enjoyments has been effected without injury to the slaves, it will not be so easy a matter as has been supposed to show the impolicy of the trade. But those who inquire dispassionately into the subject will probably come to the conclusion, that, instead of being injured, the slaves have gained by being carried from the Old to the New World. Speaking generally, the negroes are in the lowest state of abasement, possessing merely the rudiments of the most indispensable arts, a prey to the vilest superstition and tyranny, without any tincture of learning, and with little or no regard for the future. The circumstances under which they are placed in their native land may, perhaps, account for the low state in which we find them; but, however explained, the genuine negroes of Africa are admitted, even by those least inclined to depreciate them, to be, for the most part, "either ferocious savages, or stupid, sensual, and indolent."—(*Prichard, History of Man*, ii. 338. 3d ed.)—Excepting the violence done to their habits and inclinations, no one who knows any thing of their state in Africa and in the Western hemisphere can possibly doubt that they have gained most materially by their transference to the latter.

But, supposing their character to be such as represented, still it may be contended that their weakness or inferiority gives the whites no right to lord it over them, to convey them to foreign countries, and to reduce them to a state of bondage: and no doubt it is exceedingly difficult to specify in how far the civilised portion of mankind may be entitled to control those that are decidedly less intelligent and advanced than themselves. That they have done so from the earliest ages, is, however, indisputable; and every one who has any acquaintance, however slight, with the history of society, is aware that the consequences of this control have been in the highest degree advantageous; for, though polished nations have too often abused their superior power and intelligence, still it is abundantly certain that but for their dictating to and subjugating others, half the civilised world would at this moment have been immersed in the grossest barbarism. But without entering into any discussion respecting the application of this principle in the case of Africa, it is enough to know that the Europeans did not originate slavery in that continent; the Africans were enslaved and disposed of as other goods and chattels for centuries before they began to be purchased by the former; and the conduct of the whites is to be determined by the nature of the treatment which the slaves received at their hands.

Now, though it be abundantly certain that this has been on the whole indulgent, it is not to be denied that very many enormities have been perpetrated, which the law should have prohibited and severely punished. The crowding of slaves together in their passage across the Atlantic, and the cruelties which some worthless masters have been accustomed to commit, are of this description. But these outrages are not of the essence of slavery; and they might and should, no doubt, have been suppressed. An institution is not to be confounded with its abuse. The object of the slave trade was to procure a supply of compulsory labourers for the service of the colonists in the West Indies and other tropical countries; but it did not, therefore, follow that the colonists were to be under no restraints either as to the methods by which they sought to procure such bondmen, or as to the power which they might exercise over them.

Neither does it follow, because the slave trade may have been for the general advantage of mankind at a particular period, that it should be indefinitely extended. When as large a supply of negroes has been imported as may be necessary to supply its markets with labour, there can be no good reason for allowing their farther importation into a country, at the same time that there seem to be sundry good reasons why it should be put a stop to. By preventing the importation of fresh slaves, the proprietors may find it for their interest to be more attentive to the condition of those already in their possession than they might otherwise be; for it is evident that in such cases they could only look to the natural increase of their slaves for a supply of labour in future; and that they could not expect to supply by foreign importations the place of those who might perish by bad treatment. On these grounds we are inclined to think that the English and Americans acted with quite as much prudence as humanity, in forbidding, in 1807, the farther importation of slaves into their dominions. Cuba, and perhaps also Brazil, might, it is alleged, advantageously follow their example. The slave population in these countries is now probably large enough to furnish, with proper treatment, an adequate supply of labourers, how rapidly soever we may suppose them to advance in the career of industry.

We have ventured to submit these statements to the consideration of the reader, not because we have any desire to extenuate the evils inseparable from a state of slavery, or the cruelties of which slave-dealers and slave-proprietors may be justly accused. But, after making every allowance for these drawbacks, it is evident, if the preceding statements be well founded, that slavery as it exists in modern times, and still more as it might be established, is not the unqualified abuse it has uniformly almost been represented. On

the contrary, we are disposed to regard it as being, under proper modifications all but indispensable to the profitable cultivation of the western countries in which it is at present met with. It is to no purpose to say that free labour is cheaper than slave labour. We more than doubt whether, when applied to them, there be any foundation for such a statement; but that is really immaterial, the fact being, that were slavery abolished, few or no free labourers would be found to engage in the great departments of industry carried on in the slave-holding countries. It would, indeed, be a contradiction and an absurdity to suppose that it should be otherwise. In countries with a fruitful soil and under a tropical sun, the principal wants of the inhabitants are supplied with but little exertion, and the *dolce far niente* is their *summum bonum*. In such situations industry is a sickly plant; and instead of employing their surplus time in the production of articles of ostentation and luxury, the inhabitants most commonly waste it in idleness and apathy. Were the slaves completely emancipated in the U. States, Cuba, and Brazil, it is all but certain that the culture of sugar and cotton would be as completely abandoned in them as in Hayti. And if the change were accompanied by a considerable improvement in the condition of the black population, the sacrifice might not, perhaps, be deemed too great. But where is the ground for supposing that such would be the case? Indeed the fair presumption seems to be the other way. Little, at all events, would be gained by turning a laborious, well-fed slave, into an idle, improvident, and perhaps beggarly freeman.

There may, however, be such a thing in a colony as a *quasi* emancipation of slaves, or, which is the same thing, regulations may be enacted giving the slaves freedom, and at the same time excluding them from the possession of that which can alone make that freedom of any practical value. Speaking generally, the blacks in our colonies have little or no capital; and, therefore, they must live either by occupying patches or land on their own account, or by working for others. And provided they be debarred, by regulations effectual to their object, from acquiring or occupying small portions of land, they will necessarily be compelled, how much soever they may dislike it, to engage as labourers on the estates of others. This, however, is probably the very worst sort of compulsory labour. It gives the blacks enough of freedom to make them in the last degree dissatisfied with the regulations by which it is sought practically to nullify it, and makes them at once discontented, refractory, and idle. But, wretched as it is, we believe that at this moment the obstacles that have been and may be thrown in the way of the blacks obtaining patches of land are the principal dependence of the colonists in our West India islands for the continued culture of colonial staples!

Without entering farther on a subject which would require a long essay for its discussion, we may remark that a good work on the subject of slavery is a desideratum which will not, probably, be speedily supplied. In this country it has been treated as if it were everywhere the same, and as if it were in every case an unmixed evil, and an outrage on humanity. This, however, is to confound the most obvious distinctions; to substitute abuse for reasoning, assertion for inquiry, and prejudice for principle. Those who inquire dispassionately into the matter will, perhaps, see abundant reason for agreeing in opinion with Michaelis and Grotius (*De Jure Belli*, lib. ii. cap. 27.), that while slavery has its evils, it may also have its advantages; and that if there be countries and states of society in which the former very decidedly preponderate, there are those also in which the preponderance is as certainly on the side of the latter.

Abolition of the Slave Trade. — Notwithstanding the sanction it received from parliament, and the supineness of the public, the slave trade was frequently denounced by distinguished individuals, in this and other countries, as essentially cruel and unjust.

The first motion with relation to it in parliament was made in 1776; but the subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the abolition of the slave trade, were members. This committee collected some highly coloured evidence of the enormities produced by the trade, which they circulated throughout the country, and thereby succeeded in making a great impression on the public mind. After a number of witnesses on both sides had been examined before the privy council, Mr. Wilberforce, on the 12th of May, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke, Mr. Pitt, and Mr. Fox. But, notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the House, contrived to interpose so many delays that the session passed off without any thing being done. In the following sessions the struggle was continued with various success, but without any definite result. At length the triumph of the abolitionists was finally consummated in 1807; a bill for the total and immediate abolition of the slave trade, having been carried in both Houses by immense

majorities, received the royal assent on the 25th of March, being the last act of the administration of Mr. Fox and Lord Grenville.

America abolished the slave trade at the same time as England.

But notwithstanding what had been done, further measures were soon discovered to be necessary. The Spanish and the Portuguese continued to carry on the trade to a greater extent than ever; and British subjects did not hesitate, under cover of their flags, to become partners in their adventures. An effectual stop was put to this practice in 1811, by the enactment of a law introduced by Mr. (now Lord) Brougham, that made trading in slaves punishable by transportation for 14 years, or by confinement to hard labour for a term of not more than 5 years nor less than 3 years. And since that period the British government has zealously exerted itself for the suppression of the slave trade in every part of the world. But, in defiance of its efforts, considerable numbers of slaves still continue to be carried across the Atlantic to Brazil and Cuba, and it will be no easy matter wholly to suppress the trade. Provided, indeed, the great powers were to concede a mutual right of search, and to make the traffic in slaves piracy, it might be effectually put down; but there are all but insuperable prejudices and jealousies in the way of their consenting to adopt such measures. (Mr. Bandinel's work on the Slave Trade contains the clearest and best exposition that is anywhere to be found of its rise, progress, and suppression; and of the efforts made by the British government to induce other nations to abandon it.)

The British laws relative to the slave trade were consolidated by the act 5 Geo. 4. c. 113. But, as the greater part of this act was superseded by the statute for the extinction of slavery (3 & 4 Will. 4. c. 73.), we shall merely lay before the reader the clauses still in force relating to dealing in slaves.

Dealing in Slaves in the High Seas, &c. to be deemed piracy. — And if any subject or subjects of his Majesty, or any person or persons residing or being within any of the dominions, forts, settlements, factories, or territories, now or hereafter belonging to his Majesty, or being in his Majesty's occupation or possession, or under the government of the United Company of Merchants of England trading to the East Indies, shall, except in such cases as are by this act permitted, after the 1st day of January, 1825, upon the high seas, or in any haven, river, creek, or place, where the admiral has jurisdiction, knowingly and wilfully carry away, convey, or remove, or aid or assist in carrying away, conveying, or removing, any person or persons as a slave or slaves, or for the purpose of his, her, or their being imported or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; or shall, after the said 1st day of January, 1825, except in such cases as are by this act permitted, upon the high seas or within the jurisdiction aforesaid, knowingly and wilfully ship, embark, receive, detain, or confine, or assist in shipping, embarking, receiving, detaining, or confining, on board any ship, vessel, or boat, any person or persons for the purpose of his, her, or their being carried away, conveyed, or removed as a slave or slaves, or for the purpose of his, her, or their being imported, or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; then and in every such case the *persons so offending shall be deemed and adjudged guilty of piracy*, felony, and robbery, *and being convicted thereof shall suffer death without benefit of clergy*, — and loss of lands, goods, and chattels, as pirates, felons, and robbers upon the seas ought to suffer. — § 9.
